This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children.

Thus, a man may not marry the daughter of a member of his [582] [684]
own class. If he fornicates with her he is punished by his own age-mates. " His kraal is destroyed, he is severely beaten, and a number of his cows are slaughtered ". Similarly, " if a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade ". (HOLLIS). Furthermore, any class member when a guest [837]
of any of his age-mates, has a right to cohabit with his host's wife. [587]
MERKER, says that a widow " must not re-marry but she must live with the members of her deceased husband's class ". This " sexual communism ", as HOLLIS calls it, takes place only among members [837]
of the same class. It is limited, of course, by clan and kinship exogamy, which, even for class members, is strictly enforced. [582]

At the performance of the *Embolosat*, *Enpiloto*, *Uwuo*, *Ngokerr* 561
names are given to sets instituted. Names assumed at the *Embolosat*, 552
Enpiloto, and *Uwuo* are temporary, for temporary is the nature of the set thus established. At the *Ngokerr*-proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus recalled when historical facts are remembered.

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by MERKER, FOX, and FOSBROOKE.[188] FOSBROOKE has attempted

has been shown them, he will enter one. When he has entered, the owner of [574]
the hut leaves him and goes to search for a place to sleep in... A Masai cannot [954]
refuse hospitality to a stranger (of his own age) for he is afraid that the other [622]
members of his age will curse him, and he will die ".

3: Hollis G-5 (ca. 1894-1904) 1910 FL.12 Masai FL.12

601 431 Thus, a man gives his brother's wife or his paternal uncle's wife, or his paternal uncle's son's wife a cow, a calf, or a lamb, and the terms of address used by the two, instead of being *per-eiden* or *pripe*, as the case may be, are *pa-ldirky*, *pa-nake*, or *pa-orpen*; a father-in-law gives his daughter-in-law a calf, and the two call one another *pa-nake*; and a paternal uncle gives his nephew's wife a she-goat and calls her *pa-liar*. Similarly a man's first wife usually presents each successive wife with [595] a calf on her marriage, and instead of using the term *ne-ebei* when speaking to one another the two women say *pa-nake*; a woman gives her husband's brother's wife a donkey as a wedding present, and the two women call one another *pa-eighirie*; and a mother-in-law selects a cow for her daughter-in-law some months after marriage, when she has learnt to keep house for her husband, and the form of address is *pa-ldirky*. This method of address is carried even further, and is used between men of the same family. A father, for instance, usually gives his son a bull when the boy is eight or nine years of age, and the two call one another *pa-eikpiai* instead of *pepe* and *ki-epiai*; a paternal uncle makes a similar present to his nephew, and the same form of address is used; an elder brother gives his younger brother a heifer, and the two call one another *pa'a-dooee*; and paternal cousins often use the terms *pa-ere* or *pa-nerepek* when talking to each other.

The following terms are found: *pa-ldirky*, the bullock or the cow; *pa-nerigi*, the bullock; *pa-ldiler*, the cows; *pa-eikpiai*, the bull; *pa'a-dooee*, the heifer; *pa-lenkpai*, the bull calf; *pa-nake*, the calf; *pa-kee*, *pa-ere*, or *pa-ailiar*, the he-goat; *pa-liar*, the she-goat; *pa-lolola*, the kid; *pa-lerr*, the ewe; *pa-nerepek*, the ram; *pa-eighirie*, the donkey; *pa-orpen*, the ewe lamb; *pa-ooee*, the twin kids.

With one exception, a present of this nature is not made, nor are these terms of address used, outside the father's family. Thus, a brother cannot give his sister a heifer so that the two might call one another *pa'a-dooee*, because if the sister marries she will leave the family; a maternal uncle cannot give his nephew a bull and call him *pa-eikpiai*, and maternal cousins may not address one another by the terms *pa-ere*, etc. The exception to this rule is made when a man marries. He then presents his father-in-law with a bullock and his mother-in-law with an ewe, and the terms of address are *pa-ldirky* and *pa-lerr*. These presents have nothing [583] to do with the cattle paid for the bride.

604 578 754 A maternal uncle (*el-epa*) exercises great influence over his nephews, as it is believed that if he were to curse them they would die. He can at any time stop a fight in which one of his nephews is engaged by merely calling on his nephew to desist, as the nephew would be afraid of his right arm withering if he were to [593] disobey. This power is to a certain extent reciprocal, and if a man were to start beating his wife he would have to stop if his maternal nephew ordered him to do so. 593 A father and any old man of the family can also usually stop a fight by telling 626 the combatants to desist, but they are not necessarily listened to. A mother has more influence, and if her son refuses to obey her, she strikes her stomach and says, "You were born in this"; whereupon the son is said to sicken, and can only recover when his mother makes a rope of fibre which she hangs round his neck. 754

9:Foshrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

When the whole of one age has been circumcised, and the endosqore ceremony performed, the members of the completed age feel it is about time to claim some privileges from the prior age. Whether the age immediately above is of the same or a different generation does not appear to affect the rule that these privileges are only granted when the senior age begins to doubt its capacity to retain them by force. The chief privileges are (a) the marking on the shield known as *ourot ongoki* (most important), (b) the spear handle of black wood called *enjata narok*, and (c) the right to hold a dance without seeking permission from the senior moran. 561

No formal demand is made. The juniors will assume one of the privileges, and when met by a band of seniors will be promptly beaten up and retreat. This process continues till wounds become frequent in these affrays. When the seniors feel that they are on the point of losing their ascendancy they gracious hand over these privileges to the juniors, who may then proceed to the Uasin ceremony. [579]

In the first few years subsequent to circumcision, the new moran have been kept in a position of subjection by the moran of the preceding age or generation. But these latter have now handed over the marks of seniority and entered into elderhood through the *ngabare* ceremony. What does this change of status mean to the moran concerned?

Fundamentally it means that having shown their worth in the fights for the coveted insignia, the junior moran are now deemed capable of guarding the country. Their seniors can retire to the more peaceful occupations of marriage and animal husbandry, in the knowledge that their juniors are worthy successors. But their period of junior service has done more than make them efficient warriors; it has moulded them in ways which are to-day more important than the purely military aspect. Both as individuals and as a group they have been taught respect for authority. If as individuals they are found associating with the moran girls who are the perquisite of the seniors, they are beaten; if as individuals they quarrel with a member of the senior grade, the wrath of the whole of that age falls upon them. An example of this is the case of a Moruko of Kihaya who at Kihaya quarrelled with a Kisale of Mokani. The Kihaya Kisale promptly gave the Moruko a good beating. A few days later, having got news of the quarrel, a party of Mokani Kisale appeared on the scene to beat the Moruko. But having heard that the Kihaya Kisale had done the job for them they went home forthwith. [524]

The ceremony of promotion from junior to senior warriorhood, called *eunoto*, is probably the best known and most misconstrued ceremony in the Masai age grade system. Hollis, Merker and Storm Fox all regard it as the step between warriorhood and elderhood, and only Leakey and Hemsted (the latter somewhat vaguely) regard it as a ceremony of promotion. [114]

It is performed by sections or groups of sections. The Kisongo traditionally perform the ceremony at Magulat near Mosa, i.e. on the eastern slopes of Mondul mountain, actually in the Arusha district. As many as possible of the age attend, but by no means all. The Arusha tribe

9:Foshrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

The organization of these deputations is actually a magico-religious rather than a political duty — that is, from our point of view — in the Masai it is just one aspect of the general theme of ensuring peace and prosperity in the area.

It will also be noted that there are very few duties which might be called executive. The laigwanan does not enforce judgments, or visit towns collecting cattle for the laibon — the matters are discussed in open kraals and the weight of public opinion compels the individual to act as required. When this fails there is nothing to take its place. This explains why the laigwanan often make unsatisfactory paid headmen. Frequently the action required of a headman has not got this necessary weight of public opinion behind it, and consequently there is no indigenous method of enforcing an order.

The relations between senior laigwanan and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale communal efforts are required. In the old days when large groups of moran got together for raids the senior laigwanan must of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture. With decreased opportunities of asserting his position, it is natural that the power of the laigwanan should itself decrease.

Another tendency to be noted is the manner in which laigwanan move from their areas, more especially during old age. A senior laigwanan of the Kisonko lives at Ngarenaro, one from Engare Nanyuki at Ngorongoro, another from Engarduka at Piaya, each at least a hundred miles away from the people they are supposed to lead. This is only another aspect of the break-up of the sections previously recorded, but it does illustrate the loss of old loyalties.

C. Other officials — the laoni — magico-religious position — his duties — the el kere ongoni — the lemurujo.

At the onset of promotion ceremony, there is chosen an official known as the Laoni, — *el oononi pl. il oonok*, — or Olonono. He is acknowledged by all the sections which attend the onset, as their ceremonial or religious head. The position is not popular, as the candidate has to be installed by compulsion. After appointment the laoni takes on the mode of living of an elder, being given a wife and cattle by his age-set.

The duties of the position are obscure, but as far as is known the laoni appears to be a sort of scape-goat for the age. If he flourishes and begets many children, and if his cattle prosper and increase, it is a lucky omen for the rest of the age. But his adversity will indicate the age's prosperity.

He must do everything in advance of his age-mates, marry, settle down, make the final payment that binds the marriage. It is as though the moran, standing on the brink of adulthood, send forth the laoni as an explorer into the unknown country, so that any bad luck which may be awaiting them shall be focussed on one individual and not on the whole age.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

from each side rubbed each other's backs. Peace was then kept till it ended one side to break it. With Masai tribes the Masai sometimes made stock blood-brother head with intent to deceive, for they have no blood-brotherhood of their own. Ad among the Nandi, grass is a sign of peace, and a handful of grass constitutes a pledge for money recognized by the Masai and those whom they count as more or less equals, the *Il-naapti* or "enemies," such as other pastoralists, but not *Il-meek*, the Masai agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend more upon the force of public opinion than on the position and opinion of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *ol-ddim ol-ddaap*, "murder cattle," varies, but may be as high as two or three hundred for a man; Hollis says 50 for a boy, and Merker 18 head of cattle and 18 goats and sheep for a woman. Fadiman gives the figures as 40 for a circumcised man, and 20 for a woman or uncircumcised man. The *Il-Oruma* are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer, and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is paid either side. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Hollis gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and diviners, the *laikanis*, *laiki-ldoki*, and some near relying are returned to the owner, the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 41 head of cattle, with two more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *el-kunum*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Their concept of cattle is apparently considered of little account: "If a Masai steals milk or meat or other small things, he is not fined. Cows-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned.

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai, and the recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *el-mamai*. In some cases a diviner of the type called *el-gnaldi* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation.

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut parent division of the latter. Up to 1910 the chief taken to Kenya was accepted by the Administration as a permanent

/91 cont./

wife of her husband; often, however, the sins name both herself. Soon after birth the twins receive a leather cord trimmed with cowrie shells hung around their necks, as expression of personal pride, so that everyone will immediately recognize the child as belonging to a pair of twins. To be sure, the Mawai living in a circle of two to three days' march are well acquainted with each other and are immediately informed of every bit of news through the constant intercourse between the individual kraals. Every Mawai coming from farther away, however, upon seeing a child unknown to him, always asks first of all: "Who is his father?" The birth of triplets is said not to occur. After the birth of a deformed or dead child, the young mother is beaten by the women of the kraal and the father overwhelmed with abuse from the other men. The woman is punished because it is assumed that she practiced sexual intercourse in her advanced pregnancy and through that injured the fetus. But then an unusual birth or a stillbirth is also regarded as a punishment of God for a sin, especially as one directed against a relative, a fellow lineage or tribal member, be it through inflicting an injury or neglecting a bond of friendship or love. They admit the killing of newborn children only in case the child comes into the world very frail or was conceived out of wedlock by an old, sick man. There can be no doubt, however, but that they also kill deformed children immediately after birth, for one never sees cripples among them.

During the birth process the women of the neighborhood have assembled together in front of the hut of the woman in childbed, in order to bring her milk or also food. Five of all the other wives of her husband bathe them, as well as the women of her kin, her lineage or tribe. Good /92/ breeding demands it of them and they comply in order not to be subjected to the mockery and abusive language of the others. When the child is brought into the world, the women of the kraal sing and dance, in order to thank Ng ai for the successful birth, for which they receive an ox from the father of the newborn child, which they immediately consume outside the kraal. The next day a second ox is slaughtered, or the consumption of which any guest is welcome. In the lineage of the El Mbwile every newborn

/92 cont./

[92] in a long leather apron reaching to the feet (ni gaf, ni gafat),
[292] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before camp at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[292] which is professionally performed by old men, especially Wandorobo,
[319] is the following /the following paragraph has been translated from the Latin of the original source/:

[31] After the outer skin of the penis has been drawn back and the
[304] inner lamella of the foreskin around the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an ovule (1).

> 1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look out (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ni jaal." The swelling glans prevents the foreskin from sliding forward.

[312] /93/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the
[312] leather apron spread out on the ground. After it, the wounded part is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who sticks backwards for this, into his mother's hut and is poured on the ground there. As
[312] a gum to stanch the blood is not used. During the circumcision
[312] until the parents of the boy remain in their hut, for if the latter
[312] moans or cries out from the pain, they are punished with shaving

/92 cont./

words and blows by the assembled warriors, because they did not rear their son to have the hardening and self-control necessary for a warrior, while the weakling is reviled for a long time afterwards as *ekiyo* a coward, or *ekiyal* a the bad one. After the circumcision all the sons of the neighborhood gather in the kraal, where they are regaled with meat and honey beer by the fathers of the sons just circumcised, after the latter have kindled a fire with juniper twigs (*Juniperus procera*). The festival is called *ol ngiti* | *el olpik ganaiku*, that is, the festival of the circumcised boys. Unbelievable amounts (1)

1. I once observed that my four Masai boys together at an evening meal ate over 60 pounds of less meat.

of raw or half-cooked meat slightly roasted at the open fire are consumed in the shortest time by the married men and women, whereas the warriors neither eat meat nor drink honey beer, but only take some fresh milk. People joke and laugh and everyone seems to want to outdoor the others. The warriors hear of alleged heroic deeds in former wars and discuss the prospects of the sons circumcised that day on their first military expedition, which will perhaps take them to this or that region, where they themselves had made an attack only a short time before. The fathers dream of their sons' future heroic deeds and are happy at the thought of the rich booty with which the budding warriors will augment the personal herds. Suddenly the glances of a few who had just been joking darken and turn toward a distant hut at whose door a military old man is sitting. They jump up and go toward him with quick steps. The angry expression on their faces matches their rough and abruptly uttered invectives and threats, in which one hears the reproaches that the old man has brought up his son to be a weak coward, who during the circumcision betrayed his pain by a twitching of facial muscles and a half-suppressed groan, which they, however, jeringly compare to the cries of pain of a bull being cut. The old man too quickly fled from their reproaches into his hut, and his attackers vent their wrath on two good bottles of honey beer left standing, which they knock over and

[E6] /[illegible]/
[E14] trample underfoot. The one new woman had also wanted /[illegible]/ to
[E2] regale guests with it on that day, but no one came to him whom she
[E3] showed himself to be a [illegible]. While the old people, as long as
[E3] there is something to eat and drink, are only interested in that, the
[E3] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /[illegible] 10 appears
here./

[E4] The circumcised boys, soon after the completed operation, went
into the hut of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
[E11] blood, and meat. During the following period, until complete
[E25] healing, they roam in small bands with bow and arrow -- they do not
use the ordinary bows, but ones only about half as long, made only
for this occasion; the arrows used with them have a wax ball on the
tip -- through steppe /[illegible]/ and forest, in order to shoot small birds,
the skins of which they string by the backs on a cord, which they
place garland-like around forehead and occiput. Between the bird
[E0 1] skins the [illegible] (sing. [illegible]) -- as the newly circumcised men
[E02] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay ([illegible]).
[E4.2] On the first day they go out, they slaughter a white goat-
buck on the steppe. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called [illegible]
[illegible] (of [illegible] = the goat buck, [illegible] means the fire
with whose lowering they make the fire). Every evening after their
excursions they return to the kraal and to the hut of their mothers.

[E1] [illegible]
[E1] As soon as the young girl, who until then has lived in the exterior
kraal in the most unrestricted freedom, concludes from certain

[TEXT CONTINUED ON PAGE E6]

[Warrior Ersal]

/Ilcumu/ A few intrepid warriors also leave the kraal, spear in hand, in order to attack the lion, but as a rule soon return unsuccessful.

If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol oigwenani). The warriors of a few neighboring kraals have already /ol/ promised their participation and have also passed their spokesmen, who then all together go to the ol oyoni with whom rests the war because a settled matter, for the waging of which only the permission of the ol oiboni is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Maasai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Maasai themselves or a competitor to them in the plundering of other tribes -- the ol oyoni or one of the speakers has himself be carried away to secure a majority for the war by calling the ventilating seer ol lenyenu, that is, Ilmelmitia. He always achieves the desired result with this, but in the following days may have his hut only under the protection of influential warriors, in order to avoid assaults on the part of the vexed seer.

If they have finally succeeded, however, the leaders of the majority order an end to further debate by invoking the ol daroni, a god of Ilkiti arch. /Ilkiti, a meadow in Ketumbeni where the first longer of the three centuries was formed in 1897./ Then every warrior of the female concerned has to put on immediately the visible sign of the

/111 cont./

437 designate the first one as an ship on cloth, i.e., war cloth, because the warriors like to dress up in it; the longer they call an ship ban, i.e., colored cloth, and the paint, ai gamcha.

43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits

[458] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

[459] [460] The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay; a need that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing.

[461] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily

[462] enter upon the arrangement, is forced into it by the public opinion, which is often exposed to violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repay-

[463] ment of the debt will be easy for them. It may also happen that the creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her.

[464] Since the creditor, even in this case, [illegible] pays his father-in-law the bride price, the debt remains standing in full and the kinship

[465] bond only makes its repayment more certain. The heir is liable for

/Tilt cons/

There is no special punishment for cowardice in war. The warriors, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

The death penalty is carried out in that a band of armed men attack the delinquent sinner and kill him with spears. For a war /tilt/ review the execution is carried out by warriors, for an arsonist, by those injured by him. Fines are usually paid in bamalinwam. In general their amount is not fixed for the individual offenses. In the one case this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sicknesses or unsuccessful wars naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors. Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating. A degrading punishment exists only for the warriors and consists of cutting off the guilty man's braid-coiffure, as is well known, one of the insignia of his manliness. This punishment is said to be inflicted most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons are recompensed with a goat or a sheep. The mentally ill occupy an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in harness the sick person who is inclined toward misdemeanors or crimes. Frequently, too, if an ill guilty does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

[illegible]

Now cattle feed on grass, and the Masai love grass on this account.

[illegible]

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God.

If a warrior lands a lay on the grazing ground, the lay leave up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign.

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having smeared it with green grass, sprinkles it over them.

Thus, if people move from one kraal to another, they tie grass on to the goods.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle.

Again, if a man who is proceeding on a journey sees a tree which had

MASAI CUSTOMS

[illegible]

One of [illegible] warriors, [illegible] Ilmoran, were [illegible] called to [illegible]: "Ilkiliyo."

Ilkiwet Ilmoran called [illegible] Ilkiyo-[illegible].

One of [illegible] shield, [illegible] [illegible] Ilkiliyo Ilkiyo-[illegible], [illegible]: "Ilkiliyo."

Once, [illegible] Ilmoran.

Ilkiwet [illegible] [illegible] [illegible] [illegible] [illegible].

Ilkiwet [illegible] Ilkiliyo-[illegible] [illegible] Ilkiliyo-[illegible].

One of [illegible] Ilmoran, [illegible] Ilmoran [illegible] [illegible] [illegible] [illegible] [illegible] [illegible].

Ilkiliyo Ilkiwuak [illegible] [illegible] Ilkiwuak, [illegible] Ilmoran.

Ilkiyo [illegible] [illegible] [illegible] [illegible] Ilkiliyo Ilkiliyo [illegible] [illegible] [illegible] Ilkiwuak [illegible].

When the fire is dying down, the warriors standing outside are called, and told that, "It is finished."

They all run towards the spot, trying to get the horn.

The one who arrives first puts his hand in the fire, and, taking out the horn, stretches out his arm. He shows it to the others, and cries out: "I have finished it."

With this the Ilmoran have terminated.

The Amorai, or chief, is shaved on the same day together with the Aigwenani, or Counsellor, who was elected before the feast of circumcision.

Afterwards the warriors may be shaved whenever they wish.

When the warriors have shaved their chief, they slaughter cattle, and wait for four or five months, at the expiration of which they proceed as a unit. This is called The (hill-[illegible]) of the war or The ([illegible]) of the chief.

They wear cotton clothes*, called The war*, on which are sewn the seeds of the chichiki tree*.

They also wear necklaces made of [illegible] of the [illegible] tree*, and called [illegible] and some carry their [illegible] small [illegible] or [illegible] with them.

* Before cotton clothes were introduced, [illegible] skins were together were* worn. [illegible] garments are worn like the Spanish poncho, a slit being made in the middle for the head to pass through.

* A well [illegible] after a long period in also called [illegible]. Any warrior who shields his [illegible] or any member of his [illegible] will not be punished.

* [illegible] [illegible]

* [illegible] [illegible]

[illegible]

[illegible]

[illegible]

[FL-12 Pg]

[illegible] Sometimes circumstances prevent the immediate use of medicine obtained; a drought for instance might make it impossible to collect people for the ceremony. In such a case the shaman might get old and lose his efficiency, or perhaps the object of the cure may be forgotten. If this happens the medicine is ceremonially unloaded or is thrown away. But if an urgent need be made to the medicine man, for he will have some which happened to his medicine and will be angry. If the fare is concealed from him.

[FL-12]

After some years the bags are abandoned, and become sacred repository. In such as most of these are abandoned the regular place in form into separate compartments to conclusion for medicine to worship villages called Dwangali. Messages are sent and the members of all these are called together by means of an alarmed just as the bags did before the endangered ancestors. The number of compartments, called [illegible], to be formed, also the names to be given to them are decided on beforehand by the legend mention. After discussion a division is decided upon. One senior representing each compartment to be formed leaves the community, goes a little way and striking the left of the [illegible] upon with his stick to attract attention, he calls: "Ha ale Z Mwale" or "Ha ale Z Kalunt" "Ha ale Z Mwale, this way the Mwale." "Ha ale Z Kalunt, this way the Kalunt." The members then rise and join the man calling the name of the compartment they wish to join.

Groups of five will go together, to join the same compartment. A compartment may include members of more than one clan though as a rule the majority are of the same clan.

If the members of one clan are too few to form a separate unit they join the unit of another clan. If the clan is a very big one, the members may form two or more separate units. Starting from a unit a member may remove at any time before that unit forms the first member village. Once the essential villages are formed, any member who leaves one unit to join another, needs the bitter consentment of the others. In some cases a fine of cattle is inflicted.

[FL-12 L-37]

The units once formed, the members now approach the Kalunt elders with a view to holding the ceremony of drilling without which the first member village or elongate of here, ngangang may not be erected.

The ordinarily ceremony or the breaking of the fire stick, though is ordinarily held up the ceremonies, is not finally held. It sometimes happens that the medicine man decides that a left-hand ceremonies shall be held, in which case all the boys, the 5 girls planned to make their special cure, will be late to them, for the boys will be circumcised to form one age with the ——— or right-hand ceremonies.

[FL-12]

9.Fatherwake G-5 (1934-1948)-1948 FL12 Mawai FL12
Elsenko

SL1
G24

By the very nature of the Mawai organisation, inter-age disputes are bound to crop up periodically (see Agegrades). In the 'Promotion' dispute between the Elsenko and the Mortlake of the Mawai area in 1938, the respective lagwanak played a considerable part, not only at their own meetings, but in reporting decisions to the District Office.

In the old days it was the duty of the lagwanak to assemble his people for war, and to settle the disputes which inevitably arose when the spoils were divided. But by custom he should not enter into the actual fight, but remain in the rear with a small body-guard. This is probably because the lagwanak were the chiefs which had been elected from the fathers, and its loss could not be risked. It is difficult to say what part the lagwanak play in what they regard as their present-day duty, namely the suppression of raiding. Very probably in respect of lagwanak raiding they have considerable influence. If any area were openly considering a major raid, and the lagwanak agreed to it, many would join in against their better judgment, but if the lagwanak discouraged it, the project might well be dropped.

G24
G23

Generally speaking it is unusual for a lagwanak to interfere in an individual dispute without invitation. It appears to be the privilege of the aggrieved party to select his judges. He knows best, perhaps daughters an ex and calls in neighbouring elders, together with the defendant. If a local lagwanak has a reputation for fairness and justice, he will be called even from a distance, but proceedings are not considered if no lagwanak is present. If the defendant fails to turn up, the assembled elders will view the law discuss the case, and if the claimant's suit is well founded, they will tell him so. He in his turn will go and tell the defendant that the elders have given judgment in his (the claimant's) favour. This may be sufficient to induce the defendant to pay up, but if after as not he will refuse. The claimant may then muster his men, and take his claim by force, in which case the defendant will call a meeting and claim the return of property wrongfully removed from his home. And so the circle starts again. Or the matter may be allowed to drop, to be re-opened after a year or two, possibly on the appearance of some new witness.

G24

To sum up the lagwanak's position in relation to the dispensation of justice, it cannot be said that he holds a formal position in the judicial system. He is sought as a judge by virtue of his qualities and not of his position. Nor is this aspect of his duties (where, even a case means a social gathering, and attendant hospitality. The position is different of course in the case of lagwanak who are at the same time paid 'Native Authority' officials. When the assistance of such people is required, it has become customary to take the case to them in their own home.

The above description is intended to convey some idea of how far the lagwanak do in practice fulfil the duties imposed on them. The duty of helping the poor and oppressed seems to be honoured in the breach. The deputations to the fathers appear to occupy the major portion of the time which a lagwanak devotes to public duty, but even here the time he spends is little more than that spent by the average elder of the area.

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and hunt in the sand, and they make spears out of bulrushes. Little girls make dolls of the fruit of the mango-tree[1]. [97] [98]

Big boys play shoot in the herds of cattle. They choose a spiral animal, and pretend it is a bull. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called Sambwen.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'a-dum. This game is called ko-gulaai. [99] [100]

The warriors also play this game, but they do not care about it much. They have no kraals, and make holes in the earth.

Peace.

If the Masai make peace with other people, whether enemies or other Masai with whom they have fought, the warriors who two in- [101] [102]

Now Mbatian was very aged and he had only one eye. He therefore did not see which of his sons was before him and gave to Lenana the insignia of the medicine-man (the iron club and the medicine horn, the gwori, the stones[1], and the bag), at the same time saying: 'Thou shalt be great amongst thy brothers and amongst all the people.'

Lenana took the medicine-man's insignia and went away.

Sendeyo then went to his father, but was told that his brother had already been there and been given the medicine-man's insignia. When he heard this, he was very angry and said: 'I will not be subject to my brother; I will fight with him till I kill him.'

Mbatian died and was buried near Donyo Erok.

When he was dead, some of the people proclaimed Lenana principal medicine-man, 'for,' they said, 'Mbatian told us that he would give the insignia of his office to whichever of his sons he wished should succeed him.' They therefore remained with Lenana.

But others said: 'We will not acknowledge this man for he is a chest,' and they threw in their lot with Sendeyo[2].

[1] It is possible that these stones, which according to tradition were brought many years ago from the north, may prove to be of some interest. It is asserted that no European has ever been allowed to behold them.

[2] This is the story as told by the Masai. The official version is that Lenana was chosen by the elders of most of the clans and districts on his father's death, but that Sendeyo refused to acknowledge him, and we

Now disease broke out amongst Sendeyo's people, many of whom died, their cattle all perished, and they were defeated by the Germans; whilst those people who remained with Lenana did not fall ill, and they obtained cattle, as Mbatian had predicted.

The two clans waged war for many years, and eventually Sendeyo was beaten. He came in open to beg his brother to allow him to live with him, and peace was concluded between the two parties.

Before Lenana dies he will select whichever of his sons is acquainted with the work of the medicine-men to succeed him.

The principal badge of the medicine-man's office is the iron club[1]. If the medicine-man sends a messenger to tell his people anything, he also sends his club so that it may be known that the message comes from him.

Should a medicine-man strike anybody with the iron club, that

supported by the 'l-oitai (i.e. the Masai of the 'l-oita sub-district, near Kilima Njaro), with whom he lived for many years. The warriors of the two parties frequently met in deadly strife, and raided each other's cattle. In open Sendeyo gave up the hopeless conflict, and agreed to acknowledge his brother as chief. He now lives not far from Naivasha. Lenana himself says that he and his three brothers Sendeyo, Nelleng, and Tolite were examined by their father a short time before the latter's death, and as he possessed a better knowledge of the work of the medicine-men than his brothers, he was given the iron club, &c., and chosen by the elders as Mbatian's successor.

[1] On one occasion the iron club was lost. A messenger was sent by Lenana to the Government authorities at Nairobi, and when crossing the Uganda Railway he was overtaken by a train. He jumped on one side and saved his life, but dropped the club, which was never found again. Its place was taken for some years by a small iron poker, but another club has now been made.

2: Bernardi E, M-4 (no date) 1955 FL12 Mawai FL12

all the cattle: the chief leader of the age-unit; 2. *of siqwanai lel kawa ovuk*, a duly appointed *siqwanai* to whom a black club is presented; 3. *a wart of siqwanai*, 3b. the 'tusk of the *siqwanai*', who is the right-hand man of the *siqwanai* proper (No. 2), to whom chiefly no important decisions are taken.

The election of the *siqwanai lowaqiko pokio* is described by FORBUCKER,[44] in connection with the *Dasin*. We have noted, however, that his statement in this passage is contradictory.[45] Unfortunately, there is no other authority on the matter, but one gets the impression that the *siqwanai lowaqiko pokio* is never elected as such: he emerges from among his fellow *siqwanai* as the best man for the office.

The *siqwanai lel kawa ovuk* is the ordinary leader elected at the *Ziqpikain* by the elders and the *ingoiv*. He is elected from a list of prospective candidates. Second to him is his deputy and assistant, namely, " the tusk of the *siqwanai* " (*wart of siqwanai*).

The *siqwanai* is the leader of the age-unit in his section.

FORBUCKER mentions the case of some subalterns being elected when the number of the age-unit members in one area is too big and the *ingoiv* feel that another leader is needed.

The function of the *siqwanai* is political, military and to some extent judicial, his authority extends to his age-mates of whom he may be said to be " primus inter pares ".[46]

Every *siqwanai*, even the *siqwanai lowaqiko pokio*, is primarily responsible for his territorial section or group of sections or area for which he has been appointed. He has to foster good relations among members of his age-unit, between his unit and other units either in his or in other sections. He is responsible for seeing the elders and the prophet in order to obtain their approval for *Dasin* and any other ceremony or matter connected with his age unit.

In military activity the *siqwanai* was more important in former times than at present. When large sections were organised and different sections threw their lot together, the various *siqwanai* united according to their seniority. This might have been the occasion

[44] FORBUCKER, l. c., p. 34.

[45] In no description of *Dasin* is there mention of an *siqwanai* being elected. The only officers associated with *dasin* are the *mawai ni ziwa*, and the *ziwangua*.

[46] Cf. HAGEN, l. c., p. 44.

[illegible]

[illegible] the Masai, an occurrence which was only brought about by the authority and dignity of Lenana, the chief medicine-man of the time when the European Government was first established, who survived long enough to keep his people in check until such a degree of administration had been effected as to render the despatch of a punitive expedition a measure that could only be resented by the less scientific. Further, the Masai are thoroughly realist here inasmuch they are if ever they come into armed conflict with the Government. Their contacts, inevitable hereafter, would consequently be few and a sufficient degree of punishment could quickly be exacted. For this reason, it is extremely improbable that they will, of their own initiative, or for longer than they consider it to their best interests so to resist a serious disturbance. The escape from punitive expeditions, however, has undoubtedly been a factor in the preservation to their original form of the Masai ideas and traditions.

The army, its organisation and duties.

As will be seen in Chapter II., the Masai who originally consisted of both pastoral and agricultural sections, of which the latter was almost annihilated by the famine and survives at present only in one or two scattered localities, usually in areas reserved for other tribes. A small section of these agriculturalists, the Ngorongoro, is to be found on the north end of Lake Natron, but there is the only trace of them in the present Masai Reserve, and these people are show a tendency to assume the habits and customs of the pastoralists. The problem presented to the administration of the Masai is therefore almost exclusively concerned with the pastoral section. According to the social system of this section, the male are divided into two broad classes, warriors and elders. The first stage continues until circumcision, which may be performed approximately between the ages of thirteen and seventeen. These boys are called "L-ayok." After circumcision, they become warriors, or "Morans," those who have been circumcised or about the same time being said to belong to the same age. The "Morans" reside on the fighting strength of the tribe for periods varying from seven to fourteen years, during which period they constitute a standing army. They are divided into Companies, or "Ilots," which live in separate villages, or "Boma-ton," some of them containing as many as six or seven hundred fighting men. With few exceptions, the "Morans" of the present day perform no work of any kind. In days gone by, they were expected to carry out raids and preserve the social prestige of the tribe, but the introduction of the "Pax Britannica" has deprived them of such employment, and they, having found no alternative occupation, are content to remain in idleness and to live in the state of free love with immature girls which tradition prescribed as the duty of the warrior in the days of tribal warfare.

Social system of the Masai tribe "L-ayok" "Morans"

The place of the military organisation.

The military organisation of the Masai made them, in the past, a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they imposed and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or policy analogous to the Kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military concordality and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been regarded as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.*

[illegible]

[illegible]

[illegible]

The Rooiboom Reserve.

On December 4th, 1918, the Company sent the Boni chiefs to Salisbury. The remarks then made by Lagdaan and his affiliants were empty, and no attempt was made to express their true feelings to the native or to disclose their reasons for taking legal proceedings against the Government. The Governor was of opinion that only a minority of the tribal elders, headed by Lagdaan and Mudhowli, were responsible for the action, ostensibly on behalf of their tribe, and that the personal rivalry and ambition of these two men were therefore contributory causes of their organised opposition to the approved Government policy. There are reasons for the view that the chief grounds for their objection are to the secondary effect of the new country in which they were being moved.

Completion of the work.

On the 8th of April, 1919, the Native Commissioner informed the Secretary of State that the Boni work was completed. With the completion of 3 Dole Labourers' Kraals, all the Lubigan Boni were located in the extended Reserve, which had drifted, after remaining for some months on the Tana River, moved to the Kapedo country and settled there. Reports showed that the lands allotted to the Boni on account of the move had been very small. Disagreement was rife both in Lubigan and the south, from which many hundreds of Boni died, but the missionary officers who were in charge of both areas did all that was possible to preserve the spread of the disease. Young adhered as one or two considered, but only a few succeeded. Two Dole were being used, each with an officer in control, and of the thousands of sheep at these Dole not one was lost. The death rate of the Boni themselves, directly attributable to the move, was probably nil. On the whole, the Boni behaved well throughout, and there was very little friction with settlers. Statistics show that the number of Boni moved between the 24th of June, 1918, and the 31st of March, 1919, was 488 warriors, 1,[illegible] other males, 1,[illegible] women and 2,[illegible] children, a total of [illegible] souls, [illegible] head of cattle and [illegible] sheep were counted. The number of sheep is probably very greatly underestimated. The Governor of State expressed his appreciation of the manner in which the defence and officials had had performed.

Attempt of the Boni chiefs to return.

On the completion of the move the Parke division erected a considerable distribution to cross the Ewaso River, but no steps were taken to induce them to do so and a large number of Boni, including all the Parke Boni, moved into the Ewaso-Boni region in September, 1919.

The Boni did not, on the whole, settle down successfully in their new surroundings and they showed a disposition to make the most of everything. Complaints were numerous that the country was unsuitable for them and for their stock, and every device short of active resistance was employed to obstruct the Administration and to defeat the ends of justice. Information concerning crimes was withheld, and accused witnesses were coached and bribed. Chiefs and other persons everything but helpful and were consistently absent defiant. The "Boni Case" was undoubtedly responsible for much of this feeling, but it is also probable that the natives resented the close administration which had been rendered possible by the amalgamation of the two reserves.

The disconcerted feeling began to disappear some six months after the completion of the move and with, therefore, and with Dole Boni, moved to Kapedo. Two years after their arrival the Boni could be described as contented and happy in spite of their dissatisfied disposition.

Removal of Dorobo Reserve.

Prior to the arrival of the Boni from Lubigan, the country constituting the extended Southern Reserve had been occupied by members of the Lelu, Dorobo, Kakamega and Sirk tribal divisions as well as by about one-quarter of the Parke division. These natives had undertaken to move to Lubigan in 1918, but succeeded in evading the terms of their agreement with the Government and, while admitting that they had no claim to the land, occupied the area and came to regard it as their own. By date Boni the arrival of their tribes from Lubigan was removed, while the latter were displeased at being the last growing grounds already taken up. A considerable amount of friction ensued, such particularly between the Parke and Dorobo divisions.

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

[illegible]

The matter was discussed in Executive Council on the 21st of June, 1921, when Mr. Hemsted, who was present, stated that there could be no doubt that the members of their "Delta" were well aware of the identity of the murderers and were deliberately shielding them from justice. Several members of Kikuyu had recently surrendered to an area the Board Reserve, and an exemplary punishment was considered necessary. A fine of Rs. 10,000 was accordingly imposed on each of the three "Delta," the land then belonging to the district. The Secretary of State concurred the sanction for Hemsted, on the 22nd of August, 1921. Three seventeen hundred head of cattle were seized in August as security for the payment of the fine, but, by October, no portion of the fine had been paid in full. Representations were, therefore, issued that the fine is to be recovered by distress, by the sale of the cattle to realize the amount of the fine imposed. This sale was postponed owing to an outbreak of lung-disease among the herds.

Consideration of sale of cattle postponed.

[illegible] Owing to complaints by the Board of the damage done to their crops by [illegible] and trespassers of several natives whose natives had been killed by their herds, permission was granted in December, 1919, to Chief's Officers finding in the Board Reserve, to shoot them in the Northern Game Reserve, in case which there was good reason to believe that the animals were dangerous.

[illegible] Owing to the constant trespassing by the Kikuyu on the farms in the Kiambu Valley, that district was moved to Dondoro, 1919, and was located in the vicinity of the Ngong Hills, on area which had, for some time past, been practically unused.

[illegible]

In the Kikuyu cattle were highly susceptible to East Coast fever, it became necessary to erect a cattle dip for them. On the advice of officers in Ngong being satisfied for their requirements. The site selected for the new cattle dip was near the Kiambu District, two miles south of Ngong, and the construction was commenced on the 8th of January, 1921.

[illegible] Murder of two Kikuyu near Kiambu.

In March, 1921, a young man and three boys were brutally murdered within a short distance of the Board boundary near Kiambu. The circumstances of the crime pointed strongly to the fact that the Board were here here the offenders, but there was no evidence of their complicity and no punishment was inflicted.

[illegible] Murder of two Kikuyu [illegible] 1921.

In May, 1921, some Kikuyu were attacked while grazing their cattle in their reserve within one mile of the Board boundary, and two boys were killed with spears. A witness, who saw the whole incident, escaped with his life, and subsequently gave evidence to the effect that the murderers were a band of Board. In the judicial proceedings which ensued, the chances of any caution for such a deed on the part of the neighbouring Kikuyu was clearly established, while a caution was present in regard to the position of the Board tribe, as it was by matters necessary to certain circumstances for such people to have blended their spears before attention to the forthcoming Kikuyu witnesses. In general impossible to trace any of the individual criminals, but it was considered that sufficient grounds existed for holding the divisions of the Board tribe, resident in the neighbourhood, responsible for the outrage. The prosecution of a number of members of the same district and in the north were a third time positive in this crime, in one of which had sufficient evidence been obtainable to warrant the imposition of a collective punishment, influenced the Governor in determining the severity of the penalty to be inflicted in this case and, as it appeared that the belief was growing among the Board that they would escape punishment for such deeds if they were performed outside the limits of their own reserve, he determined to make the punishment an exemplary one, and a fine of Rs. 10,000 was imposed under the Collective Punishments Ordinance on each of the Board divisions implicated, namely, the Highland, Kikuyu Kiambu, Mangaria, Kyambu and Kikuyu Lakeside divisions. It was decided that from the proceeds of the fine, blood money should be paid to the relatives of the two Kikuyu victims.

In June, 1921, unrest was reported among the Board of the Public and Lake tribes. On the evening of June 3rd, the Public commenced operations for an attack on the Lake, and the District Commissioner, Fort, who followed

[illegible]

[illegible]

[illegible]

[illegible] along the left bank of the Bele River up stream to the point where it is crossed by the Bukwo-Mbale Motor Road; thence along the road to the division of Bukwo Sorobi to the point of commencement.

The following area, however, is to be excluded from the native reserve, viz., [illegible] at Kibiro:—

Commencing at the point where the Bele River is crossed by the Bukwo-Mbale Motor Road the boundary follows the road to the division of Bukwo Sorobi for about one and one-third miles; thence in an easterly direction for about half a mile; thence in a south-westerly direction to the Bele River; thence along the left bank of the Bele River up stream to the point of commencement.

On the 4th of April, 1919, Kalle was interdicted under the Native Foreign Regulations, 1909, forbidding the Uasin Gishu Boni from proceeding out of the reserve on pain for the rest of their lives except under permit from a District Commissioner or Assistant District Commissioner.

In August, 1919, proposals emanated from the Land Office recommending the removal of the Uasin Gishu Boni from the area reserved for them and showing their capacity upon to European settlement. The argument was that in the event of a railway passing through that part of the country, it would be a pity to allow the small but comfortable tribe to occupy a tract of land so valuable from an agricultural point of view as the Bele River Reserve.

It was suggested that a place might be found for these people in the Southern Boni Reserve.

Action on these proposals was delayed by order of the Governor until various other important questions relating to native reserves had been settled.

After the debate of the Uasin Gishu Boni to the Lumbwa Boni on the grounds during the latter half of the nineteenth century, conditions of the South Uasin Gishu Boni may into Kericho country and settled in the South Kericho area under the South Kericho. From that time they were spared further to the year 1906. In 1907 they were located in all parts of the South Kericho District, many of the South being situated near the Uganda border. Shortly they asked to be allowed to take up separate and contiguous grazing lands in the end of the District but these applications were opposed by the Provincial Commissioner, Mr. Cunningham, who believed that these Boni should remain mixed up with the Kericho.

Their subsequent locale was in South Kericho District in 1911, the District Commissioner allowed these people to have and with their cattle so that the tribe might remain the area of industry and they and the opportunity afforded by this [illegible] in order to make an effort to achieve their desire to be allowed to remain [illegible] under these conditions. Several requests reached him the Uasin Gishu area.

The future policy in dealing with the section of the tribe was referred to the Governor by minute in March, 1918, and he directed that Uasin Gishu Boni should be moved into the South Kericho District and placed under the control of Commissioner Hobbs with a view to inducing them to work with the neighbouring Kericho and to obtain their gradual civilization by means of agricultural occupation.

Dept. Plan was during March and April, 1918, to move Uasin Boni from the Uasin Gishu of the district and they were distributed in the various locations under the personal supervision of the Chief concerned.

F122 Masai F122

619 bend than others. The most aristocratic of these clans are
565 the Ngojik-Masai, Matilian, Lpusik, and Lotuyo. These have
the finest physical development, and are undoubtedly superior
192 to the others in the shape of the head, the less depressed
nose, and thinner lips. Indeed,—but for the prominence of
the cheek-bones, a tendency to a Mongolian shape and up-
ward slant of the eyes, the chocolate-coloured skin, and the
hair with a tendency to become frizzy—they might pass
another as very respectable and commonplace Europeans.
The Ngojik-Masai are the purest breed, and are to be found
chiefly around Kilimanjaro. The most degraded tribe physi-
cally is that which is known to the coast traders by the
name of Wa-kwafi. They seem to have acquired a strain of
negro blood, as will be perceived by an examination of the
photograph of the Masai of Lykipia (p. 208). The higher
development of the Ngojik-Masai is seen in the photo of an
aristocratic woman of Njiri.

634 The country is divided into about ten principal districts,
such as Sigiroi, Njiri, Matombato, Kapti, Dogilani, Lykipia,
Goso' Ngiduo, &c. The various members of the race are
[614] generally designated by their native district. Various clans
may be found occupying the same district, but they usually
keep in distinct bands. Hence they speak of the "El-Masai
[714] Matombato," or El-Masai Kapti. Each district also is fur-
[721] ther distinguished by having special heraldic devices on the
shields of the warriors, painted with wonderful skill and
taste in black, white, red, or yellow colours. Between the
619 various sections of the tribe there is not the slightest cohesion.
620 Were among themselves are of constant occurrence, though
when a state of war is not declared, they are on the most
friendly terms,—their feuds not being of that deep-seated
character which distinguishes those of semi-civilized lands.

194 Of these internal wars none have been so disastrous or so
625 oft-repeated as that between the main mass of the Masai and
the Wa-kwafi (I have use the name for convenience). The
original home of the latter was the large district lying
between Kilimanjaro, Upare, and Pare on the west, and
Teita and U-sambara on the east. This large region is known
to the Masai as Mbarwai. Some fifty years ago the Wa-
kwafi were numerous and strong, able to hold their own
against all comers. About 1830—as far as I can gather—a
series of misfortunes fell upon them. In a great war-raid
against the Wa-ggo to the south they suffered a severe
repulse, and great numbers were slaughtered. The same

[not processed.—Analyst]

179
128

disaster fell upon them shortly after, in a raid against their kinsfolk of Ekungu. The saying that misfortune never comes singly was well exemplified by their case, for savages took up the work of ruin. A chief of Lusaka settled on the land, and left not a blade of grass or other green thing, so that the cattle died in numbers months through starvation.

WAKWAN WARRIOR WITH A SPEAR, PAGE.

While the Wa-kwan were in this unhappy plight, the Masai of the plains to the west fell upon them and more than hip and thigh, and they broke up and scattered themselves upon the most powerful divisions of the tribe. Great numbers having lost their cattle and been reduced to starvation, were compelled to throw in their fortunes with tribes they had hitherto despised. Some found an asylum in the forests of Tavetu and Kalali, and the lower slopes of Mount Mera or

179

FILE Maori FILE
Mr. Ford.

Arawhata we find. Others, driven south, threw in their lot with the Waitaiha, keeping totally more or less distinct from them. These are the hybrid tribes studied lately by the complete administration, Messrs. Lest and Buxton, and of which such interesting accounts have been given in the "Proceedings of the Royal Geographical Society." Another section of the Wakwal was driven westward, and now forms the colonies of Ndamaniu-ai and Ngoromaai. The establishment of these colonies has been an unmitigated blessing to the country. In every case they have become the centres of trade, where man's lives and goods are safe, and indeed there is no more striking feature in the results of the enforced change in the people's mode of life than the remarkable development of peaceable habits and honest ways. This shows what the Maori, from their distinctly higher mental development, are capable of, when cut away from their traditions and brought under conditions more favorable to their advancement towards civilization. As throwing light on the origin of minor races and the blending of two distinct types as at Tewaka, the subject is an interesting study.

The Wakwal were not all scattered thus, however, for a large division of the clan kept together, and contrived to cut their way through Kikuyu and to reach Lykipia, where they settled.

Another section crossed the northbound trough and reached the opposite half of the plateau in Great Ripidon. In both districts they found superb grazing-grounds and plenty of elbow-room, and there for a time they remained quietly, and increased rapidly in numbers. At last their wars began again. Grown bold, they attacked the Maasai about fifteen years ago. The opposing parties formed regular camps, and fought pitched battles with great fury, thousands being killed on both sides. The women stood by and watched, while they incited and urged on the combatants in their terrible hand-to-hand encounters. The Maasai were at first beaten, but, fighting with the stubbornness of despair, they disputed every foot of ground. They were driven from the whole of Naivasha and Kinangop, and their enemies, still victorious, carried the war into Kapiti. Matters now changed, however. The Maasai of the entire region to the south gathered together and came to the assistance of their brethren of Kapiti. Now the tables were turned, and the Wakwal were gradually forced back. The great majority of them

6:Thompson R.-3 (1883-1884)1887
FILE Meet FILE

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of eating their children. Large numbers took refuge at Ejungu and Ejiru, where they had to have themselves to the cattle-ration of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these succeeded in make peace. Not so Infuenia were those of Gnai Ejidim. The Masai swept from south to south, and left not a man in the native land, those who escaped the sword and sword fleeing refuge in Kavirondo.

Such is the history of the bloody feud between the Masai clans. Now they live peacefully together, with hands in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a native of the Masai lay in what is phonetically described as an "intermediate condition." The environment was not of a luxurious or even comfortable nature. He lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on ancient principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a dome-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy season a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, the condition may be better imagined than described. The cattle were strikingly suggestive of the foreyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expansion of nipples as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside

6:Thomson H-3 (883-1884)887
FLLL Maui FLLL

in that they receive no benefit from the cattle of their neighbours. "We get neither meat nor milk," they say; "why, therefore, should we fight for the preservation of your cattle?" With a commendable knowledge of the region, the Maori warriors threaded their way by secret pathways, passing Torrin, and crossing the Dyke. Reaching the coast, they skirted themselves away in the bush, while a few of the bravest went forward to spy out the land, knowing, however, full well that the very sight of one of their number was quite sufficient to stampede a hundred Wa-ngika or Wedge. Such, indeed, told me that on one occasion he actually met some of these spies in the town of Kiwidown at midnight. This is, I think, doubtful, but it shows what they are considered capable of; and there can be no doubt as to the astonishing hardihood of these scouts. Stories are continually heard to their effect, thus rendering the Maori a terror in the land; and it is a fact that they have even reached Dagenham, opposite Sandton.

726

The raid was, of course, successful, and our savage friends returned in great glee. On reaching their homes, however, matters had to be squared up, and the spoil divided. So many head of the captured cattle were set apart as the portion of the lyhen Kiwanian, who had directed them so well, and whose medicine had been so potent. There followed a temporary cease over the apportionment of the remainder. There was no attempt at a fair division. The lower men and hollies of the party, considering only their own desires, took possession of such cattle as pleased them, and dared the rest to come and seize them. The understood rule was that if any warrior could hold his own in single combat against all comers for three days, the cattle were his. And thus began the real fighting of the expedition, revealing sickening sights of savage ferocity. There were more warriors killed over the division of the spoil than in the original capturing of it. To kill a man in this manner was considered all fair and above board. Should feuds were unknown, a man not being considered worth avenging who could not hold his own life safe. If, however, a man was murdered treacherously, the criminal had to pay forty-nine bullocks. Our young warrior, as he was only as yet winning his spurs, had to be content with the honour and glory of the raid, and he had the modesty not to pit himself against older and more formidable fighters. It must be remembered that the cattle thus captured did not remain

Kimoka

G19 a woman of his own clan. But in certain cases groups of sub-clans within the clan may inter-marry (as shown on the chart), but when this occurs certain payments called *engangit* are made.

The true status of the Laitayok is discussed elsewhere (Part. 1) their clans are shown on the chart separate from the main body of Maasai clans.

G23 G19 G28 One of the most important aspects of the clan system lies in the ownership of waters. It appears that in the old days, when a new country was conquered, each woman, as far as he was able, claimed a water on behalf of his clan. Thus all the Naberere and other Central Maasai wells are in clan ownership, as also are the springs round Longonot, Kilaya, etc. The senior member of the clan resident on the water is in control, and, in consultation with the other local clansmen, determines the order of watering.

The main practical application of this knowledge is that in effect the users of the water form a council for the settlement of disputes, under the 'chairmanship' of the owner. For example at Landanai a dispute arose as follows:—

A migrating Maasai may demand, and must be given, water at any well or spring, when actually on the move, drinking in priority to any local cattle. A woman claimed this privilege at Landanai, the elder who was watering his cattle refused, and a fight ensued. The local users of the water combined and decided in the matter in the absence of the 'owner' of the water; when he heard of this he was furious, called another meeting, and the original decision was reversed.

In other words, where waters are in clan ownership, there is a definite system of settling disputes arising from the use thereof; further, as the clansmen frequently meet on the water, other matters — marriage, debt, etc. — come up for settlement before the tribunal.

[99 178] The value of these tribunals should not be overrated, since in many cases waters are not in clan ownership; where water is abundant, as in a river or furrow, the water is communal, (*engare kangatia*); in other areas where recent migration has ousted the original owners, the clan system does not apply.

G19 In certain areas clan feeling manifests itself in other ways. For instance at Loitokitok in Kenya the Matelian and Laitayok have separate meetings, and act independently in certain tribal matters. Near Loitoktok it was found to be of great political advantage when the Laitayok were given a headman of their own. In the course of this survey, only one other clan concentration was discovered, namely the Laitayok at Engamont, where this clan forms two-thirds of the total population. Local government can, therefore, be given a strong clan bias in that area, and in other areas which may be found in future to contain large numbers of a single clan.

G19 G22 The feeling that the clan owns jointly all cattle in possession of the clansmen manifests itself in numerous ways. For instance, members of the Engidong clan are not supposed to contribute to the cattle taken by deputations to the laibon — himself an Engidong — but may add a *oyp* present of their own. When blood-money is paid, it is less when the

[illegible]

[illegible] the bill dates, not only up to the amount of the inherited property. If a warranter is liable for the debt, he must satisfy the creditor if the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warranter does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rule tends to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was selected by the ol mentsi - divine judgment. The blood is put into the awkward position of having to ask in this way only it. As example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the local to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a meal with the legs upward, or he wraps the legs of the meal or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries. The ol mentsi is a divine judgment. A person who does not grant the request expressed in the ol mentsi sign will soon be punished by Nyi ol through death or illness. A person who did not grant the request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men where he entertains with a head of cattle and heavy beer. It is believed that by the observance of this formality and by the movement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

[illegible] Loans or contracts are unknown. The creditor does not have a right to the corpse of the debtor; neither debts nor misdeeds or crimes committed by the deceased have an influence on the nature of his burial.

• [illegible] No distinction is made between murder and manslaughter, but there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. Any brother of the one murdered is first of all entitled to carry out the blood revenge and, further, any man belonging to the family. Blood

/214 cont./

628 revenge goes first against the murderer or, if he has fled and is not
682 available, against his brother or any man of the family of the
[672] murderer. Usually blood revenge is commuted by composition
[593] (wergild), the amount of which the murderer negotiates with the
avenger through a friend. As a rule it consists of 200-300 cattle --
[613] now fewer in many cases -- which the murderer, together with his
[614] people and his fellow lineage and tribal members living in the
vicinity, that is, in the same district, gather together. The avenger
is free to accept or reject the composition. /215/ Blood revenge is
not carried out longer than one or two months after the murder:
composition then takes its place.

[678] The kraal of the ol oiboni is regarded as a place of refuge. If
the murderer has confessed his deed here, blood revenge may no
longer be carried out on him, though he remains obligated for the
payment of the composition. Murder committed on a married man,
a girl, or a woman is never expiated by blood revenge, but by a fine.
Until the payment of the composition or fine the murderer is called
[326] ol oikobani (pl. el oikob). The murder of a blacksmith is unpunished.
[564] On the other hand, if a blacksmith murders or even only negligently
kills a Masai, a band of Masai consisting of married men, warriors,
and boys immediately sets out to kill several blacksmiths.

682 Negligent homicide is expiated only by fines. These are very
613 minor if the perpetrator and the one killed belong to one lineage.
672 If they belong to different lineages of the same tribe, every male
member of the lineage (warrior, married man) and every married
female member of the lineage must pay a cow. Of this livestock
the brother of the one killed receives one half, while the other half
[614] is distributed equally to his fellow lineage members. The fine is
paid and distributed analogously if perpetrator and victim belong
to different tribes. If a woman kills a man through negligence, she
will also be killed in most districts. On the other hand, if a man
has killed a woman, he either remains unpunished or is given a
682 beating by the brother of the woman killed. In a few districts no
634 distinction is made as to whether the perpetrator acted intentionally
184 or negligently, for example, in Loita, where blood revenge is also
[672] only very rarely used.
[628]

/216 cont./

682 A person who attempts suicide must, in some districts, pay a head of cattle to the one who prevented him from carrying out his intention.

685 Kidnapping and sale do not occur. Theft of cattle often leads
[624] to a fight if the thief and the person robbed belong to different kraals
[628] lying far apart and at the same time to different tribes. Among
[614] fellow tribal and kraal members the theft of a head of cattle is atoned for with a fine of up to ten head of cattle, that of a sheep or a goat with the payment of a head of cattle. Anyone who has eaten some of a stolen head of livestock, even if he did not know that it was stolen, must contribute to the payment of the fine. If the stolen head of cattle is found still alive and is returned to the owner, this acts in such a mitigating way that in most cases no punishment at all takes place (2).

> 2. 2nd Moses /Exodus/ 22, 1 and 4: If anyone steals an ox or a sheep and slaughters it or sells it, he shall restore five head of cattle for an ox and four head of small livestock for a sheep. If the one stolen is actually found alive in his hands /the Ger. Haut, "skin," here evidently should be Hand, "hand"/, from ox to donkey to sheep, he shall restore double.

One who acts as accomplice in a theft pays half the fine, while the thief has to raise the other half. One who steals a spear must return it and is given a beating as punishment. If the spear had already been sold before the one robbed discovered the thief, the latter must pay the former a cow, while the spear remains with the present owner. Theft of a shield is punished with the payment of a female goat. One who kills a stranger's livestock without stealing it must provide a replacement.

687 The death penalty is given for treason in war and for deliberate
685 incendiarism. Negligent incendiarism is not punished.

/217 cont./

681 Unknown in penal law are: an aggravated death penalty, for example, death by fire, the principle of an eye for an eye, the view that the perpetrator must pay with the body part with which he has sinned, as well as symbolism, inprisonment, enslavement, a public monetary fine besides the composition, public monetary fines in general, a right of pardon.

683 There still remains to be pointed out one penal decree, which,
519 however, exists only for warriors. That the calling and way of life of the warriors, who are impressed primarily by brute strength and force, are not suitable for preventing rowdiness is obvious and is shown by the frequent, more or less rough brawls among them. Insofar as they seem useful for promoting personal courage, they are not punished; for those connected with bodily injury what was said above applies. For the brawls a stick or a club is used as a weapon and the shield for display. In order to force the opponent to leave himself open, one directs a blow on the left lower arm holding the shield, and, to be sure, not infrequently so violently that it is shattered. Now, if a warrior has already inflicted broken bones on the opponent several times, especially in the manner just described, all the warriors, under the leadership of their ol aigwenani, gather together and announce to him that he will be outlawed if he once more /218/ engages in a brawl; if the one warned violates this prohibition, every warrior of the kraal is justified in killing him.

692 The legal proceedings are the same in civil and penal cases;
561 in both there is only one court for the people of a district. For the warriors this is the speaker (ol aigwenani); for the older married men
[556] an older, respected, i.e., wealthy, man chosen each time by the persons concerned to settle the particular case presented. In con-
[628] troversial matters between warriors of different kraals or, which is usually the same thing, of different areas, the speakers concerned jointly confer and decide, either alone or, if they do not reach a definite decision, with the advice of an ol aunoni, whose voice is then decisive. In disputes among married men of different areas a mixed council of elders decides. The ol oiboni may be regarded as a court of review, who, however, is called upon only in those
692 cases which concern the commonweal. There are civil proceedings

221 #233 Masai was not an unoriented wandering but it was instead a regular seasonal movement <u>from</u> one established area <u>to</u> another, and back. In this sense the movements of the Masai fit the definition of animal migration -- "seasonal and regular passages..." given by Bourlière (1955:203). Each social group apparently had a dry season water supply near which they maintained bomas, as described above. In the wet seasons some of the tribe took the livestock away to take advantage of the more abundant (614) grass, and water in other areas. Since there were well defined areas belonging to or controlled by different clans or sections (Hollis, 1905), the wet season movements of the individual Masai must have been relatively circumscribed. This is the case at present in Western Masailand. Each village has an area where it sends its livestock during the wet season in addition (628) to the water near the base boma. Although these wet season areas may be changed periodically, there is some sort of agreement between different villages regarding division of available grazing, and disputes arise when one village's area is invaded by another.

#233 It appears to us that both in former times and at present the absolute limits to the numbers of livestock a Masai could keep and the pattern of his grazing

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

On the whole, those two authorities stress the linguistic unity of all the Masai.

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[3] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[4] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[5]

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njemps 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168.

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony.

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BRYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made

175 permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was once the home of the Laikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. [131] At the end of 19th century a great cattle plague and, even more, [235] civil wars (the Kapiti versus the Laikipiak and Uasin Gishu) wrought [669] havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Laikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony.[6]

* * *

●631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralised authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organisation.

634 The major territorial section is made up by the area in which
101 the movements of a full tribe usually take place. The existence of
619

[6] SANDFORD, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *K. L. C. E.*, p. 188. One may note that the Uasin [186] Gishu and the Laikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Maasinda. See FOSBROOKE, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Laikipiak and the Uasin Gishu.

In December 1950. I visited the Ndigirri Dorobo at Dol Dol on the Mukogodo Hills, some 50 miles north west of Nanyuki. They claim to have been dependent on the Laikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

648*

Mr. Hemsted's Proposals, February, 1913.

On August 1st, 1912, Mr. R. W. Hemsted was placed in charge of the Masai Reserve. In February, 1913, he submitted a scheme for the administration of the Reserve. This memorandum dealt with the following points:—

STATIONS AND SUB-STATIONS.—The Masai being a tribe of nomadic habits, scattered over a wide area, and concentrated in no particular localities, he considered that effective administration could not be carried on by officers remaining at fixed stations. Constant travelling was necessary, and he advocated the establishment of one central station only, with four or five outposts at each of which a small house could be erected for the visiting officer, with a few huts for his staff. The central station would be situated near the Uaso Nyiro, or on the River Narosura, and would be the headquarters of the officer in charge. In this way, economy and mobility would be combined with efficiency. He suggested the erection of outposts in the Ol-Orokuti near the Anglo-German border, in the Lemek Valley or on the Upper Mara, at Il Melili, at Ngong, and among the Laitokitok, or in the Magadi Railway zone.

STAFF would consist of an officer in charge, a Senior District Commissioner, four Assistant District Commissioners, one Police and one Veterinary officer.

648* 614 [643]

NATIVE ADMINISTRATION.—The tribal system of the Masai rendered direct administration of the clans through their own chiefs particularly suitable. The paramount chief was recognised by the whole tribe, but had tended, under British protection, to deteriorate into a mere figure-head. His duties could be considerably extended. Legalishu, Ngaroya, Masikondi, and Toroni drew pay from the Government, but these men, though intelligent, were conservative and lacking in energy. A few young and energetic men could be included in the ranks of the official headmen, whose numbers should be increased, and Mr. Hemsted suggested the following appointments as sufficient for the needs of the tribe:—

For the Purko clan	.. ..	1 chief and 3 headmen.
"	Kaputiei .. / L'Odo Kilani .. / Matapatu .. / Sighirari ..	1 chief and 3 headmen.
"	Loita .. .. / Salei	1 chief and 1 headman.
"	Kakonyukye	1 chief or headman.
"	Siria	1 chief or headman.
"	Il Dala Lekutuk ..	1 chief or headman.
"	Il Damat	1 chief or headman.
"	Laitokitok	1 chief or headman.

—a total of 15 chiefs and headmen, in addition to the paramount chief, for the supervision of some 37,500 Masai and 13,500 square miles of territory.

[631]

The clan divisions mentioned above were, in fact, geographical divisions, overlapping in certain cases, but Mr. Hemsted proposed the demarcation of each division and the restriction of the clans to the use of the areas allotted to them, which would be termed locations. The Masai were, he said, agreeable to such an arrangement, realising that any trouble which might arise could thus be localised.

648* 651

TAXATION.—While agreeing that the present form of hut tax was unsatisfactory, and inadequate in the case of the Masai, he considered that the difficulties of assessment, the dissatisfaction that might be created, and the probable consequent fluctuations in the revenue were serious objections to the imposition of a cattle tax. He therefore suggested a poll tax of Rs. 15 per head per annum, together with a compulsory subscription of Rs. 15 per head per annum towards a fund for development of, and improvements in the reserve. A revenue of Rs. 90,000 or Rs. 100,000 would thus be assured, and it was difficult to justify a higher tax. In the alternative, he suggested a tax of one to one-and-a-half per cent. on all cattle, irrespective of age or sex.

SECTION VII

THE MASAI EXTRA PROVINCIAL DISTRICT

GENERAL NOTE

MASAILAND constitutes an Extra Provincial District under an Officer in Charge, holding the powers of a Provincial Commissioner, with two District Commissioners, stationed at Kajiado and Narok. The legislation in force in other parts of the Colony applies to the District, but the Outlying District Ordinance, No. 25 of 1902, has also been applied to it, in order to provide a means for controlling immigration from other tribes, a matter to which, as will be subsequently shown, much importance is attached by Masai tribesmen. The area of the District is 15,177 square miles and the population was estimated in 1945 at 53,000.[1] The density is thus 3.4 per square mile. 631 [131] [61]

The Masai District contains in its more northern section a considerable area of land which ranks for agricultural or pastoral purposes with parts of the neighbouring Highlands reserved for European use, though it is to be noted that the rainfall here is more variable than in the central part of the Highlands. The lower parts of the District have a lower and even more variable rainfall, with the result that there is an area, conservatively estimated at a little over 3,000 square miles, which is arid and for all practical purposes waterless.[2] But the value of the large area held by the Masai is not to be judged by its agricultural possibilities, for if the Masai no longer justify the character assigned to them by history as "a virile tribe of predatory nomads," they have at all events maintained their traditional habit of life as a pastoral people, and though there is some cultivation in the Nairage-Ngare area and also near Ngong, this forms only an infinitesimal part of the District, and is for the most part carried out by Kikuyu immigrants on behalf of the local Masai. 311 132 311 563

It is of interest to note that in 1904 the number of cattle was estimated at only 50,000 and the sheep and goats at 600,000. This may have been an underestimate, though it must be realized that the country was still to some extent suffering from the effects of the great rinderpest epidemic of 1890, which had entailed such catastrophic results both on the numbers and the military power of the Masai. By 1914 the estimate had gone up to 600,000 head of cattle and over a million and half sheep and goats.[3] The Masai herds suffered severely in the drought of 1933 and 1934, when their losses of cattle were estimated at over a quarter of a million. But a recent estimate has put the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys. The further increase in the number of cattle is to some extent affected by the existence of fly, which is prevalent on the South Kavirondo boundary, in the extreme west, and also in the middle area, where the Kajiado and Narok Districts join. But if the present estimate of the stock is correct, 233 195 [131] 471 233

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

471 233 the Masai must, considering their small numbers, have a larger potential capital per head than any other tribe in East or Central Africa.

563 167 Practically the whole population may be said to belong to the Masai tribe, though there are a small number of immigrants, numbering rather less than one thousand in all, ninety per cent. being Kikuyu. As shown above, they are for the most part employed by the Masai in the cultivation of the small area of land used for agricultural purposes. There has been a certain amount of intermarriage, but the penetration of the country by the Kikuyu is viewed with distrust by the Masai, and three Alien Committees have lately been established in order to consider measures for the control of alien immigration. An area 631 167 of 47 square miles known locally as Olenguruone) within the Masai Native Land Unit was set aside in 1942 for "squatters" displaced from European farms, most of whom are Kikuyu.[1] But this area will remain politically separate, and it will not affect the position of the Masai as a homogeneous population.

563 Early records refer to the existence in Masailand of a number of Dorobo, of whom Masai tradition speaks as the original inhabitants of the country. When Europeans first came into contact with the Masai, part of the Dorobo were still leading a primitive life in the bush, while part served the Masai as herdsmen and in some cases had small herds of their own. These people have, however, now been absorbed by the Masai and are not readily distinguishable from them.

THE MASAI TRIBE

131 648 Reference will be found in the Chapter on Tanganyika to the circumstances in which the Masai tribe, as it existed in 1890, was cut in two by the international boundary drawn between Kenya and Tanganyika.[2] The area thus left to the Masai in Kenya, now estimated at 15,177 square miles, compares with the area of 18,470 square miles now held by the Tanganyika Masai, with [161] an estimated population of 32,168, and a density of 1.7 per square mile. The proceedings as the result of which the Kenya Masai were in 1911 placed in occupation of their present area have had a prominent place in the controversies connected with the alienation of native lands in the Colony, but it will be sufficient to refer here to the facts as summarized in paragraphs 635 to 674 of 631 648 the Report of the Land Commission of 1933.[3] The Masai lands are now held as a Native Land Unit under the terms of the Native Lands Trust Ordinance 28 of 1938 and the Kenya (Native Areas) Order in Council 1939. There is, however, one fact which differentiates the Masai lands from those occupied by other tribes under the terms of this legislation, or those held by the Tanganyika Masai. Whatever the judicial value of the Agreements made with the Kenya Masai in 1904 and 1911, it is held, in the words used by the Governor of Kenya in 1946, that they "have the validity of a Treaty."[4] If so, the terms of the Order confirming the Agreement of 1911 constitute a moral obligation to the Government to reserve these lands for the exclusive use of the Masai, "so long

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the sanction of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Keyna Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (sirit) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own "Counsellors" (L'Aiganak) chosen from among the Moran. 561 701 [361]

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' ideal of existence seemed to be ease, not unmixed with drunkenness."[1] Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [836] [622]

There is another feature of importance in the social structure. The Masai are divided into Sections (Alosho) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran became Elders at the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 634 [623]

[1] Introduction to The Masai, by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 69 of the Administrative and Political History of the Masai quoted above.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Political Structure

Land Divisions and Authorities

The basic unit of a tribe, *ol-osho*, is the *sirit* or warrior company in its *manyata*, for it represents a district from which a given number of fighting men is drawn; and within this district are also the kraals, *enk-ay*, of the elders. The formation of an *enk-ay* varies. It may contain a group of men who continue as elders the association which they began as warriors in the *manyata*; or it may be a casual grouping which can break up and re-group; and it may contain anything from one to 10 gates. Within the *enk-ay* a rudimentary council seems to exist with one of the elders at its head; it may be no more than the heads of families sitting together and talking. Such as it is, it corresponds to some extent to the Nandi *kokuet*, though its powers and sphere are smaller. But it differs also in an important respect. All the inhabitants of a Nandi parish, including the warriors, come under the jurisdiction of the *kokuet*, whereas in the Masai system the local warrior company has its own authority, the *ol-aiguenani*, who is responsible for the maintenance of both military discipline and "civil law" within his company, and his warriors appear to be independent of the elders' councils. When the age-set has passed out of the warrior stage, the *ol-aiguenani* remains its authority. A number of *sirit*-districts forms the larger unit, *ol-osho*, which English writers call the section or division, the latter being the word used by Sandford. Each of these *il-oshon* has a council of elders which corresponds in some respects to the Nandi *pororiet* council; and, as will be seen from p. 11 above, the *il-oshon* are associated either in loose confederacies with a group-name, like Il-Purko, Il-Damat, and Il-Keek-o-nyokie, which together form the Il-Kinopop, or in distinct "tribes" like Il-Aikipiak, Sambur. The organization of the Sambur seems to have developed on slightly different lines from the rest of the Masai.[30] The *enk-ay* is the homestead of one elder and his wives and children; a number of such homesteads forms a local group with a council of elders, and the total number of local groups is divided among eight sections called *il-mareita* (sing. *ol-marei*), each with a council made up of the leaders of the component group-councils. These *il-mareita* are divided into two large sections with "cattle-names": the Il-oo-rook-kishu, "the black cattle," contains the *il-mareita* of Lo-l-pusin-kishu, Lo-l-ŋuesi, Ol-masila, and Nyaparai; and the Il-oo-ibor-kishu, "the white cattle," contains the sections called Il-oo-rook-kishu, Lo-l-kumai, Lo-l-musii, and Lo-ŋeli.

The most important figure in Masai organization is the *ol-aiguenani*, whose duties in the past were to make the practical arrangements for war, to control the distribution of the loot, to settle disputes when appealed to, to lead his men in war, and to maintain liaison between his company and the laibon on the one hand, and between his company and other companies on the other. But he could resign if displeased with his men, who in turn could dismiss him if not satisfied with his actions. Now that there is no more organized warfare, the duties of the *ol-aiguenani* are mainly confined to the suppression of raiding, in which his effectiveness depends on his character, influence, and disposition; and to settling disputes, in which he is assisted by the elders of the district. Thus a council system with an elected leader has developed out of the older structure in which the *e-manyata* and *enk-ay* were semi-independent bodies. As among the Nandi, it is the personality of the *ol-aiguenani* and the force of public opinion that compel obedience to him. But the whole Masai system is less clear-cut than even that of the Nandi, in spite of the apparent definiteness of the *ol-aiguenani*; though in certain respects he is analogous to the Aba Boku or age-set ruler of the Galla, who is the tribal ruler for a period of eight years.

The Laibon

The laibon, a word anglicized from *ol-oiboni*, pl. *il-oibonok*, and derived from *a-ibon*, "to make 'medicine,'" is a ritual expert who practises divination and rain-making, cures illness, provides charms, and foretells the future. Fosbrooke divides

[30] Information from the Rev. Charles Richmond of the B.C.M.S.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

from each side suckled each other's babies. Peace was then kept till it suited one side to break it. With Bantu tribes the Masai sometimes made mock blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. As among the Nandi, grass is a sign of peace, and a handful of grass constitutes a plea for mercy recognized by the Masai and those whom they count as more or less their equals, the *Il-magati* or "enemies," such as other pastoralists, but not *Il-meek*, the Bantu agricultural tribes. 728 [608 648] [186]

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *in-kishu oo-l-oikop*, "murder cattle," varies, but may be as high as two to three hundred for a man; Hollis says 50 for a boy, and Merker 19 head of cattle and 19 goats and sheep for a woman. Fosbrooke gives the figures as 49 for a circumcised man, and 29 for a woman or uncircumcised man. The Il-Arusa are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is payable. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Maguire gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the bell-oxen, herd-leaders, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kunoni*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "if a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned. 671 [626] 682 681 627 [614 672] 685

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mumai*. In some cases a diviner of the type called *ol-goiatiki* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation. 681 695

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut *pororiet* divisions of the latter. Up to 1918 the chief laibon in Kenya was accepted by the Administration as a paramount 631 648

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

631 chief; but in that year it was recognized that he was in fact no such thing, and the native administration was reconstructed with 14 Native Councils, one for each
648 division (Il-Purko, Il-Damat, etc.), to replace the original council of the *ol-osho*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 46 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled chiefs) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kisonko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

CRAFTS

Housing

342 The Masai hut, *enk-aji*, pl. *ink-ajijik*, is a low structure with a flat or flattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather hides are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tiamus have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *ol-gobor* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

714 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece
[301] of goat-skin fastened to the belt. The distinctive warrior's ornament is the horn arm-clamp called *e-rrap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-toros* is worn by warriors on certain occasions: Hollis says when going on a raid after electing an *ol-aunoni* (*ol-otuno*); John Tombo ole
291 Mbaei, when they go on a raid after making a vow to conquer or die. Elders wear
[556 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys
301] wear a sheepskin.

Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and from knee to ankle. All married women wear flat discs of coiled
301 iron wire, *i-surutia*, hung by straps from the ear-lobes (like the Nandi *tasok*), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

FL12 Masai FL12

Naivasha province and 5,000 between Kikuyu and Kilima-Njaro. 161 175

The expansion of the tribe seems to have come to an end about the middle of the last century. About 1830 they reached their furthest recorded point in the south and were driven back by the Wagogo and Wahehe. The southward movements of the Gallas and Somalis kept them back on the north-east, though as late as the nineties they raided on the Tana river. It would appear that about 1850 the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time an old man can remember according to the native expression—the Masai dwelling on the Uasin-Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin-Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjámusi at the south end of Lake Baringo. Another branch called 'L-Osigella or Segelli took refuge in the Nyando valley but were wiped out by the Nandi and Lumbwa. The Laikipia plateau, which is now uninhabited like the Uasin-Gishu, was not depopulated in 1889, when Peters crossed it and had many fights with the Masai. According to one story, the people of Laikipia raided some other Masai near Nairobi about 1890 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Laikipia took the disease and died. This was considered as a judgment on the Laikipia for raiding their brethren. 175 648 [361] [731]

At present the agricultural Masai are found chiefly near Lake Natron and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Enjámusi, the Burkeneji, and perhaps the people of Samburu in the Rendile country. It would appear that the name Wakwavi, often applied to the agriculturalists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places. The pastoral section classify themselves under five districts, with many subdivisions, namely Kaputiei (Kapite plains), En-aiposha (Naivasha), Kisongo (the district south and west of Kilima-Njaro), Uasin-Gishu, and 'L-Aikipyak. The two last districts, as mentioned, have ceased to exist, and those who 101 [361] 101 634

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-'l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 261 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shilluk there are similar customs of free love.

PART IV

'OROT OO-'L-MAASAE

DIVISIONS OF THE MASAI PEOPLE

619 101 The Masai race is divided into two sections, the one entirely pastoral and the other partially agricultural. The pastoral Masai call themselves Il-Maasae, whilst their brethren are known as 'L-Olkop or Il-Lumbwa.

101 614 634 The Masai are further divided genealogically into clans and families, and geographically into districts and sub-districts, as shown in the following tables:

Clans.	Families[1].
'L-Aiser.	'N-Gidongi (the medicine-man's horns), Il-Parkeneti (the counters?), Il-Loghumae, Il-partimaro.
Il-Meligana.	'L-Aitayok, 'Siria (the designs?), Il-Marumae (the priers), Il-Makuperia (the flesh on the ribs).
Il-Mokesen.	Il-Mokesen-sate, Il-Partalale (the long-sighted ones), Il-Tarteero, Il-Kiporon (the scars?)[2], Il-Tanap-dwara (the lion-killers).
Il-Mtlelyan.	Il-Mtlelyan-sate, Il-Mamasita, Il-Pojos, Il-Kipuytai, Il-Moshino, Il-Masaligia, Il-Mokorere.

Whenever representatives of the four clans take part in a raid, it is usual to refer to the Aiser and Meligana clans as 'L-oodo-kitabu (the blood-red cattle), and the Mokesen and Mtlelyan clans as 'L-oorok-kitabu (the black cattle).

Districts.	Sub-Districts.
101 634 Kaputiei or Kaptiei.	'L-oodo-kilani (the blood-red cloths), Matapato, Il-kik-oonyokye (the red trees[3]), Il-dala-le-kutuk (the fast talkers).
En-aipesha (the lake).	Purko, Kinikop (the burning country?), Il-damat, 'L-oita.
Kisongo.	Moipo (the Pangani River), 'M-baahi (the valleys), 'K-oonyokye (the red soils), Em-baghoi (name of a tree[4] and light yellow), Il-launyi (the mistakes).

[1] Some of these families are again divided into smaller sub-sections.

[2] The members of the family called Il-Kiporon are said to be snake-charmers and rain-makers.

[3] *Rubdia kilimandscharica*, Gilg.

[4] *Terminalia* sp.

[991]

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Districts.	Sub-Districts.
	'Mōwarak (the horns), Lo-'sokonoi (of the cassia tree), Kilepo (watering-place), Ol-osira (the-which-is-decorated), Naiñgazya-ōwarak (which astonishes the beasts of prey), Kipulul (place of many springs), 'N-gujuka (the axe handles), Ol-ñgelata (the plain between two hills), Sighirari, 'L-oita, 'Ng-orighaishi (the small stools), Ol-oitokitok (the bubbling spring), Il-Komōlo, Kitēto, Il-ketu-'m-beine, Salei.
'L-uasin-gishu[1] (the striped cattle).	'L-uasin-gishu oorook (the black striped cattle), 'L-uasin-gishu oonyokyo (the red striped cattle).
'L-Aikipyak[1].	Kimiri (pursuers), Marikōni, Il-meruesh-'n-dana (those who are not thrown down by roots), Sekin, Lo-'l-purkel (of the lowland), Le-naibor (of the white thing), Il-memonyōtu, 'L-alikinani, 'L-ooibor-oiñgok (the white bulls), Loo-dōtwarare, Il-marmar, Lo-'sekelae, 'L-aringon, Eng-añg e-Lema (Lema's kraal), Il-loijo, 'L-aisi.

When the article forms a part of the above names, the vowel is omitted if it follows a word ending in a vowel.

Alo 'N-aipoeha	I go to Naivasha.
Alo 'L-oitokitok	I go to Loitokitok.

The Masai reckon time by 'ages' or periods of about seven and a half years. The following account of the Masai ages is given in the words of the Masai themselves.

Eata 'l-Maasae 'l-porori lenye.	The Masai have what they call ages.
Memurati 'n-gera te-'wāji nēbo. Edung áitaa 'l-porori, metushuli áitaa ol-poror ōbo, amu merisyoro pókin; emurati 'l-kituak, nepali 'l-ooti metubulu.	Children are not all circumcised together: they are divided up into ages, for they are not all alike in point of years. First of all the big ones are circumcised, and the small ones wait until they grow up (i.e. until they reach the age of puberty).
Ore lekwa kituak ooiteraki samurat nēji e-murata e-tatēne,	Now, those who are circumcised first belong to what is called the

[1] Owing to cattle plague, disease, and civil wars, the Masai occupying the Uasin-gishu and Aikipyak districts have practically ceased to exist. The remnants have been scattered and mixed with other tribes.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

'L-omon loo-'l-loñgoi oo 'm-ḃéria oo-'l-muran loo-'l-Maasae.

Itadua, 'l-loñgoi oo-'l-muran mepiki o-sirei ōbo; ōorioro.

Metii ol-poror lemeata o-sirei lenye, meñgar sii 'l-oshon i-sirei, metii 'l-muran lo-'l-osho lemeata o-sirei lenye.

Amu ōjo pe ten etumo 'l-muran oo 'l-mañgati, neiyōlōuni 'njere ol-poror ōje, kake lo-'l-osho ōje.

Etii 'sirei ooñgwan loo-'l-loñgoi, o-sirei onyokye, o o-sirei orok, o o-sirei le-'l-loñgo, o o-sirei loo-'l-kigeluni.

Ore 'm-ḃéria oo-'l-muran mepiki sii o-sirei ōbo; ōorioro.

Ore ten edoli em-ḃere, neiyōlōuni to-'l-ñgorat ol-poror ōje ol-openy, o ol-osho ōje.

Concerning the shields and spears of the Masai warriors.

714 531 634 561

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

In consequence, if the warriors meet an enemy, it is known to what age such a one belongs, and also to what sub-district.

There are four markings for the shields, the red one, the black one, the ornamental one, and the one for bravery [1].

Likewise with the spears, they are not all marked alike.

411 531 634 561

If a spear is found, it can be ascertained by looking at the lower part to what age and also to what sub-district its owner belongs.

'L-omon loo-'m-baa oo-'l-móruak loo-'l-Maasae.

Eata 'l-móruak i-sirei lenye too-'m-baa anaa eata 'l-muran too-'m-ḃéria.

Ten edoli em-bae, neiyōlōuni ol-aji lo-'l-openy o ol-osho lenye.

Concerning the arrows of the Masai elders.

The old men have special marks for their arrows as the warriors have for their spears.

If an arrow is found, the generation and the sub-district to which its owner belongs can be recognized.

[1] The Masai make use of four colours in ornamenting their shields—white, red, black, and grey. White is obtained by mixing water with white clay; red clay mixed with the juice of the *Solanum campylacanthum*, Hochst., produces the red paint; black is procured from the ashes of *Maerua uniflora*, Vahl., or from charred potsherds and gourds; and grey, which is but rarely used, is obtained from cinders.

On the whole, those two authorities stress the linguistic unity of all the Masai. 197

The great majority of the Masai are pastoral, only very few tribes having taken to agriculture. The pastoral tribes follow a semi-nomadic way of life. "They move", writes Lord HAILEY,[3] "with their herds in order to avail themselves of the seasonal variations in water supplies, so that in effect they practise a system of rotational grazing". The same writer,[4] reports "a recent estimate" of Masai herds in Kenya which puts "the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys". For Tanganyika he gives no figure. The above estimates show clearly enough how the attitude of the Masai to cattle is a paramount feature of their life. To own cattle is a privilege obtained through initiation, and large herds are a sign of outstanding social status. Cattle are the main economic interest and investment for the Masai.[5] 233 [221] 181 233 554

The total population of all the Masai may be reckoned at about 122,792. The 1948 census of Kenya's population (see Bibl.) gives for the Samburu an estimate of 20,000, and the following figures: Njemps 3,423, the other Masai 67,201. In 1931 the Tanganyika Masai were reckoned as 32, 168. 162 [161]

* * *

Under the present political situation, the Masai are not administered as a single unit, for they are divided into two sections by the border of Tanganyika Territory and Kenya Colony. 631

In Tanganyika the Masai form one of the four districts of the Territory's Northern Province (the Masai District). In Kenya the main group inhabits the reserve adjoining Tanganyika Masai District, and constitutes the Extra Provincial District (Masai District) of the Colony. The other group (Samburu and Njamusi) is incorporated with the Rift Valley Province (Samburu and Baringo District), and partly with the Northern Frontier Province. The geographical separation of the Samburu from the other Masai is the reason why the Samburu were considered, and are still considered, as a non-Masai tribe. But, as BEYAN remarks, they are true Masai. The splitting of Masailand and the separation of the Masai were made 631 634 [101] 175

175 permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was once the home of the Laikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Laikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Laikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony. [6]

[131] [235] [669]

* * *

631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralised authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organisation.

634 101 619 The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

[6] SANDFORD, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *K. L. C. E.*, p. 188. One may note that the Uasin Gishu and the Laikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Massinda. See FOSBROOKE, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Laikipiak and the Uasin Gishu. [186]

In December 1950. I visited the Ndigirri Dorobo at Dol Dol on the Mukogodo Hills, some 50 miles north west of Nanyuki. They claim to have been dependent on the Laikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

634
101
619

these sections is evidenced at a superficial level by the adoption of a common tribal name. But members of a major section are more closely bound by their social, ceremonial and military relationships based on their common age-system. FOSBROOKE,[7] who did not consider the major territorial section as a unit of Masai territorial organisation, tries to explain as follows the Kisongo major section: "the majority of the Masai in Tanganyika regard themselves as Kissongo, but Kissongo is a very difficult term to define, for it is neither a sub-tribe, nor yet, strictly speaking, a section. The nearest definition is probably "that group of sections which follows the Mondul laibon".[8] See: below *laibon's* relationship to Masai social organisation. The early fieldresearchers, MERKER and HOLLIS, recorded the major territorial sections which they calle 'Provinzen' and 'Districts', respectively. MERKER,[9] gave their number as three: Kisongo, Loita and Ol Bruggo. HOLLIS,[10] counted five: Kaputiei (Kapite plains) En aiposha (Naivasha), Kisongo (south and West Kilimanjaro), Uasin Gishu and 'L-Aikipiak. He noted that the last two had practically ceased to exist. The point is also confirmed by S. L. HINDE.[11] The term *en-gop*, pl. *in-gwapi*, which HOLLIS translates as "the land, the country", seems to apply to these major sections. Their number corresponds, at present, to the linguistic groups we have reported.

The minor territorial section has been made the subject of special analysis by FOSBROOKE. He defines it as "a territorial unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exlusion of other sections. Such a unit is called *ol osho*, pl. *il oishon*. Alone or in groups the sections function as units in war, in allegiance to a particular *laibon*, and in performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers".[12]

The absence of definite geographical limits and the stress on water and grazing rights have been noted. The *laibon's*, or prophet,

[791]

634
791

position in connection with the nature of the major and minor territorial sections is questionable. FOSBROOKE has put into evidence the marginal significance of the *laibon* for Masai social organisation. He has also shown how wrong it is to ascribe to the prophet's institution a political function. The prophet can only obtain a personal political influence which is his, and not of his office. Now, to describe the *laibon's* institution as the point of allegiance of territorial sections' members is tantamount to making the prophet a central political authority which he is certainly not. The important point in the nature of the territorial sections is members' consciousness of their strength and sufficiency as to be entitled to keep tribal ceremonies of their own.[13] In studying the Laitayok minor section FOSBROOKE brings that home: "in some areas they (the Laitayok) have been absorbed by the section amongst whom they resided, and thus eventually they came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal ceremonies of their own". FOSBROOKE insists on the fortuitous origin of the territorial minor sections. The point becomes obvious if the nomadism of the Masai and the abselce of any centralised authority are kept in mind. People remain in a definite place only for as long as they find good grazing and water for their cattle, but they move as soon as these fail, thus breaking up their territorial allegiance.

[221]

634
101
619

The following is a tentative list of minor territorial sections deducted from the literature:

SAMBURU.	1. Pusigishu	4. L'Orogishu	7. Longeli
	2. Masola	5. Doiju	8. Nyabarei
	3. Lukumai	6. Mwesi	9. Loimusi

NJAMUSI. According to DUNDAS,[14] there are only two villages: Njemps Kubwa or Njemps Liabori – down stream; and Njemps Ndogo or Njemps Lekepir – up stream.

KAPITI.	1. Kaputiei or Kapiti	3. Ladokilarsi	6. Purko

The villages, *eng ang*, pl. *ing angite*, is the minimal territorial unit. Villages are distributed within the minor sections. JOHNSTON,[15] had already noted that "they generally range within certain districts". A village is the residence of one or more elders with his or their wives and cattle. A man after his marriage does not live in the same village as his father, unless the latter has become senile and unable to cater for himself. 621 [591] [888]

The internal structure of the village is based on the gatesystem. This consists in a proper arrangement of the house on the sides of the village's gates. The village consists of a large yard enclosed by a thorny fence with gates opening at opposite sides. The house are built on the right and left sides of each gate, every gate with its houses belonging to a single elder. The usual arrangement is as follows: the first house on the gate's right is the dwelling of the owner's first wife; the first house on the left side is that of his second wife; the second house on the right side is that of his third wife; and the same alternating order is followed if marries more wives. The central yard is reserved for cattle. The elder's cattle are allotted to each of his wives according to her rank in the house. Cattle in possession of one side of the gate cannot be inherited by the other side. When inheritance takes place it is with great care that one tries to avoid cattle interchange.[16] The gate system, observes FOSBROOKE,[17] is an ideal, and "a symmetrically arranged gate is seldom found in practice". When people move in search of better grassland, the village is not destroyed, but simply evacuated. During the owner's absence the houses may be occupied by other temporary tenants. At the reverse migration the owner comes back to his old village if this is not irreparably decayed, and it is agreed by custom that any foreigner who might have found shelter in the house must vacate the place to the original owner. 621 361 [428] [166]

Another type of Masai village should be mentioned here. It is 621

621 the temporary residence of unmarried initiates or "warriors", called *ol manyatta*, pl. *i manyat*. According to MERKER,[18] "in every section there is at least one warrior's village which gathers all the [634] warriors of the section". This type of village is closely related to [561] the age-system institution. Therefore it is not a distinct territorial unit, though it shows the inter-relationship of the age-system and territorial organisation for its tenants are gathered from different villages. Indeed this is a further instance of the age-system's integrating power.[19]

* * *

614 Masai society is divided into two moieties, *en daloshi*, pl. *in daloishin*, which seem to provide a basis for clan organisation. Every Masai is found in either of the two moieties. These are named after cattle, one: *orok kiteng* — the black cattle, the other: *oodo mongi* — the red bulls. No exogamic restriction is attached to the moieties, 701 but, they seem to have an influence on military organisation. "Whe- 614 never", writes HOLLIS,[20] "the representatives of the clans take part in a raid", they are organised according to their moiety, and the loot is divided "into two parts, one part for each of these main groups".[21] MERKER, states that the words *orok kiteng* and *oodo mongi* are war-cries shouted by warriors according to their moiety. FOSBROOKE,[22] writes that the *orok kiteng* "are regarded as the right hand of the tribe", and the *oodo mongi* as the "left hand". He adds also that this dual division is typical of the "true Masai".

614 At the present there is no apparent relationship between the 634 moiety and the territorial system, but a few indications suggest that such a relationship existed in the past. Thus, in Laitokitok section, according to FOX[23] there is an equal number of "black

[23] FOX, *l. c.*, p. 457.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

cattle" and "red bulls". HOLLIS,[24] recorded two subdivisions of the Uasin Gishu, "the black striped cattle", and "the red striped cattle", which were, very probably, no other thing than the moieties. 614 634

The Masai *clans*, *ol gilata*, pl. *il gilata* or *en gishomi*, pl. *in gishomi*, are patrilineal and exogamous. Generally, they do not seem to be totemic. However, HOBLEY,[25] and the author of *MS.* No. 48 have recorded the names of a few clan totem. FOX,[26] refers also to the association of snakes with some clans. 614

The true exogamic unit of the Masai seems to be any individed unit, either clan or branch of the clan. A Masai may be adopted into another clan then his original one. The same provision applies even to an alien (Kikuyu, Dorobo). The adoptee, however, never attains the same social status as a full member of the clan. He is free to leave at any time, provided he returns whatever he was presented by his patrons, such as cattle or any other valuable. 614 597 [554]

The relationship between clans and their territorial distribution is not very clear. Analysis would suggest that in the past, clans were territorially separated. At present, there is still a tendency for members of the same clan to live close by to one another and occupy neighbouring encampments. Some sections are almost made up by members of a single clan. Thus, the *Molelian* clan is predominant in Kapiti section; the *Atayok* clan is predominant in Dalalakotok section. Such facts, however, seem to be the exception. Usually clans are represented at a time in many different sections "There is no rule", writes HOBLEY,[27] "governing the distribution of the various *gilat* (clans); often members of as many as three *gilat* will be found in one *moru engang* (elders' village) or a *moran manyat* (warriors' village)". 614 361

Water and cattle are generally clan possession. When new water sources are discovered, they are claimed on behalf of the clan. All clan members who live in the neighbourhood are entitled to make use of them. A foreigner may also be allowed to water his cattle there. If disputes arise, they are settled by the council of clan-members on the spot. As a matter of fact, these water sources are the centre of ordinary social life, as FOSBROOKE[28] writes: "The 614 623 312 423

881 593 of so-and-so. When he replies to his name, he is told to go and make a profit. He answers: " Herds and flocks ". This is repeated four times, and the ceremony is over ".

554 561 881 593 The ceremony is performed only once in a man's life, namely when he " wishes to have his eldest child circumcised ". This particular circumstance shows that by " the passing of the fence " a man obtains a special elderly status which gives him a right to have all his children initiated.

Thus, there is a relationship between the father's social status and the initiation into the age-class of his son's. None of these may be initiated unless the father has reached the proper status. The personal status of the father is reflected on his children. Therefore the " passing of the fence " is not in itself part of the age-system initiation, but a condition which must have been observed before a man is allowed to have his sons initiated.

[565] Other authorities (Fox) have stressed the fact that class membership of a Masai is somehow dictated by the class to which his father belongs. " The passing of the fence " gives a special emphasis to this fact and shows how a Masai's initiation into a class is conditioned by the social status of his father. It shows how the structure of Masai society stands on the balance of status of its members. [41]

881 634 [184] " *The tearing of the ox* " (*Embolosat ol Kiteng*). [42] Though this ceremony is performed by a single section or a group of sections, its performance has a far reaching value which is accepted throughout Masailand. The ceremony is performed by such sections as the Kakonyuke, the Dalalakotok and the Purko (all Kapiti). According to Fox the Kisongo also perform it. But this is denied by Fosbrooke, who qualifies Fox's statement by saying that the Kisongo acknowledge and respect the value of the ceremony performed by the Kakonyuke. [114]

881 561 634 As a matter of fact special importance is attached to the ceremony performed by the Kakonyuke, who in any case must be the first to do it and who have the lead in the matter. All the sections which

[41] The social balance between the father and his son is only an expression of a wider and basic principle, which, in our opinion, is an essential principle of Masai social organisation: the principle of the distribution of power. See Bernardi, *l. c.*, pp. 326 ss.

[42] Fox, *Notes on Marriage Customs among the Masai*, in *J. E. A. U. N. H. S.*, 42-43, 1931, pp. 189 s.; Leaky, *l. c.*, p. 448: *NAD*, 1926, p. 9, n. 11; 1927, p. 15, n. 61; Fosbrooke, *l. c.*, p. 27.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

do not hold their own ceremony come to, or acknowledge, the Kakonyuke ceremony. This is a point to be carefully noted. 881 561

Embolosat is preliminary not only to the circumcision ceremony, but also to any other initiation ceremony. [634]

Three different stages make up the whole of the ceremony, namely the election of the master of ceremonies, the contest, and the sacrifice of a bull followed by the naming of the age-unit.

a) The ceremony is organised by the elders. Their first task is to select a youth qualified to be master of the ceremonies (*ol opolos ol Kiteng*). They also must obtain his father's consent on payment of some helfers.

The transaction is kept secret because the office is not popular with the youths. The elders' nominee is then seized in order that he may not escape, and told what is in store for him.

Not every boy is eligible for the office, but only a member of the *Lugumai* clan. The *ol opolos* must wear the garments and the ear-ornaments (*surutya*) of the elders, whose status he is to be invested with, which seems the reason for the reluctance to accept the office. The status of the *ol opolos* is ceremonial and, according to Fox, he has no function outside the *Embolosat*. [614] [554]

The *ol opolos* has to supply the ceremonial bull, " without blemish, colour black with white breast ", [43] and the ceremony is completed at his village which is enlarged for the occasion. [44]

b) The day of the contest is fixed by the elders. In the morning the bull is taken back to the village, while the elders officially introduce the *ol opolos* to the other candidates. These are told to look up to him because he is their *ol opolos*. Then, the elders order the bull into the village and immediately the boys rush in to get hold of it.

Not all the boys enter the competition, only a few from each attending section. [45]

Members of the Kakonyuke section make a point of being victorious. The contest is stopped by the elders as soon as victory is [634]

[43] In the Annual Report, *NAD*, 1926, p. 9, n. 11, we are told that the " black ox is fed one day on milk and native beer, not being allowed to eat grass ".

[44] According to Leakey a special new village is built.

[45] Leaky writes that " only three candidates for initiation whose fathers took part in a horn-seizing ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their houses while the ceremony takes place ".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

The value of the Kakonyuke *Embolosat* is further ascertained from the analogous value of *Ngeherr* proper of the Kisongo. This is a ceremony perfecting the institution of a class. It is performed by the Kisongo and accepted by all the Masai of Tanganyika and Kenya. *See below.* 881 561 634

The fact that sections other than the Kakonyuke hold their own ceremony may probably be ascribed to the tendency of the section to act as independent group. Their performance, at any rate, has only a limited local value.

Endungore – Engibata. [48] It appears that these two ceremonies, *Endungore* and *Engibata* are closely connected, if not actually one single ceremony. [49] The aim of *Endungore-Engibata* is to define the period for the institution of the age-units and start the initiation course related to such institution. The ceremony is performed by "the right hand and the left hand" age units, i. e. before the institution of each of the two units (WHITEHOUSE, MERKER, FOSBROOKE). 881 561

Some of our authorities stress the fact that the first step towards initiation must be taken by the boys. This is true, but the decision to hold the ceremony rests entirely with the elders, and the aim of the candidates' action on the elders is merely to convince that the time is ripe for the decision.

The elders contacted by the boys are members of the class next but one above the class which is to be formed by the candidates. [50]

It is not the leading elders that the candidates contact first, but others, whose duty, apparently, is to instruct them on the right way and method of approaching the leaders of the elders' class.

Those who are to see the elders are selected with care. They "must be pure bred Masai and must have some knowledge of ceremonial routine" (DAWSON).

It is relevant to note these details. They show how the prospec-

[48] MERKER, *l. c.*, p. 61; BAGGE, *The circumcision ceremony among the Nawasha Masai*, in *J. R. A. I.*, 34, 1904, p. 168; HOLLIS, *l. c.*, p. 196; LEAKEY, 187 ss.; FOX, *Further Notes on the Masai of Kenia Colony*, in *J. R. A. I.*, 16, 1930, pp. 448 ss.; WHITEHOUSE, *l. c.*, pp. 146 ss.; DAWSON, *Notes on (a) Engapata ceremony, (b) milk drinking ceremony, (c) Ol Keremby*, pp. 1 ss.; *NAD*, 1932, p. 22, n. 63; *NAD*, 1937, p. 32, n. 54; FOSBROOKE, *l. c.*, pp. 16 s, 27 s.

[49] According to WHITEHOUSE *engibata* is the name of a dance which starts the *endugore*.

[50] In these and the following paragraphs whenever we refer to the elders" we intend the members of this class, unless otherwise stated.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

Endungore-Engibata is performed both by the 'right-hand' and the 'left-hand' age units. This shows that the ceremony has a direct effect on the institution of the age units as such and not as coefficients of the age-class. The formation of the age unit takes place during an official period in which all its prospective members must be properly initiated. This official period is primarily defined by the performance of *Endungore-Engibata*.

Endungore-Engibata obtains its value by emphasizing the negative aspect of the new initiation period, namely by making it illegal, a new *piron*-relationship having been established, to initiate any one except on the new *piron*-elders' authority, and by closing the association of further members to the previous age-unit. [40]

Engibata, therefore is to be considered as the opening ceremony for the institution of the age unit. After *Engibata* candidates are legally initiated and automatically, i. e. precisely for having been initiated during a definite approved period, become members of that age unit.

From a territorial point of view *Endungore-Engibata* is a sectional ceremony. It is performed by minor territorial sections, but no single performance is acknowledged throughout Masailand, as in the case of *Embolosat*. This makes clear the different value of *Embolosat* and of *Endungore-Engibata*. *Embolosat* opens the period for the institution of the age-class, and therefore its value is accepted

lage) and drank the beer themselves. It is confirmed by numerous reliable elders, that, even if the *laibon* had given his sanction for the circumcision, the *Dareto* elders would have been justified in acting as they did". Note the prophet's limited authority.

[40] This is clearly shown by the case reported by FOSBROOKE and quoted in previous footnote. The *Dwavi* man had failed to inform the *Dareto* elders (the *piron*-elders) of his intention, and very probably his sons' initiation was intended to be performed by the outgone *piron*-elders. If the *Dwati* man had his own way, his sons would have become members of the last age-unit, but illegaly: hence the so strong objection of the *Dareto* elders. The above explanation is confirmed by what MERKER, pp. 70 s., states, namely that a fourth minimal division, *el oirogua*, could be formed by those who were circumcised immediately before the official closing of the period for individual initiation. See below. In *NAD*, 1937, p. 32, n. 54, we read as follows: " the Officer in charge reported that a number of *layok*. (uncircumcised boys) who would have been too old to await the next '*Ngebata*' were circumcised and incorporated in the *Kidoto* age". Probably this is a similar case as that referred to by MERKER. The case shows that there is a definite closing time for every set. After this time every new initiate will be associated with a new set.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 [554] feeling of corporate responsibility and membership, which is a typical feature of the age-class system.

It seems certain that the left-hand unit does not group as many members as the right-hand unit. According to FOSBROOKE, the left-hand unit is formed only by the three last-named minimal divisions; FOX states that it may not occur at all.

The following tables illustrate the situation.

561 634 The first table is reproduced from FOSBROOKE (1939). [28] It refers to the number of age-unit members in four different places of the Kisongo section:

PLACES		Kibaya	Samatwa	Engasumet	Longido	TOTAL
Right-Hand Unit	Kisale	82	123	55	200	460
Left-Hand Unit	Merisho	41	36	11	34	122

The total percentage of members of the left-hand unit as compared with the right-hand unit is therefore 26%.

The second table is taken from FOX (1930). It refers to the names of the age-units:

SECTIONS	Purko	Loita and Siria	Damat
Right-Hand Unit	Il Meruturut	Il Kishangop	Il Meruturut
Left-Hand Unit	Il Kitoip	none	Il Kitoip

SECTIONS	Kaputiei Lodokilani Matapatu	Laitokitok	Kisongo
Right-Hand Unit	Il Aitetti	Il Kobosi	?
Left-Hand Unit	none	none	Il Kerimbut

561 Though the value of these tables is far from being absolute, they show that the right-hand unit is far more relevant than the left-hand unit. Indeed we find that candidates are far more anxious to join the right-hand unit than the left-hand unit. This may be explai-

[28] FOSBROOKE, *l. c.*, p. 32; SCHAPERA, *Some Problems of Anthropological Research in Kenya Colony*, in *I. A. I.*, Memorandum XXIII, 1949, p. 6. This date is taken from SCHAPERA, p. 6. SCHAPERA refers to the paper of FOSBROOKE as a manuscript. This was published in 1948.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [32] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [33] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [34] another test is performed inside the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [35] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [36] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol otuno*) takes place inside the *singira* hut. The elders 56 624

[32] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kaputiei, Ledokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possible, " but by no means all ". SANDFORD, on HENSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapato, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[33] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

[34] LEAKEY, *l. c.*, p. 195.

[35] *NAD*, p. 21.

[36] FOX, *l. c.*, p. 452.

where unarmed natives of the neighbouring tribes, whose duty or pleasure took them into the Masai Reserve, have been wantonly murdered, and the catalogue also includes numerous instances of thefts of stock from neighbouring farms and territories. An investigation of the record of each of these cases will show that in a small number only of incidents has the perpetrator of the crime been brought to book. The probability that the commission of a stock-theft or a murder can be performed by a Masai of the "Moran" class without the knowledge of his associates is so slight that it has been found necessary to accept the principle that the responsibility for the surrender of criminals traced to any particular area rests on all the members of the section inhabiting that area. This system is in vogue throughout all the native districts of the Protectorate and is generally employed with a fair measure of success, but a similar success does not attend its application to the Masai Reserve, and this reserve is, in fact, the area to which the great majority of impositions of fines under the Collective Punishments Ordinance, 1909, have been applied, the refusal of the Masai to assist in tracing the criminal rendering it necessary to utilize the provisions of the Ordinance to effect the punishment of the whole section involved. The blinding of a cows by the murder of an unprotected wanderer or the theft of stock guarded perhaps by children is a survival of the traditions which necessitated the "Moran" to prove their manhood during the period in the standing army or the "L-Ayok" to prove their worth before circumcision. Such acts may not be regarded at the present day as valiant, but it seems that the criminal's associates have not yet come to look on them as reprehensible, and the Masai, on account of their wealth, do not possess the same dread of a collective fine as is felt by certain of the poorer tribes. Under any circumstances, the "Moran" offer no assistance in the tracking down of the criminal and the elders, though professing detective zeal, are powerless to intervene. The attitude of the section involved in such cases is one of surprise and listlessness—they never know anything—and the collective fine which may ensue has not hitherto had the result of discouraging the adoption of such an attitude.

It will generally be found that fines of this nature have been levied on Companies or "Sirits" of different class, and, sometimes, on all the members of a class or division. There is no case on record in which a collective punishment has been imposed on the Masai tribe as a whole. It is therefore necessary to refer shortly to the divisions into which the Masai, who are all of one tribe, are divided by their traditions and customs, and to note also the divisions into which they are divided in practice for the purposes of the administration of the reserve. A description of the traditional divisions of the Masai people is given in Mr. Hollis' Book on the Masai, pp. 280 and 281, but the names which are now in use to denote the divisions of the tribe within the reserve do not exclusively follow either the genealogical or the geographical divisions which are there set out. The Officer-in-Charge of the Masai reserve is endeavouring to confine the members of each division to certain areas set apart for them as locations, and this step will have the effect of reconciling the name given to a division with the locality in which it is found, thus tending to perpetuate a convenient form of nomenclature.

Whatever may have been the original system on which these divisions were formed, it appears that there is a really marked clan feeling between them, and several incidents are recorded which disclose the presence of mutual distrust and strained relationship between the divisions, while intercourse by one division with another is keenly resented. These divisions form the basis of the tribal organization of the Masai as it exists to-day and each division has its own Council of Elders. In the recently constituted "Masai Council," one elder, or more, has been chosen to represent each division and the Council so formed has been accepted as representative of the whole tribe. It will thus be seen that the division system presents an admirable method of dealing with the tribe, closely allied to the location system employed in other Native Reserves in the Protectorate, and has enabled unrest or crime to be so localized as to limit the liability for offences committed to certain definite sections of the Masai. Nevertheless, there is not sufficient difference in the behaviour or customs of the members of each

634

division to necessitate or render advisable a departure on their behalf from the general policy to be pursued in dealing with the tribe as a whole.

634 167 [illegible]

The Tribal Divisions.

The Tribal Divisions of the Masai as they are recognized for the purposes of the administration of the tribe are as follows:—

Purko.

The Purko is the largest and most important division. They number about 14,500 and of these some 10,000 came from Laikipia. There are rather more than 2,000 Moran, who inhabit five large villages. The names of the "Siria" are Il Kimaruni, Il Mariabo, L'Aimer, Il Mejuali and Il Peiyani. In 1916, the Kimaruni Purko Moran decided to divide, and while one part retained the name of Kimaruni, the other adopted the name of "Il Kimaruni." In 1917, the Purko were estimated to possess 272,000 head of cattle, 1,000,000 sheep and 5,200 donkeys. They live in the country known as Ngatiet and in Ol-Orokuti.

Loita.

The population of the Loita Division is about 5,000 of whom some 700 are Moran. This division formerly lived near Ngong but when Sendeu, their medicine-man quarrelled with Lenana, they moved into German territory returning subsequently to the Loita Hills where they now are. The Moran "Siria" are known as Il Paragwo and Il Kimaruni. The Loita are estimated to possess 80,000 head of cattle, 350,000 sheep and 750 donkeys.

L'Otayok.

A small division known as the L'Otayok inhabits the same region as the Loita. They number about 900 of whom 60 are Moran. They are said to possess 1,000 head of cattle, 15,000 sheep and 100 donkeys. A small number of L'Otayok also live in German East Africa.

Salei.

The members of the Salei Division generally inhabit the Loita Country and they recognize Sendeu as their Laibon. Their population is assessed at 900 of whom about 50 are Moran. They possess 6,000 head of cattle, 15,000 sheep and 100 donkeys. A small portion of the Salei have amalgamated with the L'Odo Kilani.

Siria.

The Siria Division also recognizes Sendeu as Laibon. They inhabit the Ol-Orokuti country, number about 1,300 of whom 80 are Moran, and possess 12,000 head of cattle, 35,000 sheep and 50 donkeys.

Il Dumat.

The Il Dumat form one location with Purko by whom they were vanquished some years ago. They are to be found on the Loita Plains and number 900 in all of whom 60 are Moran. They are estimated to possess 8,000 head of cattle, 30,000 sheep and 100 donkeys (see p. 37).

Kakonyokye.

The members of the Kakonyokye Division number 3,000, of whom 250 are Moran, and possess 50,000 head of cattle, 200,000 sheep and 2,000 donkeys. They inhabit the country known as Il Molili and Monro, and the neighbourhood of Mount Suswa. The "Siria" of the Moran are named Il Mejuali, Il Paragwo and Il Kimaruni.

L'Odo Kilani.

The L'Odo Kilani Division inhabits the country near the German border south of Lake Magadi. The population numbers 1,700 of whom 80 are Moran, and they possess 10,000 head of cattle, 30,000 sheep and 150 donkeys. The Moran are divided into two "Siria" both known as Il Kilanani.

Ngurumen.

The Ngurumen form a survival of the old agricultural Masai, but they have discontinued agriculture and now live in the same manner as the pastoralists. They inhabit the country near the mouth of the Uaso Nyiro River. They number 400, of whom 40 are Moran, and possess 1,000 head of cattle, 10,000 sheep and 50 donkeys.

Matapato.

The Matapato number 2,400, possess 40,000 head of cattle, 175,000 sheep and 500 donkeys. Their Moran number 160 and are divided into three "Siria" named Il Kilum, Il Tetimia and Seure, and they inhabit the country between Kajiado and the German border.

634 162 561 231 The Sighirari of the Engidongi inhabit the country in the neighbourhood of the Ngong Hills and En Doinyo Narok. To this division belong the medicine-men of the L'Aiser Gilata of whom Seggi is now the chief. The Division is estimated to possess a population of 1,900 of whom 120 are Muran, 28,000 head of cattle, 80,000 sheep and 300 donkeys. Sighirari of the Engidongi.

[563] [144] The Il Dala Lekutuk came from Laikipia in 1912 and are sometimes known as the Nyeri Masai. They have a considerable admixture of Kikuyu blood in them. They inhabit generally the neighbourhood of En Doinyo Narok and their population is estimated at 700, including some 75 Muran. They are said to possess 6,000 head of cattle, 20,000 sheep and 75 donkeys. Their Muran are divided into two "Sirits" named Il Tareto and Seure. Il Dala Lekutuk.

The Kaputiei are to be found in the neighbourhood of the Nyiri Desert. Their population is estimated at 2,600 including 175 Muran, and their possessions at 30,000 head of cattle, 100,000 sheep and 400 donkeys. Their Muran are divided into four "Sirits" whose names are Il Mokesen, Il Mejuali, Il Kidemmi and Il Sogon. Kaputiei.

The Sighirari of Laitokitok inhabit the country to the north of Kilimanjaro, which country is watered by the Engare Rongai, Kikalelwa, Naromuro, Ol ol Turesh and Rombo streams. The population of this division is estimated to number about 2,800 of whom 180 are Muran. These are divided into two "Sirits," named Il Kituli and Il Mejuali. The live-stock possessions are said to number 60,000 head of cattle, 175,000 sheep and 500 donkeys. Sighirari of Laitokitok.

563 In addition to the Masai, there are considerable numbers of Wandorobo ("Il Torobo") living in the Masai Reserve. Their numbers are probably not less than three or four thousand, and many of them possess considerable herds of cattle, and live the life of ordinary Masai, from whom it is difficult to distinguish them. They may be conveniently divided into two classes, namely, those who live in the bush and forest, and those who possess cattle. The former possess little or no live-stock, and subsist almost entirely upon wild animals and honey, while the latter live in villages and subsist only to a very limited extent on game. Wandorobo.

The former are to be found mainly in the neighbourhood of the Mau, but small parties of them are also met on the Uaso Nyiro, on the Lower Mara River, along the Sotik border, and in the Trans-Mara region. They live on tree rabbits and the smaller game animals, in rough shelters in the forests, or in the huts in some of the Masai villages.

The latter are to be found on the Uaso Nyiro, in the neighbourhood of Ol Alunga and Ol Doinyo Rasha, on the western bank of the Mara River, and in the Siria country. In all, they probably number about 1,000.

564 326 There exists in the reserve, a special tribe of smiths, somewhat similar to the Wandorobo, called Il-Kunono, who make iron weapons, but are treated as inferiors, and are not allowed to marry Masai women. Il-Kunono.

181 105 To recapitulate, the Masai are a listless, conservative, slothful people, inadequately governed by Councils of Elders, who admit themselves to be incompetent to deal with the idle body of warriors whose *raison d'etre* has now disappeared, but who are still sufficiently insubordinate to render ineffective the counsels of their seniors. They have been concentrated in one area, where they have amassed enormous herds of cattle of a poor quality, and countless sheep. No suitable means of employment has as yet been found for the males of the tribe as a whole, though they are experts in the care of stock, and once possessed fighting qualities of a savage nature, which spread the terror of their name far and wide. They have considerable latent powers of organization, alertness and ability, but these are largely discounted owing to their unreliability: they have always realized that it is in their best interests to be loyal to the British Government, and have never been responsible for any serious disturbance, being too proud to work, and rich enough to disregard fines, they are probably the most backward administered native tribe in the East Africa Protectorate. Recapitulation.

(c) Appointments under the Native Tribunal Rules, 1913.

Notice.

Notice is hereby given that His Excellency the Acting Governor has been pleased to recognize the Councils presided over by the following Headmen for the purpose of the Native Tribunal Rules, 1913, and to appoint such Councils to be Collective Headmen under the Native Authority Ordinance, 1912.

Name.	No. of location.	Area of Jurisdiction.	District.	Remarks.
Ole Mosilwudi	No. 3	Narok area of Purko and Damat Location	Narok, Masai Reserve ..	These four Councils may combine to exercise joint jurisdiction over the whole of the Purko and Damat Tribal Divisions.
Ole Galitan	No. 3	Mara area	Mara, Masai Reserve ..	
Ole Ruboko	No. 3	Narowua	Narok, Masai Reserve ..	
Ole Kotaiga	No. 3	Il Molili	Narok, Masai Reserve ..	
Stanga Ole Parsiten	No. 4	Kahonyjkye Location	Narok, Masai Reserve ..	—
Ole Kanku, Senr.	No. 2	Loita, L'Atayok and Salai Location	Narok, Masai Reserve ..	To exercise jurisdiction over the Loita, L'Atayok and Salai Tribal Divisions.
Nabulio Ole Ngoidilia	No. 1	Siria Location	Mara, Masai Reserve ..	—
Ole Mange	No. 7	Sikhiuri (Engidongi) and Ol Dala Lekutuk Location	Ngong, Masai Reserve ..	To exercise jurisdiction over the Ol Dala Lekutuk Tribal Division only.
Engiroya	No. 7	Ditto	Ngong, Masai Reserve ..	These two Councils may combine to exercise joint jurisdiction over the Sikhiuri (Engidongi) Tribal Division.
Saggi Ole Lemana	No. 7	Ditto	Ngong, Masai Reserve ..	
Ole Naipenya	No. 5	L'Odo Kilani and Ingurumen Location	Ngong, Masai Reserve ..	—
Njoroge Ole Karei	No. 8	Kaputiei Location	Ngong, Masai Reserve ..	—
Ol Gedenie	No. 6	Matapato Location	Ngong, Masai Reserve ..	—
Matiabe Ole Kordilio	No. 9	Sikhiuri of L'Atokitok Location	Ngong, Masai Reserve ..	—

Nairobi,
The 18th day of April, 1918.

W. J. MONSON,
Acting Chief Secretary.

THE MASAI PENAL CODE

Some Notes on the Recognised Masai Punishments for Crimes, with Examples of Masai Oaths or Ordeals

121 The following notes relate to those punishments of ancient origin still remembered among the Kisongo [1] Masai. Some of the penalties are habitually inflicted up to the present day. Some, as will be obvious from a perusal of the text, have, of necessity, fallen into disuse. They have been written down from the statements of certain Masai Elders of the *'L-aimer* [2] age, and have received the *imprimatur* of the *'L-oibon* Párit. Párit [3] has asked me to say that he cannot be responsible for the authenticity of what follows, though he has no doubt that it is correct, but being a comparatively young man of the *'Sēure* [4] age, he has not the knowledge of these things that the Elders have.

114 115 [561]

121 The notes are brief and unscientific, and were made, primarily, with the object of adding to our knowledge of Masai custom in the matter of criminal offences in view of the recent formation of Native Courts throughout Tanganyika Territory.

'L-oikop: Murder

682 (*a*) If one Masai kills another, all the cattle of the murderer are taken by the relatives of the deceased. A council is then

[1] Kisongo is the Masai name for the southern Masai areas. It includes almost the entire Tanganyika Masai District as constituted to-day. The principal Masai "Districts" included under the name Kisongo are (for the purposes of this article) Moipo and Kitēto. [634]

[2] Circumcision of 1874, approximately, according to Hollis.

[3] Párit is a brother of Séke and Kimórua, of Kenya. They are all three of the clan of the medicine-men or *'L-oibonok*. Ol-Ōnana (Lenana) was Párit's father, and Párit is Séke's brother by a different mother. Párit came down to Tanganyika in 1923 by his own desire, and at the request of the Tanganyika Masai. He has lived here ever since in the vicinity of Tarosero. (GBE; Kilimanjaro; E; 7 & 8).

[4] Circumcision of 1896, approximately, according to Hollis. I think the date of the ceremony was somewhat later among the Masai of Tanganyika.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

614 breed than others. The most aristocratic of these clans are
565 the Ngajè-Masai, Molilian, Lyserè, and Leteyo. These have the finest physical development, and are undoubtedly superior
142 to the others in the shape of the head, the less depressed nose, and thinner lips. Indeed,—but for the prominence of the cheek-bones, a tendency to a Mongolian shape and upward slant of the eyes, the chocolate-coloured skin, and the hair with a tendency to become frizzy—they might pass muster as very respectable and commonplace Europeans. The Ngajè-Masai are the purest breed, and are to be found chiefly around Kilimanjaro. The most degraded tribe physically is that which is known to the coast traders by the name of Wa-kwafi. They seem to have acquired a strain of negro blood, as will be perceived by an examination of the photograph of the Masai of Lykipia (p. 205).[1] The higher development of the Ngajè-Masai is seen in the photo of an aristocratic woman of Njiri.

● 634 The country is divided into about ten principal districts, such as Sigirari, Njiri, Matumbato, Kaptè, Dogilani, Lykipia, Guas' Ngishu, &c. The various members of the race are
[614] generally designated by their native district. Various clans may be found occupying the same district, but they usually keep in distinct kraals. Hence they speak of the "El-Masai Matumbato," or El-Masai Kaptè. Each district also is fur-
[714] ther distinguished by having special heraldic devices on the
[531] shields of the warriors, painted with wonderful skill and taste in black, white, red, or yellow colours. Between the
619 various sections of the tribe there is not the slightest cohesion.
628 Wars among themselves are of constant occurrence, though when a state of war is not declared, they are on the most friendly terms,—their feuds not being of that deep-seated character which distinguishes those of semi-civilized lands.

174 Of these internal wars none have been so disastrous or so
628 oft-repeated as that between the main mass of the Masai and the Wa-kwafi (I here use the name for convenience). The original home of the latter was the large district lying between Kilimanjaro, Ugono, and Parè on the west, and Teita and U-sambara on the east. This large region is known to the Masai as Mbaravui. Some fifty years ago the Wa-kwafi were numerous and strong, able to hold their own against all comers. About 1830—as far as I can gather—a series of misfortunes fell upon them. In a great war-raid against the Wa-gogo to the south they suffered a severe repulse, and great numbers were slaughtered. The same

[1] [Not processed.—Analyst]

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the sanction of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Keyna Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (sirit) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own "Counsellors" (L'Aiganak) chosen from among the Moran. 561 170 [361]

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' ideal of existence seemed to be ease, not unmixed with drunkenness."[1] Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [836] [622]

There is another feature of importance in the social structure. The Masai are divided into Sections (Alosho) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran became Elders at the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 634 [623]

[1] Introduction to The Masai, by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 69 of the Administrative and Political History of the Masai quoted above.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

634 [623] was further complicated by the fact that at stated intervals, normally about 15 years, power passed from the hands of the representatives of one Age Group in each Section into those of the succeeding Age Group, there being thus an alternation of authority in each Section between the Right Hand and Left Hand Groups.

642 To quote Sir Charles Eliot again, the consequence of the traditional structure of Masai society was that "the centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship. The chiefs arranged the details of any raids which [622] the young men wished to undertake, but their power of compelling them to do anything which they did not wish was very slight." The nearest approach 691 to a central and superior authority was to be found in the Chief Medicine-Man 642 (Laibon), though his authority was based mainly on the discharge of his magical functions.[1] The medicine-men were divided into three grades, of which the first grade was represented by the person of the Laibon, the Chief Medicine-Man of the tribe, and his guidance was held to be of the first importance in any major operation which the tribe might undertake.

THE INTRODUCTION OF THE NATIVE AUTHORITY SYSTEM

175 It is unnecessary to dwell here on the circumstances which for a prolonged 648 period made the Masai a standing menace to the peace of their neighbours. The tribe seems to have reached the height of its power between 1800 and 1850, when it overran Kenya and part of Tanganyika.[2] There were subsequently severe internal dissensions among the Masai, which resulted in two of their five "divisions" being practically destroyed and there was also great mortality as a result of the outbreak of rinderpest and smallpox in the 'eighties of last century. But even though their strength was much reduced, their predatory habits continued to be a matter of grave concern in the early days of the Colony, and seemed in particular to threaten the progress of European settlement. Among the Masai themselves strong feelings were aroused by the measures, taken largely in the interest of European settlers, designed to counteract the propensity of the tribesmen to roam widely in search of fresh grazing grounds, as the result of which they were restricted to a Northern Reserve (Laikipia) and a Southern Reserve, separated from the Northern Reserve by a broad belt of country occupied by European farms. That was the position at the time of the Masai Agreement of 1904, but it subsequently became the policy of the Kenya Government to move the tribesmen in the Northern Reserve into the Southern Reserve, which was to be largely augmented in area for this purpose.[3]

175 In view of the terms of the Agreement of 1904, the assent of the Masai was 648 required for this transfer, and the operation was one of obvious difficulty. In 791 the circumstances it was not unnatural that the Government should have availed itself of the influence exercised by the Chief Medicine-Man, the Laibon Lenana. He had inherited from his father, Mbatian, who died in 1890, a position which commanded general respect, and he himself took a leading position on behalf of the tribe in the discussions which led up to the Agreement of 1904, which he signed as "Chief Laibon." He was subsequently recognized

[1] The word laibon appears to be a Europeanized form of the Masai word Ol'oiboni (A. C. Hollis, The Nandi, 1909, page 49.

[3] The Laikipia Reserve, contained 4,500 square miles. An addition of 6,500 square miles was to be made to the Southern Reserve.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

There are certain units, which may be termed *sub-tribes*, whom the "pure" Masai regard as inferior. By "pure" Masai is meant those who regard themselves as descendants of Maasinda. It is of interest that the word ol *Maasinda* is frequently used in place of ol *Masai* as the singular of il *Masai*. Such socially inferior sub-tribes are the Laikipiak, Siria, Uasingishu, and Kwavi, with the Laitayok as possibly a sub-tribe absorbed by the "pure" Masai. The nineteenth century witnessed the ascendancy of the Masai over the "inferior" sub-tribes, whilst in the fifty years which have elapsed since the Great Famine the rivalries of the sections within the Masai themselves have brought about many changes. 614 565

By *section* is meant a territorial unit of the Masai, the members of which regard themselves as owners of their waters and grazing grounds, to the exclusion of other sections. Such a unit is called ol *osho*, pl. il *oshon*. Alone or in groups the sections function as units in war, in allegiance to a particular Laibon, and in the performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers. 634

The list of sections in Hollis, divided into districts and sub-districts, is too exhaustive to be of practical value, and for this reason the "Administrative History of the Masai" is taken as a basis for the following list. Those sections which live entirely in Kenya are :—Siria (a sub-tribe?), il Damat, il Kakonyuke (see Age Grades), L'Odo Kilani, Nguruman (Lumbwa living north of Lake Natron), il Dala Lekutuk and Kaputiei.

Of more immediate interest in Tanganyika is the Sighirari, apparently a section composed entirely of members of the Engidong clan. The Administrative History refers to Sighirari of Ngong and of Laitokitok. The area between Kilimanjaro and Meru is also known as Sighirari, and is probably the original home of this section. When their lands were alienated by the Germans they returned to Kenya.

The Matapatu are another purely Kenya section of interest to Tanganyika, since it appears that their original grazing grounds included Longido, Kiserian, Engare Naibor, and the numerous small waters to the north thereof. First turned out by the Germans, they again penetrated south at the end of the War, and were again removed by the British, their country being occupied by the Kissongo.

Finally the Laitokitok are of particular interest to us, in that they are closely associated with the Kissongo, and acknowledge the Mondul laibon. This section appears to be composed of Laiser, Laitayok and Molelian clansmen; here as in other areas the Laitayok do not fuse with the other clans, but have independent manyattas, perform separate fertility ceremonies, etc.

A number of sections are divided by the inter-territorial boundary. Of these the Purku alone have no pre-European claim to inhabit Tanganyika. On their eviction from the Naivasha area a portion of this section moved to the area in the Kenya reserve immediately north of Loliondo. By the end of the War they had penetrated as far south as Ngorongoro, whence they were evicted in 1920. All did not, however, return to Kenya; a number settled in the then unadministered area round Loliondo, where

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

634 they were found in 1928 by the Sonjo Patrol, and allowed to stay on in terms of the agreement made with the "Kenya Masai."

The other two sections included in the terms of this agreement, the Loita and Laitayok, were not in fact Kenya Masai at all. For a division of the Loita, called il Ndasagera, had inhabited the highland area round Loliondo, as far south as Lemunyani, since the Masai took possession of the country. The history of this section is bound up with that of Sendeyo, and is recorded below.

Likewise a division of the Laitayok possessed ancestral grazing grounds to the west of the area inhabited by the Loita, which, like those of the latter, were bisected by the inter-territorial boundary.

There are numerous other Masai found in many sections who call themselves Laitayok, and it is difficult to decide whether the name applies
174 to a clan or to a section. From the recorded legend (see Early History)
565 it would appear that they were not amongst the Masai who took part in the exodus, and even to-day a certain stigma attaches to them. When
634 inhabiting the country of another section they usually dwell apart, as for example, amongst the Laitokitok or at Engasumet; Ngongongare on south-east Meru mountain is also regarded as a traditional Laitayok area. Frequently the name il Mingana is used to distinguish the Laitayok from the "pure" Masai.

The probable explanation of their status is that they do in fact belong to a lower stratum; in some areas they have been absorbed by the section amongst whom they resided, and thus eventually came to be regarded as a clan; in other areas they were sufficiently numerous to enable them to retain their own grazing grounds, and to justify their holding tribal
634 ceremonies of their own. An example of the latter is the Loliondo group, who are rightly regarded as forming a separate section; or again the il Dala Lekutuk is reputed to be a section composed entirely of Laitayok.

Another section divided by the border is the Salei or Saleh who now inhabit the area immediately west of the Rift, from the Loita to the Ngorongoro Highlands. They are reputed to have been in the past an important and numerous section, with the true Salei living on the Sanjan Plain (known to the Masai as Salei, the Sanjan is a river) and various sub-sections; the il Merik at ol Donyo Gol, il Bokai on the Oespuku lol Datwa, and il Ngorongoro in the place which their name signifies. Apparently they, together with the Serenget, acknowledged Mako, brother of Mbatian, as Laibon. They are recorded in the "*Administrative History*" as following Sendeyo; their present nominal allegiance to Mondul is probably due to the conscious efforts of the administration to bring all the Loliondo Masai into the Kisongo fold.

The Serenget, as their name implies, live on the plains to the west of Ngorongoro, from Lake Eyasi to Engare Nanyuki. They were dispersed by famine and Loita invasion between 1890 and 1900, and only reassembled during the post-war period. The strength of their allegiance to Mondul is also very doubtful.

The Engaruka are a section who perhaps took their name from having maintained themselves through the famine of 1890 by cultivation at

9:Foxbrooke G-5 (1936-1948) 1948 FL.12 Masai FL.12
Kisonko

Engaruka in the Rift valley. The main body of the section uses the Engaruka stream in the dry season, but Kavinjiro above the Rift Wall should also be included in their area, as forming their reserve of highland grazing. Many of the section are found on the Senjen and Lemutyani, having, it is reported, originally been sent there for veterinary reasons.

The majority of the Masai of Tanganyika regard themselves as Kisongo, but Kisongo is a very difficult term to define, for it is neither a sub-tribe, nor yet, strictly speaking, a section. The nearest definition is probably "that group of sections which follows the Mondul laibon". But there are numerous border line cases, such as those sections defined above whose allegiance to Morgul is doubtful. The Kisongo proper divide themselves into two groups, the Kiteto and the Molio. Each of these groups may be regarded as a section, since they exhibit a certain jealousy one to the other, as was shown by a dispute as to whether Lengijabe should belong to Naberera (Molio) or to Makami (Kiteto); such feeling is not shown between, say, the Longido and Mondul people.

The Kiteto section comprises those who inhabit Kiteto, Talamai, Kibaya, Makami and Simanjiro. Those Masai now resident in the Central Province, (*for the most part with the inception of the Groundnut Scheme they have been returned to Masailand—Ed.*) also belong to this section and take part with their brethren on this side of the border in those tribal matters concerning which the Kiteto section functions as a unit.

The Molio section is an unwieldy unit now in the process of sub-division. It takes its name from the Ruvu (Pangani) river, where the section claims to have originated. When for various reasons the Mondul, Longido and Ngorongoro areas became practically vacant, the Molio proceeded to occupy them, frequently intermingling with the remnants of the original inhabitants. That new sections are in the process of formation amongst the Molio and the remnants they have absorbed is shown by the organisation of the Kisale age, (see Age Grade section). Longido, Naberera or Mondul may soon be as jealous of their individuality as are the Laitokitok, Salet and Engaruka.

That a section is in the first place a fortuitous grouping of individuals may be shown by an analysis of the Longido and Engare Nairor areas, which were made free for settlement by the eviction of the Matapato.

Sectional origins of the Population of Longido and Engare Nairor.

Molio	...	... 134	Sighirari	...	13
Mwesandet	...	... 47	Kiteto	... ...	9
Longuwa	...	... 43	Engaruka	...	7
Ngongongare	...	... 29	Laita	... ...	6
Damat	...	... 23	Sundry	... ...	27

The Mwesandet are the remnants of a scattered section who originally inhabited Moss, Mwesandet and Kisimere, areas now included in the Arusha District. Longuwa is a name for the area round the Engare ol Motonyi furrow. Those who came from Ngongongare are the remains of the Laitayok who lost their land to alienation. The remaining names on the table have already been defined.

The members of this heterogeneous group are, insofar as the more

9:Foxbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

junior ages are concerned, beginning to regard themselves as a unit. Ngorongoro is another area where similar conditions pertain.

C. **Recent History: Famine — civil war — German Policy.**

Again taking up the thread of history, the period 1880 to 1890 is regarded by the Masai as one of prosperity. Mbatian was the laibon at this time; it was he who called up the Moibo Masai to fight the Uasingishu and Laikipiak sub-tribes. But the period was mainly occupied with wars and raids against neighbouring tribes; the devastating effects of such raids, as noted by early explorers, are graphically illustrated by extracts from their writings reproduced in the "Administrative History".

But about 1890 the Masai were visited by the triple misfortune of famine, smallpox and rinderpest. Whole families, together with their stock, were wiped out. In some cases the survivors lived by hunting or agriculture; in others they were adopted into, or carried off into captivity by, neighbouring tribes. The tribe was in fact scattered from Lake Victoria to the Coast. But such was the urge to the nomadic pastoral life that, in the course of the next few years, most of the wanderers returned, and from their earnings or stealings commenced to build up new herds.

During the famine Mbatian died, and the tribe was divided by civil war. For two of Mbatian's sons, Lenana and Sendeyo, were rivals for the position of laibon. The former had a following of Purku and other sections, the latter was backed up by the Loita. After various skirmishes round Nairobi, Sendeyo turned south, and his Loita beat in turn the Laitayok, Salei and Serenget of the Loliondo area, thus finishing up at Ngorongoro. From there they descended to Kisongo, some of the Loita spreading to Longido and Olmuing. At one time Sendeyo himself lived at Lesongoui, but later returned to Ngorongoro. When below the Rift he had numerous skirmishes with the Germans, and also with the Kisongo, supported by the Purku. His final defeat was brought about by a clever flanking movement; the Kisongo, by this time recovering from the effects of the famine, approached Lenana, who agreed to send his Purku from the north, via Loliondo, whilst the Kisongo attacked from the east. Thus both parties would converge on Sendeyo at Ngorongoro. When Sendeyo heard of this, he saw that the struggle was hopeless and fled by night to Lenana to admit defeat. Lenana allowed him to return as laibon to the Loita section.

An important feature of recent history is the policy which the German Government pursued in relation to the Masai. When they first made contact with the tribe, the Masai of Tanganyika, being scattered by the famine, must have been very few in number. The area south of the Moshi—Arusha—Mbugwe road was therefore thought sufficient as a Masai Reserve, and the objective was to keep Mondul, Longido, Ngorongoro and Loliondo areas free for alienation. This meant that the Laitayok and Ndaragora Loita of Loliondo, the Salei and Serenget west of the Rift, the Mwaandet of north Meru and Mondul, the Sighirari of Sanya and the Matapato of Longido, were all debarred from their grazing grounds. During the war, when this policy was relaxed, the various sections began to

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

561 place until the two senior groups move out together into the elders' class. The result of this arrangement is that no group which enters the warrior class as *muratagediengo* ever stays in the warrior class for as long as any *jungienobor* group.

56 62 59 *Manyattas.*—During their time of service in the warrior class the members of each age-group live in special villages built away from the main married men's villages. These villages are territorial, in that all the warriors of a single age-group in a single area live in one such village. Warriors of different age-groups never live in a single *manyatta*, as each *manyatta* is essentially the headquarters of the members of a single age-group in the warrior class in a given area. *Manyattas* are moved about from place to place when fresh grazing is necessary.

361 634

62 561 A *manyatta* consists of a number of huts each one of which is built, and lived in, by the mother (or another married woman relative) of one of the warriors of that *manyatta*. Normally each warrior has his own mother living in the *manyatta* and she is accompanied by her children, especially by some of the man's uninitiated sisters and half-sisters. The elder women are there to do the work of the *manyatta*, such as milking, fuel gathering, water drawing, etc., and in this they are assisted to a certain extent by the girls, but the latter are chiefly in the *manyattas* as companions and lovers for the warriors. No girl can live at a *manyatta* at all unless her brother or half-brother is a member of that *manyatta*, and each warrior living at a *manyatta* is expected to bring two or three of his sisters or half-sisters to live at the *manyatta*, and if possible some of these should be fairly grown up and others quite children who will grow up at the *manyatta*.

462

836 561 *Sex Life.*—During the warrior stage no man may have sexual intercourse with any initiated girl or with married women, but on the other hand, there exists in the *manyattas* a system of sex life which is decidedly interesting. The warriors, whenever they feel like it (which, as my informant pointed out, is "very, very often"), invite one of the girls (sisters of the other men in the *Manyatta*) to sleep with them. This is done by a method and formula which corresponds in some ways to the *umbani* of the Kikuyu peoples, but has certain marked differences.

201 832 971

A group of warriors at any time of the day will stand outside the village and call to any of the girls whom they see about, and when they come they say to them *tasiukiu*, and the girls then each select one of the men, and say "I choose so-and-so," not mentioning the man by his own name but as "the son of so-and-so." By so doing the girl binds herself to go and sleep with the man so chosen that night. It is a point of honour and etiquette that no girl so called upon to choose a man may refuse to do so unless she is (*a*) actually at a menstruation period at the time, or (*b*) has already promised herself to another man for that night, but she may make her choice from any of those men who were in the group that called to her.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

561 634 624 *Siriti.* The age-group of each section forms one or more *siriti* or companies. Each *siriti* has its *Aiguenan*, who performs some of the duties of a captain. The word literally means counsellor. One of the captains is considered to have authority over all the age-group as well as his own *siriti*, and he is called *'Ir-Aiguenan l'ol poror* in contrast to the others who are *'L-aiguenak loo siriti.*

As an example of the *siriti* divisions, the Il Kitoip age-group of the Purko has three *siriti*—Il-Meshuko, 'L-Aitetti and Il-Kanyara.

When the warriors become elders the *Aiguenak* usually retain their authority.

(a) Generation-names common to all the Masai :—

Il Nyangusi. Very few survivors now.
Il Aimer.
Il Tulala.
Il Twati. The present ruling elders and *Ol piron* to the present warriors.
Il Tuwto (?). This is believed to be the new name given to the groups who have most recently become elders. It had not come into general use in Narok District when I left last May. I therefore give below the various age-group names of the warriors of this generation :—

(b) :—

Section.		Purko.	Loita and Siria.	Kakonyuko.	Il Damat.
Il Tuwto.	Right hand	Il Meruturut.	Il Kishangop.	Il Meshuko.	Il Meruturut.
	Left hand ...	Il Kitoip.	None.	I Rayani.	Il Kitoip.
	Right hand	Il Sebesh.	I Rimirim.	?	?

Section.		Kabutei, Loshgilani, Matapato.	Il Dalalgutuk.	Loitokitok.	Kisongo.
Il Tuwto.	Right hand	Il Aitetti.	?	Il Kilumi	?
	Left hand ...	None.	?	None.	Il Keriubot.
	Right hand	?	?	?	?

Some of the names are omitted because they have not yet been given, and others, e.g. the Il Dalalgutuk, because I have not had anything to do with that section for some years.

An *Aiguenan* appears to be chosen in the first instance by the elders, but if he proves unsatisfactory the warriors sometimes exert themselves successfully to get him changed.

561 *Ol Piron.*—The elders of the generation next but one senior to another generation are said to be the *Ol Piron* of that generation. Thus the *'L Aimer* are *Ol Piron* of the Il Twati and the Il Twati are *Ol Piron* of the present warriors, *e.g.* Il Sebesh.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

428 a small legacy of a few cattle to anyone he likes, but the bulk of his property must be inherited according to the above rules.

422 562 *Women's Property.*—As a general rule a woman cannot own cattle herself, but holds them in trust for her husband. I have twice come across exceptions to this :—

(*a*) A woman who had plied the profession of a doctor (*i.e.* native herbalist) and had received cattle in payment.

(*b*) A woman who had amassed wealth outside and independently of the tribe.

Household utensils such as gourds, hides, and donkey saddles belong to the woman of the house.

175 791 648 634 *Laibons* (Masai, *'L-Oibonok*).—Hollis, pp. 324–330, gives the history of the *Laibons* up to the beginning of the present century. I will therefore briefly summarize their more recent history.

Lenana was made paramount chief of the Masai in Kenya Colony by the Government. He died in 1911. Some people thought that his brother Sendeyo had bewitched him, but little credence need be attached to this opinion. He appointed his small son Seggi to succeed him. As Seggi was a minor, Ngaroya, son of Neilian, first cousin to Lenana, was appointed as regent. Between the years 1912 and 1923 it was the Kenya Government's policy to curtail the powers of the *Laibons*. Seggi grew up a weak and lovable person, who has little authority, and is more often drunk than sober. At one time he was deposed from paramount chieftainship for persistent inebriety, but was subsequently re-appointed to be paramount chief of the Kajiado District only.

His brother, Kimurusi, is *Laibon* of the Purko section. He is a weak character, but vainglorious and boastful. He is very untrustworthy owing to his desire to seem more important than his character warrants him to be.

Ngaroya is now a very old man. He is *Laibon* of the Kakonyuki section. Sendeyo is *Laibon* of the Loita section. He was deported to Meru in 1923, it having been alleged that he was implicated in the rising of the Il Kitoip age-group of the Purko at the end of 1922. He was allowed to return to Loita in 1926 and still lives there, much loved and respected.

Whereas in Kenya the power of the *Laibons* has been much reduced since Lenana's death, and councils of elders have been created to try and take their place in the government of the tribe, in Tanganyika Territory the authority of the *Laibon* has been upheld and he is regarded as the paramount chief. I believe that the system has worked well. Until recently their *Laibon* was Parit, a son of Lenana. Parit is now dead, and a minor, whose name escapes me, has succeeded him.

In Pl. XIII, *Fig.* 4, is seen a photograph of Seggi holding in his hand the bronze club of his grandfather, Mbatian, and the iron club of his father, Lenana (*see* Hollis, pp. 329 and 330). Mbatian's bronze club is at present in my possession, but should be returned to one of his descendants at some future date.

FURTHER NOTES ON THE MASAI.

[P. 466-A]

M 174 184 619 [101] [361] /8 cont./
the name El muli. Those who became sedentary, however, are designated by the Masai as El lumbua and also as El kuafi -- probably because they constitute the main part of the old El kuafi. The caravan people, accordingly, call them Wakuafi, while they make no distinction between El muli and Masai and even impose on the former the name of the latter.

M [144] In contrast to the El muli, who have remained pure, the El lumbua of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the somatic features characteristic of the Masai people: in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

D 174 M 174 184 A last group,[1] finally, became hunters, the El asiti. This is the second branch of the Wanderóbo: the third and most recent, the El gasurek, arose from the Masai themselves, in that those impoverished by livestock epidemics were forced to a new means of subsistence.

M • 634 635 [648] Even up to 17 years ago the Masai were the lords of the vast steppes in German and British East Africa, when the European occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kisoñgo Province embraces those steppe regions that lie south of the line, extending east-west, connecting the peaks of Kilimandscharo and Meru. North of this lies the province of Loita, and still farther north, embracing the region of Lake Naiwascha, the province of Ol bruggo. In earlier times a part of Loita called Es sereñget seems /9/ to have temporarily formed a province by itself. Each province (ol oscho 'bo = a province) is divided into districts (eñ gob = the land), and these again into areas. Most of their names are proper names that can not be translated; others are chosen from local peculiarities, for example, springs, brooks, hills, mountains, trees, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kisoñgo-Masai, Loita-Masai, Sereñgeti- or even Kiteto-, Moibo-, Sogonoi-Masai, etc. Earlier travelers often mistakenly took this designation for tribal names. Similarly, the word ol oikob has been misinterpreted,

M [101]

/60 cont./

881 [791] The circumcision of boys is a public affair and is ordered by the ol oiboni. With the issuing of his order, the circumcision years ('l arī omoratyeki 'l aijok) begin, that is, the following four to five /61/ years during which the boys may be circumcised. In all [634] the districts the old men now hold consultations and set a definite day (1)

[613] 1. The circumcision of the boys belonging to the lineage of the El kiborōn always takes place on the 20th day of the Masai month.

for the circumcision of the first division of the boys in question. Similarly, later, in the following years, the circumcision days, usually only one in each year, will be determined for the following divisions of boys. It should be mentioned here, beforehand that all boys circumcised during a series of circumcision years form an age class (ol borōr) and that this age class is given a definite name by the ol oiboni. [561] [791] The circumcision period is ended by the ol oiboni ordering the en gebāta. This is a festival which is celebrated by the first boys in

291 142

Ill. 17. Masai boys. C.G. Schillings phot.

/72 cont./

142
291
411
701

C. G. Schillings, phot.

Ill. 25. Warriors.

561 It is to be inserted here that the girls who have been circumcised in the period from the beginning of a series of circumcision years to the beginning of the next series are counted in the age class in which the boys circumcised within the same period up to the en gebāta festival are reckoned.

/73/ As long as the members of an age class still belong to the warrior standing, those living in each area have their own head, the speaker (ol aigwenani), whom we shall meet again in the warrior
561 kraal. But if those belonging to one ol borōr are all married, they
• 634 are given a head for the entire district, the ol aunoni, whom not only the people of his age class, but also those of all younger age
[791] classes are obliged to obey. It is the business of the ol oiboni to arrange matters so that in each district only one holds this rank. The discussions with regard to his appointment begin even before all the ol borōr members have left the warrior standing. The speakers of the district go to the ol oiboni and put their request before him.

561 /73 cont./
634 After he has counted off the little stones of his oracle game for a
[791] while, he decides that N., the son of M., is to become ol aunoni.
[787] This session is secret, and the speakers also have a duty to keep
its result secret for the time being. A man can only become ol
[554] aunoni who is distinguished by physical beauty, faultless build,
strength, and health. After the speakers have returned home again
to their area, they call together all the ol borõr members there and,
with these, again set out for the ol oiboni. Then a very large hut
(os siñgira otunigi) is built there. When it is finished, the speakers
take a number of warriors into their confidence and tell them who
has been named ol aunoni. Then all gather in the hut, in the center
of which stands a new, neatly carved wooden stool, toward which the
one named is inconspicuously pushed by those who know. As soon
[301] as this has been accomplished, a few of those standing around him
[291] push him down onto the stool, others place a string of blue ring-beads
(ñ gonoñgo) around his neck, tie the spiral ear ornament made of
copper wire (e surudia), such as is worn by old men and women, into
his ear lobes, remove his short, skin-apron (e megiti) of the warrior,
and in its place drape around him the long one of the married (the
ol gela l ol moruak). Finally all those present cheer the new ol
aunoni and cry out tadarawá jo ijõk eñ gischon, that is, remain poor,
[556] bring us luck. The Masai in general maintain that every ol aunoni
has remained poor: if he were to put livestock in his kraal, he would
soon die, his wives would bear him few children, wealth would remain
[431] denied him. But he does not need it, for every man under him is
obliged to give to the ol aunoni visiting him a fat ox and milk.
Hence he is constantly on visiting trips, which explains why he has
neither a large stock of cattle nor numerous progeny. In his kraal
the lord who keeps the women at work is missing, and the latter in
turn indeed have no incentive to work, for, by means of the gifts
that fall to their husband, an excess of foodstuffs always prevails.

[574] After the ol aunoni festival is over, the other ol borõr members
[721] wander back home and celebrate a long meat feast (ol bul), where-
upon they /74/ usually set out on a war expedition, while the ol
aunoni himself goes back to his kraal and remains there.

/74 cont./

561 The principal activity of the ol aunoni consists in keeping the
• 634 people of his district together and protecting them from splitting
578 up, which could be more or less disastrous for the Masai. Occasion for this is furnished by both the constant petty jealousies and friction between the warriors of the various areas, who, for example, not infrequently plan two war expeditions at the same time, instead of concentrating on one, and the short-sighted selfishness of many old men, who are inclined, in the selection of new pasturing places, to think only of the quality of the pasture, instead of also considering whether the warriors are in a position to protect the desired place from hostile attacks. An enemy's success affects not only the one who loses all his property in connection with it, but is a disgrace for the
[681] whole people. In such cases the ol aunoni asserts his authority. To one who does not obey him, the authority of the ol aunoni is, as a
561 rule, made clear by the others by means of a beating. Besides this
634 activity, the ol aunoni, if necessary, acts as an intermediary between
[791] the people of his district and the ol oiboni, and sometimes his de-
[692] cision is requested in legal disputes, but since in this case he is guided very little by legal principles, but rather by political shrewdness, one cannot actually designate him as a judicial presence. The conjecture that the ol aunoni might have something to say in matters pertaining to the cult or might make magic amulets is obvious, but does not prove to be true.

561 We have seen above that every two age classes form an associa-
791 tion. If the members of this association have all been married a long time, the ol oiboni binds them even closer in that he bestows upon the two age classes, each of which -- which is to be said beforehand -- has its own name, a common name. This takes place at
561 the ol ñeher festival. For this all the men of the association gather
791 near the ol oiboni and build a large kraal in the vicinity of his village.
527 Everyone brings honey for beermaking or a head of cattle for the food. The latter is then killed by suffocation, as at the eñ gebāta festival. The festival consists of the consumption of these things, whose climax is formed by the declaration of the ol oiboni that those assembled henceforth belong to one association (ol adji), which only now actually exists and are to bear a common association-name.

/79 cont./

714 which only the brave are entitled to wear, the os serata l el kigeloni.
531 A shield emblem is complete if, in addition to the ornamental band, it also contains the red warrior-emblem.

The ornamental band is the stripe painted in the longitudinal diameter of the shield. Actually es segira is the name of the cowrie shells that, sewed on leather strips, adorn the gourd bottles. The similarity of such an ornamental band with the longitudinal stripe on the surface of the shield explains the Masai word used for this and my translation as ornamental band. The drawing of the ornamental band is unimportant and is often subject to the taste of the moment. Considerable differences exist both between the provinces and within the individual ones.

714 The most important emblem on the shield of the warriors is the
531 red warrior-emblem. Three forms of it are distinguished: the
634 double wedge (Plate 1: Figs. 2, 4, 6, 9, 13, 14, 15, 17) along the
184 ornamental band belongs to Kisoñgo Province, the segments of circles (Plate 1: Figs. 5, 7, 10, 18) on the ornamental band are the emblem for Loita Province, and the peripheral emblem (Plate 1: Figs. 11, 12, 16) shows that the bearer of such a shield belongs to Ol bruggo Province. The warrior emblem is either on both halves of the shield or only on one: the former is the rule in Ol bruggo and Loita, the latter /80/ in Kisongo. Loita and Kisongo, however, show more exceptions. If the red emblem is painted on both halves of the shield, the one half shows the mirror image of the other, so that a symmetrical double emblem results, the center line of which is formed by the ornamental band. According to my explorations, this seems to have been the fashion especially after booty-rich war expeditions: On the other hand, where the red emblem is found on only one side, the other half of the shield shows one or two large, black, bow-shaped emblems
714 (Plate 1: Figs. 2, 3, 5, 13, 15, 17, 18). These are commonly
531 found in Kisoñgo, where they have been customary for as long as the
634 memory of the people extends. They are rarer in Loita /Ill. 29 ap-
184 pears here/ and, to be sure, really only since the death of Mbatyan.
174 Mbatyan resides in Kisongo, and his bodyguard consisted of Kisongo
791 warriors. After his death Zendeo put together a guard made up of Loita warriors and also stayed largely in Loita in order to avoid the

/80 cont./

714 influence of the Moschi military station better. The answer to the
531 question concerning the meaning of the black bows was almost always
• 634 merely that they probably served as ornamentation, since, with the
184 application of the warrior emblem on the one side, the other half
791 of the shield would look unattractively empty, and only a few old men
174 opined that it was originally a lineage emblem of the En gidoñ. This conception seems to me the right one, and it would explain why the emblem /81/ has been commonly used in Kisongo from time immemorial and then also came to Loita after Mbatyan's death.

714 The lineage emblem is almost never found on the shields of
531 today; thus I did not come across it until I had drawn by a number of
613 old men the shield escutcheons carried by them in their youth. The illustrations of Plate 2 1/A show a collection of lineage emblems. We see there that the emblem is sometimes applied on the front of the shield surface, sometimes on the back of the shield. While the
[561] warrior emblems have remained the same for a long time, the lineage emblems were always quite variable, and it seems that each age class made up its own.

1/A. [See p. 608--Analyst]

[Warrior Kraal]

/83 cont./

XI.

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- War: permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 70 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

[342] [513] [423]

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

/214 cont./

628 revenge goes first against the murderer or, if he has fled and is not
682 available, against his brother or any man of the family of the
[672] murderer. Usually blood revenge is commuted by composition
[593] (wergild), the amount of which the murderer negotiates with the
avenger through a friend. As a rule it consists of 200-300 cattle --
[613] now fewer in many cases -- which the murderer, together with his
[614] people and his fellow lineage and tribal members living in the
vicinity, that is, in the same district, gather together. The avenger
is free to accept or reject the composition. /215/ Blood revenge is
not carried out longer than one or two months after the murder;
composition then takes its place.

[578] The kraal of the ol oiboni is regarded as a place of refuge. If
the murderer has confessed his deed here, blood revenge may no
longer be carried out on him, though he remains obligated for the
payment of the composition. Murder committed on a married man,
a girl, or a woman is never expiated by blood revenge, but by a fine.
Until the payment of the composition or fine the murderer is called
[326] ol oikobani (pl. el oikob). The murder of a blacksmith is unpunished.
[564] On the other hand, if a blacksmith murders or even only negligently
kills a Masai, a band of Masai consisting of married men, warriors,
and boys immediately sets out to kill several blacksmiths.

682 Negligent homicide is expiated only by fines. These are very
613 minor if the perpetrator and the one killed belong to one lineage.
672 If they belong to different lineages of the same tribe, every male
member of the lineage (warrior, married man) and every married
female member of the lineage must pay a cow. Of this livestock
the brother of the one killed receives one half, while the other half
[614] is distributed equally to his fellow lineage members. The fine is
paid and distributed analogously if perpetrator and victim belong
to different tribes. If a woman kills a man through negligence, she
will also be killed in most districts. On the other hand, if a man
has killed a woman, he either remains unpunished or is given a
682 beating by the brother of the woman killed. In a few districts no
• 634 distinction is made as to whether the perpetrator acted intentionally
184 or negligently, for example, in Loita, where blood revenge is also
[672] only very rarely used.
[628]

/215 cont./

682 only very rarely used. In these areas the perpetrator, as punishment
634 for the killing or the murder of a man, loses all his property; his
184 livestock, his wives and children pass over to the heir of the deceased. For killing a woman who has not yet given birth to a child, only half of the livestock of the perpetrator will be given to the widower. For the killing of a woman who has children, the perpetrator pays her husband 19 head of cattle and 19 goats or sheep. In this some distinguished as to whether the woman killed had a son or a daughter; in the former case the fine is greater than in the latter one.

683 Bodily injury with a fatal result is regarded as the same as murder,
[682] as is one that results in the loss of a leg. A person who cuts off another's arm (in some districts this applies only to the right arm) or makes it useless pays the injured one a few head of cattle and later, in case the crippled one is killed in battle, also the fine customary as atonement for murder. It is assumed in this case that the cripple was killed only as a consequence of his inability to fight. Serious injury to the head is atoned for with the payment of a cow, an ox, and a sheep, among others only with the payment of a cow; the fracture of an arm or leg, with the payment of one or two head of cattle, likewise the fracture or loss of a finger, with /216/ the exception of the two index fingers (os sogutihoi or ol osokutoni), which, as magic fingers, are "dangerous and evil." The destruction of an eye remains unpunished. One who tears off another's ear lobe pays him a goat or a sheep for it.

672 One who acts as an accomplice in a crime against life and health is punished in the same way as the perpetrator.

684 Rape, abortion, unnatural lewdness, which is said to occur as
[682] sodomy (1),

1. Cf. the remarkably frequent prohibition in 2nd Mo. /Exodus/ 22, 19; 3rd Mo. /Leviticus/ 20, 15; 3rd Mo. /Leviticus/ 18, 23; 5th Mo. /Deuteronomy/ 27, 21.

are not punished.

614 (a) Section: A section is defined by
• 634 Fosbrooke (1948:7) as: "a territorial unit of the Masai, the members of which regard themselves as owners of the waters and grazing grounds, to the exclusion of other sections. Such a unit is called ol osho, pl. il oshon. Alone or in groups the sections function as units in war, in allegiance to a particular Laibon, and in the performance of certain tribal ceremonies; in general they possess a sense of solidarity which expresses itself in regarding members of other sections to a certain extent as strangers."

131 Most of the Masai in Western Masailand
614 in Kenya are of the Purko section. The Loita section
634 live on the Loita Plateau. Three small sections, the Moitanic, Uasin Gishu, and Siria, live above the Siria
[433] Escarpment. The first two are at least partly cultivators. In Tanganyika, the Serenget section occupies the Serengeti Plain (which was named for them), and the Salai section lives in the area between the Serengeti Plain and the Rift, including the Ngorongoro Highlands and the
614 southern Loita Plateau. There are a number of sub-
634 sections and divisions of these main sections. The original section organization has been much altered. Grant (1954) describes in detail these alterations for Tanganyika.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

claim to belong to them live elsewhere. Merker gives as the principal divisions three provinces, Kisongo, Loita, and Olbruggo. This is perhaps not according to Masai traditions, but is not incorrect as a practical description of the present distribution of the tribe. The Loita and Olbruggo, also known as Elburgon and Purko, are both subdivisions of the Naivasha district, of whom the former acquired importance by refusing to accept the present Laibon, Lenana, and following instead his brother Sendeyo. Besides these districts, there are four clans representing genealogical not territorial divisions: Aiser, Meñgana, Mokesen, and Molelyan. The Aiser seem to enjoy a certain primacy. The medicine men all belong to this clan, which is specially connected with Mount Ngong (to the south of Kikuyu), also called Ol-doinyo loo-l-Aiser, the mountain of the Aiser.

According to the social system of the pastoral Masai the male sex is divided into boys, warriors, and elders. The first stage continues until circumcision, which may be performed any time between thirteen and seventeen, or sometimes in the case of poor people not till twenty. Those who are circumcised about the same time (see p. 261 for details) are said to belong to the same age, and are known collectively by a distinctive name, such as 'the White Swords' or 'the Invincibles.' After circumcision the warriors plait their hair, but, except for a small skin hanging over the shoulders, and their arms and ornaments (which are described by Mr. Hollis), go absolutely naked. They subsist entirely on meat, milk, and blood, and in particular may not smoke or touch intoxicants. They do not live with the married people, but in separate kraals with the immature unmarried girls, with whom they are allowed to cohabit freely. Tradition[1] (see p. 117) ascribes this practice to the fear that if girls were kept away from the society of their own warriors, they would let themselves be seduced by the enemy; but the remedy has been worse than the danger it was to avert. The direct physical evil is considerable, and is partly responsible for the diminishing numbers of the race. Besides this, female morality after such a girlhood was naturally low, even when the Masai kept to themselves. Now that they have come into contact with civilization, prostitution and venereal disease have become deplorably frequent. About the age of twenty-seven or thirty, or nowadays when raiding is forbidden somewhat earlier, a warrior marries and settles down. If he

[1] It is said that among the Dinka, Bari, and Shillak there are similar customs of free love.

M 174 184 619 [101] [361]

/8 cont./

the name El muli. Those who became sedentary, however, are designated by the Masai as El lumbua and also as El kuafi -- probably because they constitute the main part of the old El kuafi. The caravan people, accordingly, call them Wakuafi, while they make no distinction between El muli and Masai and even impose on the former the name of the latter.

M [144]

In contrast to the El muli, who have remained pure, the El lumbua of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the somatic features characteristic of the Masai people; in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

D 174 M 174 184

A last group,[1] finally, became hunters, the El asiti. This is the second branch of the Wanderóbo; the third and most recent, the El gasurek, arose from the Masai themselves, in that those impoverished by livestock epidemics were forced to a new means of subsistence.

M 634 635 [648]

Even up to 17 years ago the Masai were the lords of the vast steppes in German and British East Africa, when the European occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kisohgo Province embraces those steppe regions that lie south of the line, extending east-west, connecting the peaks of Kilimandscharo and Meru. North of this lies the province of Loita, and still farther north, embracing the region of Lake Naiwascha, the province of Ol brugge. In earlier times a part of Loita called El serehget seems /9/ to have temporarily formed a province by itself. Each province (ol oscho bo = a province) is divided into districts (eh geb = the land), and these again into areas. Most of their names are proper names that can not be translated; others are chosen from local peculiarities, for example, springs, brooks, hills, mountains, trees, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kisohgo-Masai, Loita-Masai, Serehgeti- or even Kiteto-, Mofbo-, Sogenei-Masai, etc. Earlier travelers often mistakenly took this designation for tribal names. Similarly, the word ol oibob has been misinterpreted.

[For the dynamics of political power, including the mechanics of political leadership and decision making activities in the group, see category 561. The age-set system is the key to the understanding of the political structure and behavior of the pastoral Masai.]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[29] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 671 682 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[30] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[31] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[32] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[33]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 642 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognised as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. In Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that "the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people". This is more or less true also for Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court.[*] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Masai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Government.

The institution of the Masai prophet has been described by FOURNOOKE, p. 13. He distinguishes three types of *laibon*. "First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilised to the advantage of the whole group. Such prac-

[*] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories. Part I — East Africa: Uganda, Kenya, Tanganyika*, London 1950, p. 171, "these Tribunal were not generally recognised by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders". And with regard to the new development he notes, p. 178, that "the practice for referring cases to the arbitration of local headmen or elders persists". He makes a similar comment for Tanganyika on p. 394: "in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 885 [954]

immediate interest are in the main of a private nature, and their share in tribal or public affairs is a minor one. They try to enhance their social status by increasing cattle, marrying other wives, and having their sons initiated.

561 642

The *senior elders* have a full share in political life. It would even be correct to say that this is their privilege, and theirs is the class in power. Their sons are ready for initiation. Therefore it is upon their class that falls the duty of undertaking the institution of a new class by controlling and performing all the proper ceremonies. It is from such duty or privilege that the so called *piron* relationship is derived. It is a mutual relationship by which, on the one hand, the elders pledge themselves to assist the candidates, and be their sponsors, and, on the other hand, the latter revere the elders' authority and follow their advices. Thus the *piron*-elders control the main branch of social and political activity, namely the institution of a new class. And, because the initiates, both junior and senior, constitute the strongest body of the military force even this other branch of political structure, namely military organisation and activity, falls to some extent under the elders' authority. The peculiar nature of Masai society makes it out of place the search for individual political leaders, but if we want to express ourselves with usual terms, we could say that the *piron*-elders are the true political leaders of the Masai.

561 887

The three classes of the *old men* are the classes which have retired. In practice they take no further active part in political life, but are concerned with religious ceremonies in which their presence is greatly considered. Their number is naturally decreasing and the few survivors of the last classes are generally dotards. When possible, these survivors, particularly the former leaders, are consulted when tradition is to be ascertained.

561

Analysis shows that the prerogatives of the age-classes are common and proper to all their members, and it shows also that the number of class-members, after the class is constituted, is so closed as no member is any longer accepted into the class.

Junior elders succeed seniors in political leadership when the institution of a new class is officially opened. The phenomenon takes place through the rhythm of the age-system ceremonies.

In this connection FOSBROOKE,[170] speaks of a handing over ceremony performed by the senior and junior elders. "The mat-

[170] FOSBROOKE, l. c., p. 31.

*648
179

discarded their old formations, adversities of various descriptions have introduced the necessity of undertaking manual labour in portions of each reserve and a succession of punitive expeditions or displays of force, the last of which occurred some ten years ago, has brought home to them a conception of the power of the Government, a realisation which has tended towards a more progressive attitude owing to the diminution which it caused in their minds of the influence held by their medicine-men. No punitive expedition has ever been undertaken against the Masai, an omission which was very largely due to the authority and sagacity of Lemana, the chief medicine-man at the time when the European Government was first encountered, who survived long enough to keep his people in check until such a degree of administration had been effected as to render the despatch of a punitive expedition a measure that would only be resorted to in the last extremity. Further, the Masai now thoroughly realize how vulnerable they are if ever they come into armed conflict with the Government. Their enormous, immobile herds would immediately be lost and a sufficient degree of punishment could quickly be attained. For this reason, it is extremely improbable that they will, of their own initiative, so far forget what they consider to be their best interests as to cause a serious disturbance. The escape from punitive expeditions, however, has undoubtedly been a factor in the perpetuation in their original form of the Masai ideas and traditions.

101
184
578
628

The tribal formation of the Masai.

As will be seen in Chapter II., the Masai tribe originally consisted of both pastoral and agricultural sections, of which the latter was almost annihilated by the former and survives at present only in one or two scattered localities, mainly in areas reserved for other tribes. A small section of these agriculturalists, the Nguruman, is to be found at the north end of Lake Natron, but that is the only trace of them in the present Masai Reserve, and these people now show a tendency to assume the habits and customs of the pastoralists. The problem presented in the administration of the Masai is therefore almost exclusively concerned with the pastoral section. According to the social system of this section, the male sex is divided into boys, warriors and elders. The first stage continues until circumcision, which may be performed approximately between the ages of thirteen and seventeen. These boys are called "L-Ayok." After circumcision, they become warriors, or "Muran," those who have been circumcised at about the same time being said to belong to the same age. The "Muran" remain on the fighting strength of the tribe for periods varying from seven to fourteen years, during which period they constitute a standing army. They are divided into Companies, or "Sirita," which live in separate villages, or "Manyattas," some of these containing as many as six or seven hundred fighting men. With few exceptions, the "Muran" of the present day perform no work of any kind. In days gone by, they were expected to carry out raids and preserve the armed prestige of the tribe, but the introduction of the "Pax Britannica" has deprived them of such employment, and they, having found no alternative occupation, are content to remain in idleness and to live in the state of free love with immature girls which tradition prescribed as the duty of the warrior in the days of tribal warfare.

561

Social system of the pastoral section. "L-Ayok." "Muran."

The effect of the military organization.

This military organization of the Masai made them, in the past, a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the Kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been regarded as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.*

* Sir Charles Eliot, November, 1904, Introduction to "The Masai: Language and Folklore," by A. C. Hollis.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

634 [623] was further complicated by the fact that at stated intervals, normally about 15 years, power passed from the hands of the representatives of one Age Group in each Section into those of the succeeding Age Group, there being thus an alternation of authority in each Section between the Right Hand and Left Hand Groups.

642 To quote Sir Charles Eliot again, the consequence of the traditional structure of Masai society was that "the centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship. The chiefs arranged the details of any raids which [622] the young men wished to undertake, but their power of compelling them to do anything which they did not wish was very slight." The nearest approach 691 to a central and superior authority was to be found in the Chief Medicine-Man 642 (Laibon), though his authority was based mainly on the discharge of his magical functions.[1] The medicine-men were divided into three grades, of which the first grade was represented by the person of the Laibon, the Chief Medicine-Man of the tribe, and his guidance was held to be of the first importance in any major operation which the tribe might undertake.

THE INTRODUCTION OF THE NATIVE AUTHORITY SYSTEM

175 It is unnecessary to dwell here on the circumstances which for a prolonged 648 period made the Masai a standing menace to the peace of their neighbours. The tribe seems to have reached the height of its power between 1800 and 1850, when it overran Kenya and part of Tanganyika.[2] There were subsequently severe internal dissensions among the Masai, which resulted in two of their five "divisions" being practically destroyed and there was also great mortality as a result of the outbreak of rinderpest and smallpox in the 'eighties of last century. But even though their strength was much reduced, their predatory habits continued to be a matter of grave concern in the early days of the Colony, and seemed in particular to threaten the progress of European settlement. Among the Masai themselves strong feelings were aroused by the measures, taken largely in the interest of European settlers, designed to counteract the propensity of the tribesmen to roam widely in search of fresh grazing grounds, as the result of which they were restricted to a Northern Reserve (Laikipia) and a Southern Reserve, separated from the Northern Reserve by a broad belt of country occupied by European farms. That was the position at the time of the Masai Agreement of 1904, but it subsequently became the policy of the Kenya Government to move the tribesmen in the Northern Reserve into the Southern Reserve, which was to be largely augmented in area for this purpose.[3]

175 In view of the terms of the Agreement of 1904, the assent of the Masai was 648 required for this transfer, and the operation was one of obvious difficulty. In 791 the circumstances it was not unnatural that the Government should have availed itself of the influence exercised by the Chief Medicine-Man, the Laibon Lenana. He had inherited from his father, Mbatian, who died in 1890, a position which commanded general respect, and he himself took a leading position on behalf of the tribe in the discussions which led up to the Agreement of 1904, which he signed as "Chief Laibon." He was subsequently recognized

[1] The word laibon appears to be a Europeanized form of the Masai word Ol'aiboni (A. C. Hollis, The Masai, 1905, page 40).
[2] Land Commission Report Vol. II para. 205.
[3] The Laikipia Reserve, contained 4,500 square miles. An addition of 6,500 square miles was to be made to the Southern Reserve.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

561 grades, which has resulted in marking off the whole of the younger men,
701 roughly up to the age of twenty-seven or thirty, as a warrior class (moran) who are not only free from most obligations to work, but are independent in many other respects of tribal discipline. Though therefore authority has rested
623 nominally with the Elders (laigwanak) who have passed the stage of moran,
642 and with the Councils of Elders who formed a regular feature of the Masai
701 tribal usage, these Councils have not in the past nor are they to-day able to
561 enforce decisions which may affect the younger men. It is true that the Elders have recently made decisions, accepted by the moran themselves, which will limit the period of moran-hood and may provide the moran with work on betterment schemes, but it still remains to be seen how far these will be effective in providing a solution for a problem of which the economic is no less serious than the social aspect.

175 Attempts were at one time made in Tanganyika, as also in Kenya, to
791 utilize the Laibon, the spiritual head of the Tanganyika Masai, as Native Authority. But the Masai themselves objected to his occupying this position,
623 and as the result of a Sociological Survey made by H. A. Fosbrooke in 1938, the system was altered. The gazetted Native Authority then became the Masai Council, which in practice consisted of Headmen and Elders, and apparently also of any tribesmen outside the moran age grade who cared to attend. But this Council was in effect only a consultative body, without any practical authority, and since the Headmen were not gazetted as Native Authorities, they had no legal power to issue Orders under Section 8 of the Native Authority Ordinance.

646 A further reorganization has now been carried out. Each area now has its own Local Council, with locally elected representatives of age grades and cans, and these Councils have been gazetted as Subordinate Native Authorities. Representatives from each Local Council, differing in numbers in accordance with the size and population of the area involved, compose the Masai Council, which is the Superior Native Authority for the whole Masai District, excluding Sonjo. The Council is now limited to these representatives: there is, however, provision for the addition of moran or nominated members if and when advisable. The Local Councils have begun to exercise their Order making powers under Section 8 of the Native Authority Ordinance. There are 41 paid Headmen, chosen by members of their own age grade.

652 There is a Masai Native Treasury, which however is managed entirely by the District Commissioner. The small Sonjo tribe has a Council of Sonjo
000 Headmen, which is gazetted as a Native Authority, and has a separate Treasury.

THE WORKING OF THE NATIVE AUTHORITY SYSTEM

The variety of conditions is so great that it is difficult to generalize on the operation of the system of native administration in the Province as a whole. There are, however, certain points of special significance. The recent reorganization in the Chagga Native Authority area has placed in a superior position three Chiefs who already had a high status in view of the number of taxpayers in their jurisdiction, but its future success will depend on the extent to which these Chiefs can secure the co-operation of the more progressive elements who have now been brought within the framework of the system, as members of the new Divisional Councils. This is especially necessary, in view of the character of Chagga society, for though the Chagga are probably the

Mr. Hemsted's Proposals, February, 1913.

On August 1st, 1912, Mr. R. W. Hemsted was placed in charge of the Masai Reserve. In February, 1913, he submitted a scheme for the administration of the Reserve. This memorandum dealt with the following points:—

STATIONS AND SUB-STATIONS.—The Masai being a tribe of nomadic habits, scattered over a wide area, and concentrated in no particular localities, he considered that effective administration could not be carried on by officers remaining at fixed stations. Constant travelling was necessary, and he advocated the establishment of one central station only, with four or five outposts at each of which a small house could be erected for the visiting officer, with a few huts for his staff. The central station would be situated near the Uaso Nyiro, or on the River Narosura, and would be the headquarters of the officer in charge. In this way, economy and mobility would be combined with efficiency. He suggested the erection of outposts in the Ol-Orokuti near the Anglo-German border, in the Lemek Valley or on the Upper Mara, at Il Melili, at Ngong, and among the Laitokitok, or in the Magadi Railway zone.

STAFF would consist of an officer in charge, a Senior District Commissioner, four Assistant District Commissioners, one Police and one Veterinary officer.

648* 614 [643]

NATIVE ADMINISTRATION.—The tribal system of the Masai rendered direct administration of the clans through their own chiefs particularly suitable. The paramount chief was recognised by the whole tribe, but had tended, under British protection, to deteriorate into a mere figure-head. His duties could be considerably extended. Legalishu, Ngaroya, Masikondi, and Toroni drew pay from the Government, but these men, though intelligent, were conservative and lacking in energy. A few young and energetic men could be included in the ranks of the official headmen, whose numbers should be increased, and Mr. Hemsted suggested the following appointments as sufficient for the needs of the tribe:—

For the Purko clan	.. ..	1 chief and 3 headmen.
"	Kaputiei .. / L'Odo Kilani .. / Matapatu .. / Sighirari ..	1 chief and 3 headmen.
"	Loita .. .. / Salei	1 chief and 1 headman.
"	Kakonyukye ..	.. 1 chief or headman.
"	Siria	.. 1 chief or headman.
"	Il Dala Lekutuk	.. 1 chief or headman.
"	Il Damat ..	.. 1 chief or headman.
"	Laitokitok ..	.. 1 chief or headman.

—a total of 15 chiefs and headmen, in addition to the paramount chief, for the supervision of some 37,500 Masai and 13,500 square miles of territory.

The clan divisions mentioned above were, in fact, geographical divisions, overlapping in certain cases, but Mr. Hemsted proposed the demarcation of each division and the restriction of the clans to the use of the areas allotted to them, which would be termed locations. The Masai were, he said, agreeable to such an arrangement, realising that any trouble which might arise could thus be localised. [631]

648* 651

TAXATION.—While agreeing that the present form of hut tax was unsatisfactory, and inadequate in the case of the Masai, he considered that the difficulties of assessment, the dissatisfaction that might be created, and the probable consequent fluctuations in the revenue were serious objections to the imposition of a cattle tax. He therefore suggested a poll tax of Rs. 15 per head per annum, together with a compulsory subscription of Rs. 15 per head per annum towards a fund for development of, and improvements in the reserve. A revenue of Rs. 90,000 or Rs. 100,000 would thus be assured, and it was difficult to justify a higher tax. In the alternative, he suggested a tax of one to one-and-a-half per cent. on all cattle, irrespective of age or sex.

character and great reputation as a medicine-man, but even his influence does not extend throughout the Purko and Loita divisions. The Council presided over by Sendeu also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown in these cases is due almost entirely to the personalities of the individual presidents and not to the system which they represent. 646

The Kikuyu element in the Masai Reserve. 563

The population of the Masai Reserve numbers not much more than 40,000 of whom the great majority are Masai, but which also includes a considerable number of pure or half-caste Kikuyu. The indigent lives led by the Masai pastoralists possess considerable attraction for the neighbouring Kikuyu, who being less wealthy, are under the necessity of performing agricultural and manual labour either in their reserves or on alienated lands. For many years, the Kikuyu and Masai have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To satisfy their ambitions of an idle life, migrations of individuals from Kikuyu to Masai country have been of not infrequent occurrence and the Masai Reserve therefore contains these scattered units, mainly among the divisions known as the Kaputiei and Il Dala Lekutuk.

Masai aversion to manual labour. 648* 461 241

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural instincts and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when encountered by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the system of such pastoral tribes as the Nandi and Lumbwa, but with the Masai it has been a total failure. Though encouragement has always been given, the Masai have shown no inclination to till the soil, and in the only recent cases where gardens have been prepared at the instigation of Masai owners, the labour employed was drawn from the Kikuyu tribe.

Work by Kikuyu in the Masai Reserve. 648* 563

The increased activity in recruiting natives as porters for the Carrier Corps necessitated by the military situation in March and April, 1917, led to the emigration of a number of Kikuyu from their own country into the Masai Reserve, and these emigrants, with a view to escaping enrolment, signed agreements to work as servants for Indians, Somalis and Masai. Colonel Ainsworth, then Military Commissioner for Labour, represented that while such evasion of their duties was highly reprehensible in regard to the employment with Indians and Somalis, any system which admitted of Kikuyu working for Masai was open to the greatest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Masai Reserve and elsewhere was discussed in Executive Council in June, 1917, and was referred to the Chairman of the Special Committee appointed to consider the "Resident Natives Bill," but no decision on the matter has yet been reported.

Present policy in dealing with Kikuyu emigration.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Masai Reserve of prosecuting all Kikuyu living in that reserve who cannot claim by long residence or circumcision rights to have become Masai, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Masai since the move from Laikipia. Efforts have also been made to register all Kikuyu who may be considered to have become Masai.

The Paramount Chief. 648* 791 643

An important step in the revision of the system of Masai administration was undertaken early in 1918, when for reasons mainly connected with the personality of the holder, the Acting Governor recommended that the office of Paramount Chief of the Masai should be abolished.

Seggi.

At the time of Lenana's death, in 1911, Seggi was still a boy, and control over the Masai was exercised by the two regents, Ngarova and Legalishu. When Seggi came of age and assumed the duties assigned to him in his capacity as Paramount Chief, he was given an extended trial but proved himself to be totally unreliable. He lacked energy, physique and moral courage: he was intemperate and untrustworthy: he appeared to regard any administrative function as an

*648
791
643

unpleasant duty and to look to the Government to assert for him his position as the Paramount Chief of the tribe without requiring in return any effort or energy on his part. The Sighirari of the Engidongi, of which division he was a member, and which was one of the smallest divisions in the tribe, acknowledged him as their chief, but the Purko, the most important division in the reserve, regarded him with open contempt, while the Loita, Siria and other divisions did not recognise him at all, and he refused to attempt to assert his authority over them. The position was, therefore, that the Government stood alone in recognising Seggi as the Paramount Chief of the Masai, and that, as such, he was of very little use to the administration.

Laibons.

A complication arose in this connection by the practice which had previously been followed of regarding the Chief Laibon or medicine-man of the Masai as the Paramount Chief. Lenana, the father of Seggi, had been the Chief Laibon and his functions as such had been to arrange the rainfall, direct raids, provide medicine in connection with various ceremonies and to undertake other duties of this description. Subordinate to him there had been the medicine-men of the various sections. When, about 1895, the Government began to establish closer relations with the Masai, Lenana had evinced a strong tendency to friendship and had personally been to a great extent responsible for the good feeling which came into existence. The administrative officers at that time, not being fully conversant with the constitution of the tribe, had been inclined to look upon Lenana, not only as the chief medicine-man, but as the Paramount chief also, and as time went on this dual authority came to be generally accepted as in consonance with Masai tradition. Further, in consequence of the absence during his lifetime of adequate Government control over the administration of the tribe, it had been essential to support someone who could keep the Masai in order and to grant him more or less autocratic powers. In fact, however, the tribal organisation of the Masai does not provide for such a position as that of paramount chief, and the influence which Lenana had exercised over the tribe had been due solely to his position as the Chief Medicine-man which his astuteness and strength of character had helped him to magnify.

Notwithstanding the fact that the Government officially recognised Lenana as paramount chief, the Agreement of 1904 referred to him as Laibon and not as the paramount chief, while, on the other hand, in the Agreement of 1911, Seggi was styled "Paramount Chief of all the Masai." The phraseology of this latter Agreement is incorrect, and there is no doubt that in the minds of the Masai, Seggi has no authority as Chief elsewhere than among his own division.

Functions of Paramount Chiefs and Medicine-men.

In making recommendations for the abolition of the office of paramount chief, Mr. Bowring drew attention to the fact that the functions of a paramount chief and of a chief medicine-man were incompatible. As paramount chief, Seggi was expected to endeavour to maintain order and to assist the Government, while as chief medicine-man, his whole trend of thought must of necessity be reactionary and secretive and he, together with all the other medicine-men, must realise that any real progress on the part of the tribe could not fail to undermine their influence.

*C48
791

The future of Masai.

Mr. Bowring advocated the continuance of the system of government of each division through its own local elders and local council, under which system Seggi would take his place among his own elders but would not be concerned with the administration of the rest of the tribe. It would be difficult to prevent the perpetuation of the existence of medicine-men if the tribe wished to preserve them, and he thought that a preferable policy would be to instil a desire into their minds for progress and development in which case these survivals of barbarism would eventually disappear. The Masai were a very conservative and unprogressive people, isolated in a vast grazing area, and the task of awakening them to a more enlightened train of thought, onerous as it was, was rendered all the more difficult and ineffective by the unnecessary obstacle which had been placed between the administration and the tribe in the form of a paramount chief, who had no place in the constitution as evolved by native custom and tradition. He was therefore confident that the abolition of that office would offer the Masai better security than the existing system and he was convinced that it was more in accordance with the opinion of the Masai themselves.

as a second class magistrate should be posted to Mara River, and that an Assistant District Commissioner should be transferred from Narok to Mara as soon as the military situation permitted; and that, in future, the Mara District should be controlled by a District Commissioner, and that the station should be considered as the headquarters of the area and no longer as a sub-station under Narok. One officer of the Narok District was to be posted continually in the vicinity of Sendeu's village, near the German border, to attend to intelligence work and administrative matters in that locality, while, in addition to his work as officer in charge of the reserve, Mr. Hemsted would undertake the work of District Commissioner, Narok. His Excellency did not consider it desirable to gazette the suggested districts at that time, but approved the proposal that these administrative areas should be adhered to by the officers in the reserve.

Administrative Establishment, August, 1919.

The establishment of the administrative staff in the Masai Reserve thus sanctioned was:—

At Ngong—One District Commissioner and one Assistant District Commissioner.

At Narok—The Officer-in-Charge and District Commissioner.

At Mara River—One District Commissioner, with the subsequent addition of one Assistant District Commissioner to be transferred from Narok.

Present Authorised Establishment.

No changes have been made in these arrangements since 1918, except that a District Commissioner has been posted to Narok in addition to the officer-in-charge, and the districts suggested by Mr. Hemsted have been accepted for administrative use though their boundaries have never been gazetted. The authorised establishment of European officials has been slightly augmented and now stands as follows:—

One Officer-in-Charge.

Narok District—One District Commissioner, one Assistant District Commissioner.

Ngong District—One District Commissioner, one Assistant District Commissioner.

Mara District—One District Commissioner.

Unattached—One Assistant District Commissioner.

System of Administration.

The system of administration which has been pursued in dealing with the Masai has been that commonly employed in the case of other native tribes in the Protectorate, namely, the utilisation of the tribal system of self-government as sanctioned by native law and custom, supported by the assistance and co-operation of the administrative officers in an advisory capacity, by the help afforded by the courts of law, and by the police where necessary. The proposals made by Mr. Hemsted in 1919 have, in effect, been put into force, and a system of native tribunals was established and recognised under the Native Tribunal Rules of 1918. A list of the tribunals which are so recognised at present is to be found in Appendix 4. [

646 The Inefficiency of the native tribunals.

It cannot be said that this system of self-government has proved the success it was hoped. Though it might be thought from the past record of successful raids that the tribal organisation of the Masai would lend itself in an admirable way to tribal control, it has been found that the Masai are, in fact, incapable of ruling themselves under the changed circumstances that have been brought about by the introduction and establishment of the Pax Britannica. The ignorant, lazy and conceited Morans, are quite out of the control of the elders. Sporadic efforts are made by the Councils to assert their authority, but their decisions, when they arrive at any, are invariably ignored in cases where the young men are concerned, and the elders frankly admit that they are powerless.

Only one Council has attained to any real measure of success and that is the one presided over by Ng[illegible] at Ngong. This Council is supported by the majority of the members of the [illegible], a tribute to Ngenye's exceptionally strong

] [See pp. 223-224 - 4/704/22]

character and great reputation as a medicine-man, but even his influence does not extend throughout the Purko and Loita divisions. The Council presided over by Senden also possesses a certain measure of authority, but these two present the only instances where respect is given and the respect shown in these cases is due almost entirely to the personalities of the individual presidents and not to the system which they represent. 646

The Kikuyu element in the Masai Reserve. 563

The population of the Masai Reserve numbers not much more than 40,000 of whom the great majority are Masai, but which also includes a considerable number of pure or half-caste Kikuyu. The indigent lives led by the Masai pastoralists possess considerable attraction for the neighbouring Kikuyu, who being less wealthy, are under the necessity of performing agricultural and manual labour either in their reserves or on alienated lands. For many years, the Kikuyu and Masai have engaged in trade, and their lands being contiguous, they have had ample opportunities for intercourse. To satisfy their ambitions of an idle life, migrations of individuals from Kikuyu to Masai country have been of not infrequent occurrence and the Masai Reserve therefore contains these scattered units, mainly among the divisions known as the Kapatiei and Il Dala Lekutuk.

Short attempts to control tribes. 648* 461 291

The policy of the Government in dealing with the native tribes in the East African Protectorate has been to develop their agricultural instincts and industry and to discourage tendencies towards pastoralism. This policy has been pursued with success among the Kavirondo, Kikuyu and other tribes who, when encountered by the administration were under the necessity of engaging in agriculture and has been introduced with fair results into the system of such pastoral tribes as the Nandi and Lumbwa, but with the Masai it has been a total failure. Though encouragement has always been given, the Masai have shown no inclination to till the soil, and in the only recent cases where gardens have been prepared at the instigation of Masai owners, the labour employed was drawn from the Kikuyu tribe.

Work by Kikuyu in the Masai Reserve. 648* 563

The increased activity in recruiting natives as porters for the Carrier Corps necessitated by the military situation in March and April, 1917, led to the emigration of a number of Kikuyu from their own country into the Masai Reserve, and these emigrants, with a view to escaping enrolment, signed agreements to work as servants for Indians, Somalis and Masai. Colonel Ainsworth, then Military Commissioner for Labour, represented that, while such evasion of their duties was highly reprehensible in regard to the employment with Indians and Somalis, any system which admitted of Kikuyu working for Masai was open to the greatest objections on both administrative and economic grounds. The question of such Kikuyu emigration to the Masai Reserve and elsewhere was discussed in Executive Council in June, 1917, and was referred to the Chairman of the Special Committee appointed to consider the "Resident Natives Bill," but no division on the matter has yet been reported.

Present policy in dealing with Kikuyu emigration.

In view of the general desirability of discouraging such emigration of Kikuyu natives, the policy has been adopted in the Masai Reserve of prosecuting all Kikuyu living in that reserve who cannot claim by long residence or circumstances rights to have become Masai, and of returning them to their own reserve. This policy applies to the cases of all those Kikuyu who have joined the Masai since the move from Laikipia. Efforts have also been made to register all Kikuyu who may be considered to have become Masai.

The Paramount Chief. 648* 291 643

An important step in the revision of the system of Masai administration was undertaken early in 1918, when for reasons mainly connected with the personality of the holder, the Acting Governor recommended that the office of Paramount Chief of the Masai should be abolished.

Sogoi.

At the time of Lenana's death, in 1911, Sogoi was still a boy, and control over the Masai was exercised by the two regents, Sigowera and Lenjishe. When Sogoi came of age and assumed the duties assigned to him in his capacity as Paramount Chief, he was given an extended trial but proved himself to be totally unsuitable. He lacked energy, physique and moral courage; he was intemperate and untrustworthy; he appeared to regard any administrative function as an

#648

On the 14th of February, 1918, the Acting Governor discussed the proposal with the members of Executive Council, who agreed with him as to the desirability of the formation of such an institution out of sub-councils, which would deal with specific matters in specified areas.

In reporting this decision to the Secretary of State, Mr. Bowring remarked that he regarded the word "representatives," as used in the Agreement, to mean the representatives for the time being, and he considered that, if the members of the council were selected with the approval of the respective sections of the tribe represented by them, they might be regarded as the representatives of the Maui for the purposes of the Agreement.

#648
625

On the 14th of February, Mr. Hemsted submitted for approval a list of Native Councils which it was proposed to recognize for the purposes of the Native Tribunal Rules, and which would exercise the powers of Collective Headmen under the Native Authority Ordinance. The Councils had been chosen in accordance with Maui custom, and consisted of the recognized "Aigowauh," or councillors of the different circumscribed ages of the various tribal divisions, with a few of the more influential elders and Hawaiians added. The presidents had been selected from the "Aigowauh" by the Maui themselves, and were those who had been accustomed to preside at the council meetings.

#648
641
The members of the Maui Council.

These presidents of councils would also form the council which had been proposed by the Acting Governor, and were considered to be sufficiently representative of the Maui tribe, all the principal tribal divisions being represented, and arrangements had been made for the council so constituted to meet at Kaeleh, not less than twice a year, for discussing matters affecting the tribe as a whole, as well as those connected with the Agreement of 1911.

The lists so submitted contained the names of "Aigowauh" of the "Hale," and it was intended that they should exercise jurisdiction as headmen over their own Hawaiians only. Hawaiian "Aigowauh" were not authority admitted to councils of elders by native custom, but, as the elders did not themselves possess any great measure of control over the Hawaiians, it was thought that the appointment of such leading warriors might tend to improve the situation. These appointments were intended to be purely of a temporary character, as the age of Hawaiians then in power was shortly being effaced, its members giving place to the new age, and themselves becoming elders, but, in view of this, it was eventually decided to cancel the suggested appointments, at any rate until the new age had assumed its responsibilities, and chosen its own representatives. A list of the Councils granted, and of the headmen appointed to preside over them, is to be found in Appendix 4.

646
Inaugural meeting of the Maui Council.

The inaugural meeting of the Council was held at Kaeleh on the 1st to the 6th of April, 1918. There were present Naggi (Ohi Lemoea, Paumauni Chief, Kaeleh and Lagalaha) and Ohi Kaeleh, respectively presidents of the Parke Council for the Kaeleh, Hana, and Kaumana areas; Ohi Kaiaga, Hanage, Ohi Paoiwa, Ohi Kaeleo (two) and Nakalia, presidents of the Daoni, Kakaopalaya, Lalia and Hale Councils respectively; Kaonapiwa, representing Makaha, president of the Ogheuni (Lahainaluna) Council; Ohi Hanage, representing Ohi Hanage, president of the Ii Pala Lahainaluna Council; Nigaoia, president of the Ogheuni (Engelhaupt) Council; Ohi Kaiaoya, Hanage Ohi Kaoi and Okahalaha, respectively presidents of the Councils of the Ulele Kihei, Kapaiki and Kalapaia Divisions. The Officer-in-Charge explained to the elders that they had been called as representatives of all the Maui, and that they would form a permanent council for the purpose of discussing the affairs of the tribe as a whole, and the matters arising out of the Agreement; and in order to assist the Government in carrying out its policy. The Maui were expected to rule themselves under the direction of their officers and to help maintain law and order in their own country. The tribal councils, which had been formed in each division according to native custom, were intended to settle local matters dealing with land or property and to punish people for minor offences.

823

The idea of the Council appealed to the Maui tribe as a whole, and the members of the Council agreed to attend to all matters affecting the tribe, and also to settle cases which the local sub-councils had been unable to decide.

Various matters were discussed at the meeting. The Council recorded their opinion that they were opposed to the location system, as applied to the Masai, though they were willing to accept the idea as applied to the Meru. The abolition of certain dues collected for the erection of water wells on temporary occupation licences was agreed to by the Council, who also approved the establishment of any further trading centres at places where the Government considered them advisable. Deputy president of sub-councils were elected to represent the president on the Council when the latter should be unable to attend.

In regard to the local administration of the Masai, the Council considered that the "Kirik" system should be continued for the coming year of Meru, as the system made for better control, but agreed that the "Kirik" should be small and that the Meru should not change their "Kirik" after these had once been made up. The coming Meru were to be forbidden to carry on the practice of cohabitation with young girls, and the Council agreed that it would be beneficial for a number of Meru, according to the size of each "Kirik," to go out to work, either as herds, or as askaris. At the same time, they confessed that they could not enforce such a decision consisted and were opposed to the idea of purely manual labour.

SECTION 3.—DISEASES OF LIVESTOCK.

(1) Cattle	[illegible]
(2) Sheep	[illegible]
(3) Bovine Pleuro-pneumonia	[illegible]
(4) East Coast Fever	[illegible]
(5) East and South Disease	[illegible]
(6) Rinderpest	[illegible]
(7) Tsetse Fly	[illegible]

(1) Cattle.

The two most serious stock diseases which are encountered in the Masai reserve are East Coast Fever and Pleuro-pneumonia. A variety of other diseases attack the herds and herds at various times, but these two are responsible for a higher mortality than any of the others.

That Masai stock should be largely subject to disease is only to be expected, in consideration of the enormous numbers of cattle and sheep located in the reserve, and of the consequent congestion in the grazing areas. Treatment of the diseases has not yet been undertaken in any comprehensive manner, though it has been suggested and approved in the case of some of them. But the necessity for making any treatment attempted universally applicable throughout the reserve, if immunity is to be obtained, has in each case rendered the staff available insufficient to cope with the masses of stock that would require treatment, and but little actual progress has been made. It is readily recognised that the provision of veterinary facilities for Masai stock is among the most important matters now before the administration, but, owing to the impossibility of procuring the necessary personnel of government, material and funds while war conditions prevail, it is also recognised that this must stand over until the conclusion of hostilities.

In the end of 1917 and the beginning of 1918, the Officer-in-Charge sent in frequent reports of diseases which were affecting stock in the Masai Reserve. He estimated that between May, 1917, and March, 1918, the Masai had lost by disease more than one hundred thousand head of cattle and about one million sheep. East Coast fever, rinderpest, anthrax, pleuro-pneumonia, foot and mouth disease and other ailments were, he said, prevalent to epidemic form in almost all parts of the reserve.

In a number of the diseases affecting Masai cattle and sheep were of an obscure nature, it was decided that careful investigation would be necessary to ascertain their cause and, if possible, to devise methods of prevention and treatment. A branch laboratory in Kenya, now in course of construction near Narok, and it is hoped that it will be possible to carry out research work

?: Hailey (G-4 (No date) 1950 FL12 Masai FL12

authority always tended to break down in face of the lawless and independent spirit of the Morans. In 1938 the Headmen numbered 46, of whom 18 were unpaid, and 28 received pay ranging from £5 to £16 a year, the former Paramount having a special pay of £40. Fourteen of the 28 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organization of its former importance, while the growing value of cattle and sheep has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the Masai hold tenaciously to their customary institutions and mode of life, and the Morans in particular retain the tradition of indiscipline (in all but a military sense) and the aversion to labour which characterized them in the past.

The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adapting it more nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1939 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.* The Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

The 18 Headmen have a pay ranging from 17s. to 30s. a month, and the 18 subheadmen a pay ranging from 10s. to 30s. 30 cents a month. Previously all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and subheadmen constitute the executive agency of the District administration and of the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. This is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. The Chiefs can call on the services of a small number of Tribal Police, recruited and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

Of the two Local Native Councils, that at Narok has 10 nominated and 13 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

* Page 175.

Ti Hailey G-4 (No date) 1950 FL12 Masai FL12

consultation with Headmen and other representatives of the different Sections. The Kajiado Council has no Headmen among its members; its members have some education, and it contains a schoolmaster, an ex-Government clerk, a trader and two well-to-do stockholders. The Narok Council has one Headman among its members, but a smaller proportion of educated men than Kajiado. Though it is said that these two Councils are fairly representative of the majority of the community, the persons who now command influence and authority are to be found rather among the Headmen and subheadmen than in the two Councils. 646

The two Local Native Councils are, as elsewhere in Kenya, consultative and legislative bodies. As provided in Section 13 of the Native Lands Trust Ordinance 1938, they are consulted before any action is taken to set apart plots of land for shop sites or similar purposes. They have in addition the function of dealing with the funds available in their two Native Treasuries for expenditure on local services. In this latter capacity, the funds available are shown in the figures on page 178 taken from the estimates of 1949. 652 [46]

The deficit of £8,133 was to be met by drawing on accumulated balances. The principal source of Revenue is the Local Rate of 4s. in Kajiado and 3s. in Narok, the latter having been raised in 1948 to 3s. from the previous rate of 2s. per taxpayer. This rate is paid in addition to the Government Poll Tax of 17s. a head, which is somewhat higher than in most of the Provinces of Kenya. The revenue from Landed Property consisted mainly of rents of shop sites in the Reserve. [651]

The expenditure under the head Administration was made up of a number of miscellaneous items, the stipends of Headmen and subheadmen being, as elsewhere, defrayed by the Government and not from the Native Treasuries. There is one Local Native Council school in Narok and one in Kajiado District, the teachers of which are paid from Native Treasury funds, but there are in addition a number of "corrobonds," which are all boarding schools situated alongside cattle "boma," where the children live with their relatives and family cattle, and feed themselves. These schools are of a very elementary class. The Maasai have up till recently been opposed to the extension of education and have in particular resisted the education of girls, though the latest reports suggest that this resistance is weakening. 871

There is in each Council a Finance Committee, but it is said that the members cannot understand the estimates and make no contribution to their discussion. In general, the Councils have taken little interest in matters which do not relate directly to their livestock, and the younger men are said to hesitate to express their views in the presence of their elders. In their legislative capacity the Councils have passed, on the instance of the District Commissioners, Resolutions which follow the "model" Resolutions regarding soil conservation, the cultivation of land on river banks and the burning of bush, to which reference will be found in the parts of this Chapter dealing with other Provinces. 646

The two Local Native Councils have joint meetings twice a year at Ngong to consider matters affecting Masai as a whole, and reference will be made subsequently to proposals for giving this conference a more regular position.

561 grades, which has resulted in marking off the whole of the younger men,
701 roughly up to the age of twenty-seven or thirty, as a warrior class (moran) who are not only free from most obligations to work, but are independent in many other respects of tribal discipline. Though therefore authority has rested
623 nominally with the Elders (laigwanak) who have passed the stage of moran,
642 and with the Councils of Elders who formed a regular feature of the Masai
701 tribal usage, these Councils have not in the past nor are they to-day able to
561 enforce decisions which may affect the younger men. It is true that the Elders have recently made decisions, accepted by the moran themselves, which will limit the period of moran-hood and may provide the moran with work on betterment schemes, but it still remains to be seen how far these will be effective in providing a solution for a problem of which the economic is no less serious than the social aspect.

175 Attempts were at one time made in Tanganyika, as also in Kenya, to
791 utilize the Laibon, the spiritual head of the Tanganyika Masai, as Native Authority. But the Masai themselves objected to his occupying this position,
623 and as the result of a Sociological Survey made by H. A. Fosbrooke in 1948, the system was altered. The gazetted Native Authority then became the Masai Council, which in practice consisted of Headmen and Elders, and apparently also of any tribesmen outside the moran age grade who cared to attend. But this Council was in effect only a consultative body, without any practical authority, and since the Headmen were not gazetted as Native Authorities, they had no legal power to issue Orders under Section 8 of the Native Authority Ordinance.

•646 A further reorganization has now been carried out. Each area now has its own Local Council, with locally elected representatives of age grades and clans, and these Councils have been gazetted as Subordinate Native Authorities. Representatives from each Local Council, differing in numbers in accordance with the size and population of the area involved, compose the Masai Council, which is the Superior Native Authority for the whole Masai District, excluding Sonjo. The Council is now limited to these representatives: there is, however, provision for the addition of moran or nominated members if and when advisable. The Local Councils have begun to exercise their Order making powers under Section 8 of the Native Authority Ordinance. There are 41 paid Headmen, chosen by members of their own age grade.

652 There is a Masai Native Treasury, which however is managed entirely by the District Commissioner. The small Sonjo tribe has a Council of Sonjo
000 Headmen, which is gazetted as a Native Authority, and has a separate Treasury.

THE WORKING OF THE NATIVE AUTHORITY SYSTEM

The variety of conditions is so great that it is difficult to generalize on the operation of the system of native administration in the Province as a whole. There are, however, certain points of special significance. The recent re-organization in the Chagga Native Authority area has placed in a superior position three Chiefs who already had a high status in view of the number of taxpayers in their jurisdiction, but its future success will depend on the extent to which these Chiefs can secure the co-operation of the more progressive elements who have now been brought within the framework of the system, as members of the new Divisional Councils. This is especially necessary, in view of the character of Chagga society, for though the Chagga are probably the

174 A tribe coming from the north like the Masai, and possibly at one time in touch with races influenced by ancient Egypt, may conceivably represent not an improvement of the primaeval African stock but a degeneration of some other race. Still, the accounts which we have of the Bari and Dinka ascribe to them the same vague belief in a supernatural power, which most inquirers have reported as existing among the Masai, and an absence of traditions respecting the origin of the human race[1].

175 The history of the Masai, as far as we know it for the last hundred years, presents as its most important feature a conflict between the pastoral and agricultural sections, ending in the victory of the former and the annihilation of large settlements of the latter. The conflict was disastrous for the race, for the portion which survived depended entirely on cattle and raiding for subsistence. The herds suffered severely from plague in the eighties, and the advent of Europeans and the gradual introduction of the Pax Britannica could not be otherwise than unfavourable to the pre-eminence of a tribe whose prosperity depended so largely on continually plundering their neighbours. Nevertheless from at least 1850 to the early eighties the pastoral Masai were a formidable power in East Africa. They successfully asserted themselves against the Arab slave-traders, took tribute from all who passed through their country, and treated other races, whether African or not, with the greatest arrogance. About 1859 they raided Vanga, on the coast near the present German frontier. Thomson (*Through Masai Land*, 1885) describes how, in 1883, they entered his camp and ordered about the whole caravan, including himself, as if they had been masters and the travellers slaves. This period of triumph was succeeded by one of disaster. Rinderpest attacked the cattle and small-pox human beings. The surrounding tribes who had suffered from their raids were not slow to revenge themselves for the oppression and plunder of the past, and a severe famine completed the catalogue of misfortunes. The numbers of the Masai were undoubtedly greatly reduced, and at present those found in British East Africa only amount to a very modest figure, variously estimated at from 25,000 to 12,500. The latter estimate, which is the latest and perhaps the most correct, is based on the assumption that there are 7,500 in the

[1] See Willoughby, *The Dinka Speaks*, 1906, p. 98, &c. It is true that some expressions ascribed to the Dinka, such as 'We do not know—the wise men know,' might be interpreted as a consciousness of the loss of traditions.

Naivasha province and 5,000 between Kikuyu and Kilima-Njaro. 161 175

The expansion of the tribe seems to have come to an end about the middle of the last century. About 1830 they reached their furthest recorded point in the south and were driven back by the Wagogo and Wahehe. The southward movements of the Gallas and Somalis kept them back on the north-east, though as late as the nineties they raided on the Tana river. It would appear that about 1850 the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time an old man can remember according to the native expression—the Masai dwelling on the Uasin-Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin-Gishu were scattered to the four winds: those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjámusi at the south end of Lake Baringo. Another branch called L-Osigella or Segelli took refuge in the Nyando valley but were wiped out by the Nandi and Lumbwa. The Laikipia plateau, which is now uninhabited like the Uasin-Gishu, was not depopulated in 1889, when Peters crossed it and had many fights with the Masai. According to one story, the people of Laikipia raided some other Masai near Nairobi about 1890 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Laikipia took the disease and died. This was considered as a judgment on the Laikipia for raiding their brethren.

175 648 [361] [731]

At present the agricultural Masai are found chiefly near Lake Natron and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Enjámusi, the Burkeneji, and perhaps the people of Samburu in the Rendile country. It would appear that the name Wakwavi, often applied to the agriculturalists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places. The pastoral section classify themselves under five districts, with many subdivisions, namely Kaputiei (Kapite plains), Ilo-aipesh (Naivasha), Kisongo (the district south and west of Kilima-Njaro), Uasin-Gishu, and L-Aikipyak. The two last districts, as mentioned, have ceased to exist, and those who

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[29] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 672 682 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[30] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[31] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[32] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[33]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 649 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognised as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. It Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that "the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people". This is more or less true also for Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court.[14] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Masai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Governement.

The institution of the Masai prophet has been described by FOSBROOKE, p. 13. He distinguishes three types of *laibon*. "First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilized to the advantage of the whole group. Such prac-

[14] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories. Part I — East Africa: Uganda, Kenya, Tanganyika*, London 1950, p. 171, "these Tribunal were not generally recognised by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders". And with regard to the *new development for nomads*, p. 178, that "the preference for referring cases to the arbitration of local headmen or elders persists". He makes a similar comment for Tanganyika on p. 294: "in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

881 "ask the boy (candidate) various questions as to his past behaviour, and he is put on oath to answer truly".[29] Apparently no special ordeal such as we find among the Kipsigis is attached to this testing.

b) The operation may be performed "in the morning or the evening according to the particular custom of the family concerned" (Fox). Generally it takes place early in the morning. The operator [648] is said never to be a Masai. Generally he is a Dorobo, and sometimes a Kikuyu (Fox). This peculiarity is worth noting, especially if it is compared with the great care observed in selecting all other leaders or officers out of the pure Masai.[30]

881 304 Before the operation is performed, the candidates take a cold bath in order to make their body insensible, or remain "shivering in a state of nudity until the sun rises" (Baoge).[31] Candidates are then operated upon, outside the village near the right-hand post of the gate. The patient must not betray any sign of suffering. That would disgrace him and all his family. A few elders assist and support the patient during the operation, and help him to his mother's house after the wound has been washed. Once inside he is given food (fresh blood) and a special beverage, called *eng alipeta*, after which he is allowed to speak.

881 [591] The circumcised youth is presented by his mother's brother with new sandals, and henceforth he is not supposed to make use of any garment worn before the ceremony. A procession by four girls (cfr. Fox), waving branches takes place to the entrance of the [594] boy's hut. The elders are again entertained with meat and beer;

[595] wife of a man has her independent house where she lives with her children and cattle. But the whole homestead belongs to the father, and it would be quite correct, though not so precise, to say: the house of the candidate's father.

[29] We may assume that these questions are connected with the candidate's moral and sexual behaviour. Foxbrooke states that "prior to circumcision [834] no youth may have intercourse with a circumcised woman. This is a rule most strictly adhered to". The same custom is observed among the Nandi-speaking peoples.

[30] Cfr. the election of the Ol Oi *epolos* at the *Enkolomi*, of the *ol emel* boys, the *oigwanani*, and the *enjoyenos* at the *Endungere-Enpiloto*; of the *ol ewarai* at the *uraia*.

[31] [522] Leakey states that it is "absolutely essential that the cattle shall be in their enclosure during the waste of the ceremony". No further details are given nor are reasons offered for this fact which is not mentioned by any of our Masai authorities. However, it shows that circumcision is not related to the cattle aspect of Masai culture.

Kisongo

E'-TOOSHO: ASSAULT

683

Resulting in the loss of an eye—no penalty.

Resulting in the tearing of an ear-lobe—a fine of one ewe.

Resulting in the loss or breaking of a tooth—a fine of one ewe.

Resulting in the breaking of a bone—an ox of the offender's (he may not have been the aggressor originally) is slaughtered then and there, and all partake of it. The injured man must not see the skin of the slaughtered ox. At the same time, a fine of one heifer is inflicted, but if the injured man should [682] die before this has been handed over, twenty and nine cattle may have to be paid subsequently by his slayer.[1]

To strike a man with an arrow, a club, spear, sword, or knife would result in the imposition of a fine of one fat sheep or one ox, according to the extent of the cuts or other injuries inflicted.

The preceding penalties refer to Masai only. If the murdered man be a Bantu or savage (*Ol-mekh*), and if he was known to [698] and a friend of the Masai, twenty and nine cattle must be paid to his relatives. In the case of the murder of or assault on a [699] [682] stranger, no penalty is laid down.

The reiteration of the number nine in the fines prescribed may be explained as follows. A certain round number of cattle is settled upon as fine or compensation. To this number (generally twenty or forty) must be added nine more for the body of the murdered man, in order to wipe out the stain of blood which lies between the rival parties. These nine cattle are accounted for according to the orifices of the human body, thus two for the ears; two for the eyes; two for the nose; one for the mouth; one for the urethra and one for the anus.

'NYAMIN: THEFT

Theft of any kind is almost unknown among the Masai, but 685 if one Masai should steal cattle from another, the thief must pay five beasts for each beast stolen, the sex of the animals paid depending on the sex of the stolen beasts. If sheep are

Mandara's cupidity, and soon I found I had to reckon with mine host. Of course I quite understood that in bringing him down I could not possibly send him off empty-handed; so I made up a present, consisting of a Snider, a revolver, four flasks of gunpowder, one piece of American cotton, one of blue cloth, and several gaudy-coloured cloths. Thinking I had done very handsomely, I called him into the tent and with much satisfaction showed him my present. An ominous whistle, as he brought his eye to bear upon my treasures, and an expression of contempt on his face soon brought me to my senses. "Were these," he scornfully inquired, "the presents for his askari who had accompanied him? or did I mean to offer him a Zanzibar-made gun only fit for a porter?" Having thus unburdened himself, he turned his back and marched out of the tent, leaving me staring blankly at the rejected gift. To my men outside he said, "Why had I shown him all my things, if I did not mean to give him some? What did he care for coast goods? He had plenty of them! What he wanted was European articles befitting his greatness!" I sent Muhinna and Makatuba after him, with a government Snider and some more cloth, but though they returned without these articles, they brought only veiled threats that unless he received satisfaction he would play the deuce with us in a manner that would not please us. He had bought down a fat bullock with him in the morning, and he took care to let us know that we had better not touch it.

Here was a proper quandary to get into! For well I knew that Mandara's threats were not empty words. He could without a doubt irretrievably "smash up" the caravan in the dense forests of the Kahè if we attempted to go on without his leave, and without a guide. At that moment he had over 1000 Wa-kwafi, his allies from Mount Meru, staying with him, preparing for an attack on a neighbouring state; combining his own men with these, he could place over 2000 of the most daring warriors in all that region in the field.

M
C
[C41]

Next morning, therefore, perceiving the gravity of the situation, I with much reluctance got out my own trusty double-barrelled smoothbore, which I had carried on my two previous expeditions, a steel box, a suit of thick tweed complete, a pair of shoes which I mentally wished I could compel him to wear, and a few more articles. Feeling in a very unenviable mood at thus being made involuntarily the instrument for introducing the manifold blessings of European civilised

726 ever, a party had been sent to the chief lybon of the Masai —Mbaration—to seek advice as to the time of their start, and to procure medicines to make them successful. On their return the party mustered, and set off. It was a remarkable sight to behold these bloated young cut-throats on the march, and it is almost an impossibility to convey any clear picture of their appearance in words. The Frontispiece illustration, however, will help to some extent.

714 726 Let us pause and in imagination watch some enthusiastic young ditto buckling on the armour of her knight. First there is tied round his neck, whence it falls in flowing lengths, the *nâiberè*,—a piece of cotton, six feet long, two feet broad, with a longitudinal stripe of coloured cloth sewed down the middle of it. Over his shoulders is placed [237] a huge cape of kite's feathers—a regular heap of them. The kid-skin garment which hangs at his shoulder is now folded up, and tied tightly round his waist like a belt, so as [302] to leave his arms free. His hair is tied into two pigtails, one before and one behind. On his head is placed a remarkable object formed of ostrich feathers stuck in a band of leather, the whole forming an elliptically-shaped head-gear. This is placed diagonally in a line beginning under the lower lip and running in front of the ear to the crown. His legs are ornamented with flowing hair of the colobus, resembling wings. His bodily adornment is finished off by the customary plastering of oil. His simè or sword is now attached—it does not hang—to his *right* side; and through the belt is pushed the skull-smasher or knobkerry, which may be thrown at an approaching enemy, or may give the coup de grâce to a disabled one. His huge shield in his left hand and his great spear in his right complete his extraordinary equipment. For the rest you must imagine an Apollo-like form and the face of a fiend, and you have before you the beau-ideal of a Masai warrior. He takes enormous pride in his weapons, and would part with everything he has rather than his spear. He glories in his scars, as the true laurel and decorative marks of one who delights in battles.

726 With astonishing hardihood, Moran and his comrades, thus terribly arrayed, shaped their course towards Swahili-[648] land; for, strangely enough, they have found that they can lift the cattle with greater impunity there than anywhere else—in spite of the Swahili guns and a large population. The reason is the complete absence of anything like patriotism or public spirit among the coast people. Their argument

727 the property of the successful warriors. A warrior can have no property, and hence they all become his father's.
[421] The spoil being divided, the party were next able to do full honour to the men lost in the raid—those being considered worthy of all praise "who rush into the field, and foremost fighting *fall*;" while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

648 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Galla-land, the Coast region, Sûk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilised fashion. Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilised countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 As a mild relief, and a variation from those serious matters,
186 it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened this one out of his wits, or spitted another on his spear, or smashed the skull
431 of a third into jelly. The strength and the heads he re-

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

233 the Masai must, considering their small numbers, have a larger potential capital per head than any other tribe in East or Central Africa.

563 169 Practically the whole population may be said to belong to the Masai tribe, though there are a small number of immigrants, numbering rather less than one thousand in all, ninety per cent. being Kikuyu. As shown above, they are for the most part employed by the Masai in the cultivation of the small area of land used for agricultural purposes. There has been a certain amount of intermarriage, but the penetration of the country by the Kikuyu is viewed with distrust by the Masai, and three Alien Committees have lately been established in order to consider measures for the control of alien immigration. An area

631 169 of 47 square miles (known locally as Olengurumeni) within the Masai Native Land Unit was set aside in 1942 for "squatters" displaced from European farms, most of whom are Kikuyu.[1] But this area will remain politically separate, and it will not affect the position of the Masai as a homogeneous population.

563 Early records refer to the existence in Masailand of a number of Dorobo, of whom Masai tradition speaks as the original inhabitants of the country. When Europeans first came into contact with the Masai, part of the Dorobo were still leading a primitive life in the bush, while part served the Masai as herdsmen and in some cases had small herds of their own. These people have, however, now been absorbed by the Masai and are not readily distinguishable from them.

THE MASAI TRIBE

[3] 648 Reference will be found in the Chapter on Tanganyika to the circumstances in which the Masai tribe, as it existed in 1890, was cut in two by the international boundary drawn between Kenya and Tanganyika.[2] The area thus left to the Masai in Kenya, now estimated at 15,177 square miles, compares with the area of 18,470 square miles now held by the Tanganyika Masai, with

[61] an estimated population of 50,168, and a density of 1.7 per square mile. The proceedings as the result of which the Kenya Masai were in 1911 placed in occupation of their present area have had a prominent place in the controversies connected with the alienation of native lands in the Colony, but it will be sufficient to refer here to the facts as summarized in paragraphs 633 to 634 of

631 648 the Report of the Land Commission of 1933.[3] The Masai lands are now held as a Native Land Unit under the terms of the Native Lands Trust Ordinance 48 of 1938 and the Kenya (Native Areas) Order in Council 1939. There is, however, one fact which differentiates the Masai lands from those occupied by other tribes under the terms of this legislation, or those held by the Tanganyika Masai. Whatever the judicial value of the Agreements made with the Kenya Masai in 1904 and 1911, it is held, in the words used by the Governor of Kenya in 1948, that they "have the validity of a Treaty."[4] If so, the terms of the Order confirming the Agreement of 1911 constitute a moral obligation to the Government to reserve these lands for the exclusive use of the Masai, "as long

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) " without the sanction of the paramount chief and the representatives of the Masai tribe."

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Kenya Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918.

The social structure of the Masai has from the outset created no obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (ikiti) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own " Councillors " (L'Aigonak) chosen from among the Moran.

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe for periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, " drank milk " and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, " the Elders' idea of existence seemed to be ease, not unmixed with drunkenness."* Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare.

There is another feature of importance in the social structure. The Moran are divided into Sections (Alamin) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. *Each of these Sections has its own Age Grades, so that the* period at which youths become Moran, or Moran become Elders or the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation

* Introduction to The Masai by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 89 of the Administrative and Political History of the Masai quoted above.

7: Hailey G-4 (No date) 1950 F112 Masai FL12

was further complicated by the fact that at stated intervals, normally about 15 years, power passed from the hands of the representatives of one Age-Group in each Section into those of the succeeding Age-Group, there being thus no alternation of authority in each Section between its Right Hand and Left Hand Groups.

To quote Sir Charles Eliot again, the consequence of the traditional structure of Masai society was that "the centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship. The chiefs arranged the details of any raids which the young men wished to undertake, but their power of compelling them to do anything which they did not wish was very slight." The nearest approach to a central and superior authority was to be found in the Chief Medicine-Man (Laibon), though his authority was based mainly on the discharge of his magical functions.[1] The medicine-men were divided into three grades, of which the first grade was represented by the person of the Laibon, the Chief Medicine-Man of the tribe, and his guidance was held to be of the first importance in any major operation which the tribe might undertake.

THE INTRODUCTION OF THE NATIVE AUTHORITY SYSTEM

It is unnecessary to dwell here on the circumstances which for a prolonged period made the Masai a standing menace to the peace of their neighbours. The tribe seems to have reached the height of its power between 1800 and 1850, when it overran Kenya and part of Tanganyika.[2] There were subsequently severe internal dissensions among the Masai, which resulted in two of their five "divisions" being practically destroyed and there was also great mortality as a result of the outbreak of rinderpest and smallpox late 'eighties of last century. But even though their strength was much reduced, their predatory habits continued to be a matter of grave concern in the very days of the Colony, and seemed in particular to threaten the progress of European settlement. Among the Masai themselves strong feelings were aroused by the measures, taken largely in the interest of European settlers, designed to counteract the propensity of the tribesmen to roam widely in search of fresh grazing grounds, as the result of which they were restricted to a Northern Reserve (Laikipia) and a Southern Reserve, separated from the Northern Reserve by a broad belt of country occupied by European farms. That was the position at the time of the Masai Agreement of 1904, but it subsequently became the policy of the Kenya Government to move the tribesmen in the Northern Reserve into the Southern Reserve, which was to be largely augmented to set for this purpose.[3]

In view of the terms of the Agreement of 1904, no assent of the Masai was required for this transfer, and the operation was free of obvious difficulty. In the circumstances it was not unnatural that the Government should have availed itself of the influence exercised by the Chief Medicine-Man, the Laibon Lenana. He had inherited from his father, Mbatian, who died in 1896, a position which commanded general respect, and in 1904 he took a leading position on behalf of the tribe in the discussions which led up to the Agreement of 1904, which he signed as "Chief Laibon." He was subsequently recognized

---

[1] The word laibon appears to be a European form of the Masai word Ol'aibon (pl. i). Hollis, The Masai, 1905, page 28.
[2] Land Commission Report, 1932, 17 pass. seq.
[3] The Laikipia Reserve, comprised 2,000 square miles. An addition of 8,000 square miles was to be made to the Southern Reserve.

7: Mailey G-4 (No date) 1950 FL.12 Masai FL.12

by the Government as the Paramount Chief of the Maasi, a title which was in 1911 confirmed to his son Sogi. It was as Paramount Chief that Sogi, through his Regent Legalishon, signed the Agreement of 1911, which recorded the acceptance by the Maasi of the move from Laikipia to the Southern Reserve. 175 698 991

But Lenana himself never seems to have claimed a position of sovereignty, nor was it ever accorded to him by the tribe. Sogi proved to be lacking in the qualities of his father, and such influence as he possessed was confined to the small Section of which he was a member, while the more important Sections, such as the Purko, either refused to recognize him or treated him with contempt. In 1918, therefore, the Government withdrew his recognition as Paramount Chief. Apart, however, from any question of the personal capacity of Sogi, it is obvious that the social structure of the Maasi had no place for the conception of chieftainship in the form existing in the traditional organization of those Bantu tribes which have a "centralized" system of Government. In the latter, the fundamental principle is the recognition of a tribal head, with authority devolved on territorial subchiefs, and supported on the allegiance of headmen representing either kinship groups or village units. In such an organization the authority possessed by the headmen is as essential an element as that of the Chief and his subchiefs—a fact which is sometimes overlooked by those whose contact with a tribe is primarily through these more conspicuous figures. All these features of the normal Bantu tribal organization were wanting in the structure of Maasi society.

Following the abolition of the post of Paramount Chief in 1918, the Government endeavoured to find agencies for local administration in the promotion of these institutions, a Central Maasi Council, a series of 14 Native Councils each representing a different tribal Section, and Headmen, created as far as possible on the model of the Location Headmen found elsewhere in the Colony. The Central Maasi Council at Ngong was composed of the presidents of the Native Councils and was to meet twice a year. The 14 Native Councils were designed to take the place of the informal Councils of Elders to which reference has previously been made. They were recognized as tribunals exercising powers under the Native Tribunal Rules of 1913, and were moreover given the position occupied by Collective Headmen under the Native Authority Ordinance then in force (No. 20 of 1910). The members of these Councils consisted of the recognized Counsellors (L'oipuonak) of the different Age Grades in the divisions, with a few of the more influential Elders and Morans added. Morans L'oipuonak were not ordinarily admitted to these Councils of Elders, but as the Elders did not themselves possess any great measure of control over the Morans, it was thought that the appointment of their leading warriors might help to improve the situation. These appointments could, however, only be temporary, owing to the custom already mentioned, under which an Age Grade of Morans held its position only for a specified period in each Section, giving place to a new Age Grade at the end of that time. The presidents of these Councils were chosen from the L'oipuonak by the Maasi themselves. 175 698 623

The greatest difficulty was, as became at the time, encountered in regard to the appointment of Headmen. These were not necessarily Elders, but were chosen on possessing wealth or influence, and were given the position accorded to headmen by the Native Authority Ordinance (No. 20 of 1910). But there were two obstacles to their effective discharge of these powers. The units which they were selected to control were not Locations with a settled population, as in most other parts of Kenya, but groups of semi-nomadic tribesmen, and their 175 698 623

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

authority always tended to break down in face of the lawless and independent spirit of the Masai. In 1918 the Headmen numbered 36, of whom 18 were unpaid, and 18 received pay ranging from £8 to £36 a year, the former Paramount having a special pay of £40. Fourteen of the 18 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organisation of its former importance, while the growing value of cattle and sheep has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the Masai hold tenaciously to their customary institutions and mode of life, and the Morans in particular retain the tradition of indiscipline (in all but a military sense) and the aversion to labour which characterised them in the past.

The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adjusting it more nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1950 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.* The Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

The 18 Headmen have a pay ranging from 17s. to 70s. a month, and the 18 subheadmen a pay ranging from 10s. to 30s. 30 cents a month. Practically all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and subheadmen constitute the executive agency of the District administration and of the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. This is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. The Chiefs can call on the services of a small number of Tribal Police, uniformed and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

Of the two Local Native Councils, that at Narok has 10 nominated and 15 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

* Page 175.

Mbugwe are Barra. There is also a small group of Tusilya, leading virtually a bushman life in the Lake Eyasi basin, to whom reference was made in Section 1.[1] There would appear to have been a movement both northward and southward on the part of the tribe, who were previously contained in a very small area by the Masai invasion of the early part of the century.

THE MASAI DISTRICT

131 161 The Masai District forms the southern portion of the large block of country in Tanganyika and Kenya, extending to no less than 115 million acres in extent, occupied by the Masai tribe, whose numbers were given in the 1931 Census as 48,[illegible] in Kenya and as 5,[illegible] in the 1948 Census in Tanganyika. There will be found in the Chapter dealing with Kenya Colony further reference to the tribal characteristics of the Masai, and it will be sufficient to give here only those facts which bear in particular on the position they occupy in Tanganyika.[2]

194 The southern movement of this tribe from the neighbourhood of Lake Rudolf seems to have come to an end about the middle of last century, but its spearheads had in 1890 penetrated as far south as the Great Ruaha River and even to Uhehe in the Iringa District, whence they were driven back by the Gogo and Hehe. There were many isolated Masai raids after that time, but these were in the main carried out by Kenya Masai, whose incursions have directed towards the coastal areas on the east, and indeed took them on occasion as far as Mombasa. The Masai settled in Tanganyika do not seem to have attempted a further movement of any importance into the neighbouring areas of the Territory.

195 101 The Anglo-German Agreement of 1890 cut the Masai country into two parts, roughly equal in area, though the population remaining under the British jurisdiction was somewhat larger than that which fell under German rule. The result was to make an effective division between the Kenya and Tanganyika Masai, and though the two sections have retained a community of racial interest, this has not extended to the political field. Such political unity as the Masai people possessed had existed largely for war purposes, and in peace time political as apart from religious authority was dispersed among the headmen exercising control over the groups having a customary right of pasturage in particular localities. There was moreover lacking in the case of the Tanganyika Masai a motive which might have led them to identify themselves with the Kenya Masai, namely, the need for protecting their lands from alienation by Government for the benefit of Europeans. The troubles caused in Kenya by the efforts of Europeans to secure possession of Masai lands[3] were not repeated in Tanganyika, where the Masai have remained unhampered in the occupation of the country they held at the period when European rule was established.

[illegible] The present Masai District comprises, in the north, the Loliondo area, the dominant feature of which is the vast Serengeti plain, with the extinct volcanoes which mark its southern end. In the centre, south of the Rift Wall, the plateau type of country is characterised by volcanic hill masses, which provide a number of permanent water sources. In the South in extensive dense scrub steppe, with a low and very variable rainfall.

311 161 173 Practically the whole of the area included in the District is used only for pastoral purposes. It continues to correct to bolstering that the tribe was once

[1] See page [illegible]

GCE grade system. In consion of six senior Wadidi, or age grade leaders, from the three effective age grades, six deputy Wadidi and eighteen Wanyoro wa Nyen, elected citizens of standing and authority (drawn from each age grade). These thirty men comprise the Kyenza Council and elect their own speaker. The functions of the Kyenza are similar to those of the Engipuson described above. The election of the Junior is in the hands of the Kyenza but they must reach a unanimous decision on the subject.

The elected Speaker of each Kyenza kya Mbungu and three other Wadidi chosen by the Kyenza sit on the Kyenza kya Uruka, which is in effect a Tribal Council, fulfilling the functions of the lower Kyenza but on a tribal level. In addition the Government reserves the right to nominate six members. The Kyenza kya Uruka elects six Wadidi each year on the Chief's Council to assist him in all his duties. One of these is the Kyenza's Speaker.

The Avaka and Mwa Chiefs are not united in any formal manner, but there is a single Treasury for the whole District.

THE WHOLE NATIVE AUTHORITIES

In the Mbulu District the four Native Authorities shown in the movement have a variety of titles, Wawiriwa in the case of the Mbulu (Iraqw) and Gorowa (Fiome), Mtemi in that of the Barabaig (Mbugwe), and Mbugwe in the case of the Mbugwe. One of the Iraqw chiefdoms has a large jurisdiction, extending to 25,000 taxpayers, but it is said that only one tribe, that of the Gorowa (Fiome), has had any strong tradition of chieftaincy. Here the chieftaincy has been in the hands of a Muslim ruling family of more advanced status than the pagan peasantry, and the chieftaincy is in this case hereditary. Among the Iraqw (Mbulu) and Barabaig the administrative structure is built on the clan, and the chieftaincy is an innovation. Among the Mbugwe, authority was formerly vested in spiritual functionaries known as Wa-mugwi, whose position had something in common with that of the Laibon of the Masai.[1] The method by which Chiefs in these three tribes are now chosen is described as that of "popular discussion and acclamation." Only one of the Chiefs is said to show any strong personality or ability, and only two are literate.

The sub-chiefs there bear the title of Gwan or Sagwiman, the Headmen that of Yakwan, Barlamd or Mwiman. Both sub-chiefs and Headmen are chosen by the Chiefs in consultation with their Elders in local meetings.

The difference in tribal composition is reflected in the attitude of the Chiefs on the subject of union for joint purposes, for they have not as yet united in any formal federation, and there appears to be opposition to closer union. There was formerly no combined Native Treasury for the District, as each Native Authority maintained its own Treasury. As from 1st January, 1949, however, the Chiefs of Iraqw, Gorowa and Mbugwe agreed to combine their Treasuries but the Barabaig Treasury remained separate.

THE MASAI NATIVE AUTHORITIES

● 648 The Masai District has presented a problem of peculiar difficulty in the application of the Native Authority system, and it would be an advantage if the observations made here were read in connection with those made on the similar problems in the Masai Country of the Kenya Colony.[2] As there also the central feature of Masai society has been a well developed system of age-

[1] See page 286.

Kisonko

639 junior ages are concerned, beginning to regard themselves as a unit. Ngorongoro is another area where armour conditions pertain.

C. **Recent History: Famine — civil war — German Policy.**

1795 Again taking up the thread of history, the period 1880 to 1890 is regarded by the Masai as one of prosperity. Mbatian was the laibon at this time; it was he who called up the Moiko Masai to fight the Uasingishu and Laikipiak sub-tribes. But the period was mainly occupied with wars and raids against neighbouring tribes: the devastating effects of such raids, as noted by early explorers, are graphically illustrated by extracts from their writings reproduced in the "Administrative History".

1795 But about 1890 the Masai were visited by the triple misfortune of famine, smallpox and rinderpest. Whole families, together with their stock, were wiped out. In some cases the survivors lived by hunting or agriculture; in others they were adopted into, or carried off into captivity by, neighbouring tribes. The tribe was in fact scattered from Lake Victoria to the Coast. But such was the urge to the nomadic pastoral life that, in the course of the next few years, most of the wanderers returned, and from their earnings or stealings commenced to build up new herds.

1795 During the famine Mbatian died, and the tribe was divided by civil 669 war. For two of Mbatian's sons, Lenana and Sendeyo, were rivals for the position of laibon. The former had a following of Purko and other sections, the latter was backed up by the Loita. After various skirmishes round Naivasha, Sendeyo turned south, and his Loita beat in turn the Laitayok, Salei and Serengeti of the Loliondo area, thus finishing up at Ngorongoro. From there they descended to Kisongo, some of the Loita spreading to Longido and Olmelog. At one time Sendeyo himself lived at Lemagrusi, but later returned to Ngorongoro. When below the Rift he had numerous skirmishes with the Germans, and also with the Kisongo, supported by the Purko. His final defeat was brought about by a clever flanking movement; the Kisongo, by this time recovering from the effects of the famine, approached Lenana, who agreed to send his Purko from the north, via Loliondo, whilst the Kisongo attacked from the east. Thus both parties would converge on Sendeyo at Ngorongoro. When Sendeyo heard of this, he saw that the struggle was hopeless and fled by night to Lenana to admit defeat. Lenana allowed him to return as laibon to the Loita section.

1795 An important feature of recent history is the policy which the German 648 Government pursued in relation to the Masai. When they first made contact with the tribe, the Masai of Tanganyika, being scattered by the famine, must have been very few in number. The area south of the Moshi—Arusha—Mbugwe road was therefore thought sufficient as a Masai Reserve, and the objective was to keep Monduli, Longido, Ngorongoro and Loliondo areas free for alienation. This meant that the Laitayok and Ndamgoro Loita of Loliondo, the Salei and Serengeti west of the Rift, the Mirwandet of north Moru and Monduli, the Sighirari of Sanya and the Matapato of Longido, were all debarred from their grazing grounds. During the war, when this policy was relaxed, the various sections began to

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

reassemble and return, each to its own area. But the Moibo section seems to have flourished above all others and penetrated, during and after the war, into areas which had never before been in its possession. 175 648

The details of this period of famine, civil war and European intervention have not been recorded at length, but it is hoped that sufficient has been said to drive home the point that the period 1890 to 1920 was one of great upheaval for the Tanganyika Masai. The most obvious effect of this was the break-up and submergence of many of the sections, together with the loss of the loyalties which hold those sections together and generally of political cohesion. Only time can bring about a reorientation in accordance with the present distribution of population.

Another aspect of the above historical review should also be borne in mind. It is almost impossible to find at the present day an elder who did not go through considerable hardship in his youth. To anyone who has lost and regained a possession, such possession is of greater value, at least sentimentally. The Masai of Tanganyika lost their cattle, their mode of living and their tribal life, and largely by their own efforts have once again regained them. It is suggested that their intense conservatism and resentment of change may perhaps be better understood in the light of the foregoing. 191

For clarity this historical section is concluded with a chronological chart showing the main events and personalities referred to. 195 561

CHRONOLOGICAL CHART.

Age	*Approx. date of circumcision.*	*Important Events.*
DIYOGI	1778	Members of this age can be remembered by living elders. Subet belonged to this age.
KISARUNI	1791	Masai penetrated to Usagara.
MERISHARI	1800	Conquered Manyara from Adere.
KIDOTU	1821	Took Naberera from the Kwavi. Kikoin (the original Wéaruaha) brought up from Aruaha Chini. Capture of Engaruka.
DWATI	1836	Captured Loiborne, Moibo and Kihaya from Kwavi. Drove Datwa from Ngorongoro Highlands. Mbatian belonged to this age.
NYANGUSI	1851	One or two members of this age still alive. Took Karatu from Datwa. Death of Subet.
LAIMER	1866	Moibo Masai called up by Mbatian for Laikipiak war. Capture of Talamai and Kiteto.
DALALA	1881	Peace made between Masai and Kwavi at Ruvu. Death of Mbatian. Famine, rinderpest and smallpox. Loraana and Sendeyo belonged to this age.
DWATI	1896	Civil war between Loraana and Sendeyo. First contact with European administration. Parrit promoted to this age, though actually Dareto.

Kisonko

After going through the ceremony, the new elders can drink milk alone, eat meat that married women have won, carry short bladed spears (*endere ene*) in place of the long polished warrior's spear; in fact all the customs of warriorhood are abandoned. 561

On return to their homes those who are not yet married do so at the earliest opportunity. Those who are married, if their fathers are still alive, move off from the paternal home; for they are now in complete control of their cattle, and if they stayed with their fathers there would be constant bickering on animal husbandry matters.

From the foregoing it may be concluded that the average Masai male spends at least 10 years of his life as a moran. What are his economic duties and privileges during this period? In olden times his primary duty was to defend the country and, by raiding other tribes, to maintain and increase the cattle population. But European intervention has deprived him of his main occupation, and the only duties which the moran by custom seem bound to perform to-day are (a) drawing water from wells for his father's cattle or superintending their watering at flowing streams, (b) cutting the thorn tree branches which form the fence of the home, and (c) escorting home night-bound cattle or searching for lost beasts. It was natural that few everyday tasks should be imposed on the standing army, but although the military duties are now in abeyance, the moran have retained the privilege of freedom from responsibility together with many other perquisites. These include access to the unmarried girls and the right to demand milk in any home. In the matter of bullocks for slaughter in *ol pul*, the camp at which the moran may alone eat meat, the warriors seem to have a fairly free hand; if an elder withholds his consent, his moran son (with friends) will frequently help himself. It is not improbable that with the prohibition of raiding the moran exert these privileges in greater degree than they used to. If the elders are to be believed they spent a considerable portion of their time as warriors absent from home on raids, living in the bush on stolen cattle preparatory to stealing more. Consequently the time which they spent wandering round the homes making their demands must have been considerably curtailed.

Another duty, or rather, restriction placed on the moran was abstinence from tobacco and beer. The former is largely breaking down, but fortunately the latter still holds to a considerable extent. This is not so with the Arusha, amongst whom drunken brawls between groups of moran are not infrequent.

The above largely refers to the unmarried moran; once they settle down, even before the *eparkuro* ceremony, their mode of life is practically indistinguishable from that of a newly made elder.

Elderhood is in itself marked by different stages, each of which has its own privileges and responsibilities. The members of the generation immediately above that of the moran are mostly concerned in family matters, establishing their own gates, marrying and performing ceremonies to ensure the fertility of their wives. The generation next above the most junior elders, as explained earlier in this chapter, is responsible for the

PREFACE.

[174] [175] In the past very little detailed work on the social life of the Masai has been attempted, since such investigations cannot well be made through interpreters, while few, if any, Europeans speak the Masai language sufficiently fluently to make such an investigation in that language.

Although I cannot claim any knowledge of the language of the Masai, I have been [22] fortunate enough to become friendly with four Masai who speak Kikuyu fluently, and as I speak Kikuyu as well as I do English I was able to learn something from them about their customs.

These notes are of necessity brief and full of lacunæ, since I avoided asking direct [24] leading questions, though tempted to do so, and also because they do not include information unless it was obtained from or corroborated by more than one informant.

The Masai from whom this information was obtained came from that part [01] of the Masai Reserve which lies to the west of the Rift Escarpment, and I was not able to find out whether these customs prevailed among the whole of the Masai group.

My two principal informants were an old woman, past child-bearing, and her married son, aged about 35 (I have unfortunately lost the paper with their names). They were insistent that most of these customs have been slightly modified since [24] [34] government control has been set up, but I have, notwithstanding, written mainly in the present tense.

PART I.—CEREMONIES.

[174] *Birth.*—Among the Masai, birth takes place in the woman's own hut in her husband's village and she is attended by an old woman of her husband's family. Other women may be present, but no men. If a woman is having her first child she assumes a stooping position supported by other women, as the first child is considered more difficult to deliver; otherwise a woman giving birth to a child lies upon the bed. The acting midwife cuts the cord with a special instrument,* and both the woman and new-born child are washed with warm water. The placenta is carried out and thrown down in the cattle yard, but is not buried. As soon as the child is born its ears are ascertained in order that an animal may be bled to supply blood for the mother to drink. If the child is a boy the blood is obtained from a young bull, and if a girl, from a young heifer. (For method of procuring blood see Part II.) From the day of [174] birth onwards many sheep and goats are killed to supply meat and fat for the mother in order that the child may grow up strong, but these animals have no special significance, and are not sacrificial or for purification purposes.

[183] [177] *Naming Ceremony.*—Children are not named until they can run about, and unlike some other East African tribes, the child does not inherit any name from any PATERNAL OR MATERNAL

* There is some mystery attaching to the instrument used, and I am not sure what it is.

C34 *Boyhood. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference [illegible] should they ill-treat the boys.

Should an uncircumcised boy have intercourse with a married woman he may, when his time comes to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had an offended was circumcised in due form on payment of a fine of four cows.

[illegible] The elders who decide when a new circumcision is to take place are those of the Ol-Piron generation to that which is about to be circumcised.

Ol-Piron means a foreskin, and its significance is explained below under superstitions of prominence and eyes.

Ceremony of Setting the Ox by the Horns.—The Masai call this ceremony *Enkolomi e ol-Gimp*, which means the tearing of the ox. Ol-Gimp is the general word for an ox and is not confined to the one used at the ceremony. It must be performed first by the Il Kaboyoshi section. I have not seen it performed.

[illegible] *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a gourd. Six bulls were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Kikuyu and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany.

As soon as the operation was finished new sandals were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator ceased off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat alone on a bed while an elder refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period.

A branch of a tree is tied to the front of the boy's mother's hut by twelve thongs passed through the wall.

C41 *The Festival.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

In social classes, Il Piron means a foreskin. I have been given a reason for the use of this term, but was not convinced of its truth. The elders of the *Il Piron* generation stand in a particular position of guardians to their juniors who recognize their authority to a far greater extent than they do that of elders of other generations. This relationship has considerable political as well as domestic importance. 561

Manyatta.—The unit is the unit for a single manyatta, except when the whole age-group of a single area combines to form one manyatta for some ceremony, *e.g.* the *Il Oiom*. 561 562 563

For some years the policy of Government was directed towards supporting the warrior system, and manyattas were prohibited, each warrior being supposed to live in his father's village. With increasing control and understanding of the tribe this rule has been somewhat relaxed, and the warriors are now commonly allowed to have manyattas provided that they continue to behave themselves before the law.

But the general effect of Government policy has profoundly modified the original customs with regard to warriorhood, and it is now rather difficult at times to know exactly what they were. The main political effect is that warriorhood lasts for a much shorter period than formerly, and most men marry and become elders within four or five years of their circumcision. 564 565 566

Nowadays the parents are somewhat unwilling that the girls should live in the manyattas, and so there are only a few of them to be seen there.

A manyatta usually differs structurally from an elder's village in that it is simply a circle of huts without the usual thorn hedge round it.

Sex Life.—The word written by Mr. Leakey *tumbiba* would perhaps best be spelt as two words *Tumbi ipuk*. *Tumbi* is a second person singular imperative of a dative verb (see Hollis, p. 77) which I have never heard except as described by Mr. Leakey. *Ipuk* means "no" or "or" or "or." 576 577 578

When a man has been accepted by a girl who has been so allowed to usually little sex he has to lie with the tips of his forelegs and thumb touching to form a circle. She is then supposed to break the circle so formed with her forelegs. This is regarded as making her acceptance binding. 579 580

It is a great disgrace for a warrior to come as uninitiated girl to marriage, and he must kill an enemy in order to wipe it out. This is, in fact, the usual reason for the occasional murders of people of other tribes, frequently ascribed erroneously to a desire on the part of the murderer to "blood his spear." 581 582

The Il Oiom Ceremony.—Nowadays this takes place from three to five years after initiation. It is not a single ceremony for the whole of the Masai, but there are a number of separate ceremonies according to the groups enumerated in my age-group table above. 583 584

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

561 warriors may have sexual relations with initiated women. This is regarded as being 334
the first stage in a warrior becoming an elder.

The warriors have their heads shaved—usually by their mothers—at the close [302]
of the *Il-Oasis* ceremony, but they allow the hair to grow again, and plait it into a
pig-tail when long enough.

Milk Drinking by Warriors.—A warrior may not drink milk unless it is handed 56
him by another of his age-group. They must therefore always go about in parties 374
of two or more. The procedure on arrival at a village where they want some milk 272
is as follows :—

The warriors enter the village and stand in the open space within the circle of the huts till one or more of the old men come to greet them. They ask for a hut of their age-group, or, failing that, a hut of an elder of their *Il Piron*. On being shown a hut to enter they go in and sit down on a bed or the stool, and wait till milk is handed to one of them (for description of hut see p. 632 f.) He shakes up the milk, removes the cap of the gourd, and hands it to his companion, who drinks it. If only two gourds be brought they share it, handing it from one to the other. If a second gourd is brought the warrior to whom the first gourd was originally handed may open it and drink it himself provided that he has given the first gourd to his companion. Drinking after a drink of milk is a sign of repletion and is good manners, showing the guest's appreciation of the hospitality of his host.

Il-Ny'ukor of Milk.—This ceremony is performed by each warrior individually. 56
He is given milk by an elder in his mother's hut, and drinks it by himself. He shaves [272]
his head and does not grow a pigtail again. Thereafter he may drink milk by himself. [302]
He usually marries very soon after this ceremony, and is no more regarded as a
warrior after it. The ceremony usually takes place nowadays a year or two after
the *Il-Oasis* owing to Government policy of reducing the period of warriorhood as [481]
much as possible. In the Purko, most of the *Il-Sidimoi* have already performed their [171]
milk *Il-Ny'ukor*, although there is as yet no left-hand age-group for their generation.

I have read it said that in some tribes there is a ceremony of handing over warriorhood from one generation to a junior one. Among the Masai there was no such ceremony. When the young warriors of a new generation became strong enough they fought and defeated the old ones, taking on the warriorhood by force.

Meat Taboo.—No man may eat meat which has been touched by an initiated [262]
woman until he has performed the second *Il-Ny'ukor* ceremony, called the *Il-Ny'ukor of meat*. Also that he may not eat meat which a woman has touched if he *Ilog*. The
Il Moruroro and *Il Kibeju* age-groups of the Purko were said to be going to have their meat *Il-Ny'ukor* in June, 1930; but I left Africa before it was due, and therefore cannot describe the ceremony.

A man of the generation immediately elder than the warriors must not be seen eating or drinking milk by a warrior until one of the warrior age has given him a bullock.

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

498 a small legacy of a few cattle to anyone he likes, but the bulk of his property must be inherited according to the above rules.

Women's Property.—As a general rule a woman cannot own cattle herself, but holds them in trust for her husband. I have twice come across exceptions to this :—

(a) A woman who had pled the profession of a doctor (i.e. native herbalist) and had received cattle in payment.

(b) A woman who had amassed wealth outside and independently of the tribe.

Household utensils such as gourds, hides, and donkey saddles belong to the women of the house.

175 *Laibons* (Masai, *'L-Oibonok*).—Hollis, pp. 324-326, gives the history of the *Laibons* up to the beginning of the present century. I will therefore briefly summarise their more recent history.

Lenana was made paramount chief of the Masai in Kenya Colony by the Government. He died in 1911. Some people thought that his brother Sendeye had bewitched him, but little evidence need be attached to this opinion. He appointed his small son Seggi to succeed him. As Seggi was a minor, Ngunya, son of Keilana, first cousin to Lenana, was appointed as regent. Between the years 1912 and 1922 it was the Kenya Government's policy to curtail the powers of the *Laibons*. Seggi grew up a weak and lovable person, who has little authority, and is more often drunk than sober. At one time he was deposed from paramount chieftainship for persistent inebriety, but was subsequently re-appointed to be paramount chief of the Kajiado District only.

His brother, Kimeruai, is *Laibon* of the Purko section. He is a weak character, but religious and beautiful. He is very untrustworthy owing to his desire to seem more important than his character warrants him to be.

Ngunya is now a very old man. He is *Laibon* of the Kaikenyuki section. Sendeye is *Laibon* of the Loita section. He was deported to Ikoro in 1922, it having been alleged that he was implicated in the rising of the 2 Kinyi age-group of the Purko at the end of 1921. He was allowed to return to Loita in 1928 and still lives there, much loved and respected.

Whereas in Kenya the power of the *Laibons* has been much reduced since Lenana's death, and councils of elders have been created to try and take their place in the government of the tribe, in Tanganyika Territory the authority of the *Laibon* has been upheld and he is regarded as the paramount chief. I believe that the system has worked well. Until recently their *Laibon* was Parit, a son of Lenana. Parit is now dead, and a minor, whose name escapes me, has succeeded him.

In Pl. XIII, Fig. 4, is seen a photograph of Seggi holding in his hand the lenana club of his grandfather, Mwatana, and the iron club of his father, Lenana (see Hollis, pp. 325 and 326). Mwatana's lenana club is at present in my possession, but should be returned to one of his descendants at some future date.

13:9ostingford E-4 (no date) 1953 FL.12 Masai FL.12
TATOGA FN26

group: Kipkoromb, Tindiret, Lelkhond, Ravine, Western Mau, Eastern Mau; Central group: Dondolo, Sabiti, Kisiwa, Digiri; Eastern group: Mt. Kenya, Kisiwa; Southern group: Moshi. The western, central, and eastern groups are all in Kenya, the southern in Tanganyika Territory.

The Teteg division comprises:*

1. Barsiwiyi: call themselves Barsiwiyi, sing. Barsiwiyo; the sing. primary form is Barsiwo; the plur. primary Barsiw has not yet been recorded. 2. Chemnjuk. 3. Dumunjuk. 4. Dorowujuk. 5. Bunuiik. 6. Sinujuk. 7. Kongwiyuk. 8. Chkorowiik.

The Teteg (Tatoga) are called Tetuny by their Southern and Sonia neighbours; this is said to be a corruption of Teteg. They are called D-Mugori, sing. Ch-Mugoriwo (= "the enemies") by the Masai, and this term has crept into some of the literature.

II. Masai Group

The Masai as a whole call themselves D-Masai, sing. Ch-Masaiwo.* There is some uncertainty as to the nomenclature and tribal divisions of the Masai. It is clear, however, that they are not a single tribe, but a group consisting of a number of pastoral units called D-ulu, sing. ol-ulwo, or sub-tribes, which were associated in major units which may be called tribes and were the political units. These tribes and their sub-tribes may be provisionally set out as follows:

Northern Masai:

1. D-Ahiyiuk, sing. Ch-Ahiyiuwi. Written also Lahiyiyu, Lahiyio, and even Lyhiyio.

2. D-Wamlo-kidoi, sing. Ch-Wamlo-kidoi. Commonly written Uasin Gishu, and formerly Cross Dyhiou from the misnomer idea that D means "cross (gender) of cattle," whereas D means "striped cattle."

3. I-Sampur, sing. O-Sampuri; commonly written Samburu or Sambur. Called by the other travellers Burkeney (I-ten-ilon-kiwyi = people of the white goat).

Central or Rift Valley Masai:

4. D-Kisongo, sing. Ch-Kisongoi, a grouping of three d-ulu called D-Purko, D-Orom, and D-Kaik-a-ayiku. D-Purko has been Europeanized into Kisongo, and Kisongo into Kisongo.

5. D-Kaputiei, sing. Ch-Kaputieni, a grouping of three d-ulu called D-Kaputiei, D-ne-de-kiboi, and D-Sale-le-Kiruk. The first is also written Kapti, Kapti, the second is the Dogboi of the other travellers.

6. I-Loitai, a grouping of the I-Loitai and I-Siria, to which latter belong the Isiriwa of the D-Aiwi clan.

Southern Masai:

7. D-Kisonko, sing. Ch-Kisonkoi, generally written Kisongo, the Masai of Tanganyika Territory.

All these are Pastoral Masai; the first two no longer exist as separate tribal entities; the D-Wamlo-kidoi were broken up about 1883, and lost their tribal; though they have now been re-formed under their old name, this is due to the action of the British Administration. The D-Ahiyiuk have also lost their land and their separate identity.

The Agricultural Masai are known as I-Lumpur, sing. O-Lumpuri, commonly

* Information from Mr. Gordon Wilson.
* D and I in these names and words are the plural and singular article respectively (masculine, etc.), sing., etc. The Western Kidoi pronounced in Swahili.

13:Huntingford E-4 (no date) 1953 FL.12 Masai FL.12
Pastoral Peoples

In 1952 the Il-Tiamus numbered about 2,200 (3,420 according to the 1948 Census), and though they are of Masai stock, being descended from a Kaputiei section called Il-Dogilo, they have admitted a variety of refugees including Kamasia, and become rather mixed. According to one Ildamat they had originally four villages at the south end of Lake Baringo, but two were deserted on account of Masai and Suk raids, and some of the inhabitants, having lost all their cattle, took refuge on Kokwa Island in Lake Baringo. They are expert swimmers and possess canoes, though one Ildamat saw none in 1947. Their dwellings are round huts with rather high-pitched and somewhat convex thatched roofs, and walls of posts and sticks. These are crowded into two permanent villages known as "Nyanga Kokwa" and "Nyanga Ninga" in the Tigish valley a few miles south of Lake Baringo; the closely packed huts almost touch each other, and the mud-walled grounds are surrounded by strong palisades.

In general the Il-Tiamus keep as close as they can to the dress and customs of the pastoral Masai; they have circumcision and moran and other ceremonies, and practise the "lion-hero" system of the pastoralists, though without the moranyata. Today they have some 100,000 acres of poor land, most of it unfit for cultivation, but they have acquired, since the establishment of British rule, some 12,000 or more head of cattle, and 30,000 goats and sheep, thus achieving in part the ambition of all Il-Oiburu to become cattle people again. In the time of Thomson and Teleki, however, Nyanga was an important station on the caravan route, and one Ildamat noted that they had a large extent of cultivated land. This was divided into blocks (he says of three to four miles square) which were interwoven by irrigation channels bringing water from dams across the river Tigish. This system was still working in Dundas's time, who says that the opening of the main ditch was performed with the sacrifice of a sheep at the mouth of the ditch.[1] Besides agriculture, the Il-Tiamus fished and hunted, using the bow, and spears of fish and Tilapia types.

It is possible that the fishing group called Il-Molo who live on the east shore of Lake Rudolf is to be classed as Il-Oiburu.[2] They subsist on a diet of fish alone which, when Teleki and von Höhnel saw them in 1888, had produced no ill-effects, but it seems now to have resulted in considerable physical degeneration, and in the appearance of albinos in all members of the group. There seems to be a good deal of Cushite blood in them.

The Il-Arusa round Mount Meru are a large tribe of agricultural Masai, originally of Sonjo stock, but now accepted by the pastoral Masai as worthy of recognition as a group which can pay and receive cattle for compensation in cases of homicide. The Wangaya in Southern Mombasa are also to be classed as agricultural Masai.[3]

SOCIAL ORGANIZATION AND POLITICAL STRUCTURE

Social Organization

Life Cycle

From birth to circumcision a male is a boy, *el-ayiani*. At circumcision[4] he enters an age-set and becomes a warrior, *el-moran*; "one who is circumcised," and may associate with uncircumcised girls. At the *el-gulan* ceremony he becomes an elder, *el-moran*. Warriors may marry when they become senior warriors. After the *el-gulan* the newly made elders attend to their family concerns, and get seven

[1] G. D. Dundas, *JRAI*, 51, pp. 99-100.
[2] H. S. Huntingford, "The Island," *JRAI*, 1955, LXXXIII, p. 201. von Höhnel, II, pp. 196-98.
[3] The people known as Wadiro in northern Tanganyika are not Masai, but people of Sonjo stock who have adopted Masai.
[4] There is some uncertainty as to the age at which boys are circumcised. Hollis gives the limits as 10-17 years. Farquhar gives the limits as 18 or 19.

from each side locked each other's bodies. There was then kept (?) a solid cow-
skin to block it. With Sonia when the Masai ceremony made much blood-brother-
hood with lance or dagger, for they have no blood-brotherhood of their own. As
among the Nandi, grass is a sign of peace, and a handful of grass constitutes a pledge
for money recognized by the Masai and those whom they count as more or less kin-
equals, the *Il-mapani* or "mamion," such as other particulars, but not *Il-mook*, the
Sonia agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and
to depend even more on the force of public opinion than on the position and status
of the council leader. It appears that only in cases of homicide is there anything
like a regular procedure. The Masai distinguish between intentional and accidental
homicide, the difference being that for the latter there is no blood feud and the
amount of compensation is smaller. The number of blood-cattle paid as compensa-
tion, *ni-ibike ni-i-ainap*, "murder cattle," varies, but may be as high as two to
three hundred for a man; Hollis says 50 for a boy, and Merker 10 head of cattle and
40 goats and sheep for a woman. Tadenoko gives the figures as 40 for a circumcised
man, and 20 for a woman or uncircumcised man. The *Il-kiwa* are recognized as a
group which pays and receives blood-cattle. The murder may be avenged by the dead
person's brothers who may try to kill the murderer, and if compensation is not paid,
the resulting feud may involve all sporadic kinsmen on both sides. It is not clear
whether killing of the murderer makes the avenger also liable to compensation. If
the victim belongs to the same subclan as the murderer, no compensation is pai
ceb. If they belong to different subclans of the same clan, or to different clans,
all members of the murderer's subclan contribute, and the cattle are divided among
the members of the victim's subclan after the elder brother has received half the
stock. When a settlement has been made, peace is made between the families con-
cerned by an exchange of garments. Sapolu gives details of three methods of
dealing with cases of murder. (1) The relatives of the victim take all the murderer's
cattle; they hold a council and, after giving a few cattle to certain elders and old
women, the brothers, herd-leaders, and some near relatives are returned to the
owner; the rest they divide among themselves. (2) If action is not taken at once,
the relatives of the murderer send a *ainik* to the relatives of the victim, the acceptance
of which implies an agreement to meet and settle the matter, and compensation is
arranged, the figure named being 40 head of cattle, with also some added to symbolize
the human body (reckoned by the number of its orifices). (3) Sometimes the rela-
tives of the victim do not take action for two years or more; they then call the
murderer's kraal by night and demand the number they want. For killing a child,
el-kanoni, no compensation was payable, nor was there a blood feud. If a child
killed a man, several months or not and killed several months. Death (except of
cattle) is apparently considered of little account: " If a man steals milk or meat or
other small things, he is not fined. Grown-up people rarely steal," says Hollis. For
cattle thefts, the thieves when caught were fined, given food from each man
concerned.

The general principle that a man is entitled to compensation for a wrong
suffered is recognized by all Masai and this recognition is extended to " foreigners "
like Sonia, provided the people concerned are well known to each other. On being
accused, a man may submit to an ordeal, *el-mamai*. In many cases a diviner of the
type called *el-gonito* by Merker is employed to find a guilty person. The whole
subject of Masai legal institutions needs detailed investigation.

Modern Administration

The Masai political structure has proved even more difficult of adaptation than
that of the Nandi, since it lacked the clear-cut present divisions of the tribe. Up to
1918 the chief taken to Kenya was accepted by the Administration as a permanent

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

651 chief, but in that year it was recognized that he was in fact no such thing, and the native administration was reconstructed with 14 Native Councils, one for each
● 652 division (3 Parkis, 3 Dinat, etc.), to replace the original council of the elders. These Councils were composed of 3 elegunak, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 40 laibons, some of them 3 elegunak. The Reserve was divided into nine locations, the numbers of laibons varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The laibons were divided into two grades, laibons (orpiko) chiefs and sub-laibons.

In Tanganyika, the laibon was at first supported on the head of the Kimolos; but since this arrangement proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of laibons and elders, but possessing only advisory powers. Later, a local council was set up in each area, with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid laibons.

MAIN CULTURAL FEATURES

Crafts

Housing

392 The Masai hut, enkaji, pl. enkanjik, is a low structure with a flat or flattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather holes are held on top to bring out the smoke. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The beds of the agricultural D-Tadaiks have flattened seats of the normal East African pattern (p. 111). A temporary skin hut called enjoiro is used for a temporary halt when journey is past.

Dress and Ornaments (Traditional)

719 Warriors wear a small calf- or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a head-dress of ostrich feathers or of lion-skin, a cape of vulturine feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece of goat-skin fastened to the belt. The distinctive warrior's ornament is the lion
[361] arm-ring called *e-rol*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-kowo* is worn by warriors on certain occasions. Bells are worn when going on a raid after shaving an *el-amorai* (*El-olmoi*); John Tandon ole Mbatu, which they go on a raid after making a vow to conquer or die. Elders wear
391 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys
[394] wear a skin-apron.
[361] Married women wear a skin cape and a skin skirt held in place by a broad belt. They wear coils of iron wire on the arms and legs, often on both the upper and
391 lower arms, and from time to wear. All married women wear the skins of coiled iron wire, a specialty being by usage from the neighbors (like the Bondei tribe), and
301 some wear coils without beads of coiled iron wire which stand out round the neck, and are about 8 or 9 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear this garment tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

[For Mawi traditions of contact with non-Mawi peoples during the "primeval age of the Mawi" migrations, along with a brief cultural sketch of each group, see category 116, pp. 380-400.]

/7/

In these mighty corps that followed one another at long intervals, the Ideal people came from the north down toward the equator. The long separation from one another in space and time, their different length of residence in the new Ideal homeland, and the different shaping of their lives conditioned by that scale then appear to us today as three branches of the Ideal people.

The remnants of the earliest immigrant band are the Ad, more generally known under the name of Wandering /Wandersdorf/ (a Bantu formation from the Ideal word El Ambie : the poor), of whom they form only a part.

Although the tradition of the Ad has nothing to say about a former possession of livestock, one most nevertheless assume, especially on the basis of their ethnography, that they immigrated as stock-raising nomads and, as such, took possession of large parts of the steppes. Wars among themselves, livestock epidemics, and, finally, the pressure by the Tuaga evidenced the Ad to such an extent that it was easy for the second band of Ideal, the El Ambi, the first sections of which were the El Ambiya, and the later ones the El Amib, when it came to, to drive out the colored and alienated. A part of these found refuge among the neighboring agriculturists, with whom they merged, another part among their oppressors, who adopted them as members of the tribe; the rest, however, withdrew into the forests and bush of the steppes, where still today, in great poverty, they live a poor living by hunting.

The fate of the Ad, however, was not to be spared the El Amib either. After a rather long period during which they competed with the Tuaga for dominion in the steppes, the Ambiyaya appeared again several times and, as before, brought poverty and death. And again, as before, the new inhabitants did not remain alone. The third band, the El Ambat (sing. el Ambat), immigrated here from the north, and it looked as though it would equally complaint, by means of bloody fighting, the destructive work of the epidemics. But the presence of the Tuaga, who in places were just as powerful as they were feared, diverted the hostility of the Ideal. They joined the El Amib for the common fight against the former.

the sinn Féin craft. Those who become military, however, are designated by the blood or Ó hanlon and also as Ó hanlon -- probably because they constitute the main part of the old Ó hanlon. The common people, accordingly, call them Wolcott, while they make no distinction between Ó craft and blood and even impose on the honor the name of the lands.

In contrast to the Ó craft, who have received pure, the Ó hanlon of all the settlements are more or less strongly mixed. In places the degree of mixture is so great that at first glance one scarcely recognizes the exactly Saxon characteristic of the blood people; in places, however, it is also still so slight that any mixture at all can only be determined by thorough investigation.

A few generations, however, the Ó [illegible]. This is the second branch of the Wadsworth: the third and last racial, the Ó [illegible], arose from the blood descendants, in that those impoverished by Cromwell's epidemics were forced to a new mixture of substances.

Even up to 17 years ago the blood were the lords of the rent steppe in Carrow and Brian Ó hanlon, when the Saxonic occupation brought about a change. The entire land inhabited by them is divided into three provinces. The Kinsale Province unknown than steppe regions that lie south of the line, extending east-west, connecting the peaks of Kilmacdarkane and Mon. North of this lie the provinces of [illegible], and still farther north, embracing the region of Lake Kilmacdarkane, the province of Ó hanlon to earlier times a part of Lake called [illegible] [illegible] to have temporarily formed a province by itself. Each province (of course Ó hanlon a province) is divided into districts [illegible]; the lands and these again into areas. Most of first names are proper names that can not be combined; where we choose from local peculiarities, for example, springs, heads, hills, mountains, rivers, etc. The inhabitants often name themselves after the individual provinces or districts and then speak of Kinsale-blood, Lake-blood, Ó hanlon or even Kinsale-, Lake-, Ó hanlon-blood, etc. Earlier services often mistakenly took this designation for tribal names. Similarly, the word [illegible] has been misinterpreted.

[illegible] [The reference is to the last group of the original. Swift—dual pat.]

/3 cont./
to due to our colors or a tribal name, and people spoke of ei ehleh-tawat and ei ehleh-Wokeeh. Ei ehleh (sing. ei ehlehah) were fellows, rough, brutal persons, and is an insection with which the Wandarlies, Wokeeh, and the Ideet Ilee-hentlie (ei hemmi) designate their opponents, the Ideet. Parker mistakenly rendered the word as "owners of the land"; this, however, would be ellleh ei ehlie | ei ah.

The Wokeeh live in their colonies as more or less peaceful, sedentary cultivators. Wherever they found peaceful neighbors after their defeats, they too became calm. On the other hand, where they encountered in close contact with the Ideet and were exposed to their constant raids, the old bellicosity remained in them. An example of this is the population of Ideeberg /Ideh, Ideet/ in the Great Bowrlie /Bowlie/ and Mere area. In spite of a very considerable contact with Wederlaggie from nearby Kilbrandeham, they have carefully kept their original character traits. Their impetuosness, rapacity, and running equal fear of the Ideeti is enough, on the other hand, they even despise them. Their numerous attacks on the camps of Ramgreen and their caravans reveal them as brigands. The relationship between Wokeeh and Ideet is in general not bad. The latter regard the former as fellow villagers, even though as inferior men, because they work the soil and own only a little livestock. They are fast one minute and friends the next. And both seek always reconcile themselves to each other, for the Ideet consider in without them as suppliers of vegetable foods, after the conquest in the end of the eighteen eighty regard as dependently among their lands.

While among the Wokeeh are not still clearly recognize their ancestral power and greatness, this is no longer the case at all among the Ideet. Most of them, just like the Ei ehleh, roughly and concentrated in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild berries, roots, and herbs. Where they dwell in the vicinity of the Ideeti, they live in a certain

/Page [illegible]/

dependency on them. A caravan traveling across the steppe certainly does not remain hidden from the Wandolfo roaming about everywhere. /[illegible]/ Their betrayal was cause it to fall victim to the quite-hungry Ideni. Though their poverty and the consequ-ent endeavor to make up for the lack of daughter animals through the killing of goats, the Wandolfo, to be sure, stand especially low in the estimation of the Ideni, yet the latter do not deny the connection with their old fellow villagers to the extent that they do not grant individual Wandolfo, as well as El Iambos and El Gesli, admission into their community.

In recent times these Ideni who, after the loss of their livestock, have become detached from the larger community and live in small bands in relative poverty, still generally reckon themselves as belonging to the El Ambiko, without, however, counting themselves within one of the three branches — Ank, El Ambi, El Gamesh. Often they live together with a few Wakeafi, sometimes one also finds one or several Wandolfo families among them. Their property consists of a few cows and donkeys, a couple of goats and sheep. Since they cannot subsist on them, they also cultivate maize, beans, etc. here and there and devote themselves to hunting with bow and arrow.

The influence that the Ideni people exerted and still exert on the settled peoples who live on the borders of the steppe dominated by them for centuries is very great. Just as formerly it was the Wandolfo, now it is the Wakeafi and Ideni to whom influence the surrounding peoples most adroit. What qualified the Ideni for this lordly position is their relatively high cultural level; what made possible their reaching this position, their strict organization and their war-mindedness. This is not the place to analyze why the culture of the Ideni is a higher one than that of individual Dagaan surrounding them. It should only be pointed out that among almost all of them, in contrast to the Dagaan,

superstition and belief in spirits are to be found in the grossest forms, just as all the crimes resulting from them, such as abortion, infanticide, etc., are everyday occurrences. Yet even a people standing culturally higher than the Ainoi, with their absolutely quite low culture, would never have arrived at a dominant position peacefully living side by side. The reason of attaining it was the very vague, commonly and rationally. Their being quite greatly impressed the Magyars, which is why the latter, in order to be taken for Ainoi themselves and to be feared as such, adapted their attire as our expeditions. The involuntary admiration into these Magyar tribes on the part of many Ainoi women and children, who often fell victim to their neighbors during the constant wars, as well as the compulsory innocuous of those who found help and refuge among the adjacent agro-civilized when the periodically recurring epidemics had carried off their livestock, created circumstances that took shape in the direction of a general blendation. To the young Magyars the Ainoi, long accustomed only to war and raids, seemed worth aspiring to, and the girls found the handsome slender Ainoi figure more desirable /75/ than the men of their own tribe, who, in their often hideously ugly and wild Magyarkaum and through the frequently total lack of care of skin and body, stand in coarse contrast to the agreeable, often finely chiselled, and handsome features and the shapely limbs of the Ainoi. Thus the Ainoi gave much of their blood to other tribes, and today is almost all the peoples who have come into close contact with them one finds figures which at first glance one could take for pure Ainoi.

/10 cont./

[illegible] dare to appear commissioned before the mighty one. Thus, the Meet living on the military station of Meetki /Meetki/ remained hidden during Zendee's presence when the latter visited it at the beginning of 1896, and my Meet servant did not dare deliver a message either to Zendee or to an attendant sitting beside him.

The aim of the chief's policy is the unity and strengthening of the Meet. By loving the capacity of the warlike spirit itself in expeditions against foreign tribes, he prevents his own people from devastating civil war for which the endless friction of the dancers among themselves would give continuous occasion. This influence makes possible for him the belief that a victory is attainable only through the secret power of the war medicine that he alone knows how to manufacture, and a defeat must inevitably come if he predicts it. Neither he nor his closest relatives go to war. He gives remedies against sickness and sickness — as a rule in the form /10/ of magic medicine — and makes supplications [illegible] Meet god [illegible]. He reads the prophecies from an oracle game of the kind of the covering off of bottom. [illegible] man's horn provided with a leather cover (Fig. 1) he takes a handful of river pebbles, puts one or several of them aside, and throws back the rest. After he has repeated this several times, he announces his prophetic verdict, which often enough is worded in Pythian ambiguity. The game, like the lineage, is called [illegible]. The office of [illegible] is hereditary and has been handed down until the most recent times from father to the oldest son of the principal wife. The badge of his office is an iron club.

Fig. 1

The Meet do not have much to say about the genealogical [illegible] of the [illegible]. The five four or five names that it contains belong to chiefs who ruled in early times. These names are [illegible], [illegible], [illegible] (Sun-people), and [illegible]. The [illegible] are historical and descend from modern times. The five of them, [illegible], seems to have ruled at the beginning of the nineteenth century; he was followed by his son [illegible], who

[illegible] when such a narrow escape. Mbwyas demanded thousands of workers, and they moved obediently, in endless long lines, men, women and children, toward the swampy area of Kimbiga, lying

Mwalimu photo.

Ill. 6. *Zawiwa, the present chief of the Mbwai.*

west of the mountain, where the mighty one resided, like his ancestors. There they had to dig a long water channel, whereby -- a further particular humiliation -- the men had to work in rank and file with the women. Encouraged by these and other successes, the Mbwai became more and more arrogant, and they extended their war expeditions farther and farther. It was not only the Nagao tribes of the interior who had to suffer under their lust for military and martial, they even penetrated into the inaccessible hinterland of the coast and directly approached the coastal cities of Mazeiwa, Tonga, Bagamoyo, and others.

The belief in the magic means for healing *furyawa* which Mbwyas gave those seeking help, and whose chief ingredient quantitatively was the vanilla-scented, pulverized wood of the *ni magnigaro* liana, was so deep-seated in the people /73/ that it was often supposed to have actually brought to the people

/11 cont./

recovery from their pain. Mbatyan earned outstanding merit through the discovery of a protective vaccination against lung disease of cattle. According to the corresponding accounts of Zendeo and four old Masai, Mbatyan, several years before his death, had already prophesied the appearance of rinderpest that did not take place until after it and the subsequent subduing of the Masai by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard. That is, in contrast to the other men, neither the ol oiboni nor the ol gojewa and ol kibondo mentioned farther below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hair.

The chief's village consists of a large number of kraals lying close together, several of which serve as the dwelling of the ol oiboni with his numerous wives. Mbatyan had about 200 wives; the still young Zendeo has only 30 of them. No strange man may enter these dwelling kraals of the chief and his wives or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (ol dulgenak olorif ol oiboni) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the marches of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying him camped in a large circle. The ceremony in the chief's camp is very simple. One of the men wandering about idly in the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

/78 cont./

714 These consist of curves, sectors of circles, lines and scallops,
531 which are painted on the shield's surface in three colors. Pompeian
[822] red, black, and gray (1).

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs
[386] stand out in sharp contrast. One uses for this the red earth mixed
[824] with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black,
[239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 Today considerable confusion in the shield escutcheons already
531 prevails. The rarer the war expeditions of the Masai become,
721 thanks to European domination, the more the old formalities of war-
178 fare are sloughed off, and ancient rules, which formerly were never
[648] transgressed, are today all too often ignored: their purpose has lost
[669] its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 A shield escutcheon (Plate 1)[2] may contain 1. the red warrior-
531 emblem (os serat' onjugi), 2. the black emblem (os serat' enok) (1).

1. To which the rare gray also belongs.

3. the ornamental band (es segira l el ofo), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

/101 cont./

726
721

As has already come out in the foregoing, the Masai are not familiar with a declaration of war in their dealings with foreign tribes. War is rather a sudden attack in the midst of peace, or, more properly, because, as we shall presently see, seriously intended and binding conclusions of peace are indeed not customary, in a state of peace, which the tribe concerned owes merely to the circumstance that the Masai at the time are simply plundering other peoples rather in livestock at the moment.

722
648

If the war concerned a distant area, no peace whatever was concluded, unless it were to deceive those people, so that no difficulty /102/ was to be expected from their side for a later attack on a land neighboring them. For this a few old men were free sent to the just attacked tribe. They carry a bunch of grass (el ngiboro, el ngiboi = grass) in the right hand and bring a sheep that wears a chain of blue or green ring-beads, el ngoodoi, around its neck. These are the peace insignia (el dogiria ee ngoo = things of peace). After the old men have put their request before the foreign chief, the latter, happy to be able to make peace with the Masai, gives them a few old men to take along, with whom the speakers then enter into blood friendship (el ngumai). Both parties, surrounded by warriors, sit down under a shade tree in the vicinity of the kraal, closely opposite each other, one of the foreign old men in front of each speaker. Now each one makes a small cut in the left lower arm of the one opposite him and wipes off the blood gushing forth a number of times with a few pieces of partly roasted meat, which he eats. During this ceremony the participants swear eternal peace. The meat used comes from an animal just slaughtered, usually from a head of cattle, more rarely a goat or a sheep. The animal must be perfectly sound, about which both parties convince themselves by an examination of the entrails.

Just as the Masai deceive foreign tribes with this blood friendship, they have also often done this with respect to Europeans. These concerned simply believed that a blood friendship coming about in this way had the same value as though it had been concluded with sedentary Negro tribes, who have a similar custom. But since in this case it is a mere pretense, there is suggested the conjecture that this is a matter of a custom that is not peculiar to the Masai, but was merely adopted from other peoples. The author regards the possibility of a

/[illegible]/

[illegible] Seeing conclusion of friendship between Europeans and Maori as completely impossible, both on the basis of an experience of almost eight years and also according to the statements of a large number of Maori, who, in the course of a long personal acquaintance, gained so much confidence as to express themselves freely about this point. According to their view a friendship, in whatever form it might be concluded, would only ever have the result that individual persons in the service of the Europeans concerned would find a hospitable reception in the Maori kraals. It could no more bring about a lasting friendship than it would induce the Maori to follow the orders and the laws of the Europeans.

On the other hand, if the Maori seriously crave peace because the tribe waged upon them close to them and they are dependent on it for buying vegetable food there (as, for example, in the above-mentioned Kaho), they make an extra exchange if gave a suckling of exchanged children. After they have sent off an old man, as before, and he has returned together with a few foreign old men, it is agreed in consultation that the Kaho chief, a Kaho woman with a suckling child, and a number /[illegible]/ of witnesses should come to a certain designated place in the enclave between Kaho and the Maori kraals. At the appointed time, there will also be found there a woman from the Maori (not a true Maori, however, but one from another tribe captured in a previous war) with a suckling child, as well as the speaker, the leaders, and other warriors as witnesses. The two women now exchange their children, and each puts the foreign child to her breast for a moment. They then take the children on their backs in the leather apron and conclude blood friendship with each other. One of the witnesses makes a few incisions in the skin of the abdomen of each of the two women and hands her a small piece of the heart of a just slaughtered head of livestock. After each one has wiped off the blood coming out of her cut with this, she sticks it in the mouth of the other. While this ceremony is going on, the speaker and the chief of Kaho affirm eternal friendship in the name of their peoples; they call upon God as their witness and pray to him that he might exterminate them if they do not maintain the friendship. Every conclusion of peace has as its consequence the obligation for mutual hospitality.

/[illegible]/

[illegible] fixed to the branches of the trees surrounding the kraals, waiting for some kind of animal game. In addition to the two points, one also finds well-shaped wooden pointed the latter are often poisoned, the former only rarely. The Masai do not make the poison [illegible] themselves, but buy it from Wandorobo, who obtain it from /[illegible]/ the [illegible] (Acocanthera ouabaio) tree by boiling the roots and the wood. The arrows are carried in a leather quiver or [illegible], which is slung over the shoulder on a leather strap. It consists of a tube 70 centimeters long and made out of cow's skin, with a bamboo stitched to and a similarly worked, twelve-centimeter lid that can be turned up high.

[illegible]

Firearms, which as times almost entirely replaced the spears and bows among military Dagoos (1).

1. For example, in a few areas at Kilimandjaro.

- [illegible] are not generally carried by the Masai. Although in the barter with the Pasaramano Troops they have at various times captured guns and ammunition from Arlan Aidari, I never observed or learned that they used these weapons. They never bought muzzle-loaders from trade caravans, and the most that I found in one of their kraals showed by the lack of cock or piston, or by other damage, that they were not carried along by the Masai for the purpose of use, but merely as trophies. It was not until April, 1905, that a troop of Masai warriors armed with English Snyder breech-loaders came into my field of observation. The troop came from the Masai province of El Meggo, and, to be sure, from the English station of Naivaiha, located on the Uganda railway, and arrived as tourists in the Kilimandjaro area of Bombo. With a loss of approximately 33 per cent dead and bartyless, however, they were sent home by the Wasandes, armed only with spears.

[illegible]

This case

Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the person assembled for the proceedings will be convinced by it.

The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the sorcerer, who he has learned from or of *gracia* the sorcerer of the bewitched, prefers to believe the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship *(Ma)* or, however — and this not infrequently happens — the bewitched can see kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

There are no secret societies for the purpose of legal accusations or for other purposes. Men rare on the belief that the dead person will reveal the murderer to a dream are unknown. The blood do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a blood on a non-blood. In this case, therefore, the dead relatives complained, whereas the blood as a rule practice revelation if the dead was committed on one of their people. Whether or not the murder committed on an dull or an ill itself by a blood is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the communities of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a blood, his fellow witnesses will answer with war.

/[illegible]/

XII.

Character of the Ait. compared with that of the Ahmed.

In character the Ait in general greatly resemble the Ahmed, except that the tribal arrogance seems to be considerably lessened as a result of their poverty, though it will also always appear to their concept of the ai nasrat whom they call nasrin. It is not possible to give a general opinion about their attitude toward Europeans, since they have actually come into contact with them personally only in exceptional cases and otherwise are acquainted with them only from the accounts of the Ahmed. On the whole, the Ait living independently stand out favorably from those who have joined the Ahmed, in that the former seem to be more modest and less crafty, whereas the latter are a match for the Ahmed in subterfuges. The relationship of the two tribes to each other rests on the complete subjugation of the Wandorobbo, who are in the Ahmed their masters and, in major legal disputes, also their judges.

Exceptions to this are the Ahmed Kiriwirrik, who stand as low in the estimation of the Wandorobbo as in that of the Ahmed. The ai lemmi are also completely without rights before the ai dandaki. The Wandorobbo appear peaceable toward passing caravans and solitary Europeans. When they were shot at the former with poisoned arrows, without having been attacked themselves, they were /[illegible]/ to have acted in pressed self-defense; in any case one cannot accuse them of a lust either for war or for murder. With these reservations, what has been said above about the Ahmed holds concerning their character traits, their solidarity against the members of all foreign tribes, the position of their women, etc. Something new to be mentioned here is the custom that I found several times according to which a woman, just because of her inferior position, may not walk through a group of men.

In greeting, the Wandorobbo use the same words and formulas as the Ahmed and accompany them with the same gestures.

The farewell of the one going runs aija nerida. The answer to it, ada, is said to mean "go!" To the objection that this is not very courteous, an aged Ait replied: "We are poor people, when the visitor has gone we no longer need give him any of our food!"

1. [A Masai word meaning "the unbelievers"--Analyst]

/[illegible]/

[illegible] is present at all. The heir of the vengeance is also liable. The giver is offended by a refusal to accept a gift. A counter-gift of approximately the same value follows gift-giving. The giver gets upon the gift when he hands it over. The Wandaville never conclude lasting friendships among themselves, but only -- and, to be sure, very rarely -- with members of other tribes. The ceremony observed for this reconciliation the one described above among the Maori. If a stranger has bought ivory from him and paid only part of the price, the of debtor often likes to conclude blood friendship with his lenders in little that then the debtor must die if he does not repay the debt as quickly as possible (1).

1. This view is in general terms it was not originally peculiar to the Ait, but adopted.

As among the Maori, the legal view makes no distinction between murder and manslaughter, but indeed between the latter and negligent homicide. A murderer caught in the very act is subject to blood revenge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and companions are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /[illegible]/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably less than if they are from different lineages of the same tribe. On the other hand, if the two belong to different tribes, the ones entitled to blood revenge often land over the execution of it to the Maori, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is regarded as outlaw, corresponding to the of [illegible] of the blood. If an Ait kills a Maori blacksmith, the deed remains unpunished because the blacksmiths are too weak for revenge and the Maori would

/DAT cont./

never have anything to do with taking their part. On the other hand, if an dal is killed by a blacksmith, the blood immediately place themselves on the side of the man injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandaffin, as he men, would themselves be a position to avenge the revenge, but the blood do not permit this because they see in it an encroachment on their rights as masters of the land and in particular also of the ol hamma.

Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are as, and for with the payment of a specific number of bedidiwa. For the destruction of a finger one bedidiwa is paid, for one hand eight; among mere Wandaffin who live in close contact with the blood the amercement for the destruction of a finger or the whole hand amounts to a far-called deep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, as does inherent assault. Abortion is said to be unknown, and parentess not to occur. Kidnapping and sale are unknown.

A theft committed in the camp by an inhabitant or stranger is amend for by the return of the stolen gamin that of a bedidiwa hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a bedidiwa pays five bedidiwa. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows to the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his compatriots.

Unknown are aggravated kinds of death, the principle of repaying life with life, compensation to the culpable body part, symbolism, imprisonment, enslavement, public punishment, the right of pardon.

For the inquiry concerning an unknown culprit, the injured one turns -- /DAT/ as has already been mentioned -- to a sorcerer, who is also called ol gelettit among the Wandaffin. Instead of the manipulations with the ol gelettit, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1. [ol gelettit is a Masai word also meaning sorcerer--Kalyet]

illegal and immoral, because they run contrary to our conscience of justice and our Christian morality, and which came to arise in the economic field exploitation in the common sense of the word. Now while every done that occupies a savage country has the duty to oppose no pressure and question of justice and morality and at the same time to promote economic development by guiding protection along the paths of our modern principles, along with that it only has often overcome the foundation pillars on which the existence of a primitive people rests.

Thus in plague-ridden Africa the blacks largely owe their existence as a sociable people, whose only resource lies in its livestock holdings, to the fact that they can always replace their losses by expeditions of war and plunder. As soon as the possibility of such expeditions is taken away from them, or at least very much reduced, through the exertion of military measures that grant protection to the victims of the blacks, there soon naturally arise a situation in which a gradually increasing weakening of the vitality of a people takes place. What was formerly to their advantage, their war lust and the cowardice of the Negroes, now becomes fatal for them. Both entice them to visiting expeditions again and again. In order to avoid the punishment deserved for them, they cannot lose regions that they formerly avoided as harmful to the health for human beings and livestock, or on account of infective patterns. If the blacks, when they came under the influence of the European occupation, had still been the young people of thirteen or 20 years ago, they might perhaps, after the example of other primitive peoples, have carried from it even though a marked, nevertheless only a temporary weakening in the meeting with the higher culture, and then gradually recovered again when they had become ready for its advantages. But we found the blacks already in a condition that looked very much like ruin. The livestock epidemics around the year 1890, which, not locally restricted, had afflicted the herds of all the blacks to such an extent that actually only miserable remnants were left, had produced a general and extraordinarily severe famine. Hundreds of thousands of blacks, especially men and boys, fell victim to it, and in the year 1895 the author still found the steppes around Kilimandjaro appearing in places as though they

/THE END/

had been seen with the bleeding skulls of those who had warred and
[illegible] out of the African colonies. Any of the women and girls who had an
[illegible] deal of bargaining weight and found refuge among Magnes practicing
[illegible] agriculture, who always like to buy or kidnap female individuals.
A spoiled would sell her child for a handful of maize and would sell
herself a day later for a similar price. In order to avoid starvation,
Magnes and captives /THE/ took possession of the silt-lee area. In
order to avoid them as slaves. Many have since come back, in part
through flight, in part through redemption by their relatives, but
more are still found in strange hands. The latter, even though their
friend live as beneficially in the new manner with Magnes, are
permanently lost to the friend people. In greatly has the uniformed,
to which an opposite effect is to also withdrawal, broken up the
former organization, the free unity. Also, even after the end of the
epidemics, the unhappy quarrel between the brothers Lasana-Condee
about the undivided rule over the island could begin. With its con-
tinuing civil wars it are powerfully toward the completion of the
destructive work of the epidemics. The Magnes, with which since
the island formerly waged war, except for another underlying
among themselves, which have more the character of personal
than of nations battles, were opposed effective to them. Now equal
parties stand opposite each other, which makes the war bloodier,
more destructive.

Through increasing impoverishment as a result of these epidemics
and civil wars, there is now going on among the Ibeni — as formerly
among the Walsall — a change from nomadism to sedentarism.
Agriculture is taking the place of animal husbandry. The now
deserting the "people" in this manner are founding settlements, in
part self-sufficient, in part supported by Magnes tribes, somewhat
removed from the dry steppes, there where the watering is adequate
for the laying out of plantings. No one expects them to prove to be
particularly skilful at this but Marsen, which goes so far to meet
her children in the region, helps here too. A moderate watering
suffices to make the heavy dust stuck in the virgin soil grow and
produce values. Maize for the most part appears just as easily
satisfied as advantageous. These then are the principal useful plants

[illegible]

[illegible] as others. Based on fertilizer and despised as agriculturalists, the nomadic [illegible] are constantly plagued by raids that not only cause them great loss in human lives, but also take away any possibility for them to make or any improvement to their way of life by keeping livestock for the sustenance of the meat and milk that is necessary for them. Moreover, the frequent intercourse with sedentary Bagrawa and conversion people leads to an increase in the cases of venereal diseases. Premature marriages of girls, which can not happen among the Mawri still living as nomads, is not rare among the sedentary ones and often enough leads to the death of the young woman who is scarcely more than a child and whose bony structure, despite her evident capability to conceiving, is not yet developed. Finally, it must still be mentioned that no doubt the longing for the formerly free life in the broad steppes and the feeling of humiliation over having become a so deeply despised cultivator of the soil overall are factors that have a wasting effect. The latter circumstance also brings with it a decrease of national pride. The barrier that kept Bagrawa out of the community of the Mawri has fallen. A disintegration process continues hurting the people is slowly taking place. Among the Wadmai, this process was more rapid in their period. At that time no European administration prevented their raiding expeditions to Bagra regions, from which they brought home livestock that soon experienced to agriculture.

In frequent — almost daily — intercourse that soon springs up and then continues to exist between the Mawri who have become sedentary and the settled Bagrawa, the Mawri carefully also share in the disadvantages that [illegible] come to the Bagrawa through the encounter of their lower culture with our higher one.

We have seen how many difficulties sedentarism brings to the Mawri, and it is therefore not surprising that a part of those who have already become sedentary give up their fixed residences again after repeated failures. These then often join the Wandersbe, to live by hunting, and call themselves Ala.

[501 words]

The existence of the Masai people was based on a sovereign power deserving or destroying the Negro tribes, which, through conquest, successful war and raiding expeditions, not only again and again furnished the necessary cattle herds, but also fostered national unity. The European administration interfered here and through that backward, in the manner described above, the role of a people clinging with nervous tenacity to its old habits of life.

The process of becoming sedentary, the transition from livestock nomads to earth-raising agriculturists will presumably slowly continue to take place, but amidst enormous sacrifices to human lives and the destruction of the people's continuance. A small part — the-one-now-taken to livestock — will perhaps be maintaining themselves as nomads, or — the passive — will, by the dance of agriculture, again become that and, to enforced pauperishment, grave their small herds. But they, too, will then have ceased to be Masai, for a Masai with shepherd's staff and pipe is no longer a Masai. In view of such an outlook for the future, one is almost struck with melancholy when one hears how firmly the Masai believe in a resurrection of their power, according to the prophecies of Mbaryan, who dently before his death said: "Epidemics will destroy the herds, and civil war between the parties of Lenana and Sendee will this the cadre of the warriors. Then a white bird will come from the coast, sent in our land, and bring us to the edge of destruction. But after this time of trial the Masai people will expand to a new flowering and their old power."

Before -- the Masai tribe occupied what is now Northern Mozambique by conquering and driving the previous inhabitants (Ewart, 1907). The Masai were a fierce and warlike people. Once they had taken over that country no one seriously disputed its title them.

In the early 1900's through the Agreement of Kenya the Masai made a treaty directly with the Queen of England. This involved relocating a segment of the Kenya Masai, but the long term effect was to put the Kenya Masai in a privileged position relative to the other tribes -- who did not have such a treaty -- and to give them a degree of autonomy virtually unknown to other parts of Kenya. Because of their remote location and the nature of the Tanganyika administration, the Masai in the Tanganyika portion of Northern Mozambique also maintained a large degree of autonomy. Aided by these circumstances, the extremely conservative northern Masai have kept largely to themselves, and to an extraordinary degree the modern world has gone on around them, instead of over them and through their country.

My first visit to the Serengeti-Mara Region was in 1958. I had been assigned to carry out a brief ecological reconnaissance of the Serengeti National Park under the sponsorship of the Wildlife Management Institute and the American Committee for International Wild Life Protection (Talbot, 1958).

*196 The western Dune was found on Lake Batson, to seemingly [illegible] been replaced by Immigrants from the east. At the time of their visit the land to the southeast of Lake Batson was a Swamp [illegible] from which the Wood had been excluded. I have flown over that area and even today, after fifty years of Wood overrun, it appears practically inaccessible as a route of passage for large animals, or least to the east seaboard.

Beckland (1898) notes that an unnamed old Wood also "came up" -- presumably to the Bulcahy area -- from the Rift near Lake Bagwell, which is adjacent to the area mapped by Roosevelt and Heller.

To my knowledge, none of the Roosevelt and Heller party visited the Lake Batson area. The map must have been drawn from second hand reports representing the best sources of information available at the time. It seems possible, then, that the wildebeests in the Rift near Lake Batson were then what they are now, representatives of the eastern race.

If this were so, although the Rift will permitted movement west, why did these wildebeests not move further north? At present the Rift between the Batson area and the vicinity of Mt. Dunne is hot, waterless, forbidding

The people when the Maasai migrated to Ngorongoro were mainly pastoralists. There were also some small tribes who practiced irrigated cultivation near the Rift wall and on some mountain fields. Those who immediately preceded the present Maasai may have been related to them, and they, in turn, entered peace conditions. Some of these early people dug wells and built dams, but Fosbrooke (1948) believes that except for irrigation systems on some mountains, these enterprises were for pastoralism rather than agriculture. There were also isolated tribes of small numbers in the world who may have provided the Maasai with spears and bows.

In the study area, the Maasai occupation of the Ngorongoro Highlands and the Serengeti Plain was probably completed by 1850. A people called the Il Datoga occupied the highlands and much of the rest of the area, both north and south of Ngorongoro. These were probably both pastoralists and cultivators. Another similar tribe, the Sonjo, lived near the foot of the Rift west Lake Natron.

Somewhere between 1850 and 1871 the Maasai drove the Il Datoga off of the Crater Highlands and the Serengeti Plain. The Iraqw also of the eastern

Serengeti was sold by the Masai to have been dug by the Ci Batwa, and they still call the Ngorongoro Highlands "Ngongo ya Batwa" in memory of the people from whom they took the area. In the mid 19 years the Masai took the first land immediately south of the highlands. Then, until about 1890, several sections and sub sections of the Masai occupied the entire Serengeti Plain, the Ngorongoro Highlands, and the lands immediately west of the Rift. They held the land south of the highlands through possession of the Karkar Pip, just as they held other lands to the east and south of the present Masailand.

During the period of 1880 to 1890 the Masai were a prosperous tribe and they probably reached their maximum land holdings and cattle numbers. The area they occupied extended roughly 500 kilometers north to south and 150 miles from east to west, an estimated 60,000 square miles. Under the leadership of their paramount leader, Mbatian, they raided from Lake Victoria to the Indian Ocean. Gorfuad (1910) and Simon (1967) gave accounts from the writings of many early explorers referring to the extent and effect of these Masai raids. The raids were not confined to other tribes, however. Some of their more devastating battles took place between different sections of the Masai themselves.

But so was the absolute range of the Maori. The organisations of the centuries was much further up. Many pastoral Maori had lost their lands and had taken to hunting or exploitation. Some had been taken to by surrounding tribes and others taken as captives by them. A great many had died or been killed in the combination of famine, displacement, smallpox, and civil war. Therefore the population of Maori in Maoriland around 1900 must have been quite low. The lowest ebb probably came around 1890 or 1895, and there had been some recovery in the next decade. Some Maori had started to rebuild their herds by stealing cattle. Others bought them by working for the farmers helping to subdue other tribes.

It is uncertain what the fate of the Maori would have been without the intervention of the Europeans. Those most afflicted with Maori-like belief that the Maori were recovering rapidly and that they would have fallen to greater power but for the Europeans, who held them down and took their land. Those on the other side say that the Maori were a dying race and that only the protection of the Europeans enabled them to maintain their way of life. The truth doubtless lies between the extreme views. Don Mellis (1947) who was certainly not anti-Maori felt that they would have to alter their way of life if they were to survive.

[19]

In terms of total population the Masai have greatly prospered under European administration. It has been estimated that at the peak of Masai power, before 1890, the total population of Masai was around 40,000 (Sidney, 1965). By the mid 1920's they had recovered from their series of disasters and their numbers were estimated at about 50,000 (Jackson, 1938). The census of 1948 gave the total Masai population as 207,000 (Fosbrooke, 1948). The most recent census places the population at about 227,000.

Most of the Masai prosperity in the 20th century has taken place under the English administration. In 1890 the boundaries of the German Territory of Tanganyika stopped short of what is now Tanganyika Masailand, but it was included in the German "sphere of interest" (Sampson, 1921). Subsequently, apparently because there were so few Masai living in Masailand following their multiple disasters, the Germans created a Masai Reserve that was mostly south of an east-west line through Arusha. This division left the Ngorongoro Highlands, the Loliondo area, and the highlands near Eastern Masailand free for European settlement and displaced the Masai living there. This action further scattered the remnants of the Masai, some of whom moved north into Kenya and others south into

[12]

175 648 131 the German Masai Reserve. After the 1914-18 war the English allowed the Masai to return to most of the areas they formerly occupied in Tanganyika.

175 648 After defeating his brother, Lenana returned to Kenya and in 1902 he peacefully acknowledged British rule. The Masai were still very few in numbers but they ranged over a wide area of Kenya, grazing their cattle and raiding. In 1904 two Masai reserves were created, 175 648 657 131 a northern one of some 4,500 square miles in the Laikipia area, northeast of Western Masailand, and a southern one of about 4,350 square miles which included part of the present Eastern Masailand in Kenya. The Masai, led by Lenana, signed a treaty accepting the reserves in August 1904. This arrangement did not prove satisfactory for either the Masai or the English. Lenana found it difficult to control the northern Masai when he was in the south and requested that the reserved be joined. Consequently, after several years of negotiations, a treaty was signed in 1911 in which the Masai gave up the 4,500 square miles of the Northern Reserve and received in return over 9,000 square miles of land including what is now the Kenya portion of Western Masailand. Part of this area was unoccupied, some of it was European ranch land, and part of it had been occupied in former times by Masai. This new half of the Southern

175
648 Reserve became Narok District, with headquarters at
667 Narok. The remainder of the Southern Reserve was
131 Kajiado District, with its headquarters at Kajiado, about 45 miles south of Nairobi on the Great North Road (Fig. 1). The Provincial headquarters for both districts was located at Ngong, just west of Nairobi.

175 With subsequent extensions, the Masai in Kenya
648 received a total of over 15,000 square miles which
131 included some of the finest grazing and forest land in Kenya.

Partisans of the Masai say that the treaty of 1911 was a catastrophy for the Masai and that they were tricked by government into giving up good land for bad. It is also pointed out, however, that as a result of the treaty of 1911 the Masai received over twice as much as they lost, and that land included some of the finest grazing and forest land in Kenya. The treaty was requested and signed by the Masai leaders. As a result of that treaty, their population density in the reserve was probably about one and one third persons per square mile, so in terms of land, this treaty made the Masai one of the richest tribes in Africa.

175 Regardless of the logic, the move was resented

175 strongly by many of the Masai involved. Few of those who made the move are still living, but the memory of
175 it is kept alive by the Masai nationalists. The Masai in
181 Kenya's Western Masailand are, or are descended from,
184 those who made the move from Laikipia. They are characteristically more conservative and more distrustful of the government than other groups of Masai, and they attribute these attitudes to the move.

Fosbrooke (1948:11), an admirer of the Masai, attributes the conservatism of the Tanganyika Masai to their hardships from famine, pestilance, civil war, and German administration in this way:

> It is almost impossible to find at the present day an elder who did not go through considerable hardship in his youth. To anyone who has lost and regained a possession, such possession is of greater value, at least sentimentally. The Masai of Tanganyika lost their cattle, their mode of living and their tribal life, and largely by their own efforts have once again regained them. It is suggested that their intense conservatism and resentment of change may perhaps be better understood in the light of the foregoing.

175 During the German period the Masai were
• 648 largely excluded from the Western Masailand in Tanganyika,
131 although occasional raiding parties came through it. Between 1900 and 1905, according to Grant (1957), there was one Masai encampment or warrior's barracks

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

175 648 131 at the Moru Kopjes on the western edge of the Serengeti Plain, just north of the headwaters of the Simiyu River (Fig. 3).[1] Western Masailand in Tanganyika is large and was virtually uninhabited by Europeans, so doubtless some Masai remained throughout the German period.

During the 1914-18 war the Germans retreated from northern Tanganyika. The Masai whom they had evicted began returning to their former grazing grounds. In addition, by the end of the 1914-18 war Masai from Kenya had penetrated the Serengeti region and the Ngorongoro Highlands. Part of these were from the Purko section, people who as a result of the 1911 treaty had moved from areas around Lake Naivasha to the Loita Plateau north of Loliondo. Others were of the Loita section who formerly lived on the Loita Plateau.

When the English took over Tanganyika as a Trust Territory after the 1914-18 war, they established all of Tanganyika Masailand as a single Masai District. Its headquarters were at Monduli, about 15 miles west of Arusha (Fig. 1).[2] In the study area the western boundary of the Masai District is the line between the Lake Province and the Northern Province (which includes the Masai District). This line was drawn by the Germans

[1] [See p.19.--Analyst] [2] [See p. 9a.--Analyst]

175 and it cuts through the Serengeti Plain roughly paralleling
• 648 the eastern border of the Serengeti National Park (Fig.3).
131 Grant (1957) notes that the line is an arbitrary one which did not take account of the actual distribution of the Masai. The Serenget section of the Masai formerly occupied the plains west of the line. When the Germans surveyed the area they apparently thought it uninhabited because the Masai had been dispersed by famine and civil war. After the 1914-18 war the Serenget Masai returned to the western Serengeti. They were then in Lake Province but they were so isolated from its administration that the District Officer for the Masai District at Loliondo handled their administration.

In 1920 the English administration evicted the immigrant Kenya Masai from Tanganyika in favor of the resident Kissongo section of the Tanganyika Masai. Since then the Kenya Masai have been moving southward again slowly.

*13 Early in German times the importance of the
648 unique wildlife concentrations in the Serengeti and Ngorongoro Crater were recognized (Grzimek and Grzimek, 1960a). During the period between the wars the Tanganyika Government created several nature reserves in the area protecting some of the wildlife from hunting, but not much affecting the Masai.

659
656

In 1940 the Ngorongoro Highlands, much of the Serengeti Plain, and a strip of bush country leading to Speke Gulf were gazetted as a National Park. Due to the war and the terms of the ordinance this action did not affect the area or the Masai living there. In 1948 because of renewed interest in the status of the area, a new National Parks Ordinance was passed, and later, by Government Notice No. 137 of 1951 the area was re-gazetted the Serengeti National Park.

At that time it was believed that the objectives of a national park as defined by the London Convention of 1933 (C.C.T.A., 1953), could be achieved and maintained with a resident population of Masai with their livestock. In a few years it became evident to both the Masai and the Government that the arrangement was not working out. The activities of the Masai and their administrators were conflicting with those of the national park staff. There followed a series of hearings, government announcements, and interventions by interested individuals and organizations, culminating in 1956 in the appointment by the Tanganyika Government of a Committee of Enquiry. The Report of the Serengeti Committee of Enquiry (1957) details the history and events leading up to the enquiry. Further comments on and analyses of the situation include those by Anon. (1959), Bigalke (1959), Boyle (1956),

19: Talbot K-4,5 (1956-1962)1964 FL12 Masai FL12

*13 Grant (1957), Grzimek and Grzimek (1960a), Kenya Wild
648 Life Society (1957), Huxley (1961), Pearsall (1957),
656 Petrides (1956), Talbot (1956), the Tanganyika and Kenya
659 Wild Life Societies (1956), and Thomas (1960).

In 1959 and 1960 the park regulations and boundaries were revised (Fig. 3) and the Ngorongoro Conservation Unit was created. The new regulations for the park exclude human residents and livestock. The Conservation Unit covers some 3,000 square miles adjoining the park to the east and south, and includes the Ngorongoro Highlands and part of the Serengeti Plain. The purpose of the unit is to achieve a balanced management of the resources and to develop the natural resources of water and grazing in the interests of both human and wild life populations.

Since 1959, then, the Masai have been excluded from the portion of the western Serengeti Plain and the bush country to the north that is within the park boundaries. The park boundary was adjusted several times to exclude from the park various water holes around its periphery that were considered important by the Masai. As a result the western park boundary follows a zig zag line from the southern Serengeti Plain north to the

[See p. 19.--Analyst]

#13 648 656 659 Kenya border. The only significant area lost by the Masai was the Moru Kopjes area. This was used occasionally during the dry seasons because of the springs and good grazing found there. By about 1956, however, the last spring appeared to have dried up because of destruction of the vegetation by the Masai.

#13 184 The status of the Masai in Narok District has remained relatively constant compared with that of the Tanganyika Masai to the south. Since 1911 the only changes have been slight enlargements of the area and fluctuations in the land infested with tsetse fly.

#13 648 224 65 The part of Western Masailand immediately to the north of the Serengeti National Park and east of the Siria Escarpment (Fig. 3) is Kenya's finest game area. Following the Second World War part of this area, the triangle formed by the Mara River, the Siria Escarpment, and the Tanganyika border, was made a National Reserve. This action protected the area from hunting but did not affect the Masai. In 1961, due largely to the efforts of Major Temple-Boreham, Senior Game Warden of the area, and Mr. C. Denton, District Commissioner of Narok, an agreement was made between the Narok District African District Council and the Kenya Government to establish a Masai Mara Game Reserve. The reserve covers some 700

*13 224 648 65 square miles adjoining the Serengeti National Park and including the Mara Triangle. The African District Council has appointed a warden and subsidiary staff to the area, and has passed by-laws for its management including control of burning and grazing. A section of the reserve of roughly 200 square miles adjoining the Serengeti National Park has been set aside as a Game Reserve Developed Area in which no grazing nor entry (529) is allowed except by permit of the warden. With Government help they have built roads and a lodge, and the proceeds from visitors' fees go to the Masai. This is, in effect, a true national park run on a local basis by the Masai.

*233
122 every opportunity. There the purpose is primarily to
232 clear new grazing land. During the 30 months of our
824 major study period, we were in sight of the Mau forest (at the foot of the Kau Escarpment) at least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the trees or brush.

*13 Relations with Wildlife
• 648 The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
[714] the hides, giraffe for hides and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
[825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
*[233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

the Masai. Griffiths (1940) gives a more complete description of the Sonjo and their history.

648 Squatters

In parts of Western Masailand where cultivation is possible, especially on the higher slopes, squatters from other tribes are moving in and establishing small [582] shambas or cultivated fields. The Masai take some of their wives from surrounding tribes. Most of the squatters are relatives of these wives and are therefore allowed to stay by the Masai. The problem is particularly acute in the Mau forest region, where most of the squatters are Kikuyu.

*13 Some cultivation could be carried on in approporiate places with no detrimental effect to the lower plains. However, the system as now practiced results in considerable erosion and substantial vegetation clearance through cutting and burning. Much cultivation, especially in the Mau area, is carried out in the lower margins of the forests which are sub-marginal for cultivation. During the high rainfall years the squatters move in, clear and farm. Two or three years later a dry year forces them to abandon the area. Rainfall is low enough that regrowth is slow while erosion is considerable.

After the war the German titles were invalidated. In 1921 Sir Charles Ross purchased the title to, or a lease on 16,309 acres of the Crater to preserve the game and provide himself with a winter home. He never was able to be in residence, however, and there was a long litigation between him and the Tanganyika Government which ended by their repossessing the land when the said lease expired in 1940. Apparently a Captain G.H.R. Hurst also had a farm in the crater "for several years" after the war (Joelson, 1928).

There were a few European ranches along the north edge of Western Masailand in Kenya prior to 1911. At least one of these was owned by a Major Carnegie in the Lemek Valley north-east of Aitong (Kenya Game Dept., 648 1911). All European lands in Western Masailand in Kenya were given to the Masai as a result of the treaty of 1911.

[797] At Narok, Loliondo, and Ngorongoro Crater there are District Administration offices and missions. [871] [758] Being a District Headquarters Narok also has a Masai school and hospital. [439] Periodically Europeans, especially South Africans, have run small stores here and there in the area. We were told that one was at Guaso Nyiro,

• 648 near Narok, and another at Barkitabu on the northwest side of the Loita Plateau.

000 Professional hunting, or "white hunting" as it is known in East Africa, was becoming an important business even before Roosevelt's trip in 1909 (Roosevelt, *136 1910). The Mara area in Kenya was known as an outstanding area for hunting, especially for lions, early in the 1900's (Kenya Game Dept., 1909). In the 1909-1910 Annual Report, the Kenya Game Warden states,"There seems little doubt that the Loita Plains have been very heavily shot over and that game is now very scarce." He recommended closing the area to hunting for eight to twelve months. Again in the next year's Annual Report he noted that the Loita area was the "most shot over" part of Kenya, and he observed that animals, rhinos for example, were changing their habits and taking to bush because of heavy shooting.

During the 1914-18 war sport hunting stopped, but meat hunting was intensified. The Kenya Game Department (1920) estimated that at least 30,000 head of game were taken to feed the troops during the war. These animals came from the Southern Reserve which is essentially Eastern Masailand in Kenya. Because it was so remote,

177
232

From the end of the 1914-18 war to the present the Departments of Veterinary Services in both Kenya and Tanganyika have been very active in Masailand. The visible results of their work involve provision of water supplies, treatment and prevention of disease, and provision of some experimental or demonstration ranches whose aim is to encourage better livestock management on the part of the Masai. European veterinary personnel with African assistants have been active in Western Masailand in both Kenya and Tanganyika, and they have exerted a very significant influence on the ecology of the area. As noted above their work has greatly aided the increase in the numbers of the Masai livestock, without showing any demonstrable improvement in the quality of the livestock, and with very demonstrable deterioration of the grazing land, especially in the vicinity of the water points.

The significant exceptions are the activities of the Tsetse Survey and Control Branch of the Kenya Department of Veterinary Services. In Narok District they have maintained two small field houses (one has since been removed), a field laboratory, and an experimental ranch. Their research has been aimed at learning the

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

648 654 177 232 ecology of the tsetse flies in order to effect their control without employing destructive game killing or land clearing schemes (Langridge 1960, 1961). Within Western Masailand their work has largely consisted of careful research and controlled experimentation.

The damage to rangeland resulting from the activities of the other branches of the Veterinary Services are the natural result of a well intentioned, efficient, but narrow approach to the livestock problems of the Masai. Such effects are not limited to East Africa. There are many such examples in the western United States.

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
K. Kikuyu FL10
Masai FL12

seen amongst them, and it is not difficult with a little practice to tell the particular division to which a Kikuyu belongs. Thus the people of Iriaini* have pronounced Masai features, and many of their chiefs are pure or half Masai by birth. This is due to the fact that when the Kikuyu invaded that district about forty years ago they found it occupied by the remnants of the Aikipiak and Dala-le-kutuk Masai, who owing to famines, raids, and other causes were too much weakened to resist them. The two tribes therefore settled down peaceably side by side, and by intermarrying formed one people.

Again, many of the Kikuyu clans claim descent from certain particular tribes; thus, the Anjiro and Chakamoyo clans say they are descended from the Shuka, the Akkachiko and Achera from the Kamba, the Aesaka from the Chaga of Kilimanjaro. Anyone enquiring into the descent of those present at a meeting of Kikuyu elders will find an extraordinary number of different tribes represented. One is a Maeru, another a Chaga, a third a Masai, a fourth a Shuka, a fifth a Dorobo, and so on.

The actual Kikuyu themselves are said to have come from two tribes called the Shagishu and Ngembe, both of which still exist as tribes somewhere beyond the Maeru country, north of Mount Kenia.

I cannot speak from experience of the Shagishu, but I have met a native of Ngembe whose appearance reminded me strongly of a Kikuyu. This man, who said he had never seen a white man before, told me that his country lay beyond Maeru and that he had come here to visit relatives. These same Ngembe are believed to have been originally Dorobo, and Karuri, one of the paramount chiefs of the Kikuyu, who is himself a Dorobo, claims descent from them. The Ngembe of the present day are probably analogous to the Kikuyu, *i.e.*, they are a mixture of Dorobo and some other tribe or tribes.

Many absolutely foreign tribes have had colonies in Kikuyu for shorter or longer periods. A tribe of coast people called Digo are stated to have lived for many years on the Tana River, in what is now known as the Fort Hall District.† Somali, Galla, Borana, or some other similar people effected a very strong footing in Kikuyu some fifty to seventy years ago. According to tradition they belonged to the Barabio Lokulala, Sigirai, and Endaramuroni clans,‡ and they had settlements at Nyeri, Naivasha, Kijabe, Punda Milia, and generally all over the Kikuyu country.

In those days the Aikipiak Masai occupied the Laikipia Plateau, the Purko Masai were at Naivasha, the Kaputiei in the Kidong Valley, and the Tarosero at Iriaini. The Dorobo, who were still the dominant tribe, occupied with the Kikuyu the present Kikuyu country.

With all these tribes the Somali or Galla lived in a state of chronic warfare.

The Larussa, a Kikuyu clan, and the Atwa, a Dorobo clan, unable to hold out any longer, migrated. The former have, it is said, preserved to this day their tribal identity and customs, and are still to be found somewhere in the vicinity of Kilimanjaro§; the latter near Mombasa.‖

The remaining tribes appealed for assistance against their oppressors to a great medicine man called Supi (or, to give him his correct name, Supeet), the grandfather of Lenana, the present Masai chief.

---

* The name Iriaini is said to be derived from 'N-Darosero ainei, my Tarosero women. Tarosero is the name of the most important clan in this particular section of the Masai.

† Mr. Hollis informs me that the Segeja, who have intermarried with the Digo, a sub-tribe of the Wa-Nyika, have a tradition to the effect that they once lived on the Tana River.

‡ Barabio is the Kikuyu, Sigiriaish the Masai for Somali and Galla.

§ Possibly the Arusha, who live on Mount Meru in German East Africa.

‖ By Mombasa the up-country native often means the coast generally. According to Mr. Hollis the Wa-Sanya call themselves, and are known to the Galla as, Watwa; sing., Waatya.

12:Dundas G-5 (ca. 1900) 1908 FL6 Dorobo FL6
Kikuyu FL10
Masai FL12

Supi is said to have instructed the Dorobo to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Kikuyu an animal called Huko (a burrowing rat or mole).

The Dorobo cut off the ears of a donkey, and produced these as the required sandals before Supi; the Masai brought a bull fed on milk only; and the Kikuyu the animal called Huko.

Supi then told each tribe to take its respective charm and to attack the enemy separately and at different points.

The Masai, marching into Kikuyu from Naivasha, fell upon the strangers first, and taking all their stock drove them on to the Kikuyu, who in their turn drove them on to the Dorobo, by whom they were finally routed.

The Somali or Galla were thus disposed of, and only by the name Iregi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dorobo, are we reminded of their settlements in Kikuyu. Amongst these prisoners may be mentioned an old woman called Barabio, who is still alive and resides in one of Burgo's villages. She was formerly Chief Karuri's nurse.

Needless to say the Masai kept all the cattle which they captured, and this caused a rupture between them and the Dorobo and Kikuyu, who joined forces and waged war on them. After a truce had been made the Dorobo and Kikuyu fought amongst themselves.

If the Kikuyu were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dorobo depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primæval forests, the home of the Dorobo, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Baringo, Naivasha, Ravine, Kijabe, on Laikipia and Mau, at Taveta, in German East Africa, and even, it is said, in places as remote as Kismayu—(the clan that went to this last place was the Agumba). This scattering of the tribe accounts for the peculiar fact that Dorobo living in widely different localities speak the same language.† The Baringo, Naivasha, Kijabe, and Ravine Dorobo, and those of similar colonies will, if questioned as to where they come from, usually mention Kururuma and Karirau‡ as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agumba and the Okiek: the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may to this day be seen anywhere in the Kikuyu country, though of course they become more numerous the nearer one approaches the forest. They are also said to have buried their

* The first Kikuyu to come into the country appear to have been almost without exception pastoral, and they accordingly did not interfere at all with the Dorobo. The later arrivals, who seem to have possessed less stock, purchased from individual Dorobo the right to certain pieces of land or forest. For some reason or other just about the time the Somali or Galla were driven out, a sudden very pressing demand for grain appears to have arisen amongst the Kikuyu; this may have been due to one of two causes—the Kikuyu may have lost through sickness a large amount of stock, or there may have been just at this time a sudden influx of agricultural natives.

† Nandi. (In colonies not in touch with Nandi-speaking tribes, the younger generation is rapidly forgetting this language.)

perished by starvation, thus feeding vultures and hungry hyenas. In places where there were no such natural barriers, and where the two tribes came into contact frequently, peace treaties were signed and friendly relations established. In this case intermarriages were one form of peace-making.

K M 728 581

K M 648 581

To take a concrete case, my grandmother, on my father's side, was a Masai woman called Mosana, and in reciprocity for this friendly feeling, my aunt (i.e. elder sister of my father) was married to a Masai chief called Sendeu, and was treated as the head-wife. Exchange visits were made on both sides, and I had the opportunity of visiting her and stayed there for some months as a member of the family.

K M 648 721

In territories where this friendly relationship was established, especially between the Kaptei Masai and the Southern Gikuyu, the warriors of the two tribes joined together to invade another section of Masai, like Loita or a section of Gikuyu, like Mbeere or Tharaka. This information was given to me by my grandfather, Kongo wa Magana, who led several of these attacks as a fighting warrior and later as a magician of war.

000

It can be said that the relation between one tribe and another was no more or less than the relations existing in the present day between various tribes of Europe and America. The only difference is that the relations between European countries involve great suffering for the majority of the people, either through economic fights, tariff barriers and distribution of wealth, etc., or through actual fights in battle-fields. The case of the Spanish Civil War, where one tribe is fighting between itself, or the case of Japan and China, where a strong tribe is trying to dominate a weaker one, are illustrations.

K 722

The raids in the tribal warfare affected only a few villages,

21:Huxley Q, T-5 (no date) 1960 FL11 Luo
Masai FL12

MASAI HERDS AND MARA LIONS

Westerners the Masai have become the symbol of a vanished aristocracy, a lost cause they can afford to keep as a household pet who has the spunk to stand up to its master.

The Masai way of life is certainly doomed. For a while it may continue, but nothing in the end can resist the pressures of Western materialism. The British have protected it by freezing a tribal pattern of land ownership, enshrined in a treaty to which the Masai hold with all the desperation of a man clinging to a raft when the waters are rising. That treaty, which confirms them in possession of their grazing-grounds 'for ever', was made to keep out Europeans. Now it is no longer white settlers who threaten them, but black ones. Will a treaty made for the one purpose serve for the other? Only while the British enforce it; when politicians of the land-hungry Kikuyu and Luo peoples occupy the seats of power in Nairobi, the borders of Masailand seem unlikely to remain intact.

For here lie the last reserves of fertile, well-watered and unused land in Kenya, hitherto protected by the strongest guardian of the land in Africa: the tsetse fly. In the last ten years, modern techniques of mastering tsetse-borne diseases, and the tsetse fly itself, have reached a point where all this land could be thrown open to settlement. The question now is partly one of expense, and partly of politics. The Masai themselves do not cultivate. So long as their treaty with the British Government holds good, they will resist to the last man the opening of their land to settlement by the cultivating tribes.

II

The Tanganyika–Kenya border cuts through the Masai's territory, most of which is open, semi-arid grassland useless for any purpose other than seasonal grazing by scrub cattle, even if water could be tapped by boreholes. But in the west, where Masailand approaches Lake Victoria, and on the Mau escarpment's south-western slopes, soil and rainfall would support a sizeable population of cultivators.

The Masai, numbering about 85,000, keep about one

21:Huxley Q. T-5 (no date) 1960 FL11 Luo
Masai FL12
Kenya FL1

cattle. The Kikuyu and Kamba have brought in the habit of eating ground maize. And so when a man of some other tribe asks a Masai elder if he may cultivate a patch of land, and offers in return to supply maize, the elder will often agree. The cultivator will clear his patch and grow a crop; next season, he will ask permission to bring his wife and family; soon his cooking-stones, his household goods, his thatched hut are installed; he is there, probably for ever. His daughters may grow up to marry Masai men. That is the way the Masai doom will overtake them—as a people, as a warrior race.

M 177 563

Some of these accepteeS, used to the cold, are creeping up into the Mau, burning the trees to make their *shambas* as they have done before in other places. Their actions are illegal, but there is no one to enforce the law and no one dares to do so. This country the Masai know to be theirs. If they agree to let people cultivate in the forest, who is the Government to gainsay them? Attempts to remove intruders might well be met by force, and that is a thing no Government dares to contemplate. It was an attempt to use force, after all, for the ultimate good of the people, that led to the Hola disaster. If the tenant were to be hurt, and the Masai to be angered, and a fracas to arise, denunciations of colonialist oppression and tyranny would thunder from the benches of the House of Commons and repercuss all through the Secretariat. So the Mau forests burn.

M 648 311 563

IV

From our camp on the Talek, a tributary of the Mara, Dr. Philip Glover showed us a little of a tsetse research project which combines the excitement of scientific discovery with that of tracking in the old-fashioned, footprint-in-the-sand way. A tough, enthusiastic and handsome young man called Jungle Smith, helped by several veterinary scouts, has cut traces in the bush to make a grid three miles square. Each trace has been cleared of vegetation so as to leave a path receptive to the footprints of animals.

K 654

Each morning, scouts patrol the grids with notebooks in which they enter every spoor they see. By about eleven o'clock

K 654 136

*13 648 656 659 Kenya border. The only significant area lost by the Masai was the Moru Kopjes area. This was used occasionally during the dry seasons because of the springs and good grazing found there. By about 1956, however, the last spring appeared to have dried up because of destruction of the vegetation by the Masai.

*13 184 The status of the Masai in Narok District has remained relatively constant compared with that of the Tanganyika Masai to the south. Since 1911 the only changes have been slight enlargements of the area and fluctuations in the land infested with tsetse fly.

*13 648 224 65 The part of Western Masailand immediately to the north of the Serengeti National Park and east of the Siria Escarpment (Fig. 3) is Kenya's finest game area. Following the Second World War part of this area, the triangle formed by the Mara River, the Siria Escarpment, and the Tanganyika border, was made a National Reserve. This action protected the area from hunting but did not affect the Masai. In 1961, due largely to the efforts of Major Temple-Boreham, Senior Game Warden of the area, and Mr. C. Denton, District Commissioner of Narok, an agreement was made between the Narok District African District Council and the Kenya Government to establish a Masai Mara Game Reserve. The reserve covers some 700

#13 224 648 • 65 square miles adjoining the Serengeti National Park and including the Mara Triangle. The African District Council has appointed a warden and subsidiary staff to the area, and has passed by-laws for its management including control of burning and grazing. A section of the reserve of roughly 200 square miles adjoining the Serengeti National Park has been set aside as a Game Reserve Developed Area in which no grazing nor entry [529] is allowed except by permit of the warden. With Government help they have built roads and a lodge, and the proceeds from visitors' fees go to the Masai. This is, in effect, a true national park, run on a local basis by the Masai.

648*

Mr. Hemsted's Proposals, February, 1913.

On August 1st, 1912, Mr. R. W. Hemsted was placed in charge of the Masai Reserve. In February, 1913, he submitted a scheme for the administration of the Reserve. This memorandum dealt with the following points:—

STATIONS AND SUB-STATIONS.—The Masai being a tribe of nomadic habits, scattered over a wide area, and concentrated in no particular localities, he considered that effective administration could not be carried on by officers remaining at fixed stations. Constant travelling was necessary, and he advocated the establishment of one central station only, with four or five outposts at each of which a small house could be erected for the visiting officer, with a few huts for his staff. The central station would be situated near the Uaso Nyiro, or on the River Narosura, and would be the headquarters of the officer in charge. In this way, economy and mobility would be combined with efficiency. He suggested the erection of outposts in the Ol-Orokuti near the Anglo-German border, in the Lemek Valley or on the Upper Mara, at Il Melili, at Ngong, and among the Laitokitok, or in the Magadi Railway zone.

STAFF would consist of an officer in charge, a Senior District Commissioner, four Assistant District Commissioners, one Police and one Veterinary officer.

648* 614 [643]

NATIVE ADMINISTRATION.—The tribal system of the Masai rendered direct administration of the clans through their own chiefs particularly suitable. The paramount chief was recognised by the whole tribe, but had tended, under British protection, to deteriorate into a mere figure-head. His duties could be considerably extended. Legaliahu, Ngaroya, Masikondi, and Toroni drew pay from the Government, but these men, though intelligent, were conservative and lacking in energy. A few young and energetic men could be included in the ranks of the official headmen, whose numbers should be increased, and Mr. Hemsted suggested the following appointments as sufficient for the needs of the tribe:—

For the	Purko clan	1 chief and 3 headmen.
"	Kaputiei .. / L'Odo Kilani .. / Matapatu .. / Sighirari ..	1 chief and 3 headmen.
"	Loita .. .. / Salei	1 chief and 1 headman.
"	Kakonyukye	1 chief or headman.
"	Siria	1 chief or headman.
"	Il Dala Lekutuk ..	1 chief or headman.
"	Il Damat	1 chief or headman.
"	Laitokitok	1 chief or headman.

—a total of 15 chiefs and headmen, in addition to the paramount chief, for the supervision of some 37,500 Masai and 13,500 square miles of territory.

[631]

The clan divisions mentioned above were, in fact, geographical divisions, overlapping in certain cases, but Mr. Hemsted proposed the demarcation of each division and the restriction of the clans to the use of the areas allotted to them, which would be termed locations. The Masai were, he said, agreeable to such an arrangement, realising that any trouble which might arise could thus be localised.

648* 651

TAXATION.—While agreeing that the present form of hut tax was unsatisfactory, and inadequate in the case of the Masai, he considered that the difficulties of assessment, the dissatisfaction that might be created, and the probable consequent fluctuations in the revenue were serious objections to the imposition of a cattle tax. He therefore suggested a poll tax of Rs. 15 per head per annum, together with a compulsory subscription of Rs. 15 per head per annum towards a fund for development of, and improvements in the reserve. A revenue of Rs. 90,000 or Rs. 100,000 would thus be assured, and it was difficult to justify a higher tax. In the alternative, he suggested a tax of one to one-and-a-half per cent. on all cattle, irrespective of age or sex.

*648
652

tion of trading centres, for the construction of a road from Ngong to Kedong and for other similar undertakings.

Expenditure controlled.

In April, 1917, the Acting Governor took into consideration the propriety of arranging for this account to be administered in closer accordance with correct financial procedure, and he referred the matter to the Secretary of State in a despatch, dated September 17th, 1917. An examination of the account showed that the last contribution that had been made by the Masai had been in March, 1916. Such contributions had been given mainly for the purpose of improving the water supply in the reserve, and ceased on the completion of the dams. Mr. Bowring considered that any contributions which might be forthcoming in the future should be placed to the credit of the account. As regards the moneys accruing from the rent and auction of trade plots, he was inclined to think that these should be credited to general revenue, as was done in the case of other native districts, rather than to a suspense account. Though it was true that, in the case of the Masai, the land which they occupied had been formally handed over to them by agreement, rendering the consent of the tribal representatives necessary before alienation, still it might be argued that the land in other native districts was equally the heritage of the tribes, though no such solemn dedication had been made, and he was uncertain whether the difference in the conditions of land tenure in the Masai Reserve was sufficiently great to warrant such a distinction in dealing with the receipts derived from alienated areas. Under any circumstances, he thought that it would be preferable if revenue accruing from the above three sources were to be included in the annual estimates of the Protectorate, and if the estimated expenditure from the funds thus available were also to be shown.

Rents.

Collective fines.

In regard to the application of the proceeds of fines to the suspense account, Mr. Bowring did not consider that the tribe so punished should benefit from the money collected unless in exceptional cases, and he thought that even then the sanction of the Secretary of State should be obtained in each instance. He could not regard the principle as a sound one for the reason that an officer might be tempted to recommend unnecessarily heavy imposts, if he were aware that the proceeds of any fines which might be imposed would be available for improvements in his district, and would thus benefit directly the individuals or sections punished. Moreover, the fact that this system was in force in the case of the Masai alone was liable to give rise to the feeling that that tribe had been granted preferential treatment. He therefore proposed that in future, the proceeds of fines should not be credited to the suspense account unless, in each instance, the approval of the Secretary of State had been first obtained.

Secretary of State's decision.

In his reply, dated the 10th of January, 1918, the Secretary of State ruled that the amounts then standing in the account should remain credited to it. He considered that sums derived from contributions from the Masai, and rent and auction of trade plots should be placed to the credit of the account, but that the proceeds of fines should be paid into general revenue. He did not think it necessary for the receipts and payments under the account to be included in the annual estimates of the Protectorate, but he asked that an annual statement of such transactions should be included in the Treasurer's financial report on each year.

Abstract.

An abstract of the receipts and payments under the Masai Suspense Account is to be found in Appendix 5. 7/8

000

SECTION 8.—TAXATION.

*648
[651]

Hut tax at the rate of Rs. 3 per hut was first levied on the Masai, in common with other natives resident in Naivasha Province, in the year 1903-04, by Proclamation in the "Official Gazette" dated the 31st of August, 1903.

7/8 [See p. 229 -- Analysis]

648*

In his reply, dated the 3rd of December, 1913, the Secretary of State observed that in his opinion the time had not yet arrived when it was either necessary or desirable to impose a cattle tax on the Masai which might be thought by them to be the object or a consequence of the Masai move. The Secretary of State, 3rd December, 1913.

In a despatch to the Secretary of State, dated the 9th of March, 1914, the Governor remarked that a review of the present system of native taxation would no doubt be necessary in the near future, but he considered that this was not a matter of urgency and might preferably be held over until the reorganization of native administration had been effected. The Secretary of State agreed that the question might well be deferred. Sir Henry Belfield, 9th March, 1914.

On the 29th of July, 1914, Sir Henry Belfield wrote that he considered the time had come when a tax should be imposed on the cattle belonging to the pastoral tribes on the ground that the precautions taken by Government to prevent the spread of disease had enabled them to largely increase the number of their herds. He desired that the incidence of taxation should be such as to encourage agricultural industry and discourage pastoral proclivities. He therefore appointed a Committee, consisting of Messrs. Ainsworth (Chairman), McClellan, R. W. Hemsted and Northcote, to consider the subject. Owing, however, to the outbreak of war, the sittings of this Committee were delayed and were in fact never held. Sir Henry Belfield, 29th July, 1914.

Mr. Ainsworth considered the question in December, 1914, and the first three months of 1915, and submitted a report on the general question of native taxation on the 29th of April, 1915. In that part of his report which dealt with the Masai Reserve, he remarked that the Masai in the Masai Reserve presented, as regards assessment and taxation, a totally different problem from that encountered in considering the case among agricultural tribes in the Protectorate. The Masai were pastoralists, whose mode of life, customs and requirements differed from those of agricultural natives. They required much more land than agriculturists, and had many fewer inhabitants to the square mile. Mr. Ainsworth, 29th April, 1915.

Statistics of the Masai Reserve estimated the population at 32,000 souls, the number of horned stock at 550,000 head, and of sheep and goats at 2,500,000 head, while the area of the reserve was approximately 9,000,000 acres. The annual taxes paid by the Masai amounted to Rs. 30,000 only. Mr. Ainsworth quoted, in comparison, the case of three agricultural districts, whose total area was 2,168,000 acres, whose population was 669,805 souls, and which paid Rs. 692,751 in hut and poll tax. [161] [231] [65] [131]

The capitalised value of Masai stock was so large as to make the natives worth about Rs. 937 per man, woman and child, and, supposing that this capital account turned over but 5 per cent. per annum, the annual earnings of the tribe would be worth Rs. 47 per head. The total personal wants were very small, while they paid less than one rupee each in annual taxes. It was therefore evident that the Masai did not contribute their fair share to the Protectorate revenue, and that some readjustment was necessary in their case. [934]

In regard to the manner in which the Masai should be taxed, Mr. Ainsworth observed that their nomadic habits and mode of building huts rendered the method of collecting revenue under a hut assessment a far more difficult matter than it was in the case of agricultural tribes. He also considered that any system of poll tax on able-bodied males would be equally unsatisfactory. He therefore proposed a scheme which had been put forward by Mr. Hemsted and which he outlined as follows :—

In order to find out the approximate taxable value of the Masai, the tax should be worked out on a percentage, based on the assessed unimproved value of the land. The amount due would be collected in the form of a cattle tax (ignoring sheep and goats). The acreage of the reserve being nine million acres, the unimproved value being assumed to be Rs. 3 per acre, a tax of 1 per cent. on the unimproved value would produce a revenue of Rs. 270,000. This amount would be divided amongst the total number of cattle estimated, and would amount to 54 cents. per head on half a million head of cattle. Mr. Ainsworth considered that there would be considerable difficulty in counting the cattle, and suggested

*648

that assessment should take place every three years, instead of annually. He enquired whether it was to be definitely laid down that the reserve consisted of 9,000,000 acres, and whether Rs. 3 per acre was reasonable as the average unimproved value of the land.

If any unsurmountable objections were foreseen to the introduction of a native cattle tax or property tax, a graduated hut or poll tax might be applied, based on a system of a tax on the unimproved value of land, the tax so due to be spread over the huts or polls, with a proviso for a maximum tax per hut or poll.

Mr. Bowring, 6th May, 1918.

As the whole position of the Masai, whose reserve bordered on German East Africa for a distance of 236 miles, would have to be reconsidered at the end of the war, Mr. Bowring recommended that this tribe be left out of account for the present, but he saw no objection to discussing the form which such additional taxation would eventually take. On general principles, he favoured the idea of a special tax on cattle or other moveable property, but saw no necessity for introducing anything in the form of an unimproved land value tax. The only really satisfactory way of taxing the Masai was to tax their cattle, and he believed that the difficulty of counting their stock would be overcome. The system of a land value tax would mean that, the greater the number of the cattle, the smaller would be the incidence of the tax. He recommended that the principle of a stock tax at so much per head of horned stock and sheep be adopted for the Masai.

Chief Justice Hamilton, 9th May, 1918.

Chief Justice (now Sir Robert) Hamilton represented that the boundaries of the reserve would, in all probability, require rectification and alteration from time to time, and that this would alter the incidence of the tax, and would be a disturbing factor in a matter which should be as simple and as little open to disturbance as possible.

Sir Henry Belfield, 10th May, 1918.

Sir Henry Belfield was convinced that the proper method of dealing with the Masai was by imposing a tax on stock, and did not view with favour the suggestion of a land tax, which would probably be uncertain, and possibly oppressive, in its incidence, and which would not be understood by the natives. A stock tax would be quite within their comprehension, and would not, he thought, be seriously opposed by the Masai if it were made clear that it was collected in return for the benefits which administration had conferred on them, their land, and their stock.

He therefore recommended to the Secretary of State the imposition of such a tax on the Masai for consideration when the condition of the people had been adjusted at the end of the war, on the grounds that they paid little or nothing in return for what was being done for them, and that the time was at hand when the differentiation which had hitherto existed in the treatment meted out to them and to the other tribes should be reduced to comparative uniformity. The tax could be fixed without much difficulty upon the basis of a triennial count of stock.

The Secretary of State, 10th August, 1918.

The Secretary of State concurred in the view that the Masai should be left out of account for the present as regards additional taxation, and was disposed to agree that the imposition of a stock tax would be the best way of dealing with the tribe. The matter could, however, be considered further after the conclusion of the war.

[651]

By Proclamation in the "Official Gazette" of April 5th, 1916, hut and poll tax in the Naivasha Province was increased to Rs. 5, except in the case of certain areas. Inadvertently, the Masai Reserve was not originally excluded, but, though it was admitted that the Masai could easily afford to pay the enhanced rate, it was decided that, until the general question had been considered, tax in the reserve should be collected at the rate of Rs. 3 as formerly. A Proclamation to this effect was signed on the 24th of July, 1916.

*648
231

Mr. Hemsted, 3rd July, 1916.

On the 3rd of July, 1916, Mr. Hemsted submitted a memorandum containing his proposals for the taxation of the Masai. In this memorandum he represented that the Masai Reserve was already stocked to its fullest capacity, and that, without the aid of improvements in the water supply, etc., no further appreciable

*648
231

essential problem before the Government at the present time in dealing with the Masai is how to turn this annual increase into a realizable asset. The proposals for imposing upon the Masai a tax of two rupees per head of cattle per annum, approved by the Governor in January, 1918, fell through mainly owing to the impossibility of procuring a market for the quantities of almost worthless stock that would have been produced in payment, and it is difficult to see how this objection is to be overcome unless some much more marketable commodity is produced. Purchase by local residents and firms of the kind of Masai stock that would come in as a result of the imposition of such a tax would in all probability be very limited in extent, and no business firm has yet come forward with proposals for taking over such stock for canning or export by other means. It has not yet been proved or disproved that such Masai stock is marketable for the purposes of human consumption, but it is a fact that much of the stock from the Masai Reserve produced for slaughter by the military authorities was returned as unsuitable, and while it is extremely improbable that the Masai would be able to pay their tax in cash, it is only reasonable to expect that the worst stock would be paid in in lieu of cash where that was unobtainable.

Taxation.

Problem of taxation.

The problem, therefore, appears to be as follows. If the necessary staff is provided, a tax can be collected from the Masai at the rate approved which will bring in stock assessed at £100,000 annually. Of the money realized, £50,000 is to be devoted to works in the Masai Reserve which will so improve the conditions therein as will not only render it capable of maintaining a larger number of stock, but will also so alter the conditions as to make it probable that a higher grade of cattle could be supported in the reserve. When this last step has become effective, it may reasonably be assumed that a market will be forthcoming for the cattle paid in as a tax, but it is not yet proved that it will be possible to realize the value of the stock collected in the earlier years. A trial alone can demonstrate this.

*648

Masai as an asset to the Protectorate.

Enough may now have been said on the subject of the potentialities of the reserve, but it must also be borne in mind that, of the proposed cattle tax, one half of the proceeds are to be paid into the general revenue of the Protectorate, and that it is a matter of concern not only to the reserve, but to the Protectorate as a whole, that the proceeds of the tax should be forthcoming in the shape of a realized asset as soon as opportunity occurs. The Masai have hitherto paid a hut tax at the rate of three rupees per hut, which sum, amounting to less than £3,000 per annum, has not covered the cost of their administration, but the proposed tax will not only cover the cost of the administration of the reserve, but will leave a considerable balance for the general development of the Protectorate, while the needs of the Masai Reserve can be attended to to the fullest extent of which the staff is capable.

[651]

461
464

Masai residing in the reserve.

Of the Masai residing within the reserve, the most that can be expected of those who are not tending cattle is that they will help in the performance of the public works which are destined to be undertaken therein. Hitherto they have not been employed on such works, as manual labour does not appeal to them, and it is indeed doubtful if such a change will be brought about in their temperament as to induce them to perform this. That the position may not be hopeless is perhaps suggested by the fact that certain sections of the Somali tribe who had until recently maintained an attitude similar to that adopted by the Masai, commenced manual labour last year, and a corresponding change for the better may still occur among the Masai.

177
[691]

Future of the Masai.

Conditions have so greatly altered in the Masai Reserve during the last few years that the power of the medicine-men as a class has greatly decreased. The insistence on education for the Masai may further enlighten them, may undermine their conservatism, and may encourage them to discard their prejudices. An organized movement to show the Masai the development that is going on around them and to drive home to them the fact that unless they progress they are bound to disappear in the circumstances attendant on the introduction of civilization may have its effect in eventually bringing them to a conception of their duty. The Masai problem has not yet been tackled, but the prospect of rendering them useful citizens of the Empire is not entirely without hope.

Prior to the meeting, Mr. Hollis visited the Uasin Gishu Native Reserve and several of the adjoining farms and obtained the following information. The Uasin Gishu Masai in this area numbered in all between 1,400 and 1,500 souls, and paid tax on 440 huts. They possessed 15,000 head of cattle and 25,000 sheep and goats. 4,000 head of these cattle were in the habit of grazing on land belonging to Captain Grogan, who received toll in bullocks at the rate of 1 per cent. per annum. There were 30 kraals on Lord Delamere's land, containing 3,000 head of cattle, which were allowed this privilege without payment. The remaining 7,000 or 8,000 cattle were for the most part in the Native Reserve.

Statistics of the Uasin Gishu Masai. 648* 231 [162] [651]

The two reserves occupied by the Uasin Gishu Masai in February, 1911, were separated by a strip of alienated land, and steps were taken to re-acquire parts of adjacent farms belonging to Captain Grogan which would join these two areas and form one native reserve having an area of some 40,000 acres. The Masai were informed that, when this reserve had been allotted to them, they must regard the question of boundaries as definitely settled. They were also given to understand that, in lieu of hut tax, they would be required to pay a cattle tax of R. 1 per head or a stock tax of one beast out of every herd of 100 cattle, sheep or goats.

Further extension of the reserve. 648* 311

In July, 1911, the Provincial Commissioner, Naivasha, reported that dissensions had occurred between Chief Lembere and the hereditary Laibon, Walikondi, leading men in the Masai Reserve. Lembere had been constituted Chief by Mr. (now Sir Frederick) Jackson when he was stationed at Ravine and had acquired a considerable following. Charges of witchcraft had been brought against Walikondi, with the result that he requested permission to move, with the other Masai, from Laikipia into the Southern Masai Reserve. His following expressed a desire to accompany him. It seemed, however, that such a movement would be the cause of friction between the Uasin Gishu and the other Masai, who have little in common, and it was decided to hold the matter over, at any rate until the Masai Move was an accomplished fact.

Dissensions between Lembere and Walikondi. 648* 598 754 791

In May, 1912, the sanction of the Secretary of State was requested to an exchange of land held by Captain Grogan in the Naivasha Province for an area on the Athi Plains. Captain Grogan was willing to exchange 16,638 acres, to be used for an extension of the Uasin Gishu Masai Reserve, for 30,000 acres on the Athi Plains. The Secretary of State approved this arrangement in June, 1912, and the Provincial Commissioner, Naivasha, was instructed to take steps to mark out the extended Uasin Gishu Masai Reserve. 648*

A description of the Uasin Gishu Masai Native Reserve was accordingly drawn up, and read as follows:—

Uasin Gishu Masai Reserve boundaries. 648* 131

"The reserve is divided into three parts:

"No. 1. Commencing at the point where the Nakuru Eldama Ravine Road crosses the Enarosuro (or Nassour) River the boundary follows the right bank of this river down stream to its junction with the Esageri (or Sageri) River: thence along the left bank of the Esageri River up stream to the point where it is crossed by the Nakuru Eldama Ravine Road; thence along this road in the direction of Eldama Ravine to the point of commencement.

"No. 2. Commencing at the point where the Esageri River is crossed by the Nakuru Eldama Ravine Road the boundary follows that road in the direction of Nakuru to the most northerly corner or portion L.O. 487; thence in south-westerly direction along the western boundary of L.O. 487 to its intersection with the eastern boundary to L.O. 502; thence northerly and westerly along the eastern and northern boundaries of portion L.O. 502 to the Esageri River; thence along the right bank of the Esageri River down stream to the point of commencement.

"No. 3. Commencing at the most westerly corner of portion L.O. No. 486 on the Eldama Ravine Road the boundary follows the western boundaries of L.O. 485, 484, 483, 661 in a north-easterly direction to the most northerly corner of the latter (which is also the western corner of L.O. 662): thence in a south-easterly direction along the southern boundary of L.O 662 to the Molo River;

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

175 648 622 authority always tended to break down in face of the lawless and independent spirit of the Moran. In 1918 the Headmen numbered 46, of whom 28 were unpaid, and 18 received pay ranging from £6 to £36 a year, the former Paramount having a special pay of £90. Fourteen of the 18 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

175 648 178 In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organization of its former importance, while the growing value of cattle and sheep has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the [701] [461] Masai hold tenaciously to their customary institutions and mode of life, and the Moran in particular retain the tradition of indiscipline (in all but a military sense) and the aversion to labour which characterized them in the past.

175 648 623 The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adjusting it more nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1930 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.[1] The 622 Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

[465] The 16 Headmen have a pay ranging from 17s. to 70s. a month, and the 28 subheadmen a pay ranging from 10s. to 32s. 50 cents a month. Practically all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and subheadmen constitute the executive agency of the District administration and of [651] the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. That is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. 625 The Chiefs can call on the services of a small number of Tribal Police, recruited and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

646 Of the two Local Native Councils, that at Narok has 10 nominated and 23 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

[1] Page 173.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

consultation with Headmen and other representatives of the different Sections. 646
The Kajiado Council has no Headman among its members; six members have some education, and it contains a schoolmaster, an ex-Government clerk, a trader and two well-to-do stockholders. The Narok Council has one Headman among its members, but a smaller proportion of educated men than Kajiado. Though it is said that these two Councils are fairly representative of the majority of the community, the persons who now command influence and authority are to be found rather among the Headmen and subheadmen than in the two Councils.

The two Local Native Councils are, as elsewhere in Kenya, consultative and legislative bodies. As provided in Section 15 of the Native Lands Trust Ordinance 28 of 1938, they are consulted before any action is taken to set apart plots of land for shop sites or similar purposes. They have in addition the 652
function of dealing with the funds available in their two Native Treasuries for [646]
expenditure on local services. In this latter capacity, the funds available are shown in the figures on page 178 taken from the estimates of 1949

The deficit of £8,195 was to be met by drawing on accumulated balances. The principal source of Revenue is the Local Rate of 4s. in Kajiado and 5s. in Narok, the latter having been raised in 1948 to 5s. from the previous rate of 4s. per taxpayer. This rate is paid in addition to the Government Poll Tax [651] ●
of 15s. a head, which is somewhat higher than in most of the Provinces of Kenya. The revenue from Landed Property consisted mainly of rents of shop sites in the Reserve.

The expenditure under the head Administration was made up of a number of miscellaneous items, the stipends of Headmen and subheadmen being, as elsewhere, defrayed by the Government and not from the Native Treasuries. There is one Local Native Council school in Narok and one in Kajiado District, 871
the teachers of which are paid from Native Treasury funds, but there are in addition a number of "outschools," which are all boarding schools situated alongside cattle "bomas," where the children live with their relatives and family cattle, and feed themselves. These schools are of a very elementary class. The Masai have up till recently been opposed to the extension of education and have in particular resisted the education of girls, though the latest reports suggest that this resistance is weakening.

There is in each Council a Finance Committee, but it is said that the 646
members cannot understand the estimates and make no contribution to their discussion. In general, the Councils have taken little interest in matters which do not relate directly to their livestock, and the younger men are said to hesitate to express their views in the presence of their elders. In their legislative capacity the Councils have passed, at the instance of the District Commissioners, Resolutions which follow the "model" Resolution regarding soil conservation, the cultivation of land on river banks and the burning of bush, to which reference will be found in the parts of this Chapter dealing with other Provinces.

The two Local Native Councils have joint meetings twice a year at Ngong to consider matters affecting Masai as a whole, and reference will be made subsequently to proposals for giving this conference a more regular position.

Council on the same day after which they received the approval of His Excellency. The decision was as follows:— 648*

"Firstly, production of the number of men required by the King's African Rifles,* it being understood that only genuine Muran and not Liones will be accepted. Selection of the Muran can be left to the various Sirits themselves subject to approval by the Recruiting and District Officers. This proviso is considered necessary in order that genuine Masai Muran of proper standing may be produced.

"Secondly, full monetary compensation will be exacted for all damage done to property during the looting which recently took place. This damage will be assessed by a specially constituted Board of Investigation. Any rifles looted will have to be returned. Blood money will be exacted for any murders that have been committed.

"Thirdly, in view of the great provocation caused by the unfortunate action by certain of the King's African Rifles in opening fire without orders, no punishment will be imposed for the subsequent attack on the King's African Rifles by the Muran.

"Fourthly, the cattle of any Muran joining up will be immune from commandeering for military purposes, provided that a proper system of identification of the cattle can be arranged to the satisfaction of the District Officers.

"Fifthly, Government proposes to investigate the attitude of the Laibons and Elders of the Masai which may have encouraged the Muran in their rebellious attitude, and will take such steps as it considers necessary for punishing any who are found guilty. This will, however, not entail any further punishment of the Muran themselves."†

SECTION 7.—SUSPENSE ACCOUNT.

000

Contribution from the Kakonyukye—Rents of plots—Collective Fines—Utilisation of Funds—Expenditure controlled—Rents—Collective Fines—Secretary of State's decision—Abstract.

In April, 1915, the Masai of the Kakonyukye division contributed a sum of Rs. 10,450 towards the improvement of the water supply in their country. It was stated that further sums might be forthcoming, and the matter was referred to the Secretary of State, who agreed that a Suspense Account should be opened to which these and other contributions made by the Masai for the benefit of their reserve might be placed. Contribution from the Kakonyukye. 648* 652

As has been seen, the reservation to the tribe by the Agreement of 1911 of a definite area within the Protectorate for their exclusive use had rendered it necessary to obtain the consent of the "paramount chief and representatives" of the Masai to the alienation of any land within the reserve which had been selected as suitable for trading centres. Consent to the opening of certain centres had been obtained in July, 1914, and the Secretary of State also agreed that the money which might be derived from the auction and leasing of land and trade plots within the reserve should be placed to the credit of the Suspense Account and utilized for the benefit of the Masai themselves. Similar sanction was given in the case of the land alienated for the use of the Magadi Soda Company. Rents of plots.

A third means by which funds were added to this Suspense Account was by crediting thereto in specific instances the proceeds of fines collected under the Collective Punishments Ordinance. A record of such cases is given in Chapter VII. Collective fines.

From the opening of the Suspense Account until April, 1917, the manner in which the funds were utilized was left to the discretion of the Officer-in-Charge of the reserve, who obtained sanction from the Government before incurring the expenditure, and who acted with the advice of the Government's advisers on all technical matters. Money was found from these funds for the construction of a bridge over the Mara River, for a large part of the waterworks undertaken by Mr. Watts, for the repairing of the dams in the Lemek Valley, for the demarca- Utilisation of funds.

* 200 Muran were required for the K.A.R., of whom 175 were to be drawn from the Narok and Mara Districts and 75 from the Ngong District. The Sighirari division were to be called on to produce the 50 recruits required for the police.

† *Subsequent Note.*—The Purko Masai failed to produce any recruits and the rank and file of the Muran continued a policy of passive resistance, avoiding all intercourse with Government officers. Later, they perpetrated a number of raids in the occupied territory of German East Africa. No part of the compensation money was paid.

*648
652

tion of trading centres, for the construction of a road from Ngong to Kedong and for other similar undertakings.

Expenditure controlled.

In April, 1917, the Acting Governor took into consideration the propriety of arranging for this account to be administered in closer accordance with correct financial procedure, and he referred the matter to the Secretary of State in a despatch, dated September 17th, 1917. An examination of the account showed that the last contribution that had been made by the Masai had been in March, 1916. Such contributions had been given mainly for the purpose of improving the water supply in the reserve, and ceased on the completion of the dams. Mr. Bowring considered that any contributions which might be forthcoming in the future should be placed to the credit of the account. As regards the moneys accruing from the rent and auction of trade plots, he was inclined to think that these should be credited to general revenue, as was done in the case of other native districts, rather than to a suspense account. Though it was true that, in the case of the Masai, the land which they occupied had been formally handed over to them by agreement, rendering the consent of the tribal representatives necessary before alienation, still it might be argued that the land in other native districts was equally the heritage of the tribes, though no such solemn dedication had been made, and he was uncertain whether the difference in the conditions of land tenure in the Masai Reserve was sufficiently great to warrant such a distinction in dealing with the receipts derived from alienated areas. Under any circumstances, he thought that it would be preferable if revenue accruing from the above three sources were to be included in the annual estimates of the Protectorate, and if the estimated expenditure from the funds thus available were also to be shown.

Rents.

Collective fines.

In regard to the application of the proceeds of fines to the suspense account, Mr. Bowring did not consider that the tribe so punished should benefit from the money collected unless in exceptional cases, and he thought that even then the sanction of the Secretary of State should be obtained in each instance. He could not regard the principle as a sound one for the reason that an officer might be tempted to recommend unnecessarily heavy imposts, if he were aware that the proceeds of any fines which might be imposed would be available for improvements in his district, and would thus benefit directly the individuals or sections punished. Moreover, the fact that this system was in force in the case of the Masai alone was liable to give rise to the feeling that that tribe had been granted preferential treatment. He therefore proposed that in future, the proceeds of fines should not be credited to the suspense account unless, in each instance, the approval of the Secretary of State had been first obtained.

Secretary of State's decision.

In his reply, dated the 10th of January, 1918, the Secretary of State ruled that the amounts then standing in the account should remain credited to it. He considered that sums derived from contributions from the Masai, and rent and auction of trade plots should be placed to the credit of the account, but that the proceeds of fines should be paid into general revenue. He did not think it necessary for the receipts and payments under the account to be included in the annual estimates of the Protectorate, but he asked that an annual statement of such transactions should be included in the Treasurer's financial report on each year.

Abstract.

An abstract of the receipts and payments under the Masai Suspense Account is to be found in Appendix 5. 7

600

SECTION 8.—TAXATION.

Mr. Lane, 30th June, 1911—Mr. McClellan, 4th April, 1912—Mr. Ainsworth, 16th April, 1912—Mr. Tate, 9th May, 1912—Mr. Hollis, 19th July, 1912—Mr. Hemsted, 28th February, 1913—Mr. Ainsworth, 28th March, 1913—Mr. McClellan, 16th April, 1913—Mr. Hobley, 13th May, 1913—Sir Henry Belfield, 20th October, 1913—The Secretary of State, 3rd December, 1913—Sir Henry Belfield, 9th March, 1914—Sir Henry Belfield, 29th July, 1914—Mr. Ainsworth, 29th April, 1915—Mr. Bowring, 6th May, 1915—Chief Justice Hamilton, 9th May, 1915—Sir Henry Belfield, 18th May, 1915—The Secretary of State, 10th August, 1915—Mr. Hemsted, 3rd July, 1916—Reconsideration—The Postponement of the Introduction of the Tax.

*648
[651]

Hut tax at the rate of Rs. 3 per hut was first levied on the Masai, in common with other natives resident in Naivasha Province, in the year 1903-04, by Proclamation in the "Official Gazette" dated the 31st of August, 1903.

7 [See p. 229 -- Analyst]

*648
312

During the year 1913-14, £3,200 was spent in making these dams in Lemek Valley and Bardamat, and during the 13 months beginning on the 1st of March, 1913, Mr. Watts spent eight months in construction work.

Further proposals by Messrs. Watts and Hemsted.

In January, 1914, Messrs. Watts and Hemsted submitted proposals for the continuation of work on the improvement of the water supply of the reserve. They recommended

(1) The completion of the Bardamat dam.

(2) The provision of steel drinking troughs at the Koiyaki spring a permanent spring, situated some 12 miles south of Mara Post (Engirende).

(3) The construction of one or more dams in the Trans-Mara country between the Mara and Mogor River.

(4) The construction of a dam in the Kedong Valley.

(5) The provision of pumps and drinking troughs at all dams and the erection of fences to protect the sources behind them.

(6) The investigation of a project for diverting the Siyabei River in its upper courses to supplement the flow of the Olodari and Penyin Rivers, and thereafter for watering the country west of Mount Suswa, known as Leleshwa; and

(7) The construction of a dam in the Lailela Plains in the upper Loita country.

The Loita Plains were described as one of the least valuable areas in the reserve, considered as a region for the permanent support of large numbers of live-stock; the grazing in the plains was frequently exhausted before the natural supplies of water failed. It was therefore thought that the completion of the first, second, and last of the projects recommended would suffice as development in that area.

[65] Liability of the Masai to provide funds.

In June, 1913, Sir Henry Belfield had explained to the Masai that, when the Government had afforded certain practical examples of the benefits which would accrue from the conservation and distribution of water, the tribe would be expected themselves to defray the cost of such additional works as they might require. He therefore considered that it was open to question whether all the proposed works should be undertaken at Government expense, and that it would be sufficient to proceed with them as far as the provision for 1914-15 became available. When these funds had been utilised, he advocated further consideration of what additional works should be taken in hand and of the method of meeting the cost.

The Ngori Gori Dams.

After touring the Trans-Mara area with Mr. Hemsted in March, Mr. Watts returned to Bardamat and continued the construction of the dam. Early in April he visited Ngori Gori, on the border of the Loita Plain and close to a branch of the Chepalungu Forest. En route he repaired one of Mr. Catchpole's dams near Lone Hill. From the 5th to the 24th of April he worked at two dams at Ngori Gori, completing them for a cost of £347. One dam was 325 feet long and 9 feet high; the other was 400 feet long and 20 feet high.

On April 25th he reached the Penyin River and laid out work for a new dam at Ndulele. He estimated that the dams he had already constructed would protect 325 square miles of country and provide drinking water all the year round for 34,125 head of cattle or some 150,000 sheep. The works were much appreciated by the Masai in the neighbourhood, who had thrown out suggestions for further improvements required.

Work in the Kedong Valley.

On June 12th, 1914, Mr. Watts left the Penyin dam uncompleted and proceeded to the Kedong Valley to investigate the possibility of constructing a dam on the Kedong River for the use of the Masai.

The Kedong River is one of uncertain flow. In May, 1909 and March, 1911, the Greater Kedong was not even flowing as far as its junction with the lesser Kedong. In January, 1913, the combined streams disappeared a quarter of a mile below the house belonging to Marquis Hornyold and Captain Riddell, and

APPENDIX 8.

SCHEDULE OF THE MASAI SUSPENSE ACCOUNT.

648*
652

Amounts credited to the Masai Suspense Account from its commencement to March 31st, 1917 :—

Contributions by the Masai	Rs. 18,178.00
Rent of Plots	34,392.96
Sale of Trading Centre Corner Plots	150.00
Fines	46,875.27
TOTAL	Rs. 99,596.23

Expenditure charged against the Masai Suspense Account from its commencement to March 31st, 1917 :—

Construction of Mara Bridge	Rs. 1,558.84
Waterworks in the Extended Southern Reserve	13,609.62
Herding Kakonyukye Fine Cattle	355.41
Bridge at Van de Weyer's Drift	134.00
Repairing Lemek Dams	1,070.96
Dipping Fluid for Ngong Cattle Dip	316.40
Food for the Pure-bred Bull	171.18
Construction of Ngong-Kedong Road	683.35
Cost of Water Supplied by Magadi Soda Company	598.50
Upkeep of Kijabe-Mara Road	432.66
Refund of Plot Rents	60.00
Demarcation of Trading Centres	3,165.55
	Rs. 22,156.47
Balance brought forward on March 31st, 1917	Rs. 77,439.76

Schedule of the Masai Suspense Account for the Financial Year, 1917-18 :—

Balance brought forward, April 1st, 1917 ..		Rs. 77,439.76
Kakonyukye Fine		2,190.00
Dipping Fees		34.38
Plot Rents, etc.		27,847.50
Enkobirri Water Pump	Rs. 1,249.36	
Cost of Herding Kakonyukye Fine Cattle	20.00	
Repairs to Dams	997.36	
Demarcation of Trade Centres ..	600.95	
Cost of Dipping Fluid at Ngong ..	907.56	
Food for Pure-bred Bull ..	107.91	
Ngong-Kedong Road	1,825.01	
Repairs to Roads and Bridges ..	7,283.41	
Weikai Drainage Scheme ..	1,174.45	
Ovedit Mara Bridge		229.02
	14,166.01	
Balance on March 31st, 1918 ..	93,664.87

7: Mailey G-4 (No date) 1950 FL12 Masai FL12

consultation with Headmen and other representatives of the different Sections. 646
The Kajiado Council has no Headman among its members; six members have some education, and it contains a schoolmaster, an ex-Government clerk, a trader and two well-to-do stockholders. The Narok Council has one Headman among its members, but a smaller proportion of educated men than Kajiado. Though it is said that these two Councils are fairly representative of the majority of the community, the persons who now command influence and authority are to be found rather among the Headmen and subheadmen than in the two Councils.

The two Local Native Councils are, as elsewhere in Kenya, consultative and legislative bodies. As provided in Section 15 of the Native Lands Trust Ordinance 28 of 1938, they are consulted before any action is taken to set apart plots of land for shop sites or similar purposes. They have in addition the 652 ●
function of dealing with the funds available in their two Native Treasuries for [646]
expenditure on local services. In this latter capacity, the funds available are shown in the figures on page 178 taken from the estimates of 1949

The deficit of £8,195 was to be met by drawing on accumulated balances. The principal source of Revenue is the Local Rate of 4s. in Kajiado and 5s. in Narok, the latter having been raised in 1948 to 5s. from the previous rate of 4s. per taxpayer. This rate is paid in addition to the Government Poll Tax [651]
of 15s. a head, which is somewhat higher than in most of the Provinces of Kenya. The revenue from Landed Property consisted mainly of rents of shop sites in the Reserve.

The expenditure under the head Administration was made up of a number of miscellaneous items, the stipends of Headmen and subheadmen being, as elsewhere, defrayed by the Government and not from the Native Treasuries. There is one Local Native Council school in Narok and one in Kajiado District, 871
the teachers of which are paid from Native Treasury funds, but there are in addition a number of "outschools," which are all boarding schools situated alongside cattle "bomas," where the children live with their relatives and family cattle, and feed themselves. These schools are of a very elementary class. The Masai have up till recently been opposed to the extension of education and have in particular resisted the education of girls, though the latest reports suggest that this resistance is weakening.

There is in each Council a Finance Committee, but it is said that the 646
members cannot understand the estimates and make no contribution to their discussion. In general, the Councils have taken little interest in matters which do not relate directly to their livestock, and the younger men are said to hesitate to express their views in the presence of their elders. In their legislative capacity the Councils have passed, at the instance of the District Commissioners, Resolutions which follow the "model" Resolution regarding soil conservation, the cultivation of land on river banks and the burning of bush, to which reference will be found in the parts of this Chapter dealing with other Provinces.

The two Local Native Councils have joint meetings twice a year at Ngong to consider matters affecting Masai as a whole, and reference will be made subsequently to proposals for giving this conference a more regular position.

561 grades, which has resulted in marking off the whole of the younger men,
701 roughly up to the age of twenty-seven or thirty, as a warrior class (moran) who are not only free from most obligations to work, but are independent in many other respects of tribal discipline. Though therefore authority has rested
623 nominally with the Elders (laigwanak) who have passed the stage of moran,
642 and with the Councils of Elders who formed a regular feature of the Masai
701 tribal usage, these Councils have not in the past nor are they to-day able to
561 enforce decisions which may affect the younger men. It is true that the Elders have recently made decisions, accepted by the moran themselves, which will limit the period of moran-hood and may provide the moran with work on betterment schemes, but it still remains to be seen how far these will be effective in providing a solution for a problem of which the economic is no less serious than the social aspect.

175 Attempts were at one time made in Tanganyika, as also in Kenya, to
791 utilize the Laibon, the spiritual head of the Tanganyika Masai, as Native Authority. But the Masai themselves objected to his occupying this position,
623 and as the result of a Sociological Survey made by H. A. Fosbrooke in 1938, the system was altered. The gazetted Native Authority then became the Masai Council, which in practice consisted of Headmen and Elders, and apparently also of any tribesmen outside the moran age grade who cared to attend. But this Council was in effect only a consultative body, without any practical authority, and since the Headmen were not gazetted as Native Authorities, they had no legal power to issue Orders under Section 8 of the Native Authority Ordinance.

646 A further reorganization has now been carried out. Each area now has its own Local Council, with locally elected representatives of age grades and clans, and these Councils have been gazetted as Subordinate Native Authorities. Representatives from each Local Council, differing in numbers in accordance with the size and population of the area involved, compose the Masai Council, which is the Superior Native Authority for the whole Masai District, excluding Sonjo. The Council is now limited to these representatives: there is, however, provision for the addition of moran or nominated members if and when advisable. The Local Councils have begun to exercise their Order making powers under Section 8 of the Native Authority Ordinance. There are 41 paid Headmen, chosen by members of their own age grade.

● 652 There is a Masai Native Treasury, which however is managed entirely by
000 the District Commissioner. The small Sonjo tribe has a Council of Sonjo Headmen, which is gazetted as a Native Authority, and has a separate Treasury.

THE WORKING OF THE NATIVE AUTHORITY SYSTEM

The variety of conditions is so great that it is difficult to generalize on the operation of the system of native administration in the Province as a whole. There are, however, certain points of special significance. The recent reorganization in the Chagga Native Authority area has placed in a superior position three Chiefs who already had a high status in view of the number of taxpayers in their jurisdiction, but its future success will depend on the extent to which these Chiefs can secure the co-operation of the more progressive elements who have now been brought within the framework of the system, as members of the new Divisional Councils. This is especially necessary, in view of the character of Chagga society, for though the Chagga are probably the

Veterinary Services 1918-1962

648
654
177
232

From the end of the 1914-18 war to the present the Departments of Veterinary Services in both Kenya and Tanganyika have been very active in Masailand. The visible results of their work involve provision of water supplies, treatment and prevention of disease, and provision of some experimental or demonstration ranches whose aim is to encourage better livestock management on the part of the Masai. European veterinary personnel with African assistants have been active in Western Masailand in both Kenya and Tanganyika, and they have exerted a very significant influence on the ecology of the area. As noted above their work has greatly aided the increase in the numbers of the Masai livestock, without showing any demonstrable improvement in the quality of the livestock, and with very demonstrable deterioration of the grazing land, especially in the vicinity of the water points.

The significant exceptions are the activities of the Tsetse Survey and Control Branch of the Kenya Department of Veterinary Services. In Narok District they have maintained two small field houses (one has since been removed), a field laboratory, and an experimental ranch. Their research has been aimed at learning the

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

648 ecology of the tsetse flies in order to effect their
654 control without employing destructive game killing or
177 land clearing schemes (Langridge, 1960, 1961). Within
232 Western Masailand their work has largely consisted of careful research and controlled experimentation.

The damage to rangeland resulting from the activities of the other branches of the Veterinary Services are the natural result of a well intentioned, efficient, but narrow approach to the livestock problems of the Masai. Such effects are not limited to East Africa. There are many such examples in the western United States.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

695 the forcible execution of decrees for the custody of women and children in a manner repugnant to the principles of humanity.

CONCLUSION REGARDING THE VALUE OF THE SYSTEM NOW IN FORCE

000 Looking at the system of native administration in Masailand as a whole, those who are now most closely concerned with it regard the position as far from satisfactory. Consideration has lately been given to a number of changes in detail. It has been proposed that there should be a Masai Council at Ngong, consisting of the 20 members selected from the two Local Native Councils, which would deal with all questions affecting the whole of the Masai, leaving the two Local Native Councils to deal with purely local questions, such as applications for trading plots or the expenditure of local Treasury funds. This would no doubt be a simplification of the present procedure, but it will be realized that the existing method of constituting the Local Native Councils, while designed to secure a representation of the tribesmen in general, has the effect of excluding the Headmen who carry most weight with them.

A scheme has also been considered for making a more definite delimitation of the Section boundaries, in order to enable the formation of Committees of Control over grazing, and to assist the introduction of a system of destocking. It is difficult to estimate the extent to which the soil in the Masai Reserve actually suffers from deterioration owing to overgrazing, for as has been pointed out, the facts are complicated by the existence of the great quantity of game in the Reserve.[1] There is no doubt, however, that the scheme referred to would be of benefit both from the administrative and the economic point of view, though its success must depend on measures to be taken for the improvement of water supplies, without which the delimitation of Section boundaries would be ineffective.

177 But the causes which have produced the present situation in Masailand are deep-seated, and a remedy cannot be found merely in changes in the present system of native administration. The chief obstacle to progress among the Masai is the persistence with which this conservative people have clung to customs and habits of life founded on the militant traditions of the past. Some effort has been directed to effecting changes in their custom, in particular as regards the position of the Moran. At the instance of the first Provincial Commissioner (1911-1923) the tribe was forbidden to continue the warrior manyattas and the cohabitation of Moran with unmarried girls was also interdicted. More recently, a meeting of the Chiefs and Elders held at Ngong in 1947 agreed in principle that the period determining service as a Moran should be reduced to three years, and there is a further project for establishing Moran camps, which it is hoped may serve as an education in a more useful form of life.

[656]

000 It perhaps adds to the difficulty of effecting an improvement in the condition of the Masai that the problem has been viewed from two different standpoints by Europeans in Kenya. There are some, both officials and non-officials, to whom certain aspects of the Masai character have always made a strong appeal. They have in particular been attracted by the courage, frankness, and loyal sense of comradeship shown by the Morans. On the other

• 656

In 1940 the Ngorongoro Highlands, much of the Serengeti Plain, and a strip of bush country leading to Speke Gulf were gazetted as a National Park. Due to the war and the terms of the ordinance this action did not affect the area or the Masai living there. In 1948 because of renewed interest in the status of the area, a new National Parks Ordinance was passed, and later, by Government Notice No. 137 of 1951 the area was re-gazetted the Serengeti National Park.

At that time it was believed that the objectives of a national park as defined by the London Convention of 1933 (C.C.T.A., 1953), could be achieved and maintained with a resident population of Masai with their livestock. In a few years it became evident to both the Masai and the Government that the arrangement was not working out. The activities of the Masai and their administrators were conflicting with those of the national park staff. There followed a series of hearings, government announcements, and interventions by interested individuals and organizations, culminating in 1956 in the appointment by the Tanganyika Government of a Committee of Enquiry. The Report of the Serengeti Committee of Enquiry (1957) details the history and events leading up to the enquiry. Further comments on and analyses of the situation include those by Anon. (1959), Bigalke (1959), Boyle (1956),

#13 648 656 659 Grant (1957), Grzimek and Grzimek (1960a), Kenya Wild Life Society (1957), Huxley (1961), Pearsall (1957), Petrides (1956), Talbot (1956), the Tanganyika and Kenya Wild Life Societies (1956), and Thomas (1960).

In 1959 and 1960 the park regulations and boundaries were revised (Fig. 3) and the Ngorongoro Conservation Unit was created. The new regulations for the park exclude human residents and livestock. The Conservation Unit covers some 3,000 square miles adjoining the park to the east and south, and includes the Ngorongoro Highlands and part of the Serengeti Plain. The purpose of the unit is to achieve a balanced management of the resources and to develop the natural resources of water and grazing in the interests of both human and wild life populations.

Since 1959, then, the Masai have been excluded from the portion of the western Serengeti Plain and the bush country to the north that is within the park boundaries. The park boundary was adjusted several times to exclude from the park various water holes around its periphery that were considered important by the Masai. As a result the western park boundary follows a zig zag line from the southern Serengeti Plain north to the

[See p. 19.--Analyst]

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

#13 648 656 659 Kenya border. The only significant area lost by the Masai was the Moru Kopjes area. This was used occasionally during the dry seasons because of the springs and good grazing found there. By about 1956, however, the last spring appeared to have dried up because of destruction of the vegetation by the Masai.

#13 184 The status of the Masai in Narok District has remained relatively constant compared with that of the Tanganyika Masai to the south. Since 1911 the only changes have been slight enlargements of the area and fluctuations in the land infested with tsetse fly.

#13 648 224 65 The part of Western Masailand immediately to the north of the Serengeti National Park and east of the Siria Escarpment (Fig. 3) is Kenya's finest game area. Following the Second World War part of this area, the triangle formed by the Mara River, the Siria Escarpment, and the Tanganyika border, was made a National Reserve. This action protected the area from hunting but did not affect the Masai. In 1961, due largely to the efforts of Major Temple-Boreham, Senior Game Warden of the area, and Mr. C. Denton, District Commissioner of Narok, an agreement was made between the Narok District African District Council and the Kenya Government to establish a Masai Mara Game Reserve. The reserve covers some 700

175 161 In terms of total population the Masai have greatly prospered under European administration. It has been estimated that at the peak of Masai power, before 1890, the total population of Masai was around 45,000 (Simon, 1962). By the mid 1920's they had recovered from their series of disasters and their numbers were estimated at about 50,000 (Joelson, 1928). The census of 1948 gave the total Masai population as 107,309 (Fosbrooke, 1948). The most recent census places the population at about 117,000.

175 648 Most of the Masai prosperity in the 20th century has taken place under the English administration. In 1891 the boundaries of the German Territory of Tanganyika stopped short of what is now Tanganyika Masailand, but it was included in the German "sphere of interest." [657] (Kiepert, 1891). Subsequently, apparently because there were so few Masai living in Masailand following their multiple disasters, the Germans created a Masai Reserve that was mostly south of an east-west line through Arusha. This division left the Ngorongoro Highlands, the Loliondo area, and the highlands near Eastern Masailand free for European settlement and displaced the Masai living there. [131] This action further scattered the remnants of the Masai, some of whom moved north into Kenya and others south into

175
648
131 the German Masai Reserve. After the 1914-18 war the English allowed the Masai to return to most of the areas they formerly occupied in Tanganyika.

175
648 After defeating his brother, Lenana returned to Kenya and in 1902 he peacefully acknowledged British rule. The Masai were still very few in numbers but they ranged over a wide area of Kenya, grazing their cattle
175 and raiding. In 1904 two Masai reserves were created,
648 a northern one of some 4,500 square miles in the Laikipia
657
131 area, northeast of Western Masailand, and a southern one of about 4,350 square miles which included part of the present Eastern Masailand in Kenya. The Masai, led by Lenana, signed a treaty accepting the reserves in August 1904. This arrangement did not prove satisfactory for either the Masai or the English. Lenana found it difficult to control the northern Masai when he was in the south and requested that the reserved be joined. Consequently, after several years of negotiations, a treaty was signed in 1911 in which the Masai gave up the 4,500 square miles of the Northern Reserve and received in return over 9,000 square miles of land including what is now the Kenya portion of Western Masailand. Part of this area was unoccupied, some of it was European ranch land, and part of it had been occupied in former times by Masai. This new half of the Southern

19: Talbot K-4,5 (1956-1962)1964 FL12 Masai FL12

175
648 Reserve became Narok District, with headquarters at
667 Narok. The remainder of the Southern Reserve was
131 Kajiado District, with its headquarters at Kajiado, about 45 miles south of Nairobi on the Great North Road (Fig. 1). The Provincial headquarters for both districts was located at Ngong, just west of Nairobi.

175
648 With subsequent extensions, the Masai in Kenya
131 received a total of over 15,000 square miles which included some of the finest grazing and forest land in Kenya.

Partisans of the Masai say that the treaty of 1911 was a catastrophy for the Masai and that they were tricked by government into giving up good land for bad. It is also pointed out, however, that as a result of the treaty of 1911 the Masai received over twice as much as they lost, and that land included some of the finest grazing and forest land in Kenya. The treaty was requested and signed by the Masai leaders. As a result of that treaty, their population density in the reserve was probably about one and one third persons per square mile, so in terms of land, this treaty made the Masai one of the richest tribes in Africa.

175 Regardless of the logic, the move was resented

656 Petrides (1956), Talbot (1956), the Tanganyika and Kenya
659 Wild Life Societies (1956), and Thomas (1960).

In 1959 and 1960 the park regulations and boundaries were revised (Fig. 3)[1] and the Ngorongoro Conservation Unit was created. The new regulations for the park exclude human residents and livestock. The Conservation Unit covers some 3,000 square miles adjoining the park to the east and south, and includes the Ngorongoro Highlands and part of the Serengeti Plain. The purpose of the unit is to achieve a balanced management of the resources and to develop the natural resources of water and grazing in the interests of both human and wild life populations.

Since 1959, then, the Masai have been excluded from the portion of the western Serengeti Plain and the bush country to the north that is within the park boundaries. The park boundary was adjusted several times to exclude from the park various water holes around its periphery that were considered important by the Masai. As a result the western park boundary follows a zig zag line from the southern Serengeti Plain north to the

[1] [See p. 19.--Analyst]

19: Talbot E-4,5 (1956-1962)1964 FL12 Masai FL12

#13 648 656 659 Kenya border. The only significant area lost by the Masai was the Naru Kapjes area. This was used occasionally during the dry seasons because of the springs and good grazing found there. By about 1956, however, the last spring appeared to have dried up because of destruction of the vegetation by the Masai.

#13 124 The status of the Masai in Narok District has remained relatively constant compared with that of the Tanganyika Masai to the south. Since 1911 the only changes have been slight enlargements of the area and fluctuations in the land infested with tsetse fly.

#13 648 229 65 The part of Western Masailand immediately to the north of the Serengeti National Park and east of the Siria Escarpment (Fig. 3) is Kenya's finest game area. Following the Second World War part of this area, the triangle formed by the Mara River, the Siria Escarpment, and the Tanganyika border, was made a National Reserve. This action protected the area from hunting but did not affect the Masai. In 1961, due largely to the efforts of Major Temple-Boreham, Senior Game Warden of the area, and Mr. C. Denton, District Commissioner of Narok, an agreement was made between the Narok District African District Council and the Kenya Government to establish a Masai Mara Game Reserve. The reserve covers some 700

Kisonko

of plains, with inhabitants ranging from the purest of Bantu, through various Hamitic strains to the Nilo-Hamitic Masai. 114

Lest my interest in and affection for the Masai may label me in the minds of my readers as an exponent of the theory that the so-called unspoilt primitive tribes should be preserved as museum specimens, I would here state my belief that, for survival, any culture must adapt itself to its environment: and environment includes not only the physical, but the political, social and economic forces with which such culture finds itself in contact.

There are numerous features in the Masai mode of life which, relative to these external forces, can only be regarded as undesirable. On the physical side one frequently hears cited the unhygienic state of life in the bomas and the high incidence of venereal disase brought about, it is alleged, by the social system. But is life any more hygienic in the slums of great cities in Europe and America? 105 114

On the political side there is much talk of broadening the basis of Native Administrations, of greater democratic representation in the local government machine. How do the Masai compare with their neighbours to this respect? It has been written of Kenya — and within my knowledge it applies to certain areas of Tanganyika, — that "In districts where hereditary chiefs were unknown the Government-appointed chief or the chief elected without secret ballot from a short list of men presented to the people, very often *now* possesses wealth, lands and power." But this is obviously no new tendency in African social development: it is significant that in two cases the word for "Chief" in one dialect of a language group means rich man in a neighbouring dialect. (*Oo-karna* in Masai means a rich man, in Arusha, a chief: *mwangusi* in Irangi means a rich man, in Mbugwe a chief). This political nest-feathering is, however, a tendency not to be found in Masailand; the laibons by their magico-religious position have waxed and grown fat on the gifts of their followers, but the chosen representatives of the people, the laigwanak, never. Once a departure was made from the original misconception that the laibon was a type of chief, the Native Administration of the Masai was set on a truly broad-based democratic foundation of African, not European, conception. Of how many neighbouring tribes can the same be said? [661]

On the economic side the Masai are frequently alleged to maintain large herds of useless cattle, but to one who has watched the process develop over the last 14 years, the growth of the livestock marketing system and the conception of the economic value of cattle is not the least remarkable feature of Masai development. Is this conception growing at an equal rate amongst neighbouring tribes? Over the last decade has any African tribe exported a greater number of cattle than the Masai, without at the same time exporting the stored fertility of its land?

It is fair criticism of Masai pastoralism that much forest has been burnt out and many waters trampled. But the well-managed grass land which replaced the forest at least preserves soil stability, as contrasted with forest cut by agricultural tribes who expose the soil to erosion; and the trampled out waters can be restored by suitable conservation

FL12 Masai FL12

The influence of the
791 medicine man is due to his supposed power of prophecy and
787 divination. No explanation is offered of this power, nor does it appear that the Laibons are believed to enjoy the acquaintance and assistance of definite spiritual beings; but they can foretell the future by such methods as throwing stones out of a horn, inspecting the entrails of slaughtered animals, interpreting dreams, and delivering oracles when intoxicated with honey wine. Great, however, as is their influence, it does not appear that either among the Masai or
[171] the Nandi, where similar institutions prevail, they have ever attempted to assume a position like that of the various small sultans of the coast or the kings to the west of Lake Victoria.

791 The most celebrated of these medicine men was Mbatian, the father of the present holder of the office, Lenana, who died about 1890. He is celebrated for having prophesied outbreaks of cattle plague and small-pox, which duly came to pass; and also for having foretold the arrival of white people. It is generally said that he bade the Masai be friendly to them, but Mr. Hollis could not find any corroboration of this statement. His death was followed by
173 a disputed succession. There is considerable discrepancy as to the details of the story, but, according to the versions taken
791 down by Mr. Hollis (p. 327), Mbatian told his eldest son
662 Sendeyo that on the morrow he would invest him with the insignia of a Laibon, of which the principal is an iron club. Lenana, the younger son, overheard, and presented himself before his father very early the next morning. Mbatian, who was very aged and had only one eye, behaved much like Isaac in similar circumstances, and gave his younger son the insignia, saying 'Thou shalt be great among thy brothers and among all the people.' In any case, Lenana succeeded,
791 and was accepted as Laibon by all the Masai except the Loita.
578 This created a division in the tribe, and as it roughly
619 corresponded with the division between British and German territory, Sendeyo was long regarded as the chief of the German Masai and Lenana of the British. But in 1902 Sendeyo quarrelled with the German administration, made his peace with his brother, and came over to the British Protectorate.

796 The religious ideas of the Masai, as collected by Mr. Hollis, are vague and unformulated. The commonest word for God is Eng-aï, which it will be observed is a substantive with a *feminine* article. Eng-aï appears to be used either quite indefinitely and impersonally of remarkable natural phenomena

the people to move their grazing grounds, 'for,' he said, 'all the cattle will die. You will first of all see flies which make hives like bees, then the wild beasts will die, and afterwards the cattle.' 791 787

Both of these prophesies have come true: the Europeans have arrived, and the cattle died.

Mbatian himself died while the cattle plague was raging (circa 1890). 791 173

When on the point of death, he called the elders of Matapato, the sub-district in which he lived, and said to them: 'Do not move from your country for I am about to die, and I will send you cattle from heaven. If you move, you will die of small-pox, your cattle will all perish, you will have to fight with a powerful enemy, and you will be beaten. I wish my successor to be the son to whom I give the medicine-man's insignia. Obey him.'

The elders said: 'Very well,' and left.

When they had gone, Mbatian called his eldest son Sendeyo[1], and said to him: 'Come to-morrow morning for I wish to give you the medicine-man's insignia.' 791 173 662

Sendeyo replied: 'Very well,' and went to lie down.

While this was taking place, Lenana, who had hidden himself in the calf-shed, overheard the conversation. He arose early in the morning and went to his father's hut. On his arrival he said: 'Father I have come.'

[1] Lenana is sometimes said to be the eldest son of Mbatian.

1: Hollis G-5 (ca. 1894-1904) 1905

Now Mbatian was very aged and he had only one eye. He therefore did not see which of his sons was before him and gave to Lenana the insignia of the medicine-man (the iron club and the medicine horn, the gourd, the stones[1], and the bag), at the same time saying: 'Thou shalt be great amongst thy brothers and amongst all the people.'

Ne'ya Ol-Ōnana 'n-dōkitin o-'l-oiboni, nelo.

Lenana took the medicine-man's insignia and went away.

When he was dead, some of the people proclaimed Lenana principal medicine-man, 'for,' they said, 'Mbatian told us that he would give the insignia of his office to whichever of his sons he wished should succeed him.' They therefore remained with Lenana.

Kake ějo kulikae: 'Mme ol-oiboni lañg elle, amu etelejiahe.' Nepwo ninje aasuj Sendēu.

[628]

But others said: 'We will not acknowledge this man for he is a cheat,' and they threw in their lot with Sendeyo[2].

[1] It is possible that these stones, which according to tradition were brought many years ago from the north, may prove to be of some interest. It is asserted that no European has ever been allowed to behold them.

[2] This is the story as told by the Masai. The official version is that Lenana was chosen by the elders of most of the clans and districts on his father's death, but that Sendeyo refused to acknowledge him, and was

[175]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

175 permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was once the home of the Laikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Laikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few remnants have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Laikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Extra Provincial District of the Masai in Kenya Colony. [6]

[631] [633] [669]

* * *

631 A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralised authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organisation.

634 101 619 The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

[6] SANDFORD, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *K. L. C. E.*, p. 188. One may note that the Uasin Gishu and the Laikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Maasinda. See FOSBROOKE, p. 7. This ill-feeling may explain in part, the fury with which the Kapiti fought against the Laikipiak and the Uasin Gishu.

[186]

In December 1950. I visited the Ndigirri Dorobo at Dol Dol on the Mukogodo Hills, some 50 miles north west of Nanyuki. They claim to have been dependent on the Laikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The names of their age-classes are consonant with those of the Masai.

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

727 the property of the successful warriors. A warrior can have no property, and hence they all become his father's.

[421] The spoil being divided, the party were next able to do full honour to the men lost in the raid—those being considered worthy of all praise "who *rush* into the field, and foremost fighting *fall*," while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

648 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Galla-land, the Coast region, Sūk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilized fashion. Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilized countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 As a mild relief, and a variation from these serious matters,
186 it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened this one out of his wits, or spitted another on his spear, or smashed the skull
431 of a third into jelly. The senengè and the beads he re-

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

634 junior ages are concerned, beginning to regard themselves as a unit. Ngorongoro is another area where similar conditions pertain.

C. **Recent History: Famine — civil war — German Policy.**

175 Again taking up the thread of history, the period 1880 to 1890 is regarded by the Masai as one of prosperity. Mbatian was the laibon at this time; it was he who called up the Moibo Masai to fight the Uasingishu and Laikipiak sub-tribes. But the period was mainly occupied with wars and raids against neighbouring tribes: the devastating effects of such raids, as noted by early explorers, are graphically illustrated by extracts from their writings reproduced in the "Administrative History".

175 But about 1890 the Masai were visited by the triple misfortune of
731 famine, smallpox and rinderpest. Whole families, together with their stock, were wiped out. In some cases the survivors lived by hunting or agriculture; in others they were adopted into, or carried off into captivity by, neighbouring tribes. The tribe was in fact scattered from Lake Victoria to the Coast. But such was the urge to the nomadic pastoral life that, in the course of the next few years, most of the wanderers returned, and from their earnings or stealings commenced to build up new herds.

175 During the famine Mbatian died, and the tribe was divided by civil war. For two of Mbatian's sons, Lenana and Sendeyo, were rivals for
● 669 the position of laibon. The former had a following of Purku and other sections, the latter was backed up by the Loita. After various skirmishes round Nairobi, Sendeyo turned south, and his Loita beat in turn the Laitayok, Salei and Serenget of the Loliondo area, thus finishing up at Ngorongoro. From there they descended to Kissongo, some of the Loita spreading to Longido and Olmolog. At one time Sendeyo himself lived at Lossogonoi, but later returned to Ngorongoro. When below the Rift he had numerous skirmishes with the Germans, and also with the Kissongo, supported by the Purku. His final defeat was brought about by a clever flanking movement; the Kissongo, by this time recovering from the effects of the famine, approached Lenana, who agreed to send his Purku from the north, via Loliondo, whilst the Kissongo attacked from the east. Thus both parties would converge on Sendeyo at Ngorongoro. When Sendeyo heard of this, he saw that the struggle was hopeless and fled by night to Lenana to admit defeat. Lenana allowed him to return as laibon to the Loita section.

175 An important feature of recent history is the policy which the German
648 Government pursued in relation to the Masai. When they first made contact with the tribe, the Masai of Tanganyika, being scattered by the famine, must have been very few in number. The area south of the Moshi—Arusha—Mbugwe road was therefore thought sufficient as a Masai Reserve, and the objective was to keep Mondul, Longido, Ngorongoro and Loliondo areas free for alienation. This meant that the Laitayok and Ndasegera Loita of Loliondo, the Salei and Serenget west of the Rift, the Mweandet of north Meru and Mondul, the Sighirari of Sanya and the Matapatu of Longido, were all debarred from their grazing grounds. During the war, when this policy was relaxed, the various sections began to

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

726 791 Prior to a major raid, but not before a minor expedition, a visit would be paid by the participants to the laibon, who would give charms to ensure success. No payment was made at the time, but a portion of the captured stock was taken to the laibon on return. It was thus to his material advantage, as well as to that of his reputation, that the raid should be successful; it is consequently only natural that he should pass on any bits of intelligence brought in by previous visitors, and any hints which experience had taught him, to reinforce the efficacy of his charms. Thus a proportion of the spoils, lifted by a combined force of Kissongo Dwati and Dareto from the Lumbwa living beyond Kiteto, about 1916, were taken to Laibon Parrit (16), later gazetted Chief of the Tanganyika Masai, but at that time resident in Kenya.

721 791 The initiative of suggesting such raids seems to have rested with the moran, though the modern technique of an upstart laibon saying "There are plenty of cattle in such-and-such an area, I can't understand why you fellows don't go and take some", was doubtless used in the old days to encourage slovenly sections to action.

Minor raids, from all accounts, were organised locally and carried out without reference to the laibon, to whom none of the captured cattle were presented. The difference between a major and a minor raid appears to have lain not only in the numbers of Masai involved, but also in the strength and reputation of the proposed enemy.

669 791 In the matter of civil war the laibon's position was rather different, as his own position was at stake. In contrast to the usual "We went and raided such-and-such a tribe", Laimer informants frequently refer to the time "when Mbatian called us up to fight the Laikipiak." In the struggle which followed the death of Mbatian, it is obvious that Lenana and Sendeyo were encouraging war for the purpose of furthering their own personal ambitions.

561 791 The second main function of the laibon is that of supervising and blessing the *age grade ceremonies*. It is probable that a laibon at least gives charms, if he does not attend in person the Embolosat ceremony, the commencing ceremony of the age, held by the Kakonyuke section on behalf of the whole tribe. It is certain that he does so both at the Unoto and Ngeherr ceremonies, that is at the promotion and passing out of the warriors. But he is not responsible for the organisation of such matters, nor is it on his initiative that new ages commence or old ones stand down. As this is a matter of prime importance in determining his true position ,it deserves full attention. The closing of the present Merisho age was agreed to at an Ol Kiama (or General Meeting) of the tribe in 1937, and not done at the dictation of the laibon. The il *Piron* elders, i.e. those of the reciprocating age — set next but one above the warrior set — are alone responsible for the initiation, promotion and standing down of the moran. An interesting case occurred in February 1939, after the Endungore, or closing, of the present age, when a Dwati elder at Naibor Murt decided to circumcise his two sons, and brewed beer in preparation for the event. The local Dareto, hearing of this, determined to stop him, marched into his boma, and drank the beer themselves. It

/7 cont./

000 against the former. The El kuafi recognized the chief (ol oiboni)
174 of the Masai as also their own and seem for a long time to have
184 been on the best of terms with them. Then -- so the tradition
• 669 tells -- a girl named Matangó, from the family of the ol oiboni
619 Sitonik -- she is usually designated as his sister, more rarely as
726 his aunt -- took a fancy to a member of a legation of El kuafi
[173] warriors sent to Sitonik and went away with her lover. When she bore him a son, the El kuafi proclaimed him their ol oiboni and at the same time refused to obey Sitonik. With this the wars began between Masai and El kuafi. They lasted -- so it seems -- the entire first half of the nineteenth century and occurred sporadically even in the second half of it. One of the decisive battles was at Kisongo, a six-hour march west of Meruberg /Mt. Meru/, where later on the chiefs of the Masai took up their permanent /8/ residence. The ones driven away went into the rugged forests of
[466] Meruberg, where they lived for a long time in constant strife with the Masai, until the chief Mbatyan completely subjugated them and forced them into compulsory service. Other battles took place near Ngurumán, north of Lake Natron; the rest of those conquered still live there, mixed with Wasegedju from nearby Sonjo. The
[361] remnants of the ones defeated in the Serengeti steppe are still to be found in Taveta, Kahe, Aruscha-tschini. The first battles between Masai and El kuafi probably took place in the vicinity of Kenia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi; the ones conquered fled to Ngujuka and then farther to Useguha and Mahga, where they founded a settlement under the chief 'Lemá.

174 The Masai took a few individuals from among the defeated
184 into their community. The rest split up. One -- larger -- part
619 became sedentary and formed some colonies in the vicinity of
[361] foreign tribes or merged with other tribes. Another -- smaller --
[721] part at first made a living for a time from hunting, until it
[231] succeeded, by means of raids against sedentary peoples, in coming
[101] into the possession of livestock again. Today they again live wholly as before and are distinguished from the Masai only by

791 /19 cont./
175 was followed by Subet and the latter by Mbatyan. After the latter's
[619] death the Masai split up. One part placed itself under Lenana, the eldest son of the principal wife, who was born before the accession of Mbatyan, the other under Zendeo, who was the old man's favorite son and named by him to be his successor. The people relate that Lenana cheated Zendeo out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tied-on goatskin, it was made possible in the former case by the gloom of the hut in which old, weak Mbatyan was lying on his sickbed. He thought he had Zendeo before him and instructed Lenana in the secret arts of the ol oiboni. The two are now bitter enemies,
[669] who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 49 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Nairobi, whereas Zendeo, ten years younger, inhabits, with his hordes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an
175 outstanding place in the succession of chiefs. Under him the Masai
619 experienced their last golden age. After his forefathers Sitonik and
791 Subet had subjugated the Wakuafi, it rested upon him to keep down
726 their constant uprisings and to weaken and enslave them so that no
[669] danger from them could threaten the Masai any longer. Through a well-organized spy system Mbatyan kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack those very Wakuafi settlements in which a war expedition /20/ against the Masai was being prepared. The most trouble here was made by the Wakuafi of Meruberg /Mt. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on
175 neighboring Masai kraals. Finally, however, the Meru people were
619 successfully mastered; indeed, they even became so pliable that
791 they performed compulsory labor for their oppressors. One must
729 bear in mind with what deep contempt all men of the Masai people
466 look upon any kind of work, which they regard as something dis-
461 graceful, not compatible with a man's dignity, in order to

/78 cont./

714 These[1] consist of curves, sectors of circles, lines and scallops,
53 which are painted on the shield's surface in three colors, Pompeian
[822] red, black, and gray (1),

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs
[386] stand out in sharp contrast. One uses for this the red earth mixed
[824] with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black,
[239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 Today considerable confusion in the shield escutcheons already
53 prevails. The rarer the war expeditions of the Masai become,
721 thanks to European domination, the more the old formalities of war-
178 fare are sloughed off, and ancient rules, which formerly were never
[648] transgressed, are today all too often ignored; their purpose has lost
[669] its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 A shield escutcheon (Plate 1)[2] may contain: 1. the red warrior-
531 emblem (os serat' onjugi), 2. the black emblem (os serat' erok) (1),

1. To which the rare gray also belongs.

3. the ornamental band (es segira l el oño), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

[192] [126]

A war in which Masai stand against Masai is called ol arabal (pl. el arabali), not en djóre (n djorīn) as a war between Masai and foreign tribes is called.

701 574

/89/ In peacetime the warrior spends only the least time in his own kraal; for the most part he gads about on visits in neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime; a guard of at least ten men always remains at home for the protection of the girls and the livestock, while the rest stop to visit at an ol bul (forest meal, see p.111 above) or with other people.

/348 cont./

182 731 had been sown with the bleaching skulls of those who had starved and out of the stricken animals. Any of the women and girls who had not [648] died of hunger sought and found refuge among Negroes practicing agriculture, who always like to buy or kidnap female individuals. A mother would sell her child for a handful of maize and would sell herself a day later for a similar price, in order to avoid starvation. Negroes and caravans /349/ took possession of the will-less ones, in order to resell them as slaves. Many have since come back, in part through flight, in part through redemption by their relatives, but more are still found in strange hands. The latter, even though their blood lives on beneficially in the new mixture with Negroes, are 182 731 669 permanently lost to the Masai people. So greatly has the misfortune, to which an opposite effect is so often attributed, broken up the former organization, the firm unity, that, soon after the end of the epidemics, the unhappy quarrel between the brothers Lenana-Zendeo about the undivided rule over the Masai could begin. *With its continuing civil wars it acts powerfully toward the completion of the* destructive work of the epidemics. The Negroes, with whom alone [726] the Masai formerly waged war, except for smaller undertakings [186] among themselves, which bore more the character of provocations than of serious battles, were opponents inferior to them. Now equal parties stand opposite each other, which makes the wars bloodier, more destructive.

178 241 Through increasing impoverishment as a result of these epidemics and civil wars, there is now going on among the Masai -- as formerly [433] among the Wakuafi -- a change from nomadism to sedentation, agriculture is taking the place of animal husbandry. The ones [361] deserting the "people" in this manner are founding settlements, in part self-sufficient, in part supported by Negro tribes, somewhat removed from the dry steppes, there where the watering is adequate for the laying out of plantings. No one expects them to prove to be particularly skillful at this; but Nature, which goes so far to meet her children in the tropics, helps here too. A moderate watering suffices to make the batata shoot stuck in the virgin soil grow and produce tubers. Maize for the most part appears just as easily satisfied as advantageous. These then are the principal useful plants

choice resting on the general consent of the tribe. He whom the previous laibon had held in greatest esteem, and trained and nominated for the office, would normally be chosen. The past reputation of the candidate would, however, be a matter for consideration; if someone, other than the deceased's choice, had proved himself extremely powerful, it is possible that he would be chosen, for fear of the consequences were he overlooked. The maxim of English law, that none should benefit by his crime, is also applied. For the death of a laibon is as a matter of course attributed to witchcraft by a fellow Engidong, and the first step in choosing a new laibon is to ascertain who killed the old; such person is automatically barred from succession. 791 [671]

It has been represented that the above theory of late development of the institution stands or falls on a Masai legend. The answer to that is that very few legends are found without some foundation of fact, and secondly that there are many indications that it is a feature not fully assimilated by the Masai organisation. [182]

B. **Pre-European Functions of the Laibon: Raids and War — Age-grade ceremonies (with certain restrictions) — local ceremonies — tribute — supposed administrative actions.**

Immediately prior to his death in 1890 Mbatian was living at Namanga, but had previously lived, as had his father Subet (8), at Lashaine Hill, immediately below the Mondul District Office. He was nominally the official laibon for the whole of the tribe, though his brother Mako lived and practised as a laibon at Engutoto lol Mako, in Ngorongoro Crater. It is also significant that Thomson refers to "the important Lybons (medicine men) Lengobe, Mbaration, and Lembarsacout," without singling out Mbatian as the leader. If he in fact occupied the position, bordering on chieftainship, that many Masai elders would have us believe, it is improbable that even an early traveller would fail to note and comment on it. 791

There can be little doubt that at this time a laibon's chief functions were:

i. Dispensing charms for raids.
ii. Supervising and blessing the age grade ceremonies.
iii. Propounding the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall.

It is probable that any acts which he performed in the executive sphere arose from these three main duties, which must now be examined more fully.

In the matter of providing *charms for raids*, it should be noted that raids are divided by the Masai into two types, major (ol *orora*), and minor (ol *tomba*). Both these names also signify a group of moran fitted out for war, the former larger than the latter. A third term, which might well be recorded here is *o remore*, signifying a fight with spears, more particularly the deliberate killing of an alien for the purpose of acquiring a reputation. 726 791 [555]

from each side suckled each other's babies. Peace was then kept till it suited one side to break it. With Bantu tribes the Masai sometimes made mock blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. As among the Nandi, grass is a sign of peace, and a handful of grass constitutes a plea for mercy recognized by the Masai and those whom they count as more or less their equals, the *Il-magati* or "enemies," such as other pastoralists, but not *Il-mesh*, the Bantu agricultural tribes. 728 [608 618] [186]

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *in-kishu oo-l-oikop*, "murder cattle," varies, but may be as high as two to three hundred for a man; Hollis says 50 for a boy, and Merker 19 head of cattle and 19 goats and sheep for a woman. Fosbrooke gives the figures as 49 for a circumcised man, and 29 for a woman or uncircumcised man. The Il-Arusa are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is payable. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Maguire gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the bell-oxen, herd-leaders, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kunoni*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "if a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned. 671 [626] 682 681 627 [614 672] 685

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mamai*. In some cases a diviner of the type called *ol-goiishi* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation. 681 695

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut *poroiot* divisions of the latter. Up to 1918 the chief laibon in Kenya was accepted by the Administration as a paramount 631 648

• 671 An awareness and understanding of justice are very little developed among the Masai. Therefore only a small number of customary
[184] legal provisions exist, which are by no means uniform for all Masai,
but rather often enough vary in the different districts. As nomads,
[561] among whom individual families frequently live alone or with their closest relatives in a kraal, by themselves, without having neighbors in the larger vicinity, they make do with fewer laws than another tribe whose numerous members are supposed to live within definite fixed limits in permanent order and peace. Furthermore, the nomadic life in and of itself leads to a freer conception of life, which opposes tutelage through laws and often prefers to let might come before right. But in order to understand the great inconsistency in individual legal decisions, one must above all take into consideration the feeling of solidarity, which is strongest in the family and always still strong enough in the tribe to arouse from the first great prejudice against anyone who does not belong to the tribe. The questions concerning family and personal rights have

clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[28] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 623 615

The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[29] THOMAS, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[30] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[31] This is also confirmed by the notes of MAUGHAN on the penal code of the Masai.[32]

614

One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 649 195

The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognized as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

where unarmed natives of the neighbouring tribes, whose duty or pleasure took them into the Masai Reserve, have been wantonly murdered, and the catalogue also includes numerous instances of thefts of stock from neighbouring farms and territories. An investigation of the record of each of these cases will show that in a small number only of incidents has the perpetrator of the crime been brought to book. The probability that the commission of a stock-theft or a murder can be performed by a Masai of the "Muran" class without the knowledge of his associates is so slight that it has been found necessary to accept the principle that the responsibility for the surrender of criminals traced to any particular area rests on all the members of the section inhabiting that area. This system is in vogue throughout all the native districts of the Protectorate and is generally employed with a fair measure of success, but a similar success does not attend its application to the Masai Reserve, and this reserve is, in fact, the area to which the great majority of impositions of fines under the Collective Punishments Ordinance, 1909, have been applied, the refusal of the Masai to assist in tracing the criminal rendering it necessary to utilise the provisions of the Ordinance to effect the punishment of the whole section involved. The blooding of a spear by the murder of an unprotected wanderer or the theft of stock guarded perhaps by children is a survival of the traditions which necessitated the "Muran" to prove their manhood during the period in the standing army or the "L-Ayok" to prove their worth before circumcision. Such acts may not be regarded at the present day as valiant, but it seems that the criminal's associates have not yet come to look on them as reprehensible, and the Masai, on account of their wealth, do not possess the same dread of a collective fine as is felt by certain of the poorer tribes. Under any circumstances, the "Muran" offer no assistance in the tracking down of the criminal and the elders, though professing detective zeal, are powerless to intervene. The attitude of the section involved in such cases is one of surprise and listlessness—they never know anything—and the collective fine which may ensue has not hitherto had the result of discouraging the adoption of such an attitude.

It will generally be found that fines of this nature have been levied on Companies or "Sirits" of different clans, and, sometimes, on all the members of a clan or division. There is no case on record in which a collective punishment has been imposed on the Masai tribe as a whole. It is therefore necessary to refer shortly to the divisions into which the Masai, who are all of one tribe, are divided by their traditions and customs, and to note also the divisions into which they are divided in practice for the purposes of the administration of the reserve. A description of the traditional divisions of the Masai people is given in Mr. Hollis' Book on the Masai, pp. 260 and 261, but the names which are now in use to denote the divisions of the tribe within the reserve do not exclusively follow either the genealogical or the geographical divisions which are there set out. The Officer-in-Charge of the Masai reserve is endeavouring to confine the members of each division to certain areas set apart for them as locations, and this step will have the effect of reconciling the name given to a division with the locality in which it is found, thus tending to perpetuate a convenient form of nomenclature.

Whatever may have been the original system on which these divisions were formed, it appears that there is a really marked clan feeling between them, and several incidents are recorded which disclose the presence of mutual distrust and strained relationship between the divisions, while interference by one division with another is keenly resented. These divisions form the basis of the tribal organisation of the Masai as it exists to-day and each division has its own Council of Elders. In the recently constituted "Masai Council," one elder, or more, has been chosen to represent each division and the Council so formed has been accepted as representative of the whole tribe. It will thus be seen that the division system presents an admirable method of dealing with the tribe, closely allied to the location system employed in other Native Reserves in the Protectorate, and has enabled unrest or crime to be so localised as to limit the liability for offences committed to certain definite sections of the Masai. Nevertheless, there is not sufficient difference in the behaviour or customs of the members of each

9:Foebrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

When blood-money is paid, it is less when the

payment is between clansmen. The logical extension of this principle is that when cattle are due from one member of the clan they may be taken from any of his clansmen. This is in fact the rule for payment of compensation amongst the Masai, though the offender and his near relatives naturally pay more. In the one case of blood money in which details were obtained, members of sub-clans other than that of the murderer contributed, and it is, therefore, safe to calculate that clan responsibility and cohesion applies to the whole clan in greater degree than it does to the sub-clans. 614 672 681

B. Family matters — the boma system — the 'gate' — polygamy — marriage statistics — number of cattle to each gate — relations in law — travelling — adoption — economic.

Briefly, the Masai live in groups of families, usually three, four or five together, in a village comprising a ring of huts, built immediately inside a circular fence, which thus forms an enclosure for the cattle. Such villages are usually built some two or three miles, frequently more, from the water which the cattle use, so that it is unusual to find more than two or three bomas in close proximity. Frequently a boma is a mile or more from its nearest neighbour. In the village each family possesses a separate gate, enguiume, round which its members are grouped. 361 621

It is difficult to define a typical family or 'gate' unit. The ideal of a Masai elder is to possess half a dozen wives with many children, ranged on either side of his gate. As he marries he places the first on the right of the gate, and the second on the left; when a third wife comes in she builds her hut immediately to the right of the gate, and the fourth immediately to the left, the earlier wives moving round accordingly. Each wife on arrival is given a number of cattle, which are hers to hold in trust for her children. She is also given, for tending, some of the unallocated cattle which the elder holds in reserve for future marriages; such cattle are termed enpiaka e boo. Those living to the right and the left of the gate form two distinct groups, iudaiorion, and for the purpose of inheritance, should a wife on the left die without male issue, her cattle will be inherited by the senior male on the left of the gate; they may in no circumstances be taken by an heir on the right so long as there is a son on the left to inherit. 592 595 [428]

When the sons are circumcised, they nominally take over the guardianship of their mother, and of the cattle allocated to her. In the old days they would move off with her to the manyatta, warriors' village, but this is less frequent now. As they approach elderhood, however, in polygamous families the sons at times claim their patrimony and move off with their mothers, to form a separate gate in some other boma. More frequently they show little desire for this responsibility, and spend the greater part of their period of warriorhood wandering round the countryside, or living in meat-camps in the bush (ol pul). Once they become elders it is exceptional for a son to continue to live with his father, except when the latter has reached senility. 591 592 [364]

This is the theory of the gate system, but in practice it varies very considerably from the ideal. Polygamy (see below) is limited by the 595

from each side suckled each other's babies. Peace was then kept till it suited one side to break it. With Bantu tribes the Masai sometimes made mock blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. As among the Nandi, grass is a sign of peace, and a handful of grass constitutes a plea for mercy recognized by the Masai and those whom they count as more or less their equals, the *Il-magati* or "enemies," such as other pastoralists, but not *Il-mesh*, the Bantu agricultural tribes. 728 [608 648] [186]

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *in-kiku oo-l-oikop*, "murder cattle," varies, but may be as high as two to three hundred for a man; Hollis says 50 for a boy, and Merker 19 head of cattle and 19 goats and sheep for a woman. Foubrooke gives the figures as 49 for a circumcised man, and 29 for a woman or uncircumcised man. The Il-Arusa are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is payable. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Maguire gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the *loli-oaru*, herd-leaders, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolise the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kuwoni*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "if a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned. 671 [626] 682 681 627 [614 672] 685

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mumai*. In some cases a diviner of the type called *ol-gnishi* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation. 681 695

Modern Administration

III.

000 Closer family relationships. -- Kinship designations. -- Terms of address for relatives.

602 Since every tribe and every lineage are descended from a
[613] tribal ancestor, the tribal and lineage members consider themselves
[614] more or less distant relatives. The family, one's own as well as, ascending, those of the father and of the mother, forms the closer
[611] relationship. The child follows the father's family (father right).
[672] Relatives are not responsible for punishable offenses, fines, or debts of a relative. Legally they need not support them either in connection with impoverishment or release from captivity; it is such a general custom, however, that probably no one ever evades it.

601 /41/ The Masai language is poor in particular kinship designations; most of them are made up of words for father, mother, brother, sister, son, daughter, etc.

Father: baba.

Mother: ɛ̄jo.

Another wife of the father: eng afhji e ɛ̄jo.

Principal wife: e' ṅgorojoni kitok, that is, the great woman, or en altero eng aṅ, that is, the first in the kraal.

Every other wife: e' ṅgorojoni.

Brother (1):

1. Brother and sister come from the same wife, half brother and half sister from different wives of the same father.

[Warrior Kraal]

/84 cont./

701 As long as the latter stays in the kraal, his girl is obliged to
836 remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 The tending of the livestock falls to the boys. Even at night
857 they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 Within the ring of huts there is a circular kraal of thorns for
/85/ the cattle and near that a narrower one for goats and sheep,
233 while beside almost every hut there is a small lean-to for the young
417 calves and a barricade of branches for the older calves of the in-
[343] dividual ones. Thus everyone remains responsible for the barricading
• [672] of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on ac-
701 count of the lack of milk. Milk is the only food that the Ol morani
262 takes in the kraal, and the lack of it is therefore especially grievous.
264 Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable
[273] food, honey beer, and tobacco. The meat meals are always held
[276] outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these
701 forest meals (ol bul, e buli) mess companies are formed in every
262 warrior kraal, which are designated sirit' ol bul and which consist of
264 five or six members, each of whom is called os sirit ol bul. Such
574 banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called
000 ol gibet and prepares its own camp. Under a shade tree with thick

/213 cont./

439 designate the first one as en aṅga en djóre, i.e., war cloth, because the warriors like to dress up in it; the konguru they call en aṅga bos, i.e., colored cloth, and the gamti, ol garascha.

43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits [452] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

426 686 The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay: a road that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing. [672] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily [626] enter upon the arrangement, is forced into it by the public opinion, which is often expressed in violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repayment of the debt will be easy for them. It may also happen that the [581] creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her. [583] Since the creditor, even in this case, /214/ pays his father-in-law the bride price, the debt remains standing in full and the kinship [672] bond only makes its repayment more certain. The heir is liable for

/214 cont./

426 the full debts, not only up to the amount of the inherited property.
686 If a warrantor is liable for the debt, he must satisfy the creditor if
[672] the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries.
[784] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. A person who did not grant the
[783] request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 Loans or contracts are unknown. The creditor does not have
426 a right to the corpse of the debtor; neither debts nor misdeeds or
764 crimes committed by the deceased have an influence on the nature of his burial.

628 No distinction is made between murder and manslaughter, but
682 there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. Any brother
[593] of the one murdered is first of all entitled to carry out the blood
[672] revenge and, further, any man belonging to the family. Blood

/214 cont./

628 682 revenge goes first against the murderer or, if he has fled and is not available, against his brother or any man of the family of the [672] [593] murderer. Usually blood revenge is commuted by composition (wergild), the amount of which the murderer negotiates with the avenger through a friend. As a rule it consists of 200-300 cattle -- [613] [614] now fewer in many cases -- which the murderer, together with his people and his fellow lineage and tribal members living in the vicinity, that is, in the same district, gather together. The avenger is free to accept or reject the composition. /215/ Blood revenge is not carried out longer than one or two months after the murder; composition then takes its place.

[678] The kraal of the ol oiboni is regarded as a place of refuge. If the murderer has confessed his deed here, blood revenge may no longer be carried out on him, though he remains obligated for the payment of the composition. Murder committed on a married man, a girl, or a woman is never expiated by blood revenge, but by a fine. Until the payment of the composition or fine the murderer is called [326] [564] ol oikobani (pl. el oikob). The murder of a blacksmith is unpunished. On the other hand, if a blacksmith murders or even only negligently kills a Masai, a band of Masai consisting of married men, warriors, and boys immediately sets out to kill several blacksmiths.

682 613 672 Negligent homicide is expiated only by fines. These are very minor if the perpetrator and the one killed belong to one lineage. If they belong to different lineages of the same tribe, every male member of the lineage (warrior, married man) and every married female member of the lineage must pay a cow. Of this livestock the brother of the one killed receives one half, while the other half [614] is distributed equally to his fellow lineage members. The fine is paid and distributed analogously if perpetrator and victim belong to different tribes. If a woman kills a man through negligence, she will also be killed in most districts. On the other hand, if a man has killed a woman, he either remains unpunished or is given a 682 634 184 beating by the brother of the woman killed. In a few districts no distinction is made as to whether the perpetrator acted intentionally or negligently, for example, in Loita, where blood revenge is also [672] [628] only very rarely used.

/215 cont./

682 only very rarely used. In these areas the perpetrator, as punishment
634 for the killing or the murder of a man, loses all his property; his
184 livestock, his wives and children pass over to the heir of the deceased. For killing a woman who has not yet given birth to a child, only half of the livestock of the perpetrator will be given to the widower. For the killing of a woman who has children, the perpetrator pays her husband 19 head of cattle and 19 goats or sheep. In this some distinguished as to whether the woman killed had a son or a daughter; in the former case the fine is greater than in the latter one.

683 Bodily injury with a fatal result is regarded as the same as murder,
[682] as is one that results in the loss of a leg. A person who cuts off another's arm (in some districts this applies only to the right arm) or makes it useless pays the injured one a few head of cattle and later, in case the crippled one is killed in battle, also the fine customary as atonement for murder. It is assumed in this case that the cripple was killed only as a consequence of his inability to fight. Serious injury to the head is atoned for with the payment of a cow, an ox, and a sheep, among others only with the payment of a cow; the fracture of an arm or leg, with the payment of one or two head of cattle, likewise the fracture or loss of a finger, with /216/ the exception of the two index fingers (os sogutihoi or ol osokutoni), which, as magic fingers, are "dangerous and evil." The destruction of an eye remains unpunished. One who tears off another's ear lobe pays him a goat or a sheep for it.

• 672 One who acts as an accomplice in a crime against life and health is punished in the same way as the perpetrator.

684 Rape, abortion, unnatural lewdness, which is said to occur as
[682] sodomy (1),

1. Cf. the remarkably frequent prohibition in 2nd Mo. /Exodus/ 22, 19; 3rd Mo. /Leviticus/ 20, 15; 3rd Mo. /Leviticus/ 18, 23; 5th Mo. /Deuteronomy/ 27, 21.

are not punished.

/216 cont./

687 There is no special punishment for cowardice in war. The
[626] warriors, however, mock the coward in front of the girls and make
him ridiculous in their eyes. One who makes anyone ill through
683 sorcery pays a head of cattle to the one bewitched. If the latter
dies, the sorcerer must pay the fine levied for murder and is himself
driven away.

681 The death penalty is carried out in that a band of armed men
attack the defenseless sinner and kill him with spears. For a war
/217/ traitor the execution is carried out by warriors, for an arsonist,
by those injured by him. Fines are usually paid in installments. In
general their amount is not fixed for the individual offenses. In the
one area this, in the other that is regarded as the norm. Diminished
ability to pay because of precious livestock sicknesses or unsuccess-
ful wars naturally lowers the fine. Moreover, if in the district the
fellow members of the lineage or tribe of the perpetrator have a
preponderance in numbers or power over those of the injured one,
the fines are considerably smaller than in the opposite case; then
murder is often punished as negligent homicide, or many a time
even left entirely unpunished, just like other crimes or misdemeanors.
[672] Irresponsibility is regarded as mitigating in some districts, in others
not. An attempt is not punished. Self-defense is not mitigating.
[714] A degrading punishment exists only for the warriors and consists of
[701] cutting off the guilty man's braid-coiffure, as is well known, one
[684] of the insignia of his standing. This punishment is said to be inflicted
[685] most frequently for rape committed on a married woman, less often
also as additional punishment for theft. Innocent accused persons
734 are remunerated with a goat or a sheep. The mentally ill occupy
672 an exceptional position in the legal world only insofar as they are
unable to pay fines. In most cases their people are then liable.
The latter therefore keep in fetters the sick person who is inclined
[755] toward misdemeanors or crimes. Frequently, too, if an ol goiatiki
does not succeed in curing him through magic remedies, he is tied
to a tree at some distance from the kraal, to be devoured by pred-
atory animals.

181 464 561 Employment of the "Muran."

More particularly does this argument apply to the "Muran" who are of the ages at which the members of agricultural tribes are expected to work. No suitable employment has as yet been found for them as a body, though a small number have been known to reside as herds on the farms of sympathetic European stock-owners who are willing to pay a high wage for a modicum of service and who will not insist on their performance of any uncongenial labour. A very few also have proved efficient in the Police Force and K.A.R., while numbers of them, employed in the capacity of native levies have frequently proved of assistance in punitive expeditions against other tribes,* but for the majority, all attempts to find a suitable form of employment have failed, and they continue to lead their idle life in the Reserve, where their attitude is one of conceited conservatism combined with opulent apathy. The discipline formerly necessary to their existance as a fighting race is rapidly falling into disuse, and the good qualities they once possessed are fast deteriorating. Many of them have confessed to a feeling of boredom with their idle life but few have had the moral courage to change it for one of labour. This manner of existance is having a disastrous effect both physically and mentally on the Masai as a tribe, and it is stated that the average height of the "Muran" has decreased by three or four inches during the last fifteen years.

181 232 233 197 Masai conservatism respecting cattle.

It has been said that the Masai Reserve is already, with certain reservations, stocked to its fullest capacity. Mr. Hemsted has estimated the natural increase in cattle at 15 per cent. or approximately 100,000 per head per annum. It follows therefore, that a similar number must be disposed of or perish annually; but this is an argument which does not appeal to the Masai. They have not only shown a marked reluctance to sell their stock, but they have made no serious attempt to accept the assistance of science in improving the grazing conditions of their country, and, being satisfied as a result of the few experiments they have made that the class of stock they possess—a small, degenerate, in-bred animal—is best suited to withstand the ardous conditions prevailing in the Reserve, they are unwilling to permit a cross-breeding with pure-bred or grade stock which might materially increase the value of their herds in the world's markets, and which would, by the introduction of fresh blood, obviate the ill-effects of in-breeding which has been rendered necessary by the cessation of raids. The wealth of the Masai, therefore, is turned to no good purpose; their style of living does not change; they are still content to live in low buildings constructed of poles, grass and mud, in conditions of filth that defy description; and, although an improvement has been noticeable in recent years, they have shown no great desire to utilize their wealth in the purchase of imported articles and in the improvement of their diet.

623 561 Councils of Elders.

Another aspect of the character of the Masai "Muran" which deserves consideration is the disregard which they evince for the authority of their own native administration as represented by the Councils of Elders. These Councils exist according to native custom, but have never been in the past, nor are they now, efficient to enforce the decisions they may give in respect of the young warriors. It may be said that serious crime in the Masai Reserve is rare, and that there are not more than three or four cases on record, since European administration was established, when the attitude of the "Muran" gave cause for anxiety and in no one of these cases did a disturbance of such magnitude occur as to render necessary a recourse to armed force to quell it. Politically, the Masai have remained loyal to the British Government since they first encountered it, and except for isolated instances where certain sections attempted to help the allied cause and to increase their herds by the despatch of raiding expeditions against German territory, their conduct throughout the trying period when the war in East Africa was on their borders was exemplary. Nevertheless, a catalogue of the misdeeds of the Masai will show a not inconsiderable number of instances

[674] Crime in the Masai Reserve.

648 674

* The Masai have rendered assistance in the capacity of native levies on the following occasions:—

(1) Nandi Expedition, 1900. 40 Muran.
(2) Nandi Expedition, 1900. 400 Muran.
(3) Maraka Patrol, 1902. 300 Muran.
(4) Tete Operations, 1902-03. 300 Muran.
(5) Irland Patrol. 400 Muran.
(6) Kabwaren Patrol, 1904. 100 Masai and Nandi.
(7) Sotik Expedition, 1905. 400 Muran.
(8) Kisii Patrol, 1906.
(9) Nandi Expedition, 1905-06. 600 Muran.
(10) Present Turkana operations.

Reports on the work of these levies have on the whole been highly satisfactory, except in the present Turkana operations where it is doubtful if the pastoral Masai have been used, and in the Kabwaren patrol, where it was found that the Masai spearmen were of little use against the Nandi in forest country.

where unarmed natives of the neighbouring tribes, whose duty or pleasure took them into the Masai Reserve, have been wantonly murdered, and the catalogue also includes numerous instances of thefts of stock from neighbouring farms and territories. An investigation of the record of each of these cases will show that in a small number only of incidents has the perpetrator of the crime been brought to book. The probability that the commission of a stock-theft or a murder can be performed by a Masai of the "Muran" class without the knowledge of his associates is so slight that it has been found necessary to accept the principle that the responsibility for the surrender of criminals traced to any particular area rests on all the members of the section inhabiting that area. This system is in vogue throughout all the native districts of the Protectorate and is generally employed with a fair measure of success, but a similar success does not attend its application to the Masai Reserve, and this reserve is, in fact, the area to which the great majority of impositions of fines under the Collective Punishments Ordinance, 1909, have been applied, the refusal of the Masai to assist in tracing the criminal rendering it necessary to utilize the provisions of the Ordinance to effect the punishment of the whole section involved. The blooding of a spear by the murder of an unprotected wanderer or the theft of stock guarded perhaps by children is a survival of the traditions which necessitated the "Muran" to prove their manhood during the period in the standing army or the "L-Ayok" to prove their worth before circumcision. Such acts may not be regarded at the present day as valiant, but it seems that the criminal's associates have not yet come to look on them as reprehensible, and the Masai, on account of their wealth, do not possess the same dread of a collective fine as is felt by certain of the poorer tribes. Under any circumstances, the "Muran" offer no assistance in the tracking down of the criminal and the elders, though professing detective zeal, are powerless to intervene. The attitude of the section involved in such cases is one of surprise and listlessness—they never know anything—and the collective fine which may ensue has not hitherto had the result of discouraging the adoption of such an attitude. 648* 674 ● 648* 674 672 561 681

It will generally be found that fines of this nature have been levied on Companies or "Sirits" of different clans, and, sometimes, on all the members of a clan or division. There is no case on record in which a collective punishment has been imposed on the Masai tribe as a whole. It is therefore necessary to refer shortly to the divisions into which the Masai, who are all of one tribe, are divided by their traditions and customs, and to note also the divisions into which they are divided in practice for the purposes of the administration of the reserve. A description of the traditional divisions of the Masai people is given in Mr. Hollis' Book on the Masai, pp. 260 and 261, but the names which are now in use to denote the divisions of the tribe within the reserve do not exclusively follow either the genealogical or the geographical divisions which are there set out. The Officer-in-Charge of the Masai reserve is endeavouring to confine the members of each division to certain areas set apart for them as locations, and this step will have the effect of reconciling the name given to a division with the locality in which it is found, thus tending to perpetuate a convenient form of nomenclature. Divisions. 619 621 634

Whatever may have been the original system on which these divisions were formed, it appears that there is a really marked clan feeling between them, and several incidents are recorded which disclose the presence of mutual distrust and strained relationship between the divisions, while interference by one division with another is keenly resented. These divisions form the basis of the tribal organisation of the Masai as it exists to-day and each division has its own Council of Elders. In the recently constituted "Masai Council," one elder, or more, has been chosen to represent each division and the Council so formed has been accepted as representative of the whole tribe. It will thus be seen that the division system presents an admirable method of dealing with the tribe, closely allied to the location system employed in other Native Reserves in the Protectorate, and has enabled unrest or crime to be so localized as to limit the liability for offences committed to certain definite sections of the Masai. Nevertheless, there is not sufficient difference in the behaviour or customs of the members of each Masai Council. 634 [628] [623]

/216 cont./

682 A person who attempts suicide must, in some districts, pay a head of cattle to the one who prevented him from carrying out his intention.

685 Kidnapping and sale do not occur. Theft of cattle often leads
• [624] to a fight if the thief and the person robbed belong to different kraals
[628] lying far apart and at the same time to different tribes. Among
[614] fellow tribal and kraal members the theft of a head of cattle is atoned for with a fine of up to ten head of cattle, [illegible] a sheep or a goat with the payment of a head of cattle. [illegible] who has eaten some of a stolen head of livestock, even if [illegible] know that it was stolen, must contribute to the payment of the fine. If the stolen head of cattle is found still alive and is returned to the owner, this acts in such a mitigating way that in most cases no punishment at all takes place (2).

> 2. 2nd Moses /Exodus/ 22, 1 and 4: If anyone steals an ox or a sheep and slaughters it or sells it, he shall restore five head of cattle for an ox and four head of small livestock for a sheep. If the one stolen is actually found alive in his hands /the Ger. Haut, "skin," here evidently should be Hand, "hand"/, from ox to donkey to sheep, he shall restore double.

One who acts as accomplice in a theft pays half the fine, while the thief has to raise the other half. One who steals a spear must return it and is given a beating as punishment. If the spear had already been sold before the one robbed discovered the thief, the latter must pay the former a cow, while the spear remains with the present owner. Theft of a shield is punished with the payment of a female goat. One who kills a stranger's livestock without stealing it must provide a replacement.

687 The death penalty is given for treason in war and for deliberate
685 incendiarism. Negligent incendiarism is not punished.

/214 cont./

426 686 [672] the full debts, not only up to the amount of the inherited property. If a warrantor is liable for the debt, he must satisfy the creditor if the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. Kisonko

When blood-money is paid, it is less wheat like

payment is between clansmen. The logical extension of this principle is that when cattle are due from one member of the clan they may be taken from any of his clansmen. This is in fact the rule for payment of compensation amongst the Masai, though the offender and his near relatives naturally pay more. In the one case of blood money in which details were obtained, members of sub-clans other than that of the murderer contributed, and it is, therefore, safe to calculate that clan responsibility and cohesion applies to the whole clan in greater degree than it does to the sub-clans. 674 672 681

B. Family matters — the boma system — the 'gate' — polygamy — marriage statistics — number of cattle to each gate — relations in law — travelling — adoption — removals.

Briefly, the Masai live in groups of families, usually three, four or five together, in a village comprising a ring of huts, built immediately inside a circular fence, which thus forms an enclosure for the cattle. Such villages are usually built some two or three miles, frequently more, from the water which the cattle use, so that it is unusual to find more than two or three bomas in close proximity. Frequently a boma is a mile or more from its nearest neighbour. In the village each family possesses a separate gate, *enguiowe*, round which its members are grouped. 341 634

It is difficult to define a typical family or 'gate' unit. The ideal of a Masai elder is to possess half a dozen wives with many children, ranged on either side of his gate. As he marries *he* places the first on the right of the gate, and the second on the left; when a third wife comes in she builds her hut immediately to the right of the gate, and the fourth immediately to the left, the earlier wives moving round accordingly. Each wife on arrival is given a number of cattle, which are here to hold in trust for her children. She is also given, for tending, some of the unallocated cattle which the elder holds in reserve for future marriages; such cattle are termed *enyiko e ben*. Those living to the right and the left of the gate form two distinct groups, *indoiorion*, and for the purpose of inheritance, should a wife on the left die without male issue, her cattle will be inherited by the senior male on the left of the gate; they may in no circumstances be taken by an heir on the right so long as there is a son on the left to inherit. 592 595 [424]

When the sons are circumcised, they nominally take over the guardianship of their mother, and of the cattle allocated to her. In the old days they would move off with her to the *manyatta*, warriors' village, but this is less frequent now. As they approach elderhood, however, in polygamous families the sons at times claim their patrimony and move off with their mothers, to form a separate gate in some other boma. More frequently they show little desire for this responsibility, and spend the greater part of their period of warriorhood wandering round the countryside, or living in meat-camps in the bush (*al pul*). Once they become elders it is exceptional for a son to continue to live with his father, except when the latter has reached senility. 671 592 [36]

This is the theory of the gate system, but in practice it varies very considerably from the ideal. Polygamy (see below) is limited by the 595

from each side cackled each other's habits. Fires were then kept [illegible] side to hunt it. With Dorobo tribes the Masai sometimes made such blood-brother [illegible] lead with bows to dorobo, for they have no blood-brotherhood of their own. [illegible] among the Masai, gives is a sign of peace, and a handful of grass constitutes a pledge for money recognized by the Masai and those whom they count as more or less their equals, the *Il-meyani* or "enemies," such as other pastoralists, but not *Il-meek*, the Masai's agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and [illegible] of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *ol-dalia ol-i-ebogi*, "murder cattle," varies, but may be as high as five to three hundred for a man; Hollis says 50 for a boy, and Merker 10 head of cattle and 10 goats and sheep for a woman. Tadayoshi gives the figures as 60 for a circumcised man, and 20 for a woman or uncircumcised man. The *Il-kiwas* are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same *ol-chiu* as the murderer, no compensation is paid. If they belong to different *ol-chiu* of the same *olo*, or to different *olo*, all members of the murderer's *ol-chiu* contribute, and the cattle are divided among the members of the victim's *ol-chiu* after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Merker gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the *ol-i-ewo*, *ol-i-kiwo*, and some near relying are returned to the owner, the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-dumai*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several smithers, not not said killed several smiths. Theft (except of cattle) is apparently considered of little account: "If a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves which caught were fined, seven head fines each man concerned.

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai, and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mumai*. In some cases a diviner of the type called *ol-gonitie* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation.

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut permanent divisions of the latter. Up to 1918 the chief taboo in Kenya was accepted by the Administration as a permanent

/Pg cont./

The principal activity of the ol ayoni consists in keeping the people of his district together and protecting them from splitting up, which could be more or less disastrous for the Masai. Occasion for this is furnished by both the constant petty jealousies and friction between the warriors of the various areas, who, for example, not infrequently plan two war expeditions at the same time, instead of concentrating on one, and the short-sighted selfishness of many old men, who are inclined, in the selection of new pasturing places, to think only of the quality of the pasture, instead of also considering whether the warriors are in a position to protect the desired place from hostile attacks. An enemy's success affects not only the one who loses all his property in connection with it, but is a disgrace for the whole people. In such cases the ol ayoni assers his authority. To one who does not obey him, the authority of the ol ayoni is, as a rule, made clear by the others by means of a beating. Besides this activity, the ol ayoni, if necessary, acts as an intermediary between the people of his district and the ol oibonok, and sometimes his decisions is requested in legal disputes, but since in this case he is guided very little by legal principles, but rather by political shrewdness, one cannot actually designate him as a judicial presence. The conjecture that the ol ayoni might have something to say in matters pertaining to the cult or might make magic amulets is obvious, but does not prove to be true.

We have seen above that every two age classes form an association. If the members of this association have all been married a long time, the ol oibonok binds them even closer in that he bestows upon the two age classes, each of which -- which is to be said beforehand -- has its own name, a common name. This takes place at the ol ñabi festival. For this all the men of the association gather near the ol oibonok and build a large kraal in the vicinity of his village. Everyone brings honey for beermaking or a head of cattle for the feast. The latter is then killed by suffocation, as at the el gobita festival. The festival consists of the consumption of these things, whose climax is formed by the declaration of the ol oibonok that those assembled henceforth belong to one association (el ñdiñ), which only now actually exists and are to bear a common association-name.

/216 cont./

687 There is no special punishment for cowardice in war. The
[626] warriors, however, mock the coward in front of the girls and make
683 him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

681 The death penalty is carried out in that a band of armed men attack the defenseless sinner and kill him with spears. For a war /217/ traitor the execution is carried out by warriors, for an arsonist, by those injured by him. Fines are usually paid in installments. In general their amount is not fixed for the individual offenses. In the one area this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sicknesses or unsuccessful wars naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case: then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors.
[672] Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating.
[714] A degrading punishment exists only for the warriors and consists of
[701] cutting off the guilty man's braid-coiffure, as is well known, one
[684] of the insignia of his standing. This punishment is said to be inflicted
[685] most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons
734 are remunerated with a goat or a sheep. The mentally ill occupy
672 an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined
[955] toward misdemeanors or crimes. Frequently, too, if an *ol gristiki* does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

/217 cont./

• 681 Unknown in penal law are an aggravated death penalty, for example, death by fire, the principle of an eye for an eye, the view that the perpetrator must pay with the body part with which he has sinned, as well as symbolism, imprisonment, enslavement, a public monetary fine besides the composition, public monetary fines in general, a right of pardon.

483 There still remains to be pointed out one penal decree, which,
579 however, exists only for warriors. That the calling and way of life of the warriors, who are impressed primarily by brute strength and force, are not suitable for preventing rowdiness is obvious and is shown by the frequent, more or less rough brawls among them. Insofar as they seem useful for promoting personal courage, they are not punished; for those connected with bodily injury what was said above applies. For the brawls a stick or a club is used as a weapon and the shield for display. In order to force the opponent to leave himself open, one directs a blow on the left lower arm holding the shield, and, to be sure, not infrequently so violently that it is shattered. Now, if a warrior has already inflicted broken bones on the opponent several times, especially in the manner just described, all the warriors, under the leadership of their oi aigwenani, gather together and announce to him that he will be outlawed if he once more /218/ engages in a brawl; if the one warned violates this prohibition, every warrior of the kraal is justified in killing him.

692 The legal proceedings are the same in civil and penal cases;
561 in both there is only one court for the people of a district. For the
[556] warriors this is the speaker (oi aigwenani); for the older married men
[628] an older, respected, i.e., wealthy, man chosen each time by the persons concerned to settle the particular case presented. In controversial matters between warriors of different kraals or, which is usually the same thing, of different areas, the speakers concerned jointly confer and decide, either alone or, if they do not reach a definite decision, with the advice of an oi aumni, whose voice is then decisive. In disputes among married men of different areas a mixed council of elders decides. The oi ohoni may be regarded as a court of review, who, however, is called upon only in those
692 cases which concern the commonwealth. There are civil proceedings

/220 cont./

562 694 695 Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the persons assembled for the proceedings wish to be convinced by it.

683 [692] The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the one bewitched, after he has learned from an ol gnatiki the name of the bewitcher, prefers to induce the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship /221/ or, however -- and this not infrequently happens -- the bewitched one now kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

• 681 698 [578 711] There are no secret societies for the purpose of legal actualization or for other purposes. Her tems or the belief that the dead person will reveal the murderer in a dream are unknown. The Masai do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a Masai on a non-Masai. In this case, therefore, the deed remains unexpiated, whereas the Masai as a rule practice retaliation if the deed was committed on one of their people. Whether or not the murder committed on an Aná or an ol Kuafi by a Masai is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the communities of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a Masai, his fellow tribesmen will answer with war.

Murder.

If a Masai warrior strikes another and kills him, he runs away and hides himself. 682

Should there be no judges, the brothers of the murdered man will kill the murderer.

If the latter is not killed, the elders make peace between the two families, and garments are exchanged. The family of the murdered man takes the murderer's garment, and the latter takes the garment of one of the dead man's brothers.

The murdered man's brothers then wait for two years, at the expiration of which they call together all their clan, and go and lift the murderer's cattle, taking them as they would in a raid.

If there is a cow in the herd with a bell tied round its neck, it is left behind.

The herdsman is carried off as well; but when the party have arrived at the kraal where the murdered man lived, he is allowed to return to his own kraal.

Blood money is not paid by the

Masai until two years have elapsed, for they say that the dead man's head is still fresh[1].

When one Masai kills another, it is called committing murder, it is not called killing. Killing is only used when referring to savages.

633 Naa, ten ěar ol-murani ol-likae, pe edunğ en-giok, neishooyo lido ōtudunğo ol-likae e-supen e-kerr. Naa, ten ěar ol-likae, negil ol-oïto, a ol-le-'n-geju, a ol-le-'ng-aina, a ol-le-'l-lughunya, neishooyo en-dauwo.

If a warrior strikes another and tears the lobe of his ear, he has to pay a young ewe. If he breaks a bone, either in his leg, arm, or head, he has to pay a heifer.

632 Naa, ten ěari ol-ayōni metua, melaki anaa ol-murani, kake eishoori 'l-bunğaiko onom.

If a boy is murdered, the amount which has to be paid is not as great as for a warrior, the price being fifty young bulls.

En-giopo.

Adultery.

614 [50] Metii ol-murani araki ol-ayōni oidim ataboitare en-gitok o-'l-poror le-menye. Ten eiyōlōuni, nedeki.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Ore ten edeki, neishooyo 'n-gishu are, en-e-'n-aisho, naaropye 'l-paiyani pe medek. O ol-kiteğ-ōyeğ il-paiyani ten ōok en-aisho.

Should he be cursed, he pays two oxen (one in lieu of honey-wine), and he prays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

8:6 8:7 [51] Kake meikōni něja ten eboitare 'n-gitnak araki 'n-doiye o-'l-poror lenye. 'Me torono inna.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence[2].

[1] This law is not always put into force. The murdered man's relations are often willing to make peace on payment of a heavy fine, say one head of cattle.

[2] From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

[515]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

614 623 312 423 clansmen frequently meet on the water, and other matters — marriage, debts, etc. — come up for settlement before the tribunal". Clan ownership does not exclude individual ownership, which is integrated by the former as a sort of higher supervision. The point is that no clan property must be passed over to other clans without the owning clan's approval. HOBLEY,[29] states that cattle used to be marked by a clan brand showing clan-possession, and sometimes by a brand of the individual owner.

614 672 682 The corporate bond arising from clan relationship is confirmed by cases of murder compensation. Even if a murderer is a wealthy man, and might pay all the compensation out of his own stock, "the other branches of the clan would still contribute and they would pay their share". However, "if a Masai kills a member of his own branch of the *gilat* he pays compensation himself, and the other branches do not contribute".[30] LEAKEY, on the other hand, was told by his informants that no compensation is expected when a man kills a member of his own branch. They say: "what would be the use of taking a fine from one's own sub-clan?"[31] HOBLEY reports further that "each branch of the *gilat* to whom the murdered man belongs, receives a share of the compensation: 2-3rds to the murdered's father", and the rest is distributed among the other elders of the clan.[32] This is also confirmed by the notes of MAGUIRE on the penal code of the Masai.[33]

614 One should note that the corporate bond formed by clan relationship is of a particularist nature. It ties members to their own clan in opposition to other clans within the same tribe.

* * *

648 642 175 The many efforts of the Administration to identify a native political institution for local government make a very interesting piece of etnographical history. First in Kenya, and also, after 1918, in Tanganyika, one *laibon* was recognised as the Paramount Chief of the Masai. In Kenya such an office was abolished in 1918, while a graded system of councils was introduced: a Central Masai Council, 14 Native Councils and local Headmen. They acted as tribunals,

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

83 sweetheart (*e-sanja*) a girl of the same sub-clan as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *ol-le-'ittwa* and *en-e-'ittwa*; and no traveller may cohabit with the wife of a member of his own age-grade if that man is married to one of his near relations, or to a daughter of his sub-clan.[1]

581 583 837 The payment of the bridal price authorises a Masai to reckon the children which his wives bear as his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. But though individual marriage is recognised, [834 835] sexual communism or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own clan or with a near relative. In other words the Masai may be said to live in a state of group marriage, based on the organisation of the whole community in age-grades, and restricted by the exogamy of the sub-clans and the rules regarding incest.

684 If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-clan, he is punished by his relations, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His kraal is destroyed, he is severely beaten, and a number of his oxen are laughtered. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is solemnly cursed by the members of that age-grade. Unless he pays the elders two oxen, one for them to eat and the other to enable them to buy honey wine, and prays them to remove the curse, it is supposed he will die.

835 684 If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relations in order to "kill the relationship" (*e-or eup-anpil*).

843 833 [856] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaws. Should this rule be broken it is believed that the child will never be strong. In the event of

682 684 833 a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ol-kiskwate*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, strangling and suffocating the animals with their garments.

834 278 Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Masai*, p. [illegible]. An age-grade consists of all those men who are circumcised at one of the four festivals held during every 15 years. See *The Masai*, p. [illegible].

THE MASAI PENAL CODE

Some Notes on the Recognised Masai Punishments for Crimes, with Examples of Masai Oaths or Ordeals

121 The following notes relate to those punishments of ancient origin still remembered among the Kisongo [1] Masai. Some of the penalties are habitually inflicted up to the present day. Some, as will be obvious from a perusal of the text, have, of
114 necessity, fallen into disuse. They have been written down
115 from the statements of certain Masai Elders of the *'L-aimer* [2]
[561] age, and have received the *imprimatur* of the *'L-oibon* Párit. Párit [3] has asked me to say that he cannot be responsible for the authenticity of what follows, though he has no doubt that it is correct, but being a comparatively young man of the *'Sdure* [4] age, he has not the knowledge of these things that the Elders have.

121 The notes are brief and unscientific, and were made, primarily, with the object of adding to our knowledge of Masai custom in the matter of criminal offences in view of the recent formation of Native Courts throughout Tanganyika Territory.

'L-oikop: Murder

682 (*a*) If one Masai kills another, all the cattle of the murderer are taken by the relatives of the deceased. A council is then

[1] Kisongo is the Masai name for the southern Masai areas. It includes
[E34] almost the entire Tanganyika Masai District as constituted to-day. The principal Masai "Districts" included under the name Kisongo are (for the purposes of this article) Mwipo and Kiteto.

[2] Circumcision of 1874, approximately, according to Hollis.

[3] Párit is a brother of Séke and Kimdrea, of Kenya. They are all three *of the sons of the constitutional or 'L-oibonok.* Ol-Gonos (*Lenana*) was Párit's father, and Párit is Séke's brother by a different mother. Párit came down to Tanganyika in 1913 by his own desire, and at the request of the Tanganyika Masai. He has lived here ever since in the vicinity of Tarore. (OSE; Kilimanjaro; E; 7 & 8).

[4] Circumcision of 1898, approximately, according to Hollis. I think the date of the ceremony was somewhat later among the Masai of Tanganyika.

5: Maguire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

held, and about half a dozen beasts are given to certain Elders and old women. The cattle are then divided. Bell-oxen, herd-leaders and cows about to calve are returned to the murderer (the original owner). The remainder are taken by the relatives of the murdered man. The matter is then regarded as having been settled, and cannot be reopened. 682

(b) If action is not taken at once by the relatives of the murdered man, the relatives of the murderer have the opportunity of sending a small stick or wand to the kraal of the deceased. This stick may sometimes be sent by a small boy to disarm suspicion, but it is often sent by a warrior, who endeavours to persuade some immature and unsuspicious member of the deceased's kraal to accept it. If it be accepted by any male member of the deceased's kraal, he must bring it to the Chief Elder of the kraal, who is then obliged to meet the relatives of the murderer in council. At this meeting, forty oxen are selected (good, fat beasts), and then nine more are selected. These forty-nine oxen are given to the deceased's relatives. If the stick-bearer returns, having failed to induce any member of the murdered man's kraal to accept the wand, the matter is dealt with as in (a).

(c) Sometimes the relatives of the deceased do not take action for two years or more.[1] Then they come in force to raid the murderer's cattle. They come by night and place an arrow on the ground at each gate of the kraal, and while these arrows remain there no one inside the kraal may leave it. The raiders watch silently near the kraal until early in the morning, when they call: "We want our just due." They are asked by the people in the kraal: "How many cattle do ye want?" Knowing how many the murderer owns, they state a number. If for any reason the murderer cannot supply the number demanded, his relatives make it up. Any beast round whose neck the murderer or his companions have managed to fasten a belt, without being seen, *is not stolen.*[2] If any member of the murderer's kraal should leave it while the arrows still

[1] See Hollis, *The Masai*, pp. 310–311. This custom of regarding the dead man's head as "fresh" does not seem to have been binding during latter years in Tanganyika.

[2] Probably a piece of sentiment. The beast is regarded as "bribed" when the belt or rope has been placed round its neck.

5: Maguire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

682 remain before the gates, every ox, cow and calf of the murderer is forfeit.

(*d*) If the deceased has very few relatives, they sometimes try to surprise the murderer's cattle when out grazing. They hastily run them to their own kraal and brand one or two with their own brand.[1] If they succeed in branding a few before the relatives of the murderer arrive, the latter may only remove the bell-oxen and herd-leaders. All the remainder are forfeit.

Until the mater of the murder has been settled in any of
582] the above ways or by the killing of the murderer without trial, no man from the murderer's kraal may be married to a girl from the kraal of the deceased and vice versa. This applies to all Masai, irrespective of clans or families. Donkeys, sheep and goats are never included in the property forfeited except by mutual agreement.

En-dooki: Parricide or Fratricide

[428] If a son kills his father, or a brother his brother, he forfeits all rights to inheritance. The property goes to his brothers, their wives or (if he is an only son) to his uncles. If married, he forfeits his wife and children. If unmarried, he will never be given a Masai woman to wed. He is generally hunted from his kraal, and with his mother (to whom the blame for his crime also attaches) becomes an outcast.

Murder by unusual means—such as poisoning—is a very rare offence. The penalty would be the same as in murder by any ordinary method. Should the poisoned individual
[683] recover, the penalty would be the same as in the case of a serious injury. In some of the very few cases of murder by poisoning that have occurred in the past the culprit has been executed by the Masai.

Homicide is dealt with according to the gravity of the matter, the degree of provocation caused and the element of chance or accident existing. It is generally settled by the payment of twenty cattle and nine cattle, or forty cattle and nine cattle.

[1] For a comprehensive illustrated list of Masai cattle-brands, see *Die Masai* by M. Merker. (Berlin, 1910. Dietrich Reimer.)

E'-TOOSHO: ASSAULT

683

Resulting in the loss of an eye—no penalty.

Resulting in the tearing of an ear-lobe—a fine of one ewe.

Resulting in the loss or breaking of a tooth—a fine of one ewe.

Resulting in the breaking of a bone—an ox of the offender's (he may not have been the aggressor originally) is slaughtered then and there, and all partake of it. The injured man must not see the skin of the slaughtered ox. At the same time, a fine of one heifer is inflicted, but if the injured man should [682] die before this has been handed over, twenty and nine cattle may have to be paid subsequently by his slayer.[1]

To strike a man with an arrow, a club, spear, sword, or knife would result in the imposition of a fine of one fat sheep or one ox, according to the extent of the cuts or other injuries inflicted.

The preceding penalties refer to Masai only. If the murdered man be a Bantu or savage (*Ol-mekh*), and if he was known to [648] and a friend of the Masai, twenty and nine cattle must be paid [609] to his relatives. In the case of the murder of or assault on a [682] stranger, no penalty is laid down.

The reiteration of the number nine in the fines prescribed may be explained as follows. A certain round number of cattle is settled upon as fine or compensation. To this number (generally twenty or forty) must be added nine more for the body of the murdered man, in order to wipe out the stain of blood which lies between the rival parties. These nine cattle are accounted for according to the orifices of the human body, thus two for the ears; two for the eyes; two for the nose; one for the mouth; one for the urethra and one for the anus.

'NYAMIN: THEFT

Theft of any kind is almost unknown among the Masai, but 685
if one Masai should steal cattle from another, the thief must pay five beasts for each beast stolen, the sex of the animals paid depending on the sex of the stolen beasts. If sheep are

E-TAREMU EN-GIOO : ABORTION

Abortion is rare.[1] Should a woman cause herself to abort, the matter is left to the women of the kraal, who generally beat the culprit. 682

If a woman is made to abort by her husband or by another man, the matter is again left to the women. They may beat the culprit, but the more usual procedure is for them to take an ox of the abortionist's to some quiet place and beat it to death with sticks. The women then eat this ox, but no men or no pregnant women may be present while they are doing so.[2]

IL-DEKETA : CURSES

If a warrior should curse an Elder, he must offer him a cow, a calf and a bottle of honey. If he does not do this, he will die.[3] 683

If one warrior is cursed by another, he may try to kill him. If he succeeds in doing so, he is liable to no penalty. On the other hand, he may bring the matter before the Council of Elders, who will fine the guilty party. [692]

IL-MOMA LOO-'L-MAASAE : MASAI ORDEALS

Eng-duo : The Bow[4]

A strung bow is laid on the ground and the deponent swears in front of the Elders that his words are true. He then steps over the bow. Should his words be true, no harm will come to him, but should he be telling a lie, he will have bad luck and may shortly die. 695 [697]

[1] During three and a half years spent with the Masai of Tanganyika Territory, I came across only one case of abortion. In this, the husband had caused his wife to abort, *as he was jealous of the father of the child.* This man was a warrior of the same age as that to which the husband belonged.

[2] The converse of the custom whereby no women may see meat for the warriors' consumption before it has been cooked.

[3] For examples of Masai curses, see Hollis, *The Masai*, p. 344.

[4] *Eng-duo* is no longer regarded very seriously by the younger generation of Masai, and is falling into disuse in consequence. The other ordeals, particularly *Eng-duo*, are still regarded with awe, and I think it would be difficult to find a Masai living with the Tribe who would be prepared to testify falsely under ordeal.

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 334 466 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (see Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep them would certainly bring bad luck on the raiders. 721 [682] [997]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed cows are returned next morning (see Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary warriors or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [823]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, *but not vice versa*); *nor can a smith marry an ordinary Masai girl.* Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [994] [823] [823] [911] [912] [438]

from each side scribed each other's bodies. Peace was then kept till it suited one side to break it. With Dorobo tribes the Masai sometimes made much blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. As among the Nandi, grass is a sign of peace, and a handful of grass constitutes a plea for mercy recognized by the Masai and those whom they count as more or less their equals, the *Il-ongot* or "enemies," such as other pastoralists, but not *Il-meek*, the Dorobo agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *in-kiko ol-i-ashop*, "murder cattle," varies, but may be as high as two or three hundred for a man; Hollis says 50 for a boy, and Merker 10 head of cattle and 10 goats and sheep for a woman. Fadiman gives the figures as 40 for a circumcised man, and 20 for a woman or uncircumcised man. The *Il-Arusa* are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avenger also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is payable. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. Where a settlement has been made, peace is made between the families concerned by an exchange of garments. Maguire gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the bell-cows, herd-leaders, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kaunit*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "If a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned.

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mamat*. In some cases a diviner of the type called *ol-gonkin* by Merker is employed to find a guilty person. The whole subject of Masai legal customs needs detailed investigation.

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut parent divisions of the latter. Up to 1918 the chief taken in Kenya was accepted by the Administration as a paramount

[Warrior Kraal]

/97 cont./

701 654 (714) [534] fighting, large leg bells (ai dualles ainu), the tinkling of which in the latter instance serves to prevent a gang astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

[556] A special position is also occupied by the *ñ gámiini* a benefactor. They are warriors who, themselves poor, also have a generous, well-to-do father. From him they often receive cows for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 703 977 Accordingly, miserliness is sharply condemned, and a miserly warrior or one who has miserly persons is treated badly and, in case of illness or wounding on the way, is not infrequently left to lie helpless.

701 578 [564] Speaker and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword switch, but only very rarely wound each other seriously. If this should happen sometime, in a few districts the wounded one receives from the victor a fine consisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /98/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of medal tongs and sometimes also the exchange of the skin caps (a mwiiñ). The matter becomes more serious if one is killed in a duel. Then the father of the victor is then condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them however, the friends of the man killed attack his kraal and rob him of his entire herd. But they have scarcely brought these home before the friends of the one robbed also try to recover them again. This goes on until they have becomes tired

[483] [431]

[Warrior Kraal]

/88 cont./
of the fight, or until one party remains the victor two or more times in succession. The fight assumes greater dimensions if the two duelists belonged to different lineages or even different tribes. Then

Ill. 70. Dance in the warrior kraal I.

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

A war in which Maasai stand against Maasai is called el enkai (pl. el enkaiti), our en ñjóro (n ñjóro) or a war between Maasai and foreign tribes is called.

/89/ In peacetime the warrior spends only the least time in his own kraal: for the most part he gads about on visits to neighboring areas, often several days' march away. Never may all leave the kraal together in peacetime: a guard of at least two men always remains at home for the protection of the girls and the livestock, while the rest may go to visit or an el kai (house meal, see p. 111 above) or with other people.

/316 cont./

426 the full debts, not only up to the amount of the inherited property.
427 If a warrantor is liable for the debt, he must satisfy the creditor if
428 the debtor is unable to pay and, through that, becomes a creditor
of the debtor himself. The liability of the warrantor does not end
with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rule insult to the giver and
therefore never occurs. Giving is followed by counter-giving,
except when the thing given was solicited by the ai mamai = divine
judgment. The Maui is put into the awkward position of having
to ask in this way only if, for example, on an expedition of war, he
has come a long way from his home district and finds no members
of his lineage in the head to which he has come. The petitioner
hangs from the roof of the hut of the one from whom he wishes to
have a head of cattle a stick with the legs upward, or he wraps the
legs of the stick or a bow with grass. This type is more urgent than
the former, since the request must be granted before the grass dries.
[444] The ai mamai is a divine judgment. A person who does not grant
the request expressed in the ai mamai sign will soon be punished
[445] by 'Ng ai through death or illness. A person who did not grant the
request until after the grass had dried has himself absolved, for his
own peace of mind, by a gathering of old men where he excavates
with a head of cattle and honey bees. It is believed that by the
observance of this formality and by the statement of absolution of
the old men God, too, has forgiven the sin. Upon handing over
a gift, the giver always spits on it.

435 Loans or contracts are unknown. The creditor does not have
437 a right to the corpse of the debtor; neither debts nor misdeeds or
439 crimes committed by the deceased have an influence on the nature
of his burial.

448 No distinction is made between murder and manslaughter, but
there is one between these and negligent homicide. If murder was
committed on a boy or woman, it is explained by blood revenge
[447] carried out by boys and warriors or only by warriors. Any brother
[448] of the one murdered is first of all entitled to carry out the blood
revenge and, further, any man belonging to the family. Blood

/314 cont./

revenge goes free against the murderer or, if he has fled and is not available, against his brother or any one of the family of the murderer. Usually blood revenge is commuted by composition (weqid), the amount of which the murderer negotiates with the avenger through a friend. As a rule it consists of 300-500 cattle -- now fewer in many cases -- which the murderer, together with his people and his fellow lineage and tribal members living in the vicinity, that is, in the same district, gather together. The avenger is free to accept or reject the composition. /315/ Blood revenge is not carried out longer than one or two months after the murderer composition then takes to place.

The kraal of the ol ribmi is regarded as a place of refuge. If the murderer has reached his dead here, blood revenge may no longer be carried out on him, though he remains obligated for the payment of the composition. Murder committed on a married man, a girl, or a woman is never expiated by blood revenge, but by a fine. Until the payment of the composition or fine the murderer is called ol ainkhat (pl. el ainkh). The murder of a blacksmith is unpunished. On the other hand, if a blacksmith murders or even only negligently kills a Masai, a band of Masai consisting of married men, warriors, and boys immediately sets out to kill several blacksmiths.

Negligent homicide is expiated only by fines. There are very minor if the perpetrator and the one killed belong to one lineage. If they belong to different lineages of the same tribe, every male member of the lineage (warrior, married man) and every married female member of the lineage must pay a cow. Of this livestock the brother of the one killed receives one half, while the other half is distributed equally to his fellow lineage members. The fine is paid and distributed analogously if perpetrator and victim belong to different tribes. If a woman kills a man through negligence, she will also be killed in most districts. On the other hand, if a man has killed a woman, he either remains unpunished or is given a beating by the brother of the woman killed. In a few districts no distinction is made as to whether the perpetrator acted intentionally or negligently, for example, in Loita, where blood revenge is also only very rarely used.

/Ms1 cont./

GT2. GT3. GT4. only very rarely used. In *Jaun* some the perpetrator, as punishment for the killing or the murder of a man, loses all his property: his livestock, his wives and children pass over to the heir of the deceased. For killing a woman who has not yet given birth to a child, only half of the livestock of the perpetrator will be given to the widower. For the killing of a woman who has children, the perpetrator pays her husband 10 head of cattle and 10 goats or sheep. In this some distinguished as to whether the woman killed had a son or a daughter: in the former case the fine is greater than in the latter one.

GT3. GT4. Bodily injury with a fatal result is regarded as the same as murder, as is one that results in the loss of a leg. A person who cuts off another's arm (in some districts this applies only to the right arm) or cuts it useless pays the injured one a few head of cattle and lands. In case the crippled one is killed in battle, also the fine customary as atonement for murder. It is assumed in this case that the cripple was killed only as a consequence of his inability to fight. Serious injury to the head is atoned for with the payment of a cow, an ox, and a sheep, among others only with the payment of a cow; the fracture of an arm or leg, with the payment of one or two head of cattle, likewise the fracture or loss of a finger, with /[illegible]/ the exception of the two index fingers (as regarded as of enormous), which, as magic fingers, are "dangerous and evil." The destruction of an eye remains unpunished. One who tears off another's ear lobe pays him a goat or a sheep for it.

GT2. One who acts as an accomplice to a crime against life and health is punished in the same way as the perpetrator.

GT4. Rape, abortion, unnatural lewdness, which is said to occur as sodomy (1).

1. Cf. the remarkably frequent prohibitions in Ind bib. /Exodus/ 22, 16; Ind bib. /Leviticus/ 21, 13; Ind bib. /Leviticus/ 18, 22; Ind bib. /Deuteronomy/ 27, 21.

are not punished.

/Sic sum./

• 682. A person who attempts suicide must, in some districts, pay a head of cattle to the one who prevented him from carrying out his intention.

685 Kidnapping and sale do not occur. Theft of cattle often leads to a fight if the thief and the person robbed belong to different kraals lying far apart and at the same time to different tribes. Among fellow tribal and kraal members the theft of a head of cattle is atoned for with a fine of up to ten head of cattle, that of a sheep or a goat with the payment of a head of cattle. Anyone who has eaten some of a stolen head of livestock, even if he did not know that it was stolen, must contribute to the payment of the fine. If the stolen head of cattle is found still alive and is returned to the owner, this acts in such a mitigating way that in most cases no punishment at all takes place (1).

> 1. Ibid Mamen /Exodus/ XX, 1 and 4: If anyone steals an ox or a sheep and slaughters it or sells it, he shall restore five head of cattle for an ox and four head of small livestock for a sheep. If the one stolen is actually found alive in his hands /the Ger. Hand, "skin," here evidently should be Hand, "hand"/, from ox to donkey to sheep, he shall restore double.

One who acts as accomplice in a theft pays half the fine, while the thief has to raise the other half. One who steals a spear must return it and is given a beating as punishment. If the spear had already been sold before the one robbed discovered the thief, the latter must pay the former a cow, while the spear remains with the present owner. Theft of a shield is punished with the payment of a female goat. One who kills a stranger's livestock without stealing it must provide a replacement.

687 The death penalty is given for treason in war and for deliberate incendiarism. Negligent incendiarism is not punished.

/261 cont./

000 is present at all. The heir of the warranter is also liable. The giver
D is offended by a refusal to accept a gift. A counter-gift of approxi-
431 mately the same value follows gift-giving. The giver spits upon the
8 gift when he hands it over. The Wandorobo never conclude into
572 blood friendships among themselves, but only -- and, to be sure,
very rarely -- with members of other tribes. The ceremony observed
D for this resembles the one described above among the Masai. If a
[171] stranger has bought ivory from him and paid only part of the price,
[426] the ol doroboni often likes to conclude blood friendship with him
because he thinks that then the debtor must die if he does not repay
the debt as quickly as possible (1).

D
[177]

1. This view is in general rare; it was not originally peculiar to the Asá, but adopted.

D
682 As among the Masai, the legal view makes no distinction between
628 murder and manslaughter, but indeed between the latter and negligent
[171] homicide. A murderer caught in the very act is subject to blood re-
[672] venge, for the execution of which every man belonging to the family of the one murdered and in some districts also any of his friends and campmates are justified. If the avengers do not succeed in capturing the murderer on the day of the murder, /262/ the latter is safe from blood revenge, for people see in the unsuccessful search for him a command of God to let him live. To atone for his deed, however, he must pay the principal heir of the deceased one large and two small ivory tusks. Negligent homicide is punished by the payment of a medium-sized ivory tusk. If the perpetrator and the one who was killed belong to the same lineage, the punishment is considerably
D less than if they are from different lineages of the same tribe. On
[648] the other hand, if the two belong to different tribes, the man entitled to blood revenge often hand over the execution of it to the Masai, who kill the perpetrator, even if they do not capture him until after several months. Up to the completed payment the perpetrator is
D regarded as puni-andgi, corresponding to the ol olkobani of the Masai.
M If an Asá kills a Masai blacksmith, the deed remains unpunished
682 because the blacksmiths are too weak for revenge and the Masai would
648
M
[564]
[326]

/583 cont./

never have anything to do with taking their part. On the other hand, if an Ani is killed by a Blacksmith, the Masai immediately place themselves on the side of the man injured and avenge murder, manslaughter, or negligent homicide by murdering the perpetrator. The Wandorobo, to be sure, would themselves be in a position to execute the revenge, but the Masai do not permit this because they see in it an encroachment on their rights as owners of the land and in particular also of the el kanem.

Bodily injury with a fatal outcome, if caused intentionally, is regarded as murder; if negligently, as negligent homicide. Minor bodily injuries are atoned for with the payment of a specific number of beehives. For the destruction of a finger one beehive is paid, for one hand eight; among some Wandorobo who live in close contact with the Masai the atonement for the destruction of a finger or the whole hand amounts to a far-called sheep. Bodily injury leading only to the loss of an index finger or an eye often remains unpunished, as does indecent assault. Abortion is said to be unknown, and persons not to occur. Kidnapping and sale are unknown.

A theft committed in the camp by an inhabitant or stranger is atoned for by the return of the stolen goods; that of a beehive hanging outside the camp, with the payment of ten new ones. Anyone who steals honey from a beehive pays five beehives. Arson is said not to occur; one who is the cause of the illness of another through sorcery is not infrequently killed, after he has been persuaded to charm the sick one back to health. The shooting of poisoned arrows in the camp is strictly forbidden, because of the danger connected with it. Anyone who transgresses this law must expect to be killed immediately by his companions.

Unknown are aggravated kinds of death, the principle of repaying like with like, compensation in the culpable body part, symbolism, imprisonment, enslavement, public punishment, the right of parlon.

For the inquiry concerning an unknown culprit, the injured one turns -- /583/ as has already been mentioned -- to a sorcerer, who is also called el goiatiki among the Wandorobo. Instead of the manipulations with the [illegible] gourd, he throws a pair of sandals on the ground in front of him eight times, then picks them up and puts

1. [el goiatiki is a Masai word also meaning sorcerer--diviner]

Masai until two years have elapsed, for they say that the dead man's head is still fresh'.

When one Masai kills another, it is called committing murder, it is not called killing. Killing is only used when referring to weapons.

If a warrior strikes another and leaves the blue of his eye, he has to pay a young ewe. If he breaks a bone, either in his leg, arm, or head, he has to pay a heifer.

If a boy is murdered, the amount which has to be paid is not as great as for a warrior, the price being fifty young heifer.

Adultery.

No warrior or boy may commit adultery with a woman of his father's age. If he does so, and it becomes known, he is cursed.

Should he be cursed, he pays two cows (one in lieu of honey-wine), and he pays the elders to remove the curse. The elders eat the ox when they drink their honey-wine.

But this is not the case if a man commits adultery or fornication with a woman or girl of his own age. This is not an offence*.

* This law is not always put into force. The murdered man's relatives are often willing to make peace on payment of a heavy fine, say one head of cattle.

[596] * From this it will be seen that the Masai are polyandrous as well as polygamous. A man may marry as many wives as he can afford to purchase, and a woman may cohabit with any man belonging to her husband's age.

5: Maguire G-5 (no date) 1928

[293] remain before the gates, every ox, cow and calf of the murderer is forfeit.

(*b*) If the deceased has very few relatives, they sometimes try to surprise the murderer's cattle when out grazing. They hastily run them to their own kraal and brand one or two with their own brand.[1] If they succeed in branding a few before the relatives of the murderer arrive, the latter may only remove the bell-cows and herd-leaders. All the remainder are forfeit.

[294] Until the matter of the murder has been settled in any of the above ways, or by the killing of the murderer without trial, no man from the murderer's kraal may be married to a girl from the kraal of the deceased and vice versa. This applies to all Masai, irrespective of class or families. Donkeys, sheep and goats are never included in the property forfeited except by mutual agreement.

Enkoiyet / Parricide or Fratricide

[295] If a son kills his father, or a brother his brother, he forfeits all rights to inheritance. The property goes to his brothers, their wives or (if he is an only son) to his uncles. If married, he forfeits his wife and children. If unmarried, he will never be given a Masai woman to wed. He is generally hunted from his kraal, and with his mother (to whom the blame for his crime also attaches) becomes an outcast.

Murder by unusual means—such as poisoning—is a very rare offence. The penalty would be the same as in murder by any ordinary method. Should the poisoned individual recover, the penalty would be the same as in the case of a serious injury. In some of the very few cases of murder by poisoning that have occurred in the past the culprit has been executed by the Masai.

[296] Homicide is dealt with according to the gravity of the matter, the degree of provocation caused and the element of chance or accident existing. It is generally settled by the payment of twenty cattle and nine cattle, or forty cattle and nine cattle.

[1] For a comprehensive illustrated list of Masai cattle brands, see *Die Masai* by M. Merker. (Berlin, 1910. Dietrich Reimer.)

FL12 Masai FL12
Kisongo

E'-TOOSHO: ASSAULT

683

Resulting in the loss of an eye—no penalty.

Resulting in the tearing of an ear-lobe—a fine of one ewe.

Resulting in the loss or breaking of a tooth—a fine of one ewe.

Resulting in the breaking of a bone—an ox of the offender's (he may not have been the aggressor originally) is slaughtered then and there, and all partake of it. The injured man must not see the skin of the slaughtered ox. At the same time, a fine of one heifer is inflicted, but if the injured man should die before this has been handed over, twenty and nine cattle may have to be paid subsequently by his slayer.[1] [682]

To strike a man with an arrow, a club, spear, sword, or knife would result in the imposition of a fine of one fat sheep or one ox, according to the extent of the cuts or other injuries inflicted.

The preceding penalties refer to Masai only. If the murdered man be a Bantu or savage (Ol-mesh), and if he was known to [681] and a friend of the Masai, twenty and nine cattle must be paid to his relatives. In the case of the murder of or assault on a [679] [682] stranger, no penalty is laid down.

The reiteration of the number nine in the fines prescribed may be explained as follows. A certain round number of cattle is settled upon as fine or compensation. To this number (generally twenty or forty) must be added nine more for the body of the murdered man, in order to wipe out the stain of blood which lies between the rival parties. These nine cattle are accounted for according to the orifices of the human body, thus two for the ears; two for the eyes; two for the nose; one for the mouth; one for the urethra and one for the anus.

'NYAMIN: THEFT

685

Theft of any kind is almost unknown among the Masai, but if one Masai should steal cattle from another, the thief must pay five beasts for each beast stolen, the sex of the animals paid depending on the sex of the stolen beasts. If sheep are

FL12 Masai FL12
Kisongo

E-TAREMU EN-GIOO: ABORTION

Abortion is rare.[1] Should a woman cause herself to abort, the matter is left to the women of the kraal, who generally beat the culprit. 692

If a woman is made to abort by her husband or by another man, the matter is again left to the women. They may beat the culprit, but the more usual procedure is for them to take an ox of the abortionist's to some quiet place and beat it to death with sticks. The women then eat this ox, but no men or no pregnant women may be present while they are doing so.[2]

IL-DEKETA: CURSES

If a warrior should curse an Elder, he must offer him a cow, a calf and a bottle of honey. If he does not do this, he will die.[3] 693

If one warrior is cursed by another, he may try to kill him. If he succeeds in doing so, he is liable to no penalty. On the other hand, he may bring the matter before the Council of Elders, who will fine the guilty party. [694]

IL-MOMA LOO-L-MASAI: MASAI ORDEALS

Eng-duo: The Bow[4]

A strung bow is laid on the ground and the deponent swears in front of the Elders that his words are true. He then steps over the bow. Should his words be true, no harm will come to him, but should he be telling a lie, he will have bad luck and may shortly die. 695 [696]

[1] During three and a half years spent with the Masai of Tanganyika Territory, I came across only one case of abortion. In this, the husband had caused his wife to abort, as he was jealous of the father of the child. This man was a warrior of the same age as that to which the husband belonged.

[2] The custom of the custom whereby no women may see meat for the warriors' consumption before it has been cooked.

[3] For examples of Masai curses, see Hollis, *The Masai*, p. 322.

[4] *Eng-duo* is no longer regarded very seriously by the younger generation of Masai, and is falling into disuse in consequence. The other ordeals, particularly *Eng-duat*, are still regarded with awe, and I think it would be difficult to find a Masai living with the Tribe who would be prepared to testify falsely under ordeal.

[Warrior Kraal]

/91 cont./

fighting, large log bells (ai dualiai bima), the tickling of which in the latter instance serves to prevent a going astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the ñ ghoriai a benefactor. They are warriors who, themselves poorness, also have a generous, well-to-do father. From him they often receive cows for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

Accordingly, cowardness is sharply condemned, and a miserly warrior or one who has miserly parents is treated badly and, in case of illness or wounding on the way, is not infrequently left to his helplessness.

Speaker and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a conceal with them. Among the other warriors these two things always daily lead to serious disputes and often enough to duelling, in which the opponents go after each other with sword and club, but only very rarely wound each other seriously. If this should happen sometimes, in a few districts the wounded one receives from the victor a fine consisting of livestock; in other districts, only if a beast is bought. In general immediately after the duel /92/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also the exchange of the skin caps (a ongiñ). The matter becomes more serious if one is killed in a duel. Then the father of the victor is then condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them, however, the friends of the one killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one killed also try to rescue them again. This goes on until they have become tired

/711 cont./

671, 672, 673, 674 only very rarely used. In these areas the perpetrator, as punishment for the killing or the murder of a man, loses all his property; his livestock, his wives and children pass over to the heir of the deceased. For killing a woman who has not yet given birth to a child, only half of the livestock of the perpetrator will be given to the widower. For the killing of a woman who has children, the perpetrator pays her husband 10 head of cattle and 10 goats or sheep. In this area distinguished as to whether the woman killed had a son or a daughter: in the former case the fine is greater than in the latter one.

• 673 (681) Bodily injury with a fatal result is regarded as the same as murder, as is one that results in the loss of a leg. A person who cuts off another's arm (in some districts this applies only to the right arm) or makes it useless pays the injured one a few head of cattle and laws. In case the crippled one is killed in battle, also the fine customary as atonement for murder. It is assumed in this case that the cripple was killed only as a consequence of his inability to fight. Serious injury to the head is atoned for with the payment of a cow, an ox, and a sheep, among others only with the payment of a cow; the fracture of an arm or leg, with the payment of one or two head of cattle. Likewise the fracture or loss of a finger, with /711/ the exception of the two index fingers (or superior or of amulets), which, as magic fingers, are "dangerous and evil." The destruction of an eye remains unpunished. One who cuts off another's ear also pays him a goat or a sheep for it.

672. One who acts as an accomplice to a crime against life and health is punished in the same way as the perpetrator.

674 (682) Rape, abortion, unnatural lewdness, which is said to occur at midnight (?).

1. Cf. the remarkably frequent prohibition in first lec. /Bowdoin/ 55, 10; 3rd lec. /Levitical/ 51, 10; 3rd lec. /Levitical/ 18, 20; 5th lec. /Deuteronomy/ 27, 21.

are not punished.

/315 cont./

There is no special punishment for cowardice in war. The warrior, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who mai'v anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

The death penalty is carried out in that a band of armed men attack the delinquent alone and kill him with spears. For a war /317/ notice the execution is carried out by warriors, for an assault, by those injured by him. Fines are usually paid in tambiwore. In general their amount is not fixed for the individual offenses. In the one area this, in the other that is regarded as the more. Diminished ability to pay because of previous livestock sickness or unsuccessful war naturally lower the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors. Irresponsibility is regarded as mitigating in some districts, in others not. Ha attempt is not punished. Self-defense is not mitigating. A degrading punishment exists only for the murder and cutter of cutting off the guilty man's brain-stiffen, as is well known, use of the insignia of his standing. This punishment is said to be inflicted most frequently for rape committed on a married woman, but also also as additional punishment for theft. Innocent accused persons are commonly with a gun or a sheep. The mentally ill occupy an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep to forbear the sick person who is inclined toward misdemeanors or crimes. Frequently, too, if an of grievial does not succeed in curing him through magic remedies, he is tied to a tree or some distance from the kraal, so he devoured by predatory animals.

/587 cont./

68| Unknown in penal law are an aggravated death penalty, for example, death by fire, the principle of an eye for an eye, the view that the perpetrator must pay with the body part with which he has sinned, as well as symbolism, imprisonment, enslavement, a public monetary fine besides the composition, public monetary fines in general, a right of pardon.

• 68| 599 There still remains to be pointed out one penal decree, which, however, exists only for warriors. That the calling and way of life of the warriors, who are impressed primarily by brute strength and force, are not suitable for preventing rowdiness in obvious and is shown by the frequent, more or less rough brawls among them. Insofar as they were useful for promoting personal courage, they are not punished; for those connected with bodily injury what was said above applies. For the brawls a stick or a club is used as a weapon and the shield for display. In order to force the opponent to leave himself open, one directs a blow on the left lower arm holding the shield, and, to be sure, not infrequently so violently that it is shattered. Now, if a warrior has already inflicted broken bones on the opponent several times, especially in the manner just described, all the warriors, under the leadership of their of elders, gather together and announce to him that he will be outlawed if he once more engages in a brawl; if the one warned violates this prohibition, every warrior of the kraal is justified to killing him.

The legal proceedings are the same in civil and penal cases; in both there is only one court for the people of a district. For the warriors this is the speaker (of elders) for the older married men an elder, respected, i.e., wealthy, man chosen each time by the persons concerned to settle the particular case presented. In controversial matters between warriors of different kraals or, which is usually the same thing, of different areas, the speakers concerned jointly confer and decide, either alone or, if they do not reach a definite decision, with the advice of an of elders, whose voice is then decisive. In disputes among married men of different areas a mixed council of elders decides. The of elders may be regarded as a court of review, who, however, is called upon only in those cases which concern the commonweal. There are civil proceedings

/391 cont./

Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the persons assembled for the proceedings wish to be convinced by it.

The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the one bewitched, after he has learned from an *ol gaaclil* the name of the bewitcher, prefers to induce the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship /392/ or, however -- and this not infrequently happens -- the bewitched one now kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

There are no secret societies for the purpose of legal actualization or for other purposes. Nor even a belief that the dead person will reveal the murderer to a dream six unknown. The Ideal do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a Ideal on a non-Ideal. In this case, therefore, the deed remains unexpiated, whereas the Ideal as a rule practice retaliation if the deed was committed on one of their people. Whether or not the murder committed on an *Ad* or an *ol Kaal* by a Ideal is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the connection of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a Ideal, his fellow villagers will answer with war.

[682] shaved, she must [illegible] ... Maasai until two years have elapsed, for they say that the dead man's head is still fresh".

[683] When one Maasai kills another, it is called something another, it is not called killing. Killing is only used when referring to savages.

If a warrior strikes another and leaves the blow of his sword, he has to pay a young ox. If he breaks a horn, either in his leg, arm, or head, he has to pay a heifer.

[684] If a boy is murdered, the amount which has to be paid is not as great as for a warrior, the price being fifty young bulls.

Ee-giyeu.

[685] [561] Maasai ol-oonyoni ... Ee-giyeu ... Ee-giyeu ... Ee-giyeu

J: Bernardi E, M-4 (no date) 1935 FL12 Masai FL12

It is possible to consider that wilderty as a kind of class identity. 56
This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children.

Thus, a man may not marry the daughter of a member of his own class. If he fornicates with her he is punished by his own age-mates. "His kraal is destroyed, he is severely beaten, and a number of his cows are slaughtered". Similarly, "If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade". (Hobley). Furthermore, any class member when a guest of any of his age-mates, has a right to cohabit with his host's wife. Merker, says that a widow "must not re-marry but she must live with the members of her deceased husband's class". This "sexual communion", as Merker calls it, takes place only among members of the same class. It is limited, of course, by class and kinship exogamy, which, even for class members, is strictly enforced.

In the performance of the *Enkolomi*, *Engidana*, *Ewata*, *Ypkoro* rites are given to age institutions. Names assumed at the *Enkolomi*, *Engidana*, and *Ewata* are temporary, for temporary is the nature of the act thus established. In the *Ypkoro* proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus emailed when historical facts are remembered.

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by Merker, Fox, and Fosbrooke.[illegible] Fosbrooke has attempted

he has shown them, he will come too. When he has moved, the owner of the hut leaves him and goes to search for a place to sleep in... A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other members of his age will come too, and he will die".

[illegible] Merker, l. c., p. [illegible]; Fox, l. c., pp. [illegible]; Fosbrooke, l. c., pp. [illegible].

[illegible] consanguineal (*o-ranga*) a girl of the same sub-class as himself, or one who is more nearly related to him than third cousin, and only then if the terms of address used are *a-le* (elder sister) and *ma-e* (younger), and no travellers may cohabit with the wife of a member of his own age-grade if their sons is married to one of his own relations, or to a daughter of his sub-class.[1]

[illegible] The payment of the bridal price authorises a Maori to enjoy the children which his wives bear to his own; it further gives him a full measure of control over both his wives and children, and they do all the household work and tend and look after his herds and flocks. Not though individual marriage is recognized, sexual promiscuity or something very like it prevails between all the men of one age-grade and the women of the corresponding age-grade, subject to the rules of exogamy and relationship, which forbid a man to marry or have sexual intercourse with a woman of his own class or with a near relative. In other words the Maori may be said to live in a state of group marriage, based on the organization of the whole community in age-grades, and restricted by the exogamy of the sub-class and the rules regarding incest.

[illegible] If a man is knowingly guilty of incest, or has sexual intercourse with a daughter of his own sub-class, he is punished by his relatives, who flog him and slaughter some of his cattle. If he fornicates or commits adultery with a daughter of a member of his own age-grade, he is punished by the members of his age-grade. His head is destroyed, he is severely beaten, and a number of his cows are lanced. If a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade, he is mercilessly scorned by the members of that age-grade. Unless he pays the aliens two cows, one for them to eat and the other to enable them to buy heavy wine, and pays them to remove the curse, it is supposed he will die.

[illegible] If a man unintentionally commits incest—and it is quite conceivable that a man might not know his fourth or fifth cousin, for instance, should the two live in different districts—he has to present a cow to the girl's relatives in order to "kill the relationship" (*ka-ri ma-ranga*).

[illegible] A man must abstain from having sexual intercourse with his wife as soon as she becomes pregnant, and he may not again have connection with her until the child cuts the two middle incisor teeth of its upper and lower jaw. Should this rule be broken it is believed that the child will never be strong. In the event of a man having intercourse with a pregnant woman, and thereby causing her to abort, he must submit to a punishment which is called *ri-tahuna*. All the women of the neighbourhood collect together and, having stripped, seize the guilty person and flog him, after which they slaughter as many of his cattle as they can, scrapping and suffocating the animals with their garments.

[illegible] Other occasions when the sexes may not have sexual intercourse are when

[1] For the rules regarding hospitality see *The Maori*, p. [illegible]. Are age-grade members of all those men who are circumcised at one of the four festivals held during every 14 years. See *The Maori*, p. [illegible].

Si Magaire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

stolen, the fine is one ox for each sheep stolen. In the cases of thefts from Ilmoran, the fines are always reduced, because it is held by the Masai that all the cattle in the country belong, in reality, to them.

If the thief has no cattle, he must give his daughter in marriage to the man whom he has robbed if the latter is a Masai. He gets paid the usual dowry for her, however. If the theft is one of money (a practically unknown crime), the amount of the fine is regulated by the amount of money stolen and the fine must be paid in cattle.

The offence of arson is not known, and there is no stated penalty. If, as a result of grass-burning or through carelessness, a man is the accidental cause of another's kraal being destroyed by fire, he is supposed to bring a bottle of honey, or a cow,[5] by way of compensation. No fine is laid down.

Engono: Adultery. Engitaapuni: Seduction

If it be known that a man has lain with a woman of another age, he is cursed and has to pay two bottles of honey and two cows before the Elders will remit the curse.[6] Should he be caught in the act, the friends of the cuckold tie him up at the kraal door and he is beaten, pelted with cow-dung and spat upon by everybody, including the women. If the offender is a warrior, his pigtail is cut off and he is cursed. This humiliating punishment is greatly dreaded.

It is no offence for a man to commit fornication or adultery with a woman or girl of his own age, but should a warrior ravish an unmarried girl, it is considered very wrong. He must pay a cow and a bottle of honey, and the child will be the property of the man the girl is going to marry.[7] If the girl is not engaged, the child will be the property of her father, or her eventual husband may take it. By arrangement, Masai warriors generally marry the girls they cause to conceive.

[5] The Masai are not definite regarding the cow in this case. In fact, the Elders had a mild squabble on the point when the above information was being taken.

[6] See Hollis, The Masai, p. 301.

[7] Masai girls are often engaged to be married from their very earliest years.

particular relation. The naming ceremony is as follows:—When the child was one [553]
about a small rum is drunk and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good looking and of good character, or otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but [551]
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named one of his
sons he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the [304]
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [310]
which is performed with a small, sharp two-edged knife. The reason given for this [310]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [308]
water and great care be poured in through the hole so formed.

Ear Piercing.—At the age of about 5 or 6, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start fetching water they have the holes of the ears pierced. These
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their [324]
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, [291]
and the boys have small sandals made for them.

Food.—The food of children is the same as that of grown-ups and is mentioned [242]
in milk, fat, and meat, as no crops are grown.

Part II.—Boyhood.

Herding.—As soon as they are considered old enough (and this depends upon the [159]
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [334]
is not considered in any way wrong for these boys to begin indulging sexually as soon [335]
as they like, provided that they observe certain restrictions. They may do as they [334]
like with the younger girls in the neighbouring villages, provided, of course, that they [334]
observe the law forbidding sexual relations with any member of their own sub-clan,

[§ 13] and she provided they avoid such young girls as are attached to men in the warrior classes. Just those young uninitiated lads even try to have intercourse with married women in certain, as there is a special penalty provided for women who so behave themselves. (See Marriage.)

[§ 14] *Preparation for Initiation.*—No boy is allowed to think about preparing for initiation until he can show a growth of facial hair indicating puberty. Boys are always very anxious to be initiated as soon as possible, and as soon as they consider that they can make a reasonable claim that they are old enough, they have themselves into groups of anything from six to a dozen, dress themselves in new soft skins, and, taking with them bows and arrows, go out on a tour of all the villages of the district announcing that they are candidates for initiation and demanding presents. These groups are called *olmoi*, and by long custom they must be given anything they ask for which is within reason.

[§ 14] Custom dictates that they shall ask especially for honey and lynx-skin karosses, and these they take and present to senior and influential elders belonging to various circumcision groups, at the same time requesting them to bring up the question of their initiation at the *ceremonie*, and to make all the necessary arrangements. There is often a delay of anything from six months to a year before the consent of the *ceremonie* is obtained and arrangements are set on foot. In the meantime the groups of boys continue on their visiting tours collecting more presents as further persuasion to the elders to do as requested, and fresh groups of boys are formed and add themselves to the number of the candidates for initiation.

[§ 14] During the whole time that these *olmoi* groups are wandering about from village to village they may sleep with any of the uninitiated girls in the villages which they visit (even those who are attached to young warriors), provided that they observe the normal restrictions of the warrior classes.

[§ 14] *Ceremony of Setting the Ox by the Horns.*—When at length the elders have consented to proceed with the initiation ceremonies, those elders to whom the presents of honey and lynx-skins were given make the necessary arrangements for the ceremony of setting the horns of the black ox. These elders select a village of some elder of the Loiborsoi sub-clan (the ox must always be supplied by a member of this sub-clan), and demand a black ox without any defect and without any trace of other colour on any part of its body. Should the owner of the selected village not possess such an ox he must obtain one from another member of the Loiborsoi sub-clan, and if he cannot do so he must obtain it from another clan by purchase or exchange, and present it to the elders. This ox is called *ongoing*.

[§ 14] When the ox has been presented, a special village is built near where the ox was obtained, and a day is fixed for the horn-setting ceremony. Only those of the candidates for initiation whose fathers took part in a horn-setting ceremony are allowed to take part; the rest of the candidates cannot do so, but stay at their homes while the ceremony takes place.

Married Sex Life.—Among the Masai (as already stated) a married woman's first duty to her husband is to bear him children, and husbands do not mind if their wives have intercourse with other men, provided that they do not do so actually at a time when their husbands want them themselves. Even in such a case—apart from private measures which a husband might take—there is no recognized punishment for the women, or any legal claim against the man, provided, of course, he is a married man of a sub-clan other than the woman's own.

Sex Restrictions.—There are, of course, certain definite regulations which must be observed, the chief of which are :—

(1) No woman may have intercourse while she is with child (not even with her husband).
(2) No woman may have intercourse during the actual period of menstruation.
(3) No married woman may have intercourse with an uninitiated boy.
(4) No man in the warrior class may have intercourse with a married woman.
(5) No married man may have intercourse with an uninitiated girl.
(6) No woman may have intercourse with a man who is the son of any member of her husband's own age-group ("They are as his own sons, whatever their clan may be").
(7) As already mentioned, the rule of sub-clan exogamy applies as much to general sex life as it does to marriage and, therefore, a woman must avoid all men of her own sub-clan.

PENALTIES FOR BREACHES OF THE ABOVE RESTRICTIONS.

Breach of No. 1.—There is no fixed punishment for a breach of this regulation, but the man would be accused of causing damage to the child, and should abortion take place later, or the child be born with any deformity, he would be held responsible.

Breach of No. 2.—There is no punishment for a breach of this regulation, but it is simply "Not done."

Breach of No. 3.—A woman who is found infringing this rule is severely punished in the following way. She is tied up and severely beaten by her husband, so that her whole skin is bruised, and then sheeps' urine is poured over the abrasions. This acid causes very severe pain for many hours. The boy is not punished, as the fault is held to be entirely that of the woman, who should know better. In actual practice the boy is expected to bring the husband a present of honey beer in order to placate him, and so avoid being cursed with a very potent curse.

Breach of No. 4.—There is no punishment for the woman who is found to have broken this rule, nor is there actual punishment for the man, save that if his sin is discovered he is dishonoured at once by his fellow age-group members, and even if not found out at once, his dishonourable conduct will be found out at the *Eunoto* ceremony (see p. 194), when his turn comes to enter the *ilmoipu*.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Breach of No. 5.—A married man who breaks this regulation and is found out is very severely punished, the punishment being left to the women of the village, who have the right to hamstring and maim all his cattle.

Breach of No. 6.—The punishment for this is as for a breach of No. 3 as far as the woman is concerned, and likewise the man must take beer to the aggrieved husband to avoid a curse.

Breach of No. 7.—A man who breaks this regulation is held to be solely responsible, no guilt whatever attaching to the woman. As this offence (intercourse with a member of one's own sub-clan) is the worst possible, the penalty is very severe indeed. Every animal the man possesses—cattle and sheep alike—is hamstrung and otherwise maimed and left to die, and if the man can be caught he is so severely beaten and maltreated that he is almost certain to die too.

The Marriage Transaction.—The usual number of animals transferred as marriage settlement are :—

3 Heifers.
1 Ox.
1 Ewe yearling.
1 Ram.
Also honey beer in large quantities.

Of these, the ram is slaughtered by the mother of the bride, who is anointed with its fat.

When a girl who has conceived before initiation is being married by a man other than the lover who was responsible for her condition, only one heifer is given (instead of the three mentioned above) at the time of the marriage, but the other two heifers must be handed over at such time as the first of her children is initiated.

PART VI.—FAMILY LIFE.

The Relation of Parents to Children.—As already indicated, a man's legal children among the Masai are—as often as not—only his by virtue of his being the husband of their mother, and quite irrespective of physical parentage. Nevertheless, fathers are very proud of their children, and take considerable interest in their welfare. They must always be present at the initiation of a son or daughter, and feel very hurt if for any reason they are prevented from doing so. When a son grows up and eventually forms a village of his own, his father and the other men of the village who belong to his father's generation may not come and feed at the new village until one of them has been presented with a heifer called *ndaou* by the young man.

284 *Boyhood. Sex Life.*—In past times uncircumcised boys were severely punished by the warriors if they had sexual intercourse with a girl of any sort. This is no longer the case, probably because the warriors are afraid of Government interference should they ill-treat the boys.

[108] [109]

Should an uncircumcised boy have intercourse with a married woman he may, when his time comes to be circumcised, fail to find an elder who will sit behind him according to custom and hold him during the operation, but may have to sit unsupported. In an instance which I observed a boy who had so offended was circumcised in due form on payment of a fine of four cows.

[109]

281 The elders who decide when a new circumcision is to take place are those of the *Ol-Piron* generation to that which is about to be circumcised.

Ol-Piron means a foretick, and its significance is explained below under superstitions of generations and ages.

Ceremony of Setting the Ox by the Horns.—The Masai call this ceremony *Kudolomi o ol-Gilwa*, which means the tearing of the ox. *Ol-Gilwa* is the general word for an ox and is not confined to the one used at the ceremony. It must be performed first by the Il Kakonyiki section. I have not seen it performed.

281 *Circumcision.*—I will endeavour to describe a circumcision as I saw it. On my arrival a few minutes before sunrise the two boys who were candidates were standing naked and shivering outside one of the village gates. They had previously been completely shaved. An old man poured a little water over each from a pumpkin. Ox hides were brought out and each boy sat on one. Each boy was held by an elder sitting behind him. They were just outside the village with their backs to the thorn fence which encircles the village. The operator appeared and circumcised each in turn. He was a Kikuyu and performed the operation with a dirty-looking razor of a type made in Birmingham or Germany.

[304] [413]

As soon as the operation was finished new sandals were put on the boy's feet by the elders; and the elder who was sitting behind him stood up, still holding him, and walked him off backwards through the village gate.

As soon as both boys had been circumcised the operator rushed off to repeat the performance at a village near by before the sun was high. I went back into the village with the elders. One of them drew blood from the neck of an ox for one of the candidates. We went into the hut of the mother of one of the candidates, where the boy sat silent on a bed while we elders refreshed ourselves with honey wine. The boy is not allowed to speak for a period after the ceremony, but I have forgotten the length of the period.

[303]

A branch of a tree is tied to the front of the boy's mother's hut by leather thongs passed through the wall.

561 178 *The Novitiate.*—Nowadays the novices do not need to remain in this stage till all the other candidates have been circumcised, but shave after a few months. They

Marriage.—The matrimo may not marry till after the *B Uwate*, and do not usually do so till after their first *B Ryl'ndor*. The case stated by Mr. Leakey,[1] in which a matrimo cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. [92]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be redelivered if the wife dies or runs away, because the husband has got the child. [93] Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where [94] live a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the restrictions (see p. 502) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have [95] intercourse with her she may be severely admonished, and her husband may be fined a number of cattle.

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very [96] likely to occur if the men of one generation find that a man of another has had intercourse with one of their women.

If a woman who has borne children leaves her husband and lives apart from [97] him, he waits till his eldest son is old enough, and then sends him to fetch her back.

A man may not have sexual intercourse with the wife of his full brother (mother's [98] son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister.

A husband and wife may not call each other by their names. [99]

Father-in-law Mother-in-law Son-in-law Daughter-in-law	Must not be addressed by name.

Family.—The name for a family is *Ol Maori*. Relationship is not recognized [100] beyond first cousin. The Maori take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Maori descent, *Ol Maaini* sinati, he is proud of the fact.

Death and Burial.—Dead bodies are disposed of by the hyenas, except for those [101] of *Laibons* or very influential old men. These are buried under cairns of stones.

[1] See p. 500 of this volume.

the father's house or in his own wamunda. But it seems that a ceremony is performed which releases the husband from the prohibition on mention having sexual relations with married women. [illegible]

A widow is looked after by her husband's brother, or by one of her own brothers. She may cohabit with her husband's brother. It appears that a woman who has had children may not marry again, though one who is childless may marry her husband's half-brother, if he has one. Any children she may have after her husband's death are counted as his. [illegible]

Polygamy

A man may have as many wives as he can pay for: one of Malile's men says that a rich man may have as many as 20. Actual figures show that while two wives are common, three and four are found much less often, and more than five very seldom. Each wife has her own hut in the husband's kraal, and, on the hut side on the right of the gate as you go in, the second on the left. To each wife are allocated cattle which she holds in trust for her children. [illegible]

Adultery

Adultery is not common, because the rules controlling sexual relations are wide and elastic. Any of a man's age-mates (members of his own clan) may have access to his wife, and though men of one age-set are not supposed to associate with the wives of another age-set, in practice this rule is little observed. A married woman is not supposed to have intercourse with a married woman, and a married woman may not have sexual relations with an uncircumcised boy. [illegible]

Divorce

A wife cannot be divorced once she has borne a child, though a temporary separation may occur, the wife, if the husband is at fault, going to one of his age-mates, or, if she is at fault, to her father. [illegible]

Adoption

In the old days, children captured in war were often adopted, and even today, children of "foreigners" (those who are not Masai) may be adopted, especially in cases of famine. Such children become accepted as Masai. Under the term "adoption" is also included the practice of adopting children within the family, e.g., a father will adopt a child of his wife's which has been begotten by another man, and a barren wife may adopt a child of one of her co-wives. [illegible]

Birth and Naming

Birth takes place in the mother's hut, where she is attended by a midwife, and sometimes. The women and girls of the kraal assemble, and after the child has been born they feast on an ox supplied by the father; next day another ox is killed for the rest of the people of the kraal. The mother remains in her hut till she feels strong enough to go out; the husband may not enter the hut for 10 days, nor eat in it till the child can walk. Intercourse between husband and wife stops as soon as the wife knows she is pregnant, and is not resumed till the child is weaned, when it is between one and two years old. (Malile says till the time when it cuts the two middle incisor teeth, upper and lower.) Twins are considered very desirable, and a boy is preferred to a girl. [illegible]

The first name is given either on the fourth day after birth, when the child is taken outside to be shown the sun, or at a feast held on the 10th day, which begins with the killing and cooking of an ox: the meat is distributed to the inhabitants of the kraal, and in the evening the mother, carrying the child on her back, sells the cows. After this, the child is named in the presence of the father and mother [illegible]

/[illegible] cows./

[illegible] only very rarely used. In these cases the perpetrator, as punishment for the killing of the master of a man, loses all his property: his livestock, his wives and children pass over to the heir of the deceased. For killing a woman who has not yet given birth to a child, only half of the livestock of the perpetrator will be given to the widower. For the killing of a woman who has children, the perpetrator pays two bullocks: 10 head of cattle and 10 goats or sheep. In this case distinguished as to whether the woman killed had a son or a daughter: in the former case the fine is greater than in the latter case.

[illegible] Bodily injury with a fatal result is regarded as the same as murder, as is case that results in the loss of a leg. A person who cuts off another's arm (in some districts this applies only to the right arm) or knocks it unless pays the injured one a few head of cattle and lives. In case the crippled one is killed in battle, also the fine customary as compensation for murder. It is assumed in this case that the cripple was killed only as a consequence of his inability to fight. Serious injury to the head is atoned for with the payment of a cow, an ox, and a sheep, among others only with the payment of a cow; the fracture of an arm or leg, with the payment of one or two head of cattle. Likewise the fracture or loss of a finger, with /[illegible]/ the exception of the two index fingers (as regarded as of [illegible]), which, as magic fingers, are "dangerous and evil." The destruction of an eye requires equivalent. One who tears off another's ear also pays him a goat or a sheep for it.

[illegible] 672. One who acts as an accomplice in a crime against life and health is punished in the same way as the perpetrator.

[illegible] Rape, abortion, unnatural lewdness, which is said to occur as [illegible] (1).

1. Cf. the remarkably frequent prohibitions in 2nd bin. /[illegible]/ 33, 34; 3rd bin. /[illegible]/ 81, 15; 5th bin. /[illegible]/ 16, 20; 6th bin. /[illegible]/ 27, 32.

are not punished.

/[illegible] cows./

There is no special punishment for cowardice in war. The warriors, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

The death penalty is carried out in that a band of armed men attack the delinquent sinner and kill him with spears. For a war /[illegible]/ rather the execution is carried out by warriors, for an assassin, by those injured by him. Fines are usually paid to bereavers. In general their amount is not fixed for the individual offenses. In the one case this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sickness or unsuccessful wars naturally lower the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors. Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating. A degrading punishment exists only for the warriors and consists of cutting off the guilty man's braid-ruffles, as is well known, one of the insignia of his standing. This punishment is said to be inflicted most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons are remunerated with a goat or a sheep. The mentally ill occupy an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined toward misdemeanors or crimes. Frequently, too, if an ol gotchi does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

Crime: Theft.

If a Masai steals milk, or meat, or other small things, he is not fined.

Grown up people, however, rarely steal, it is the boys who take the milk and meat, &c.

Whilst the Masai do not consider it wrong to steal tribes of this nature, they dislike immensely having their cattle stolen.

Should any warriors steal or be said to be caught by the owner, they would have to pay; and if three men took part in the theft, each would have to pay three heifers.

In the event of the owner following up the thieves and catching them in the act of slaughtering the stolen animal, one of the warriors might see him and call out "Guilty," in which case he would not be fined heavily. Whilst the others would be fined in heifers, he who had cried "Guilty" would only have to pay a young bull. Were all of them to cry "Guilty," they would all be fined in young bulls.

Seduction.

If a warrior causes a woman to conceive, he marries her.

When a warrior loves a woman very much, he purposely allows her to enable him to take her as wife.

* Lit. blind-leg.

"I say, there act no longer of warrior (a circumcised, a warrior), but of warrior (an elder). Take care of thy cattle, goats and sheep, and have regard for them. Give up the occupations of the warriors thou art now an elder".

"After this feast", remarks Kenyatta, "it all depends on the warrior whether he chooses to take a greater or lesser part in rule. Usually he gets married at once and lives with his wife either in his father's kraal or in the warriors' kraal (manyatta) until all his age-mates have married. Only then he is recognized as of warrior, each one builds his own kraal and lays aside the clothes, decorations and the paint of the warrior".

It is evident that the effect of the ceremony is rather limited. It allows an initiate to take a wife, but, even after that, the initiate is not yet "recognized" as an elder. It is as if he were given the elder's status in anticipation of the time when all his age-mates are married. At which time only the status of elder becomes for all purposes official.

A very detailed description of "the spitter of milk" is given by *L. V. Downey*, but the ceremony is mentioned also by other authorities. For, [48] states that "this ceremony is performed by each warrior individually", [49] and Downey tells us that it occurs at the village of the initiate's father and that four *piron*-elders take a special part in it.

The ceremony is preceded by a dance. The candidate is clothed in women's clothes and the first two of the elders place women earrings (*ewalpa*) on him. [50]

A test follows, in which the candidate is expected to confess how many times he has "stolen milk", i. e. taken milk by himself or with people other than his age mates. Two heads of cattle are usually paid as a fine by a guilty candidate. He is then solemnly instructed by one of the elders, apparently the most senior, about "what he must and must not do after he has drunk and become an elder". He now drinks the milk, "very little however" at the

[48] Fox, *l. c.*, p. 488.

[49] He says also that "the ceremony usually takes place nowadays a year or two after the *E-unos* owing to the Government policy of reducing the period of warriorhood as much as possible".

[50] These ear-rings, *ewalpa*, are also worn by elders. For this reason some of our authorities describe the earrings put on by candidates as the elder's ear-rings or decorations. But the whole attire of candidates is undoubtedly of a female type.

FL12 Masai FL12
Kenya

B'-CHOONG: ANNUITY

685 Resulting in the loss of an eye—no penalty.

Resulting in the tearing of an ear-lobe—a fine of one ewe.

Resulting in the loss or breaking of a tooth—a fine of one ewe.

Resulting in the breaking of a bone—an ox of the offender's (he may not have been the aggressor originally) is slaughtered then and there, and all portions of it. The injured man must not see the skin of the slaughtered ox. At the same time, a fine of one heifer is inflicted, but if the injured man should die before this has been handed over, twenty and nine cattle may have to be paid subsequently by his slayer.[1]

To strike a man with an arrow, a club, spear, sword, or knife would result in the imposition of a fine of one fat sheep or one ox, according to the extent of the cuts or other injuries inflicted.

The preceding penalties refer to Masai only. If the murdered man be a Dorobo or savage (Ol-mobi), and if he was known to and a friend of the Masai, twenty and nine cattle must be paid to his relatives. In the case of the murder of or assault on a stranger, no penalty is laid down.

The reiteration of the number nine in the fines prescribed may be explained as follows. A certain round number of cattle is settled upon as fine or compensation. To this number (generally twenty or forty) must be added nine more for the body of the murdered man, in order to wipe out the stain of blood which lies between the rival parties. These nine cattle are accounted for according to the orifices of the human body, thus two for the ears; two for the eyes; two for the nose; one for the mouth; one for the urethra and one for the anus.

'NYAMIN: THEFT

685 Theft of any kind is almost unknown among the Masai, but if one Masai should steal cattle from another, the thief must pay five beasts for each beast stolen, the sex of the animals paid depending on the sex of the stolen beasts. If sheep are

[1] See Hollis, *The Masai*, p. 310.

To Magpiire G-5 (Reg date) 1928
FL12 Masai FL12
Kisongo

[695] stolen, the fine is one ox for each sheep stolen. In the cases of thefts from 'l-mark, the fines are always reduced, because it is held by the Masai that all the cattle in the country belong, in reality, to them.

If the thief has no cattle, he must give his daughter in marriage to the man whom he has robbed if the latter is a Masai. He gets paid the usual dowry for her, however. If the theft is one of money (a practically unknown crime), the amount of the fine is regulated by the amount of money stolen and the fine must be paid in cattle.

The offence of arson is not known, and there is no stated penalty. If, as a result of grass-burning or through carelessness, a man is the accidental cause of another's kraal being destroyed by fire, he is supposed to bring a bottle of honey, or a cow,[1] by way of compensation. No fine is laid down.

En-chiro: Adultery. *En-ctiaapare*: Seduction

[696] If it be known that a man has lain with a woman of another age, he is cursed and has to pay two bottles of honey and two cows before the Elders will remit the curse.[2] Should he be caught in the act, the friends of the cuckold tie him up at the kraal door and he is beaten, pelted with cow-dung and spat upon by everybody, including the women. If the offender is a warrior, his pigtail is cut off and he is cursed. This humiliating punishment is greatly dreaded.

It is no offence for a man to commit fornication or adultery with a woman or girl of his own age, but should a warrior fertilise an unmarried girl, it is considered very wrong. He [697] must pay a cow and a bottle of honey, and the child will be the property of the man the girl is going to marry.[3] If the girl is not engaged, the child will be the property of her father, or her eventual husband may take it. By arrangement, Masai warriors generally marry the girls they cause to conceive.

[1] The Masai are not definite regarding the cow in this case. In fact, the Elders had a mild squabble on the point when the above information was being taken.

[2] See Hollis, *The Masai*, p. 311.

[3] Masai girls are often engaged to be married from their very earliest years.

from each side mediate each other's bribes. Peace was then kept till it called on [illegible] to break it. With Bantu tribes the Masai sometimes made stock blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. Among the Bantu, given to a sign of peace, and a handful of grain constitutes a pact for many recognized by the Masai and from whom they count as more or less equals, the Il-ongot or "mention," such as other pastoralists, but not Il-meek, the Masai agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Bantu, and to depend more upon the force of public opinion than on the position and status of the council leader. It appears that only in case of homicide is there anything like a regular procedure. The Masai distinguish between constructive and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *ol-ashe* or *il-ashe*, "murder cattle," varies, but may be as high as two or three hundred for a man; Hollis says 50 for a boy, and Merker 10 head of cattle and 10 goats and sheep for a woman. Fadiman gives the figures as 40 for a circumcised man, and 20 for a woman or uncircumcised man. The Il-kiwas are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer, and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is paid. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Merker gives details of three methods of dealing with cases of murder: (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the *laikwan*, *laiti-kiwa*, and *ilum-ainy* calving are assigned to the *ainyi*, the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a delegation to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with five more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then send the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kaunai*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several members set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "If a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned.

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai, and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mamai*. In some cases a diviner of the type called *ol-gonshi* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation.

Native Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut patrilineal divisions of the latter. Up to 1918 the chief laibon in Kenya was accepted by the Administration as a permanent

/Text cont./

[illegible] A person who occupies outside land, in some districts, pay a head of cattle to the one who permitted him from carrying out his invention.

[illegible] Kidnapping and rape do not occur. Theft of cattle often leads to a fight if the thief and the person robbed belong to different kraals living far apart and at the same time to different tribes. Among tribes tribal and local members the theft of a head of cattle is atoned for with a fine of up to ten head of cattle, that of a sheep or a goat with the payment of a head of cattle. Anyone who has eaten meat of a stolen head of livestock, even if he did not know that it was stolen, must contribute to the payment of the fine. If the stolen head of cattle is found still alive and is returned to the owner, this acts in such a mitigating way that in most cases no punishment at all takes place (8).

> 9. Sai Idaan /Tondos/ III, 1 and 4: If anyone steals an ox or a sheep and slaughters it or sells it, he shall remove five head of cattle for an ox and four head of small livestock for a sheep. If the one stolen is actually found alive in his hands /the Ger. Hand, "skin," here evidently should be Hand, "hand"?/, from ox to donkey to sheep, he shall remove double.

One who acts as accomplice in a theft pays half the fine, while the thief has to raise the other half. One who steals a spear must return it and is given a beating as punishment. If the spear had already been sold before the one robbed discovered the thief, the latter must pay the former a cow, while the spear remains with the present owner. Theft of a shield is punished with the payment of a female goat. One who kills a stranger's livestock without stealing it must provide a replacement.

[illegible] The death penalty is given for treason in war and for deliberate incendiarism. Negligent incendiarism is not punished.

[illegible]

[illegible]

There is no special punishment for cowardice in war. The warriors, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

The death penalty is carried out in that a band of armed men attack the delinquent alone and kill him with spears. For a war [illegible] crime the execution is carried out by warriors, for an assault by those injured by him. Fines are usually paid in bewilderness. In general their amount is not fixed for the individual offenses. In the one case this, in the other that is regarded as the norm. Diminished ability to pay because of previous breaches of sorcerer or unscrupulous even naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or away a time even left entirely unpunished, just like other crimes or misdemeanors. Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating. A degrading punishment exists only for the warriors and consists of cutting off the guilty man's braid-coiffure, as is well known, one of the insignia of his standing. This punishment is said to be inflicted most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons are remunerated with a goat or a sheep. The mentally ill occupy an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined toward misdemeanors or crimes. Frequently, too, if an [illegible] does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

[illegible]

only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally unknown.

The procedure in the penal case of a livestock theft, which occurs frequently, is as follows. It is to be assumed that an ox has been stolen in the pastures. If the boy tending the livestock observed the theft, he notifies the owner of the herd (either at location of the herdsmen) upon coming home in the evening. Otherwise the owner of the ox, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the local only revolves around the theft, and through that it becomes known on that same evening, not only to the home local, but also to the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads to their discovering the ox in parts of it, so that the thief can be convicted, there are as a rule no judicial proceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investigation is without success, the person robbed turns to a seeress (al gaiatik), who, on the basis of an oracle (al gaiatik), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The one so accused appears in the following proceedings as defendant, in the same way as, say, one who is charged on circumstantial evidence. The one robbed selects as leader of the proceedings a respected old man who must have formerly once been speaker of the warriors. This man determines /fixes/ the day and place of the proceedings and has this announced by a crier, who goes to the neighboring locals, draws attention to himself by blowing a hole or says here, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear as a witness. Relatives of the defendant may refuse both to give

[illegible]

[illegible] ceremony and to appear. Other witnesses who do not appear are punished with a beating by the party of the plaintiff. The proceedings, to which only male individuals may participate, take place at a rule under a shade tree close to the head to which the judge lives. Each case arrived, after he has greeted the judge, squats down on the ground in front of him. After those who were invited and a large number of bystanders have appeared, the proceedings begin. The judge rises and says the following prayer: Ng ni dedjiko [illegible], ja [illegible] a mugilo, ja [illegible] a gwelo - may God protect us, may he give us strength and [illegible], to which those assembled reply: ebg ni ewing (may he give). Then they proceed with the oaths. Plaintiff, defendant, and witnesses are heard, one after the other. They swear the truth either by the word [illegible] - to truth, saying: Ng ni ñ gwelo - so certain that God may give me [illegible], or by [illegible] saying: Ng ni [illegible] may God kill me if I speak an untruth [illegible] - may a spear kill me if I lie. With this last formula, one picks up a little sand with the spear point and brings this to the tip of the tongue. Another form consists of chewing a few blades of grass and with that saying the words [illegible] meaning I pacify my ancestors are: Ng ni, i.e., may this grass be poison to me if I have lied before God.

For exacting truth, recourse is commonly [illegible], i.e., to the ordeal. The ordeal of a hen is used so rightly around the upper arm of the defendant that it can see the flesh. If the testimony has not succeeded in convicting the defendant and if he cannot prove his innocence by an oath, an ordeal is used. The most common is the ordeal of [illegible] i ni mugo, i.e., the ordeal of the blood. The defendant is given a bowl with a mixture of blood and milk. Before he drinks, he says the words: Ng ni o-nb ulio mugo, [illegible] ejawa ene gwedi, mugo ulio mugo, i.e., God, I drink this blood. If I have taken that bowl of cattle this blood will kill me. If the defendant does not die after eight to fourteen days, proof of his innocence is provided by that. Another ordeal is the ordeal of [illegible] i ni gwera matulio, i.e., the ordeal of the dry wood. By accepting them, he invites God's punishment upon himself if he is guilty. He will then wear [illegible] his head like the dry branch, whereas otherwise he will remain vigorous and healthy, as the green one will do. Less common is the

[illegible]

[illegible] of mennel | ell gram, the ordeal of the bow. A bow is placed on the ground and a magic horn is set at either end of it. This is a goat horn that is filled with a medicine made by a sorcerer. As soon as the defendant has stepped over the bow, his lot will be, if he is guilty, the punishment of God, that is, in this case death. The effect of the ordeal rests on the firm belief in them. The guilty one is convinced that the punishment of God will have to strike him. He imagines that he is ill and sees his salvation only in an open confession. He goes to the one ordeal, confesses his deed, pays the customary fine, and begs for forgiveness. Only by gaining the horns can he escape the consequences of the false oath. The one ordeal must in this case — if he himself does not wish to invite the punishment of God on himself — grant the pardon and does so through words and sprinkings, whereby at the same time a friendship is fostered between the two. Besides the aforementioned ordeals there are two others which are not accompanied by curses. The ol mennel | ol ngiqe | ra galagak or ol mennel | ol ngiqe | ell gab = the ordeal of the dead made of earth. The defendant must sit down on a specially prepared lump of earth. If this crumbles under him, he is regarded as guilty. The other one, the ol mennel | ol glaa (of the goat), is used only if the defendant is a new-blood. The defendant, standing, takes a goat between his legs and cuts an ear off it. If the blood issuing from the ear spattens him, he is guilty.

The majority of the assembly decides whether and which of mennel is to be used. The accused must submit to the ordeal, and, to be sure, only he alone. He may not substitute a proxy. It is never used against witnesses and plaintiff. The ordeal always constitutes the conclusion of the session, which the leader then terminates with the same prayer with which he began it.

If the ordeal has done no harm to the defendant within ten to fourteen days, he is completely cleared of suspicion. The one robbed turns to a sorcerer (if he had already turned to such a one for the first proceedings, he now goes to another one), who again, through the ol gidak, gives a description of the guilty one. As soon as the one described is found, there are proceedings against him.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Ore p' eaku en-nëä en-gima, nějökini 'l-muran, amu eitaahe pókin ti-aulo: 'Eidipe.'

When the fire is dying down, the warriors standing outside are called, and told that, 'it is finished.' 622 574

Nekwet il-muran pókin samurutókino idya-móuo.

They all run towards the spot, racing to get the horn.

Ore ol-oitera abaiki, nepik eng-aina atwa en-gima, neitau e-móuo, neitório eng-aina, neitadol il-kulikae idya-móuo, nějo: 'Aidipa.'

The one who arrives first puts his hand in the fire, and, taking out the horn, stretches out his arm. He shows it to the others, and cries out: 'I have finished it.'

Ónaa, neidipayu e-unoto.

With this the E-unoto feast terminates.

Nebarni ol-aunóni te-innaoloñg o ol-aigwenani ótai opa ake eton eitu emurati.

The Aunoni, or chief, is shaved on the same day together with the Aigwenani, or Counsellor, who was elected before the feast of circumcision. 622 302

Nebarni si ninje 'l-kulikaemuran too-'n-gulye-oloñgi.

Afterwards the warriors may be shaved whenever they wish.

Ore p' eidipi aatuun, něyeñgisho 'l-muran, netoni 'l-apaitin coñgwan ana imyet, nepwo en-jore naji En-oo-'n-dorosi araki En-e-'unoto.

When the warriors have elected their chief, they slaughter cattle, and wait for four or five months, at the expiration of which they proceed on a raid. This is called The (fulfilment) of the vow *or* The (selection) of the chief. 721

Neiahop 'l-karash ooji aii 'N-dorosi, nepik il-arash.

They wear cotton cloths[1], called The vow[2], on which are sewn the seeds of the ekirikiti tree[3]. 292 824

Nepik aii 'n-gäk e-'syaiti 'murto naaji 'mangäk, ne'ya 'l-kulikae 'l-kidoñgi lo-'l-kumban araki 'l-lenyok le-menye.

They also wear necklaces made of twigs of the e-syaiti tree[4], and called Mangäk, and some carry their fathers' snuff-boxes or fans with them. 301 824 293

[1] Before cotton cloths were introduced, dressed skins sewn together were worn. 'N-dorosi garments are worn like the Spanish poncho, a slit being made in the middle for the head to pass through.

[2] A raid undertaken after a long peace is also called en-oo-'n-dorosi. Any warrior who shirks his duties on an occasion of this sort can be put to death, and his murderer will not be punished. 686 627

[3] *Erythrina tomentosa*, R. Br.

[4] *Acalypha fruticosa*, Forsk.

/213 cont./

439 designate the first one as en aŋga en djore, i.e., war cloth, because the warriors like to dress up in it; the konguru they call en aŋga bos, i.e., colored cloth, and the gamti, ol garascha.

43 The demand for the individual trade articles varies a great deal. At times the need for one kind is so well supplied that it is either not taken at all or far below its value. Correspondingly, the value of another kind often rises disproportionately high through the heightened demand. A lengthy discussion back and forth precedes every exchange or purchase transaction. As a sign of a settlement, the seller spits [452] on the object. The exchange follows at once; only trustworthy acquaintances are granted credit. The risk in the matter, for cattle, does not pass to the buyer until the day after purchase, otherwise immediately.

426 686 The creditor proceeds against a nonpaying debtor first by complaint, and if this remains without effect, he helps himself to his property by force, provided that the debtor can comfortably pay, but for some reason, usually one that has nothing to do with the debt, does not want to pay: a road that is also often taken as the only one. Only upon his impoverishment will the creditor become earnestly pressing. [672] Then, if the debtor is incapable of paying, his brothers and half brothers, or if such are not present or are unavailable, his paternal cousins must pay. Whether the former or the latter pay, the repayment of the debt is always arranged so that no great economic hardship arises for the one paying. The creditor, if he does not voluntarily [626] enter upon the arrangement, is forced into it by the public opinion, which is often expressed in violence. An inconsiderate collection of an outstanding debt actually never occurs; rather, the creditor almost always displays an extraordinary kind-heartedness and forbearance about it and often lets himself be put off for years or waits patiently until the debtor or his heir is in such a good position that the repayment of the debt will be easy for them. It may also happen that the [581] creditor takes a daughter of the debtor and, after she has reached marriageable age in the service of one of his wives, marries her. [583] Since the creditor, even in this case, /214/ pays his father-in-law the bride price, the debt remains standing in full and the kinship [672] bond only makes its repayment more certain. The heir is liable for

/214 cont./

426 the full debts, not only up to the amount of the inherited property.
686 If a warrantor is liable for the debt, he must satisfy the creditor if
[672] the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries.
[784] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. A person who did not grant the
[783] request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 Loans or contracts are unknown. The creditor does not have
426 a right to the corpse of the debtor; neither debts nor misdeeds or
764 crimes committed by the deceased have an influence on the nature of his burial.

628 No distinction is made between murder and manslaughter, but
682 there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge
[593] carried out by boys and warriors or only by warriors. Any brother
[672] of the one murdered is first of all entitled to carry out the blood revenge and, further, any man belonging to the family. Blood

/216 cont./

682 A person who attempts suicide must, in some districts, pay a head of cattle to the one who prevented him from carrying out his intention.

685 Kidnapping and sale do not occur. Theft of cattle often leads
[624] to a fight if the thief and the person robbed belong to different kraals
[628] lying far apart and at the same time to different tribes. Among
[614] fellow tribal and kraal members the theft of a head of cattle is atoned for with a fine of up to ten head of cattle, that of a sheep or a goat with the payment of a head of cattle. Anyone who has eaten some of a stolen head of livestock, even if he did not know that it was stolen, must contribute to the payment of the fine. If the stolen head of cattle is found still alive and is returned to the owner, this acts in such a mitigating way that in most cases no punishment at all takes place (2).

> 2. 2nd Moses /Exodus/ 22, 1 and 4: If anyone steals an ox or a sheep and slaughters it or sells it, he shall restore five head of cattle for an ox and four head of small livestock for a sheep. If the one stolen is actually found alive in his hands /the Ger. Haut, "skin," here evidently should be Hand, "hand"/, from ox to donkey to sheep, he shall restore double.

One who acts as accomplice in a theft pays half the fine, while the thief has to raise the other half. One who steals a spear must return it and is given a beating as punishment. If the spear had already been sold before the one robbed discovered the thief, the latter must pay the former a cow, while the spear remains with the present owner. Theft of a shield is punished with the payment of a female goat. One who kills a stranger's livestock without stealing it must provide a replacement.

687 The death penalty is given for treason in war and for deliberate
685 incendiarism. Negligent incendiarism is not punished.

/216 cont./

687 There is no special punishment for cowardice in war. The
[626] warriors, however, mock the coward in front of the girls and make
683 him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

681 The death penalty is carried out in that a band of armed men attack the defenseless sinner and kill him with spears. For a war /217/ traitor the execution is carried out by warriors, for an arsonist, by those injured by him. Fines are usually paid in installments. In general their amount is not fixed for the individual offenses. In the one area this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sicknesses or unsuccessful wars naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors.
[672] Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating.
[714] A degrading punishment exists only for the warriors and consists of
[701] cutting off the guilty man's braid-coiffure, as is well known, one
[684] of the insignia of his standing. This punishment is said to be inflicted
[685] most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons
734 are remunerated with a goat or a sheep. The mentally ill occupy
672 an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined
[755] toward misdemeanors or crimes. Frequently, too, if an ol goiatiki does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

634 [623] was further complicated by the fact that at stated intervals, normally about 15 years, power passed from the hands of the representatives of one Age Group in each Section into those of the succeeding Age Group, there being thus an alternation of authority in each Section between the Right Hand and Left Hand Groups.

642 To quote Sir Charles Eliot again, the consequence of the traditional structure of Masai society was that "the centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship. The chiefs arranged the details of any raids which [622] the young men wished to undertake, but their power of compelling them to do anything which they did not wish was very slight." The nearest approach 691 to a central and superior authority was to be found in the Chief Medicine-Man 642 (Laibon), though his authority was based mainly on the discharge of his magical functions.[1] The medicine-men were divided into three grades, of which the first grade was represented by the person of the Laibon, the Chief Medicine-Man of the tribe, and his guidance was held to be of the first importance in any major operation which the tribe might undertake.

THE INTRODUCTION OF THE NATIVE AUTHORITY SYSTEM

175 It is unnecessary to dwell here on the circumstances which for a prolonged 648 period made the Masai a standing menace to the peace of their neighbours. The tribe seems to have reached the height of its power between 1800 and 1850, when it overran Kenya and part of Tanganyika.[2] There were subsequently severe internal dissensions among the Masai, which resulted in two of their five "divisions" being practically destroyed and there was also great mortality as a result of the outbreak of rinderpest and smallpox in the 'eighties of last century. But even though their strength was much reduced, their predatory habits continued to be a matter of grave concern in the early days of the Colony, and seemed in particular to threaten the progress of European settlement. Among the Masai themselves strong feelings were aroused by the measures, taken largely in the interest of European settlers, designed to counteract the propensity of the tribesmen to roam widely in search of fresh grazing grounds, as the result of which they were restricted to a Northern Reserve (Laikipia) and a Southern Reserve, separated from the Northern Reserve by a broad belt of country occupied by European farms. That was the position at the time of the Masai Agreement of 1904, but it subsequently became the policy of the Kenya Government to move the tribesmen in the Northern Reserve into the Southern Reserve, which was to be largely augmented in area for this purpose.[3]

175 In view of the terms of the Agreement of 1904, the assent of the Masai was 648 required for this transfer, and the operation was one of obvious difficulty. In 791 the circumstances it was not unnatural that the Government should have availed itself of the influence exercised by the Chief Medicine-Man, the Laibon Lenana. He had inherited from his father, Mbatian, who died in 1890, a position which commanded general respect, and he himself took a leading position on behalf of the tribe in the discussions which led up to the Agreement of 1904, which he signed as "Chief Laibon." He was subsequently recognized

[1] The word laibon appears to be a Europeanized form of the Masai word Ol'oiboni (A. C. Hollis, The Nandi, 1909, page 49.

[2] Land Commission Report Vol. II para. 203.

[3] The Laikipia Reserve, contained 4,500 square miles. An addition of 6,500 square miles was to be made to the Southern Reserve.

7: Mailey G-4 (No date) 1950 FL12 Masai FL12

THE ORGANIZATION OF THE NATIVE TRIBUNALS

As regards the administration of native justice, reference has been made above to the introduction of the system of Native Tribunals in 1918. It became obvious that these Tribunals were not generally recognized by the Masai, who preferred that such issues as arose between them should be settled in the customary manner by the Headmen or Elders. At present there are only two regularly constituted Tribunals in the Narok and two in the Kajiado District, with an Appeal Tribunal in each district.[1] Three of these Tribunals consist of a permanent salaried President and three salaried Tribunal Elders, taken from a panel of eight to twelve Elders; in Ngong the Tribunal has five Elders. The Tribunal Elders represent different tribal Sections and are nominated by the District Commissioner after consultation with the Headmen and tribesmen. There are still a few Chiefs on the Tribunals, but in accordance with the policy followed elsewhere in Kenya, these are now being removed. There is in addition a loosely constituted Tribunal in the Loita with a President and an indefinite number of members, but they only hear a small number of cases a year. 692

Two of the Presidents receive salaries of 50s. and 25s. a month; the others a sitting fee of 10s. a day. In two Tribunals the Elders receive 40s. a month and 18s. a month; in the others they receive a sitting fee of 5s. a day. The Appeal Tribunals are composed of members of the Local Native Authority Councils detailed at each sitting of the Council to hear such Appeals as are pending, an unusual but apparently a satisfactory arrangement. [465]

The preference for referring cases to the arbitration of local headmen or elders persists, and the civil issues which come before the regular Tribunals are few in number and refer mainly to matrimonial issues. In 1946, for example, the Native Tribunals dealt only with the following cases:— 691 692

	Number of Original Cases	Appeals to Native Appeal Tribunals	Appeals to District Commissioners	Appeals to Provincial Commissioner
Civil	163	20	6	3
Criminal ..	95	Not Available	..	..

These figures exclude, however, the large number of cases referring to breaches of the Poll Tax Ordinance, which in Narok alone were over 500 in 1946 and over 1,500 in 1945.

Judging only from such figures as are available for the appeals to Administrative Officers, the decisions of the Tribunals appear to have been generally accepted, but it is difficult to arrive at any judgment on the matter in view of the restricted field of civil issues or of true criminal issues which have come before the Tribunals. In paragraph 417 of his study of the Kenya Native Tribunals Mr. A. Phillips has called attention to the necessity for a close supervision over the exercise of criminal jurisdiction by Tribunals such as these, which are still at such a rudimentary stage of development, and he further points out that in civil issues this is in particular necessary in order to prevent 695

[1] These details differ from those given at page 141 of the Report on Kenya Native Tribunals, A. Phillips, 1945.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 when the *aigwenani loongishu pokin* was recognised as a general
624 leader.[119]

Judicial activity is not a real part of the *aigwenani's* office. It
[692] all depends on his personality and on how much he is favoured by his age-mates, who may ask him to arbitrate and settle their disputes.[120]

The election and the status of the *aunoni-otuno* as the ceremonial leader of the age-unit has already been described. A peculiar duty of the *aunoni's* office is the responsibility " for the smart turn-out of the *moran* (initiates) ".[121] MERKER,[122] and HOLLIS,[123] state that the *aunoni* was responsible to the prophet (*laibon*) for the organisation of raids. The anonymous author of *MS.* 48, p. 4, describes
[977] him as the mascot of the unit when this was at war: " as long as he is alive they (the unit-members) cannot be beaten by the enemy... For this reason they take him on their raids ".

The relationship between the *aigwenani* and the *aunoni* is not clear. It seems certain that the latter has a more ceremonial and ritual character than the former.

The term of office for all these officers is limited to the existence of the age-unit as such; but they will always be distinguished and sought for their opinion.

561 The analysis of the unit's leaders does not offer a complete pic-
621 ture of the internal structure of the age-unit. This structure rests
701 on two other institutions, namely the *manyatta*, which is the proper

[119] The *aigwenani* was not epected to take part in the actual fighting; he had to be in the rear to govern the action or, as FOSBROOKE, p. 38, puts it, " probably because the *laigwanan* wore the charm which had been obtained from the laibon, and its loss could not be risked ". At present, adds FOSBROOKE, p. 39, " the relations between senior *laigwanak* and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale common efforts are required. In the old days when large groups of *moran* (initiates) came together for raids the senior *laigwanak* (sic.) must of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture ".

[120] " It appears ", writes FOSBROOKE, p. 38, " to be the privilege of the aggrieved party to select his judges... If a local *laigwanan* han a reputation for fairness and justice, he will be called even from a distance, but proceedings are not invalidated if no *laigwanan* is present ".

[302] [121] FOSBROOKE, p. 40. So, no initiate was supposed to cut off his pig-tail coiffure without the permission of the *aunoni*.

[122] MERKER, *l. c.*, p. 122.

[123] HOLLIS, *l. c.*, p. 299 n. 1.

FL12 Masai FL12
Kisongo

E-TAREMU EN-GIOO : ABORTION

Abortion is rare.[1] Should a woman cause herself to abort, the matter is left to the women of the kraal, who generally beat the culprit. 682

If a woman is made to abort by her husband or by another man, the matter is again left to the women. They may beat the culprit, but the more usual procedure is for them to take an ox of the abortionist's to some quiet place and beat it to death with sticks. The women then eat this ox, but no men or no pregnant women may be present while they are doing so.[2]

IL-DEKETA : CURSES

If a warrior should curse an Elder, he must offer him a cow, a calf and a bottle of honey. If he does not do this, he will die.[3] 683

If one warrior is cursed by another, he may try to kill him. If he succeeds in doing so, he is liable to no penalty. On the other hand, he may bring the matter before the Council of Elders, who will fine the guilty party. [692]

IL-MOMA LOO-'L-MAASAE : MASAI ORDEALS

Eng-duo : The Bow[4]

A strung bow is laid on the ground and the deponent swears in front of the Elders that his words are true. He then steps over the bow. Should his words be true, no harm will come to him, but should he be telling a lie, he will have bad luck and may shortly die. 695 [777]

[1] During three and a half years spent with the Masai of Tanganyika Territory, I came across only one case of abortion. In this, the husband had caused his wife to abort, as he was jealous of the father of the child. This man was a warrior of the same age as that to which the husband belonged.

[2] The converse of the custom whereby no women may see meat for the warriors' consumption before it has been cooked.

[3] For examples of Masai curses, see Hollis, *The Masai*, p. 344.

[4] *Eng-duo* is no longer regarded very seriously by the younger generation of Masai, and is falling into disuse in consequence. The other ordeals, particularly *Eng-itati*, are still regarded with awe, and I think it would be difficult to find a Masai living with the Tribe who would be prepared to testify falsely under ordeal.

THE ORGANIZATION OF THE NATIVE TRIBUNALS

As regards the administration of native justice, reference has been made above to the introduction of the system of Native Tribunals in 1918. It became obvious that these Tribunals were not generally recognized by the Masai, who preferred that such issues as arose between them should be settled in the customary manner by the Headmen or Elders. At present there are only two regularly constituted Tribunals in the Narok and two in the Kajiado District, with an Appeal Tribunal in each district.[1] Three of these Tribunals consist of a permanent salaried President and three salaried Tribunal Elders, taken from a panel of eight to twelve Elders; in Ngong the Tribunal has five Elders. The Tribunal Elders represent different tribal Sections and are nominated by the District Commissioner after consultation with the Headmen and tribesmen. There are still a few Chiefs on the Tribunals, but in accordance with the policy followed elsewhere in Kenya, these are now being removed. There is in addition a loosely constituted Tribunal in the Loita with a President and an indefinite number of members, but they only hear a small number of cases a year. 692

Two of the Presidents receive salaries of 50s. and 25s. a month; the others a sitting fee of 10s. a day. In two Tribunals the Elders receive 40s. a month and 18s. a month; in the others they receive a sitting fee of 5s. a day. The Appeal Tribunals are composed of members of the Local Native Authority Councils detailed at each sitting of the Council to hear such Appeals as are pending, an unusual but apparently a satisfactory arrangement. [465]

The preference for referring cases to the arbitration of local headmen or elders persists, and the civil issues which come before the regular Tribunals are few in number and refer mainly to matrimonial issues. In 1946, for example, the Native Tribunals dealt only with the following cases:— 691 692

	Number of Original Cases	Appeals to Native Appeal Tribunals	Appeals to District Commissioners	Appeals to Provincial Commissioner
Civil	163	20	6	3
Criminal ..	95	Not Available	..	..

These figures exclude, however, the large number of cases referring to breaches of the Poll Tax Ordinance, which in Narok alone were over 500 in 1946 and over 1,500 in 1945.

Judging only from such figures as are available for the appeals to Administrative Officers, the decisions of the Tribunals appear to have been generally accepted, but it is difficult to arrive at any judgment on the matter in view of the restricted field of civil issues or of true criminal issues which have come before the Tribunals. In paragraph 417 of his study of the Kenya Native Tribunals Mr. A. Phillips has called attention to the necessity for a close supervision over the exercise of criminal jurisdiction by Tribunals such as these, which are still at such a rudimentary stage of development, and he further points out that in civil issues this is in particular necessary in order to prevent 695

[1] These details differ from those given at page 141 of the Report on Kenya Native Tribunals, A. Phillips, 1945.

/74 cont./

561 634 578 The principal activity of the ol aunoni consists in keeping the people of his district together and protecting them from splitting up, which could be more or less disastrous for the Masai. Occasion for this is furnished by both the constant petty jealousies and friction between the warriors of the various areas, who, for example, not infrequently plan two war expeditions at the same time, instead of concentrating on one, and the short-sighted selfishness of many old men, who are inclined, in the selection of new pasturing places, to think only of the quality of the pasture, instead of also considering whether the warriors are in a position to protect the desired place from hostile attacks. An enemy's success affects not only the one who loses all his property in connection with it, but is a disgrace for the [681] whole people. In such cases the ol aunoni asserts his authority. To one who does not obey him, the authority of the ol aunoni is, as a rule, made clear by the others by means of a beating. Besides this 561 634 activity, the ol aunoni, if necessary, acts as an intermediary between [791] the people of his district and the ol oiboni, and sometimes his de- [692] cision is requested in legal disputes, but since in this case he is guided very little by legal principles, but rather by political shrewdness, one cannot actually designate him as a judicial presence. The conjecture that the ol aunoni might have something to say in matters pertaining to the cult or might make magic amulets is obvious, but does not prove to be true.

561 791 We have seen above that every two age classes form an association. If the members of this association have all been married a long time, the ol oiboni binds them even closer in that he bestows upon the two age classes, each of which -- which is to be said beforehand -- has its own name, a common name. This takes place at 561 the ol ñeher festival. For this all the men of the association gather 791 near the ol oiboni and build a large kraal in the vicinity of his village. 527 Everyone brings honey for beermaking or a head of cattle for the food. The latter is then killed by suffocation, as at the eñ gebāta festival. The festival consists of the consumption of these things, whose climax is formed by the declaration of the ol oiboni that those assembled henceforth belong to one association (ol adji), which only now actually exists and are to bear a common association-name.

[Warrior Kraal]

/86 cont./

701 speaking, yet their facial expression usually remains unchanging,
531 neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Negroes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting ɛ̃, ẽ, or hm that he has understood the words spoken. The task of the speaker consists chiefly of arousing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /87/ which
701 will facilitate for the latter a sudden, predatory attack. Moreover,
726 he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture,
701 where they stay at night, where the fewest warriors live, etc. The
[554] speaker himself need not be a brave warrior; rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice incumbent upon
[692] him; he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 A leading role among the warriors is played, furthermore, by
554 the el oiñok (1)

1. Sing. ol oiñoni.

(= the bulls), of whom there are five or six in every kraal and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a
[714] sign of their rank they wear, in dancing and in hand-to-hand
[534]

/217 cont./

681 Unknown in penal law are: an aggravated death penalty, for example, death by fire, the principle of an eye for an eye, the view that the perpetrator must pay with the body part with which he has sinned, as well as symbolism, inprisonment, enslavement, a public monetary fine besides the composition, public monetary fines in general, a right of pardon.

683 There still remains to be pointed out one penal decree, which, however, exists only for warriors. That the calling and way of life
579 of the warriors, who are impressed primarily by brute strength and force, are not suitable for preventing rowdiness is obvious and is shown by the frequent, more or less rough brawls among them. Insofar as they seem useful for promoting personal courage, they are not punished; for those connected with bodily injury what was said above applies. For the brawls a stick or a club is used as a weapon and the shield for display. In order to force the opponent to leave himself open, one directs a blow on the left lower arm holding the shield, and, to be sure, not infrequently so violently that it is shattered. Now, if a warrior has already inflicted broken bones on the opponent several times, especially in the manner just described, all the warriors, under the leadership of their ol aigwenani, gather together and announce to him that he will be outlawed if he once more /218/ engages in a brawl; if the one warned violates this prohibition, every warrior of the kraal is justified in killing him.

• 692 The legal proceedings are the same in civil and penal cases; in both there is only one court for the people of a district. For the
561 warriors this is the speaker (ol aigwenani); for the older married men
[556] an older, respected, i.e., wealthy, man chosen each time by the
[628] persons concerned to settle the particular case presented. In controversial matters between warriors of different kraals or, which is usually the same thing, of different areas, the speakers concerned jointly confer and decide, either alone or, if they do not reach a definite decision, with the advice of an ol aunoni, whose voice is then decisive. In disputes among married men of different areas a mixed council of elders decides. The ol oiboni may be regarded as a court of review, who, however, is called upon only in those
692 cases which concern the commonweal. There are civil proceedings

/218 cont./

692 only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally customary.

685 The procedure in the penal case of a livestock theft, which occurs frequently, is to be shown. It is to be assumed that an ox has been stolen in the pasture. If the boy tending the livestock observed the theft, he notifies the owner of the herd (father or brother of the herdsman) upon coming home in the evening. Otherwise the wives of the owner, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the kraal only revolves around the theft, and through that it becomes known on that same evening, not only in the home kraal, but also in the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads [692] to their discovering the ox or parts of it, so that the thief can be convicted, there are as a rule no judicial preceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investi- [787] gation is without success, the person robbed turns to a sorcerer [694] (ol goiatiki), who, on the basis of an oracle (eñ gidoñ), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The 695 one so accused appears in the following proceedings as defendant, 685 in the same way as, say, one who is charged on circumstantial evidence. The one robbed selects as leader of the proceedings a [693] respected old man who must have formerly once been speaker of [202] the warriors. This man determines /219/ the day and place of the [237] proceedings and has this announced by a crier, who goes to the neighboring kraals, draws attention to himself by blowing a kudu or oryx horn, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear a as a witness. Relatives of the defendant may refuse both to give

/220 cont./

562 694 695 Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the persons assembled for the proceedings wish to be convinced by it.

683 [692] The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the one bewitched, after he has learned from an ol goiatiki the name of the bewitcher, prefers to induce the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship /221/ or, however -- and this not infrequently happens -- the bewitched one now kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

681 648 [575] [781] There are no secret societies for the purpose of legal actualization or for other purposes. Bier tests or the belief that the dead person will reveal the murderer in a dream are unknown. The Masai do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a Masai on a non-Masai. In this case, therefore, the deed remains unexpiated, whereas the Masai as a rule practice retaliation if the deed was committed on one of their people. Whether or not the murder committed on an Asá or an ol Kuafi by a Masai is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the communities of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a Masai, his fellow tribesmen will answer with war.

Songs.

A prayer to God[1].

782 844

Masai women do as follows when one of their number gives birth to a child.

They collect together and take milk to the mother; they then slaughter a sheep, which is called, The purifier of the hut, or simply The purifier.

The women slaughter the animal by themselves, and eat all the meat.

No man may approach the spot where the animal is slaughtered, for it is considered unlawful.

When the women have finished their meal, they stand up and sing the following song: [539]

[1] Masai women often pray twice daily. Men and children usually only pray in time of drought, or when a cattle plague is raging.

FL12 Masai FL12
Kisongo

E-TAREMU EN-GIOO : ABORTION

Abortion is rare.[1] Should a woman cause herself to abort, the matter is left to the women of the kraal, who generally beat the culprit. 682

If a woman is made to abort by her husband or by another man, the matter is again left to the women. They may beat the culprit, but the more usual procedure is for them to take an ox of the abortionist's to some quiet place and beat it to death with sticks. The women then eat this ox, but no men or no pregnant women may be present while they are doing so.[2]

IL-DEKETA : CURSES

If a warrior should curse an Elder, he must offer him a cow, a calf and a bottle of honey. If he does not do this, he will die.[3] 683

If one warrior is cursed by another, he may try to kill him. If he succeeds in doing so, he is liable to no penalty. On the other hand, he may bring the matter before the Council of Elders, who will fine the guilty party. [692]

IL-MOMA LOO-'L-MAASAE : MASAI ORDEALS

Eng-áuo : The Bow[4]

A strung bow is laid on the ground and the deponent swears in front of the Elders that his words are true. He then steps over the bow. Should his words be true, no harm will come to him, but should he be telling a lie, he will have bad luck and may shortly die. 695● [777]

[1] During three and a half years spent with the Masai of Tanganyika Territory, I came across only one case of abortion. In this, the husband had caused his wife to abort, as he was jealous of the father of the child. This man was a warrior of the same age as that to which the husband belonged.

[2] The converse of the custom whereby no women may see meat for the warriors' consumption before it has been cooked.

[3] For examples of Masai curses, see Hollis, *The Masai*, p. 344.

[4] *Eng-áuo* is no longer regarded very seriously by the younger generation of Masai, and is falling into disuse in consequence. The other ordeals, particularly *Eng-itati*, are still regarded with awe, and I think it would be difficult to find a Masai living with the Tribe who would be prepared to testify falsely under ordeal.

5: Maguire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

Eng-itati : The Reim

695 A short reim is greased with butter at both ends. The accused grasps one end with his left hand and his accuser the other, also with his left hand. The accuser is then told to cut the reim in the middle with a knife or sword which he is given for the purpose. If he does so and is making a false accusation, he will die. The accused may also be called upon to cut the reim in support of his defence. A similar fate will befall him if he is lying. (This form of oath is considered very binding, and no Masai will enter upon it lightly. It may be compared with the Nandi ordeal described on page 77 of *The Nandi* by Sir Claud Hollis.)

Em-bere : The Spear

The iron-shod haft of a spear is driven into the ground for about a foot, and is then withdrawn. The deponent urinates, and then spits into the hole thus made. No one may look while he is doing this, and all turn their backs. He then swears that his words are true. The Elders then fill in the hole with earth and stamp it down. If the deponent is lying, he will die.

En-aishô : The Honey-wine

If a man is accused of theft and denies it, he must drink from a gourd of honey-wine in front of the Elders, having sworn that he is innocent. If he is telling the truth, he has nothing to fear, but if he is guilty he will have no more luck [777] in life and will probably end by being killed by a lion.

It is an axiom of the Masai that no punishments should be laid down in the event of a man being discovered to have, deliberately, made a false oath. The matter is left to God, and the offender is invariably suitably punished by Him.

R. A. J. MAGUIRE.

7: Mailey G-4 (No date) 1950 FL12 Masai FL12

THE ORGANIZATION OF THE NATIVE TRIBUNALS

As regards the administration of native justice, reference has been made above to the introduction of the system of Native Tribunals in 1918. It became obvious that these Tribunals were not generally recognized by the Masai, who preferred that such issues as arose between them should be settled in the customary manner by the Headmen or Elders. At present there are only two regularly constituted Tribunals in the Narok and two in the Kajiado District, with an Appeal Tribunal in each district.[1] Three of these Tribunals consist of a permanent salaried President and three salaried Tribunal Elders, taken from a panel of eight to twelve Elders; in Ngong the Tribunal has five Elders. The Tribunal Elders represent different tribal Sections and are nominated by the District Commissioner after consultation with the Headmen and tribesmen. There are still a few Chiefs on the Tribunals, but in accordance with the policy followed elsewhere in Kenya, these are now being removed. There is in addition a loosely constituted Tribunal in the Loita with a President and an indefinite number of members, but they only hear a small number of cases a year. 692

Two of the Presidents receive salaries of 50s. and 25s. a month; the others a sitting fee of 10s. a day. In two Tribunals the Elders receive 40s. a month and 18s. a month; in the others they receive a sitting fee of 5s. a day. The Appeal Tribunals are composed of members of the Local Native Authority Councils detailed at each sitting of the Council to hear such Appeals as are pending, an unusual but apparently a satisfactory arrangement. [465]

The preference for referring cases to the arbitration of local headmen or elders persists, and the civil issues which come before the regular Tribunals are few in number and refer mainly to matrimonial issues. In 1946, for example, the Native Tribunals dealt only with the following cases:— 691 692

	Number of Original Cases	Appeals to Native Appeal Tribunals	Appeals to District Commissioners	Appeals to Provincial Commissioner
Civil	163	20	6	3
Criminal ..	95	Not Available	..	..

These figures exclude, however, the large number of cases referring to breaches of the Poll Tax Ordinance, which in Narok alone were over 500 in 1946 and over 1,500 in 1945.

Judging only from such figures as are available for the appeals to Administrative Officers, the decisions of the Tribunals appear to have been generally accepted, but it is difficult to arrive at any judgment on the matter in view of the restricted field of civil issues or of true criminal issues which have come before the Tribunals. In paragraph 417 of his study of the Kenya Native Tribunals Mr. A. Phillips has called attention to the necessity for a close supervision over the exercise of criminal jurisdiction by Tribunals such as these, which are still at such a rudimentary stage of development, and he further points out that in civil issues this is in particular necessary in order to prevent 695

[1] These details differ from those given at page 141 of the Report on Kenya Native Tribunals, A. Phillips, 1945.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

695 the forcible execution of decrees for the custody of women and children in a manner repugnant to the principles of humanity.

CONCLUSION REGARDING THE VALUE OF THE SYSTEM NOW IN FORCE

000 Looking at the system of native administration in Masailand as a whole, those who are now most closely concerned with it regard the position as far from satisfactory. Consideration has lately been given to a number of changes in detail. It has been proposed that there should be a Masai Council at Ngong, consisting of the 20 members selected from the two Local Native Councils, which would deal with all questions affecting the whole of the Masai, leaving the two Local Native Councils to deal with purely local questions, such as applications for trading plots or the expenditure of local Treasury funds. This would no doubt be a simplification of the present procedure, but it will be realized that the existing method of constituting the Local Native Councils, while designed to secure a representation of the tribesmen in general, has the effect of excluding the Headmen who carry most weight with them.

A scheme has also been considered for making a more definite delimitation of the Section boundaries, in order to enable the formation of Committees of Control over grazing, and to assist the introduction of a system of destocking. It is difficult to estimate the extent to which the soil in the Masai Reserve actually suffers from deterioration owing to overgrazing, for as has been pointed out, the facts are complicated by the existence of the great quantity of game in the Reserve.[1] There is no doubt, however, that the scheme referred to would be of benefit both from the administrative and the economic point of view, though its success must depend on measures to be taken for the improvement of water supplies, without which the delimitation of Section boundaries would be ineffective.

177 But the causes which have produced the present situation in Masailand are deep-seated, and a remedy cannot be found merely in changes in the present system of native administration. The chief obstacle to progress among the Masai is the persistence with which this conservative people have clung to customs and habits of life founded on the militant traditions of the past. Some effort has been directed to effecting changes in their custom, in particular as regards the position of the Moran. At the instance of the first Provincial [656] Commissioner (1911-1923) the tribe was forbidden to continue the warrior manyattas and the cohabitation of Moran with unmarried girls was also interdicted. More recently, a meeting of the Chiefs and Elders held at Ngong in 1947 agreed in principle that the period determining service as a Moran should be reduced to three years, and there is a further project for establishing Moran camps, which it is hoped may serve as an education in a more useful form of life.

000 It perhaps adds to the difficulty of effecting an improvement in the condition of the Masai that the problem has been viewed from two different standpoints by Europeans in Kenya. There are some, both officials and non-officials, to whom certain aspects of the Masai character have always made a strong appeal. They have in particular been attracted by the courage, frankness, and loyal sense of comradeship shown by the Morans. On the other

[1] See page 10 of the Report on the Financial Position and System of Taxation of Kenya, Col. No. 116, 1936.

from each side suckled each other's babies. Peace was then kept till it suited one side to break it. With Bantu tribes the Masai sometimes made mock blood-brotherhood with intent to deceive, for they have no blood-brotherhood of their own. As among the Nandi, grass is a sign of peace, and a handful of grass constitutes a plea for mercy recognized by the Masai and those whom they count as more or less their equals, the *Il-magati* or "enemies," such as other pastoralists, but not *Il-mesh*, the Bantu agricultural tribes. 728 [608 618] [186]

Legal Sanctions

The Masai legal system seems to be less organized than that of the Nandi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *in-kishu oo-l-oikop*, "murder cattle," varies, but may be as high as two to three hundred for a man; Hollis says 50 for a boy, and Merker 19 head of cattle and 19 goats and sheep for a woman. Fosbrooke gives the figures as 49 for a circumcised man, and 29 for a woman or uncircumcised man. The Il-Arusa are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer; and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same sub-clan as the murderer, no compensation is payable. If they belong to different sub-clans of the same clan, or to different clans, all members of the murderer's sub-clan contribute, and the cattle are divided among the members of the victim's sub-clan after his senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Maguire gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the bell-oxen, herd-leaders, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a stick to the relatives of the victim, the acceptance of which implies an agreement to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then raid the murderer's kraal by night and demand the number they want. For killing a smith, *ol-kunoni*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several warriors set out and killed several smiths. Theft (except of cattle) is apparently considered of little account: "if a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, seven head from each man concerned. 671 [626] 682 681 627 [614 672] 685

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mumai*. In some cases a diviner of the type called *ol-goiatiki* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation. 681 695

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Nandi, since it lacked the clear-cut *pororiet* divisions of the latter. Up to 1918 the chief laibon in Kenya was accepted by the Administration as a paramount 631 648

/218 cont./

692 only in putting forward property claims, and then only in the rare cases in which self-help is not preferred to legal procedure. The prosecution of a punishable deed does not take place by official action, but only on the basis of a complaint raised by the injured party. Judicial proceedings are generally customary.

685 The procedure in the penal case of a livestock theft, which occurs frequently, is to be shown. It is to be assumed that an ox has been stolen in the pasture. If the boy tending the livestock observed the theft, he notifies the owner of the herd (father or brother of the herdsman) upon coming home in the evening. Otherwise the wives of the owner, in looking over the livestock, immediately notice the loss, since they know every head precisely. All the conversation in the kraal only revolves around the theft, and through that it becomes known on that same evening, not only in the home kraal, but also in the neighboring ones. The friends of the one robbed declare themselves ready to pursue the thief and track down the stolen head of cattle. If their investigation leads [692] to their discovering the ox or parts of it, so that the thief can be convicted, there are as a rule no judicial preceedings, since the perpetrator and his accomplices usually immediately declare themselves ready to pay the customary fine. If, however, the investi- [787] gation is without success, the person robbed turns to a sorcerer [694] (ol goiatiki), who, on the basis of an oracle (eñ gidoñ), gives him a description of the appearance of the thief, whereupon the one robbed will accuse of the theft a man who fits this description. The 695 one so accused appears in the following proceedings as defendant, 685 in the same way as, say, one who is charged on circumstantial [693] evidence. The one robbed selects as leader of the proceedings a respected old man who must have formerly once been speaker of [202] the warriors. This man determines /219/ the day and place of the [237] proceedings and has this announced by a crier, who goes to the neighboring kraals, draws attention to himself by blowing a kudu or oryx horn, and informs the approaching people about the matter. Further, the judge summons plaintiff, defendant, and possibly witnesses by messengers. If the defendant refuses to appear, he is forcefully led up by friends of the plaintiff. Anyone may appear a as a witness. Relatives of the defendant may refuse both to give

/219 cont./

• 695 685 testimony and to appear. Other witnesses who do not appear are punished with a beating by the party of the plaintiff. The proceedings, in which only male individuals may participate, take place as a rule under a shade tree close to the kraal in which the judge lives. Each new arrival, after he has greeted the judge, squats down on the ground in front of him. After those who were invited and a larger number of listeners have appeared, the proceedings begin. The judge rises and says the following prayer: 'Ng ai dadjaba ijok, jo ijok e magilo, jo [782] ijok ń gischu = May God protect us, may he give us strength and livestock, to which those assembled reply: eha or escha (may he give). Then they proceed with the matter. Plaintiff, defendant, and witnesses are heard, one after the other. They assert the truth either by the word ewai = in truth, aischa 'Ng ai ń gischu = so certain that God may give me livestock, or by various curses; maoa 'Ng ai means: may God kill me if I speak an untruth; maoa en abere = may a spear kill me if I lie. With this last formula, one picks up a little sand with the spear point and brings this to the tip of the tongue. Another curse consists of chewing a few blades of grass and with that saying the words: madaduarigí kuna ń gonjet ten eledjer ata 'Ng ai, i.e., may this grass be poison to me if I have lied before God.

For exacting truth, torture is customary, tena en obíni, i.e., tie the string! The string of a bow is tied so tightly around the upper arm of the defendant that it cuts into the flesh. If the testimony has not succeeded in convicting the defendant and if he cannot prove his innocence by an alibi, an ordeal is used. The most common is the ol momai l os sarge, i.e., the ordeal of the blood. The defendant is given a bowl with a mixture of blood and milk. Before he drinks, he says the words: 'Ng ai a-ok elle sarge, tena nanu ajawa ena geteñ, naga elle sarge, i.e., God, I drink this blood, if I have taken that head of cattle this blood will kill me. If the defendant does not die after eight to fourteen days, proof of his innocence is provided by that. Another ordeal is the ol momai l en jerta natoijo, i.e., the ordeal of the dry wood. By accepting these, he invites God's punishment upon himself if he is guilty. He will then soon /220/ be dead like the dry branch, whereas otherwise he will remain vigorous and healthy, as the green one still is. Less common is the

/220 cont./

• 695 685 ol momai l eṅ gauo, the ordeal of the bow. A bow is placed on the ground and a magic horn is set at either end of it. This is a goat horn that is filled with a medicine made by a sorcerer. As soon as the defendant has stepped over the bow, his lot will be, if he is guilty, the punishment of God, that is, in this case death. The effect of the ordeals rests on the firm belief in them. The guilty one is convinced that the punishment of God will have to strike him. He imagines that he is ill and sees his salvation only in an open [783] confession. He goes to the one robbed, confesses his deed, pays the customary fine, and begs for forgiveness. Only by gaining the latter can he escape the consequences of the false oath. The one robbed [572] must in this case -- if he himself does not wish to invite the punishment of God on himself -- grant the pardon and does so through words and spittings, whereby at the same time a friendship is initiated between the two. Besides the aforementioned ordeals there are two others which are not accompanied by curses. The ol momai l ol origa l en gulugok or ol momai l ol origa l eṅ gob = the ordeal of the stool made of earth. The defendant must sit down on a specially prepared lump of earth. If this crumbles under him, he is regarded as guilty. The other one, the ol momai l eṅ gine (of the goat), is used only if the defendant is a non-Masai. The defendant, standing, takes a goat between his legs and cuts an ear off it. If the blood issuing from the cut spatters him, he is guilty.

The majority of the assembly decides whether and which ol momai is to be used. The accused must submit to the ordeal, and, to be sure, only he alone. He may not substitute a proxy. It is never used against witnesses and plaintiff. The ordeal always constitutes the conclusion of the session, which the leader then terminates with the same prayer with which he began it.

If the ordeal has done no harm to the defendant within ten to fourteen days, he is completely cleared of suspicion. The one [787] robbed turns to a sorcerer (if he had already turned to such a one for the first proceedings, he now goes to another one), who again, through the eṅ gidoṅ, gives a description of the guilty one. As soon as the one described is found, there are proceedings against him.

/220 cont./

562 694 695 Women are also entitled to make a complaint. Evidence presented by witnesses is valid only to the extent that the persons assembled for the proceedings wish to be convinced by it.

683 [692] The crime of sorcery is only rarely dealt with in a judicial assembly. For the most part the one bewitched, after he has learned from an ol goiatiki the name of the bewitcher, prefers to induce the latter, through gifts, to bewitch him healthy again. Thereupon the two conclude friendship /221/ or, however -- and this not infrequently happens -- the bewitched one now kills his opponent, and, to be sure, without inviting blood revenge upon himself because of it.

681 648 [575] [781] There are no secret societies for the purpose of legal actualization or for other purposes. Bier tests or the belief that the dead person will reveal the murderer in a dream are unknown. The Masai do not live with other peoples in such a relationship that the latter could demand or request expiation for murder or some other crime or misdemeanor committed by a Masai on a non-Masai. In this case, therefore, the deed remains unexpiated, whereas the Masai as a rule practice retaliation if the deed was committed on one of their people. Whether or not the murder committed on an Asá or an ol Kuafi by a Masai is expiated depends in each case on the greater or lesser degree of friendly relations that exist between the communities of the murderer and the one murdered. In most cases expiation does not take place, whereas if the injured one is a Masai, his fellow tribesmen will answer with war.

164

It appears at once that the incidence of yaws, malaria, helminthiasis and ulcers is higher amongst the Kikuyu, while, on the other hand, the occurrence of chronic constipation and arthritis is more frequent amongst the Masai. Pulmonary disease appears to be somewhat more frequent amongst the Kikuyu, especially in the in-patients.

It is obvious, however, that hospital statistics cannot truly represent the general incidence of disease in a native tribe. For this reason an attempt was made by the field worker to estimate the proportions of the diseases encountered most frequently in the course of his survey. Altogether, about 12,000 natives of both tribes were seen. Of those who attended for medical treatment, a large number in both tribes required dental extractions, and many were cases of local injury and conjunctivitis. Conjunctivitis is very common amongst the Kikuyu, especially the women, and less common amongst the Masai. The following table indicates approximately the incidence of the most common diseases in the two tribes (as percentages of the total number of cases of these diseases encountered in each tribe) :—

	Kikuyu.	Masai.
Bronchitis	28	4
Pneumonia..	3	—
Tuberculosis	6	1
Ulcers	33	3
Malaria	18	2
Gonorrhœa..	1	8
Intestinal stasis	4	45
Arthritis	2	35
Helminthiasis	5	2

With the exception of pulmonary conditions, this estimate is in good agreement with the hospital data. As regards pulmonary disease, the field worker's estimate is 37 per cent. for the Kikuyu and 5 per cent. for the Masai, while the hospital statistics (calculated on the same basis) show 34 per cent. in Kikuyu and 27 per cent. in Masai. Different possible explanations might be offered for the high figure from the Masai hospital. We have already noted that 20 per cent. of the patients at this hospital are not Masai. The figure for pulmonary disease might possibly be altered to some extent by exclusion of natives other than Masai. Again, we have no information as to possible dietary and environmental differences between Masai living in the neighbourhood of Narok as compared with the more remote parts of the Reserve. In this connection it is of interest to note that Masai prisoners in Nairobi Gaol appear to be particularly susceptible to pulmonary infections (Ann. Med. Rep. Kenya, 1923). It might be thought that their susceptibility is increased by the drastic change in diet and environment to which they are subjected in gaol. It is obvious, in any case, from this observation, that the Masai have

is a man of wealth and importance he may be elected chief[1], in which case he is responsible for the discipline of the warriors and their appearance when summoned to fight, though he does not go to the wars himself. As with most East African tribes an elder's ideal of existence seems to be ease, not unmixed with drunkenness. Proverb No. 64 (p. 249), 'Don't lie with your feet against a post like the father of many sons,' meaning 'Don't give yourself airs,' is a vivid picture of the Masai pater familias taking his ease in the primitive posture of lying on his back with his feet against a post, while his family do all the work for him.

Masai women, unlike the men, are carefully dressed in leather garments, but a rare, and according to our ideas most unbecoming, custom forces them to shave their heads. Before marriage they are circumcised, and signalize their change of state by wearing large circular earrings and necklaces of brass and iron wire. Both girls and women have their legs and arms encased in iron ornaments, so that they can sometimes hardly walk.

This military organization of the Masai made them a most effective body for destructive military operations, and explains not only the predominant position which they acquired in East Africa, but also the respect which they inspired and the extent to which their customs were imitated by other tribes. On the other hand, it probably also is the reason why they never founded any state or polity analogous to the kingdoms of Uganda and Unyoro. The centre of political gravity was not with the elders or chiefs, but with a republic of young men, governed by ideas of military comradeship and desirous only of military glory. Retirement from this band of warriors as a chief was honourable, but seems to have been recognised as a removal to an inferior sphere of activity. The chiefs arranged the details of the raids which the warriors wished to undertake, but their power of compelling them to do anything which they did not wish was very slight.

The nearest approach to a central and superior authority among the Masai is the medicine man or Laibon (more correctly Ol-oiboni; see p. 324, &c.). They all belong to the Kidongi family of the Aiser klan, and are said to be descended from a personage called Ol-le-Mwaiya, who came down from heaven and was found by the Aiser sitting on the top of Mount Ngong. This was nine generations ago, the genealogy having been preserved. The influence of the

[1] The chief is elected from the warriors, but leaves their ranks at once and becomes an elder.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organisation, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

621 the temporary residence of unmarried initiates or "warriors", called *ol manyatta*, pl. *i manyat*. According to MERKER,[18] "in every [634] section there is at least one warrior's village which gathers all the [561] warriors of the section". This type of village is closely related to the age-system institution. Therefore it is not a distinct territorial unit, though it shows the inter-relationship of the age-system and territorial organisation for its tenants are gathered from different villages. Indeed this is a further instance of the age-system's integrating power.[19]

* * *

614 Masai society is divided into two moieties, *en daloshi*, pl. *in daloishin*, which seem to provide a basis for clan organisation. Every Masai is found in either of the two moieties. These are named after cattle, one: *orok kiteng* — the black cattle, the other: *oodo mongi* — the red bulls. No exogamic restriction is attached to the moieties, ● 701 but, they seem to have an influence on military organisation. "Whe- 614 never", writes HOLLIS,[20] "the representatives of the clans take part in a raid", they are organised according to their moiety, and the loot is divided "into two parts, one part for each of these main groups".[21] MERKER, states that the words *orok kiteng* and *oodo mongi* are war-cries shouted by warriors according to their moiety. FOSBROOKE,[22] writes that the *orok kiteng* "are regarded as the right hand of the tribe", and the *oodo mongi* as the "left hand". He adds also that this dual division is typical of the "true Masai".

614 At the present there is no apparent relationship between the 634 moiety and the territorial system, but a few indications suggest that such a relationship existed in the past. Thus, in Laitokitok section, according to FOX[23] there is an equal number of "black

561 when the *aigwenani loongishu pokin* was recognised as a general
624 leader.[119]

Judicial activity is not a real part of the *aigwenani's* office. It
[692] all depends on his personality and on how much he is favoured by his age-mates, who may ask him to arbitrate and settle their disputes.[120]

The election and the status of the *aunoni-oluno* as the ceremonial leader of the age-unit has already been described. A peculiar duty of the *aunoni's* office is the responsibility " for the smart turn-out of the *moran* (initiates) ".[121] MERKER,[122] and HOLLIS,[123] state that the *aunoni* was responsible to the prophet (*laibon*) for the organisation of raids. The anonymous author of *MS.* 48, p. 4, describes
[977] him as the mascot of the unit when this was at war: " as long as he is alive they (the unit-members) cannot be beaten by the enemy... For this reason they take him on their raids ".

The relationship between the *aigwenani* and the *aunoni* is not clear. It seems certain that the latter has a more ceremonial and ritual character than the former.

The term of office for all these officers is limited to the existence of the age-unit as such; but they will always be distinguished and sought for their opinion.

561 The analysis of the unit's leaders does not offer a complete pic-
621 ture of the internal structure of the age-unit. This structure rests
701 on two other institutions, namely the *manyatta*, which is the proper

[119] The *aigwenani* was not epected to take part in the actual fighting; he had to be in the rear to govern the action or, as FOSBROOKE, p. 38, puts it, " probably because the *laigwanan* wore the charm which had been obtained from the laibon, and its loss could not be risked ". At present, adds FOSBROOKE, p. 39, " the relations between senior *laigwanak* and their juniors are very lax: It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale common efforts are required. In the old days when large groups of *moran* (initiates) came together for raids the senior *laigwanak* (sic.) must of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture ".

[120] " It appears ", writes FOSBROOKE, p. 38, " to be the privilege of the aggrieved party to select his judges... If a local *laigwanan* han a reputation for fairness and justice, he will be called even from a distance, but proceedings are not invalidated if no *laigwanan* is present ".

[302] [121] FOSBROOKE, p. 40. So, no initiate was supposed to cut off his pig-tail coiffure without the permission of the *aunoni*.

[122] MERKER, *l. c.*, p. 122.

[123] HOLLIS, *l. c.*, p. 299 n. 1.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

residential place of the initiates, and the *sirit* which is a manifold grouping of comradeship. 56 62 70

The *manyatta* is the village where the initiates live in segregation from other people. Externally it does not differ from any ordinary village. 621 Some authorities state that there is only one *manyatta* for each territorial section.[124] But FOX,[125] qualifying LEAKEY, states that this is only true for some special occasions as when all the initiates of one section come together to perform some special ceremonies, as, e. g., *Unoto*.

In the *manyatta* the initiates are assisted by their mothers who do the housework, and by some unitiated girls (*na sandja* or *ditto*)[126] who are there mostly for their sexual pleasure.[127] Uninitiated boys may also live in the *manyatta* for the menial works and for tending cattle.[128]

The groupings named *sirit*, pl. *isirit*, are formed, according to WHITEHOUSE,[129] at a meeting called by the *ingobir* when it is decided to build the *manyatta*. 701 Membership of the *sirit* is a matter of free choise. An initiate is free to join any *sirit*, and he is free to change it for another soon after his first election. But if he does so when the *manyatta* has been formed, he "incurs the bitter resentment" of his *sirit*-mates, and he may even be fined for that.

As far as numbers go, WHITEHOUSE states that "groups of 5 (initiates) will go together to join the same company" (*sirit*).[130] 701 621 MERKER, however, says that the inhabitants of a single *manyatta*

[124] MERKER, *l. c.*, p. 82; LEAKEY, *l. c.*, p. 192; HINDE, *l. c.*, p. 91 writes that "every section has usually some three favourite districts, in each of which is a village, called 'mangatta'".

[125] FOX, *l. c.*, p. 451.

[126] MERKER, *l. c.*, p. 83.

[127] Although the sexual life of the initiates with these girls is promiscous and free, full sexual intercourse is strongly condemned. [831] [833]

[128] According to MERKER, *l. c.*, p. 110, the initiates who belong to the smith trade usually do not share the village with the other initiates, but have their own villages and the girls who live with them are from families of the same trade. The smith initiates organise their own raids, but because they are few their booty is always small and they are easily deprived of it by other warriors. [564]

[129] WHITEHOUSE, *l. c.*, p. 150.

[130] WHITEHOUSE described the *sirit* as based on the clan. The *MS*, 46, p. 8, states that "*amanyata* is inhabitated by the *moran* of one particular clan". It seems, however, that this is not a fixed principale, and certainly does not obtain with the Kisongo. Cf. FOSBROOKE, *l. c.*, p. 28. [114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

701 may be from 50 to 100; and the anonymous *MS.* 46, p. 8, records
621 that in a *manyatta* there may be from 20 to 30 huts. The extension of the term is not clear. It may be applied alternatively to the whole group forming a *manyatta*, and to a subdivision of this. Thus, we find in *MS.* 48 that each *sirit* is said to have its own 'portion' of the *manyatta*. Similarly, Fox says that each *sirit* is commanded by a
[624] captain (*il aigwenan loo sirit*), and that the *manyatta* is ruled by a special leader (*il aigwenan 'l ol poror* = the leader of the age-unis), who is at the same time the captain of his own sirit. [131]

The fact that the members of the *sirit* " as a rule quarrel pretty regularly with other sirit of their *mannyata* " is emphasised by *MS.* 48, p. 3. There is no indication that the internal organisation of the *manyata* is based on the seniority of its members. We may, however, assume quite safely that that is the main principle which regulates the relationship of the *manyatta's* of the two age-units existing at the same period. No special information is available on this point, but it is obvious that members of the two age-units have their own *manyatta's* and we also know that they unite in time of war, the juniors being trained by the seniors.

Seemingly the *sirit* division has a military function and serves to readily organise warriors for raids. MERKER, [132] however, applies the term to a special partnership which two age-mates contract
[572] on their way to the battle-field. They pledge themselves to assist each other while fighting. They refer to each other as 'my companion' (*os sirit ai*), and if one of them falls, the other has to rescue his arms. [133] Ten or twelve such companions form a company.

527 The term *sirit* is further applied to the grouping of initiates
561 who come together for a meat festival (*es sirit ol bul*). This group consists according to MERKER, [134] of five or six age-mates who go to a segregated place where they revel on ox-meat.

The meat festivals (*ol bul*, pl. *e buli*) are held once or twice a month;

[131] Very probably this leader of the *manyatta* is no other than the *aigwenan lol kuma erok*, as indicated. The two different expressions may be taken as describing two different functions exercised by the same person. *Aigwenan lol kuma erok* means lit. " the speaker with the black club ", and '*l aigwenani 'il ol poror*, " the speaker of the age-unit ".

[132] MERKER, *l. c.*, p. 73.

[133] MERKER, *l. c.*, p. 93: " Die Aufgabe der Gefahrten ist es, dem andern im Kampfe beizustehen und, wenn er fällt, seine Waffen in Sicherheit zu bringen ". The spirit as a military company is also mentioned by *MS* 48.

[134] MERKER, *l. c.*, p. 84.

527
561

they last for three or four days and generally take place before a raid.[135]

701

At this point it is relevant to discuss the relationship of military organisation and the age units. MERKER,[136] gives a description of Masai military organization. He assumes the existence of a standing army (das stehende Heer), in which he distinguishes the recruits, the warriors and the reserve.

The recruits are " the shaved ones " (*el barnot*).[137] These, together with " the warriors " (*el moran* = initiates)[138] constitute the peacetime force (Friedensstärke), under conscription.[139]

The junior elders come into action in time of war but they may be reckoned as members of the standing army (" ... kann man als Reserve ansehen und mit zum stehenden Heer rechnen... "). The senior elders take arms only in defence of their own territorial areas and sections (Distrikt).

The above description appears to be very formal.[140] It shows, however, that military activity is not confined to the initiates but extends to the classes of elders. And this is a relevant point. We can say, therefore, that the initiates become warriors not to the exclusion of the other classes above them. A further point brought out by MERKER's description is the distinction between an offensive army constituted by the so called recruits, the warriors and the reserve, and a defensive army in which the senior elders are also incorporated.

721
701

It would be of great interest to know how the organisation of a raid or any other military action is formed, and whether there is any relationship between such an organisation and the *manyatta*

[135] MERKER, *l. c.*, p. 84. See also HOLLIS, *l. c.*, p. 317. At p. 292, n. 1, he states that " il *puli* are special places erected in the woods, to which the warriors retire when they slaughter cattle ".

[136] MERKER, *l. c.*, p. 73.

[137] " The shaved ones ", (*ol barnoti*, pl. *el barnot*), is the term applied to those who have just come out of their individual initiation and have been given the warriors' arms. They are the junior initiates.

[138] We may assume that the general term " warriors " as used by MERKER at this place (see also p. 56) refers to the senior initiates.

[139] MERKER, *l. c.*, p. 73, regards circumcision as a kind of compulsory conscription (... seiner — der allgemeinen — Wehrpflicht ins Heer...).

[140] One may note here that it is MERKER's tendency to describe Masai customs in a way which fits his own scheme. As known, his thesis on the semitic origin of the Masai has so influenced his way as to make his informations in many a case unreliable.

[114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

721
701 system. Unfortunately, no such information is available. MERKER,[141] describes the actual action in detail but from a purely tactical or strategical point of view.

701 Special distinctions may be attained by the initiates either in
554 military actions or in social life. Thus, if a warrior is outstanding in war for his courage and he " kills many savages " (HOLLIS (a) he is called " the bull ", *ol oingok*; if he is liberal and through the assistance of his father " frequently slaughters bullocks " for his comrades, he is called " the benefactor ", *N-gamini*. These distinctions as described by MERKER,[142] would suggest the existence of special offices with structural significance. He states that " the bulls " play a leading role (eine führende Rolle), and are the leaders in the fight (" Sie sind die Anführer im Kampf "); " the benefactors " retain a special position (eine besondere stellung). It seems, however, that there are no such institutionalised office as " the Bulls " and " the Benefactors "; they represent two different distinctions which may be attained by any of the initiates. This seems to be the opinion also of HOLLIS,[143] when he states that " the warriors are fond of the titles '*L-oingok* (the bulls) and '*N-gamini* (the generous people), for they may then wear bells or a bracelet called *il-torongen* ".

·561 The internal structure of the age-unit, we may now conclude, is based on various principles, which give shape to different groupings.

The essential principle is the contemporaneity of initiation either during the same season in which the minimal age divisions are instituted, or during the same initiation period in which all the minimal divisions merge into a single age-unit.

[621] A second principle is the residential principle, on which the *manyatta* and the *sirit* are organised. The *sirit ol bul*, or the grouping for the meat festival in special segregated huts also seems to be due to this principle.

[701] The military principle seems to give a special military aspect
[572] to the *sirit* proper, as found in the *manyatta*, and, apparently, the same principle extends to the temporary capillary formation of special partnership between two fighting warriors.

[624] Corresponding to these various groupings there are leaders, as mentioned above, who organise their age mates in the performance of the various ceremonies and functions of the age-unit. It is very

[141] MERKER, *l. c.*, pp. 93 ss.
[142] MERKER, *l. c.*, p. 86.
[143] HOLLIS, *l. c.*, p. 298.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

important to note their temporary and personal function. In this connection one should also noth that, however complex the organisation of the age-unit may appear, its character and nature is entirely democratic. The importance of the *ingobir* as a council to the *aigwenan* has never been stressed sufficiently. Although their office is not very well defined, it is a fact that they may exercise a real control over the leaders of the age-unit whom they have power to degrade.[144] 56 624

The following diagram illustrates the internal structure of the age-unit.

VIII – THE FUNCTION OF THE AGE-UNIT

The most apparent function of the age-unit is military. This is also the aspect stressed by all our authorities, so much so that it is commonly stated that the function of the age system is military.[145] The evidence we have just analysed suggests a somewhat different description. 56 701

We have already noted that the initiates do not become war-

[144] The relationship of the prophet, *laibon*, to the structure of the age-unit and age-class is illustrated below in connection with the latter. [791]

[145] Cf. for all others Fosbrooke, *l. c.*, p. 32: "The basic function of the age-grade system is doubtless military".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 riors to the exclusion of other classes above them. Their status is
701 that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

[62] Residential segregation is generally connected with the military activity of the initiates. MERKER states that the *manyat* were ordinarly situated in the strategic positions of the country.[146]

561 But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are [262] also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[147]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the full possession of any cattle; the share of their mother's cattle to [421] which they have right remains the property of their fathers until they get married. And to the father goes the best part of the booty [721] which they take from a raid.[148] Since cattle are the primary source [593] of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their *piron*-elders.[149]

[146] The statement is confirmed by HINDE's description *l. c.*, p. 91. He [361] says that the *manyat* were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[147] The initates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their *piron*-elders.

[148] MERKER, *l. c.*, p. 30: "Das Verdienst der zu Kriegern herangewachsenen Söhne besteht in erbeuteten Vieh und fliesst in der Hauptsache zur Herde des Vaters".

[149] Other restrictions such as the prohibition against snuffing and drin- [554] king beer, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

262 884 opened a vein and drank the blood fresh from the animal. This proceeding of our voracious young friends was a wise though repulsive one, as the blood thus drunk provided the [263] salts so necessary in the human economy; for the Masai do not partake of any salt in its common form. This sanguinary draught concluded, they proceeded to gorge themselves on the flesh, eating from morning till night—and keeping their cook steadily at work. The half-dozen men were quite able to dispose of the entire animal in a few days, and then they returned to the kraal to resume the milk diet.

884 836 If they lived an ascetic life in the matter of food, they could not be said to do so in other ways. Life in the warriors' kraal, as may easily be conceived, was promiscuous in a remarkable degree. They may, indeed, be described as a colony of free lovers. Curiously enough the "sweetheart" system was largely in vogue, though no one confined his or her attentions to one only. Each girl, in fact, had several sweethearts, and, what is still stranger, this seemed to give rise to no jealousies. The most perfect equality prevailed between the Ditto and El-moran, and in their savage circumstances it was really pleasant to see how common it was for a young girl to wander about the camp with her arm round the waist of a stalwart warrior.

884 517 701 Till a war-raid was planned, Moran, our interesting *protégé*, found he had nothing to do but make acquaintances and amuse himself with the girls. His cattle were looked after by some poor menials, and though the kraal was stationed near a dangerous neighbour, yet no fighting took place. It was, however, a rule in the warrior kraals that no fence for protection was allowed, hence the utmost vigilance had to be exercised. Moran thus in the course of his duty had frequently to act as watch. At other times he practised various military evolutions, and he kept up his muscle by the peculiar mode of dancing described in the Taveta chapter. Unlike negro tribes, they led what might be called a serious life. They had no rollicking fun, no moonlight dancing, no [533] lively songs, no thundering drums. No musical instrument [534] whatsoever enlivened the Masai life, and their songs were entirely confined to such occasions as the return home from a successful raid, or the invocation of the deity. As soon as darkness fell upon the land the guard was appointed, the cattle milked, and everything hushed up in silence.

624 Shortly after joining the kraal, Moran was called upon to record his vote in the election of a *Lytunu* and a *Lygonani*.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

as the Masai race shall exist," and to refrain from leasing or granting any land (except such land as may be required for mining or for any public purpose) "without the sanction of the paramount chief and the representatives of the Masai tribe." 631 648

As a people of Nilo-Hamitic origin, the Masai have an affinity to the Nandi, Kipsigis, Suk and Turkana of the Keyna Colony, but they have maintained more of their original custom and mode of life than the Nandi or the Kipsigis. A variety of circumstances have combined to produce this result, but it is undoubtedly due in large measure to the fact that the extent and quality of the lands occupied by them has allowed them, as a tribe, to escape the disturbance in their traditional life caused by the necessity of wage earning on the European farms and urban centres or of taking to agriculture. It is noteworthy that though parties of the Masai have on various occasions lent assistance to the Kenya Government in military or police operations against other tribes, they have never enlisted in any numbers in the armed forces maintained in the Colony, and they actively resisted the efforts made to secure their recruitment during the War of 1914-1918. 101 648

The social structure of the Masai has from the outset created an obstacle to the adoption of any system of native administration similar to that in force in other parts of the Colony. The military organization of the tribe was in earlier days maintained by a system which divided the male population into boys (L'Ayok), warriors (Moran) and elders. The first stage continued till circumcision, performed any time between thirteen and seventeen years of age. Those who were circumcised within a certain period, normally four years, formed an Age Group, and those circumcised during the succeeding period formed a second Age Group, these Groups being distinguished as the Right Hand and Left Hand Groups respectively. The circumcised youths became the warrior class, who were divided into Companies (sirit) living in separate villages (manyatta) often of a considerable size, and the larger manyattas had their own "Counsellors" (L'Aiganak) chosen from among the Moran. 561 701 [361]

The Moran had special privileges, such as that of cohabitation with unmarried girls, and were relieved of all tribal obligation save fighting and raiding. Even such forms of manual labour as were involved in a pastoral life were avoided by them. They remained on the fighting strength of the tribe or periods which originally varied from seven to twelve years, and then, after the celebration of the E-unoto ceremony, "drank milk" and passed into the stage of Elders. But, as Sir Charles Eliot observed in 1905, "the Elders' ideal of existence seemed to be ease, not unmixed with drunkenness."[1] Those who attained a position of wealth and importance might be elected as Chiefs, but the functions of a Chief were restricted to leadership in raiding or warfare. [836] [622]

There is another feature of importance in the social structure. The Masai are divided into Sections (Alosho) which probably had their origin as clan or kinship groups, but have no close correspondence with geographical divisions. There are 14 recognized Sections, of which the Purko is by far the largest and most wealthy. Each of these Sections has its own Age Grades, so that the period at which youths become Moran, or Moran became Elders at the E-unoto ceremony, do not coincide in the different Sections. Each Section used to have an informal Council of the Elders, but these had little direct control of affairs, particularly where the activities of the Moran were concerned, and the situation 634 [623]

[1] Introduction to The Masai, by A. C. Hollis, 1905. For the significance of the E-Unoto ceremony see page 69 of the Administrative and Political History of the Masai quoted above.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

175 648 622 authority always tended to break down in face of the lawless and independent spirit of the Moran. In 1918 the Headmen numbered 46, of whom 28 were unpaid, and 18 received pay ranging from £6 to £36 a year, the former Paramount having a special pay of £90. Fourteen of the 18 paid Headmen were presidents of the Native Councils, and following the custom adopted in many other parts of Kenya, they were given the courtesy title of Chief.

SUBSEQUENT CHANGES IN THE SYSTEM

175 648 178 In the period that has passed since this system was introduced, there have been changes which have to some measure affected the structure of Masai society. The restraint exercised on cattle raiding has robbed the military organization of its former importance, while the growing value of cattle and sheep has enhanced the position of the wealthier stockholders, who now constitute, together with some men of hereditary prestige, an aristocratic element with an acknowledged leadership in Masai society. In other respects the Masai hold tenaciously to their customary institutions and mode of life, and the [701] [461] Moran in particular retain the tradition of indiscipline (in all but a military sense) and the aversion to labour which characterized them in the past.

175 648 623 The Government has in the interval effected changes also in the system of native administration above referred to, with the view of adjusting it more nearly to the pattern followed in other parts of Kenya. The Central Masai Council and the 14 Native Councils gave place in 1930 to two Local Native Councils, at Narok and Kajiado, which have now been formally constituted under the provisions of the Native Authority Ordinance of 1937. The system of tribunals has also been revised, as will be further explained below.[1] The 622 Headmen have been divided into two grades, Headmen and subheadmen, of whom the former have the courtesy title of Chief. They now derive their powers from the Native Authority Ordinance of 1937.

[465] The 16 Headmen have a pay ranging from 17s. to 70s. a month, and the 28 subheadmen a pay ranging from 10s. to 32s. 50 cents a month. Practically all the Headmen or subheadmen are stockholders, and represent the ruling Age-Grade in each of the different Sections; very few of them are educated or literate and only a few can speak Swahili. The Headmen and subheadmen constitute the executive agency of the District administration and of [651] the Local Native Councils, and they are in addition charged with the collection of the native Poll Tax. That is a task which they are said to discharge with some efficiency, though as will be shown subsequently in dealing with the administration of the Tribunals, there are numerous cases of the evasion of tax. 625 The Chiefs can call on the services of a small number of Tribal Police, recruited and controlled by the District Commissioner. Up to 1943 the Tribal Police were the only force of this nature in the Province, but since that year a unit of the Kenya Police Force has been stationed in the Narok district, largely in view of the prevalence of stock thefts.

THE LOCAL NATIVE COUNCILS

646 Of the two Local Native Councils, that at Narok has 10 nominated and 23 elected members, and that at Kajiado 10 nominated and 14 elected. There is, however, little difference in practice between the nominated and elected members, since all are in fact selected by the District Commissioner after

[1] Page 173.

7: Hailey G-4 (No date) 1950 FL12 Masai FL12

grade system. It consists of six senior Washili, or age grade leaders, from the three effective age grades, six deputy Washili and eighteen Waserowa wa Nrwe, elected citizens of standing and authority (three from each age grade). These thirty men comprise the Kyama Council and elect their own speaker. The functions of the Kyama are similar to those of the Engigwana described above. The election of the Jumbe is in the hands of the Kyama but they must reach a unanimous decision on the subject.

The elected Speaker of each Kyama kya Muungo and three other Washili chosen by the Kyama sit on the Kyama kya Uruka, which is in effect a Tribal Council, fulfilling the functions of the lower Kyama but at a tribal level. In addition the Government reserves the right to nominate six members. The Kyama kya Uruka elects six Washili each year on the Chief's Council to assist him in all his duties. One of these is the Kyama's Speaker.

The Arusha and Meru Chiefs are not united in any formal manner, but there is a single Treasury for the whole District.

THE MBULA NATIVE AUTHORITIES

In the Mbulu District the four Native Authorities shown in the statement bear a variety of titles, Wawutmo in the case of the Mbulu (Iraqw) and Gorowa (Fiomi), Mtemit in that of the Barabaig (Mangati), and Msungati in the case of the Mbugwe. One of the Iraqw chiefdoms has a large jurisdiction, extending to 25,600 taxpayers, but it is said that only one tribe, that of the Gorowa (Fiomi), has had any strong tradition of chiefship. Here the chiefdom has been in the hands of a Muslim ruling family of more advanced status than the pagan peasantry, and the chiefdom is in this case hereditary. Among the Iraqw (Mbulu) and Barabaig the administrative structure is built on the clan, and the chiefship is an innovation. Among the Mbugwe, authority was formerly vested in spiritual functionaries known as Wa-sungati, whose position had something in common with that of the Laibon of the Masai.[1] The method by which Chiefs in these three tribes are now chosen is described as that of "popular discussion and acclamation." Only one of the Chiefs is said to show any strong personality or ability, and only two are literate.

The sub-chiefs Here bear the title of Gause or Sagochan, the Headmen that of Yabuse, Borchand or Mvitutu. Both sub-chiefs and Headmen are chosen by the Chiefs in consultation with their Elders in local meetings.

The difference in tribal composition is reflected in the attitude of the Chiefs on the subject of union for joint purposes, for they have not as yet united in any formal federation, and there appears to be opposition to closer union. There was formerly no combined Native Treasury for the District, as each Native Authority maintained its own Treasury. As from 1st January, 1949, however, the Chiefs of Iraqw, Gorowa and Mbugwe agreed to combine their Treasuries but the Barabaig Treasury remained separate.

THE MASAI NATIVE AUTHORITIES

648 The Masai District has presented a problem of peculiar difficulty in the application of the Native Authority system, and it would be an advantage if the observations made here were read in connection with those made on the similar problems in the Masai Country of the Kenya Colony.[2] As there also the central feature of Masai society has been a well developed system of age-

561 101

[1] See page 288.
[2] See page 171, Chapter II.

561 grades, which has resulted in marking off the whole of the younger men,
701 roughly up to the age of twenty-seven or thirty, as a warrior class (moran) who are not only free from most obligations to work, but are independent in many other respects of tribal discipline. Though therefore authority has rested
623 nominally with the Elders (laigwanak) who have passed the stage of moran,
642 and with the Councils of Elders who formed a regular feature of the Masai
701 tribal usage, these Councils have not in the past nor are they to-day able to
561 enforce decisions which may affect the younger men. It is true that the Elders have recently made decisions, accepted by the moran themselves, which will limit the period of moran-hood and may provide the moran with work on betterment schemes, but it still remains to be seen how far these will be effective in providing a solution for a problem of which the economic is no less serious than the social aspect.

175 Attempts were at one time made in Tanganyika, as also in Kenya, to
791 utilize the Laibon, the spiritual head of the Tanganyika Masai, as Native
623 Authority. But the Masai themselves objected to his occupying this position, and as the result of a Sociological Survey made by H. A. Fosbrooke in 1938, the system was altered. The gazetted Native Authority then became the Masai Council, which in practice consisted of Headmen and Elders, and apparently also of any tribesmen outside the moran age grade who cared to attend. But this Council was in effect only a consultative body, without any practical authority, and since the Headmen were not gazetted as Native Authorities, they had no legal power to issue Orders under Section 8 of the Native Authority Ordinance.

646 A further reorganization has now been carried out. Each area now has its own Local Council, with locally elected representatives of age grades and clans, and these Councils have been gazetted as Subordinate Native Authorities. Representatives from each Local Council, differing in numbers in accordance with the size and population of the area involved, compose the Masai Council, which is the Superior Native Authority for the whole Masai District, excluding Sonjo. The Council is now limited to these representatives: there is, however, provision for the addition of moran or nominated members if and when advisable. The Local Councils have begun to exercise their Order making powers under Section 8 of the Native Authority Ordinance. There are 41 paid Headmen, chosen by members of their own age grade.

652 There is a Masai Native Treasury, which however is managed entirely by the District Commissioner. The small Sonjo tribe has a Council of Sonjo
000 Headmen, which is gazetted as a Native Authority, and has a separate Treasury.

THE WORKING OF THE NATIVE AUTHORITY SYSTEM

The variety of conditions is so great that it is difficult to generalize on the operation of the system of native administration in the Province as a whole. There are, however, certain points of special significance. The recent reorganization in the Chagga Native Authority area has placed in a superior position three Chiefs who already had a high status in view of the number of taxpayers in their jurisdiction, but its future success will depend on the extent to which these Chiefs can secure the co-operation of the more progressive elements who have now been brought within the framework of the system, as members of the new Divisional Councils. This is especially necessary, in view of the character of Chagga society, for though the Chagga are probably the

561

francolin. These bird skins, once fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skins attached. During the period of the novitiate the boys are known as *laibartan* and are free to go anywhere "like women," and, in fact, may even visit the *manyattas* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *osingoilen*, which are danced by the novices alone. [535]

881
561
302

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior. [431] [411] [714]

The new warriors now form themselves into groups, and organize the building of villages, which will be their headquarters. These villages are the *manyattas* of the warrior groups (*see* below). 56 70 361

PART III.—WARRIORHOOD.

The Age-Group System.—The general word denoting an age-group is *urisiuri*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single ox-seizing ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *jangienobur* and *murategedienye*. 561

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *jangienobur* must always be the senior warrior group. This, in effect, means that a single age-group cannot be transferred from the warrior class to the elders' class, but that two groups, a *jangienobur* and a *murategedienye*, must move out together, leaving the next *jangienobur* as senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *murategedienye*, and in due course yet a third group will be initiated and enter the age-group as *jangienobur*, after which no further transfer of a novice group can take

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

The members of each *ol-porror* are circumcised in batches. Each batch forms an associating group throughout Masailand (like the *mat* of the Nandi), and has a permanent name which recurs in each age-set, and in each succeeding age-set. There are four such groups in the Right Hand; they are called *Il-cogen-opir*, "the big ostrich feathers," senior;[25] *Il-parigotua lay*, "our swift runners"; *Il-hirimbot* (meaning unknown); and *Il-tareto*, "the helpers," junior. The Left Hand, being smaller, has, according to Fosbrooke, only the last three of these groups. Women have no age-sets, but are considered to belong to the *ol-porror* which was in formation at the time when they were circumcised. 561 [562]

The main function of the age-sets was to provide a permanent source of man-power for fighting, and through them are still taught discipline and respect for elders; they thus affect behaviour patterns. An attitude of respect is required of junior to senior age-sets, while between members of the same set there is a relationship of equality and a sense of solidarity in their relations with other sets. Membership of a set also involves restrictions on both pre-marital and marital relations, of which mention has already been made. In the old days, the duties of warriors were chiefly to raid, in order to maintain as well as to increase the numbers of cattle; and to defend the country. Warriors were not allowed to drink intoxicants, but they had a number of privileges, which included access to the unmarried girls, and the right to demand milk at any homestead, and to oxen for eating. Though officially their fighting duties have been replaced by certain aspects of cattle management, mainly watering and night herding, there is a constant tendency in some tribal sections to raid their neighbours. [182] 561 701

Clans

Clans (*in-kishomin*, sing. *en-kishomi*) are divided into sub-clans or primary divisions, *il-gilat*, sing. *ol-gilata*. They are dispersed throughout Masailand, among all the tribes (*il-oshon*), and are totemic and patrilineal.[26] It is not certain how many clans there are, and this uncertainty seems to exist among the Masai themselves. The exogamous unit is probably the *ol-gilata*, though Tombo ole Mbaei says that 614

791 the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group; these all belong to the In-Kidogi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputie at Ngong (now living among the Loitai), the Kisonko, Il-Aikipiak, Il-Wuasin-kishu and Sambur also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were[31] (1) to sanction war and to provide protective medicine for those taking part in it; (2) to authorize the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical focus for tribal activities. Many laibons also practise witchcraft (as defined above, p. 39). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

721 When the warriors of a *sirit* wanted to raid, they approached their *ol-aiguenani*,
624 who planned the attack and arranged for the co-operation of other companies if a big raid (*ol-orora*) was intended. The *il-aiguenak* concerned then went to the laibon to get his sanction and protective war medicine. Before agreeing, however, the laibon
726 consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in song after getting drunk. The warriors then went to their *il-puli* and feasted on meat to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Nyika being a frequent objective; Thomson was told that a Masai
727 patrol was once seen in Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the *manyata*, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-oo-rok-kitey* and *il-oo-do-moyi*, "the black ox" and "the red oxen," and fought for the spoil. Small raids, *ol-wuampa*, carried out locally by one *sirit*, were not referred to the laibon, who received no share of the spoil.

726 Wars between Masai tribal groups were frequent, and formed one of the factors in the disintegration of the Kenya Masai at the end of the 19th century. In such
578 wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmenteita, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputie, the other of the Il-Aikipiak. A detachment of picked men from each side would come out and fight a pitched battle, cheered on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline
● 701 was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Gorged
[714] with meat, and in the panoply of ostrich-feather head-dress, cape, gleaming spear, shield, sword, club, painted face and leg ornaments, the Masai warrior felt himself more than a match for anyone.

727 Prisoners were not often taken, though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed,
728 women seldom. Peace was made by a formal ceremony at which nursing mothers

Ill. 25. Warriors.

561 It is to be inserted here that the girls who have been circumcised in the period from the beginning of a series of circumcision years to the beginning of the next series are counted in the age class in which the boys circumcised within the same period up to the ma ashita festival are reckoned.

/73/ As long as the members of an age class still belong to the warrior standing, those living in each area have their own head, the speaker (ol sigwenani), whom we shall meet again in the warrior kraal. But if those belonging to one ol boshi are all married, they
561 634 are given a head for the entire district, the ol aunoni, whom not only the people of his age class, but also those of all younger age
[791] classes are obliged to obey. It is the business of the ol olkeni to arrange matters so that in each district only one holds this rank. The discussions with regard to his appointment begin even before all the ol boshi members have left the warrior standing. The speakers of the district go to the ol olkeni and put their request before him.

/74 cont./

561
70

The strict organization of the Masai war power rests primarily on the institution of the age classes. With circumcision the youth enters the army to perform his -- the universal -- military service, and, to be sure, as ol barnot. His age class is that of the recruits and usually forms, together with the next higher one, that of the warriors, the peacetime strength of the standing army.

The next age class, the youngest of the married men, which performs no war service in peacetime, but also sets out in times of war, may /75/ be regarded as reserves and counted in the standing army. The older age classes take up arms only to defend their own district. There are two exceptions to this regular procedure. If a warrior feels still too young to leave the warrior standing along with the other ol borbo members, he joins the next younger age class and is designated as ol gairo (pl. el gairo) of it. This is done especially often by those who belong to the last course of an ol borbo, the el oingoni. The other instance occurs when a youth is heir to large herds of livestock and he lacks another man to be concerned

291
142

Ill. 26. Older men.

/75 cont./

561 with managing them. He must then take over the property himself,
• 701 and he marries soon after circumcision. He is taken into the youngest age class of the married ones and designated as ol ñosaniki (pl. el ñosanik) of it. In the age class of the recruits as well as in that of the warriors, those living in one district form a company 100 to 200 men strong. In order to prevent a company from becoming too large through the presence of too great a number of boys fit for circumcision, which would be injurious to discipline, they have the remedy
[791] of circumcision by divisions. Then a special company is formed out of one or even two annual courses, which the ol oiboni does by the bestowal of a special name. /76/ Otherwise every age class gets only one name at first, which is then often replaced by a new one after a successful, larger war expedition as a distinction for bravery shown or, more correctly, for particularly rich spoils, but only when
[791] the ones concerned have become older warriors. The ol oiboni gives the next name to the ol borôr after it has received an ol aunoni; he bestows the last one with the union of two el borôri into an ol adji, which then bears this new name until it dies out.

561 The present (that is, -1901) youngest age class is called el gischôn; it is the first of an association whose second has not yet been formed. The next association consists of the younger el kipuani and the older el mamuma. The latter were called el ñgarubur of youths and were given the name el merututut after a successful war against the Ukamba area. The next association is the 'L aimôr, consisting of the younger el kitoib and the older el merischo. The former, as recruits, were called el maûgucha; after a war against Ubehe, el ñgischaûgob; and after the selection of the ol aunoni, el kitoib. The el merischo as youths were called el metarôni; after a successful war against Laikipia as el morôn, they received the name es ñgon; and after the ol aunoni selection, their present name.

291
142
← Ill. 27. Very old man.

/76 cont./

561 According to this, the institution of the age classes together
• 701 with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors.
[703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 As soon as the circumcision wound has healed, the circumcised
702 exchange the long apron (ol gelf, el gelfal) for the short skin-cape
561 (e megiti, /77/ megitin), again put on their ornaments, anoint their
[291] bodies with red paint and, after they have once more shaved their
[302] heads, set out as el barnot (sing. ol barnati, formed from barno = bald-headed), armed with spear, club, sword, and shield, into the bush to celebrate the ol gesed i ol gutui. Spear, shield, and sword
[411] are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect
[342] a kraal of thorns for themselves or even build small huts out of leaves.
701 The festival consists of consuming large quantities of meat and noth-
702 ing but meat. For this each participant furnishes a fat ox obtained
561 from his father, which must be plain-colored, black if possible.
[292]
[262]
[822]

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments; they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors
or invented themselves, and thus stimulate their imaginations, just as
the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild,
to which also the taking, still strange to them, of various roots and
barks with a nerve-stimulating effect (which will be discussed later),
which they add to the cooking meat, contributes a great deal. All
their yearning is directed toward war and murder, everything in them
is pressing toward killing an enemy, and enemies for them are all non-
Masai. Each of them would like soon to be no longer an ebor alem =
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently
they turn against defenseless caravans if such happen to be in the
vicinity. Whether or not spoils are to be taken in this is of no im-
portance, only killing and murdering, they do not think any further.
Many attacks on caravans have come about in this way. Such op-
portunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to im-
prove themselves in the art of war. They accompany the warriors on
their raids and now and then also take part in their forest meals.
Nevertheless they do not gain admittance into the warrior kraal,
which is just as wounding to their self-confidence as the circumstance
that they are looked down upon by the warriors and treated almost
like boys. The wish to be on an equal footing with the warriors grows
ever keener in them. But they still lack two things for that: the
name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

1. Any gathering for a consultation is called this.

714 /82 cont./
531 nowadays the warriors, out of boastfulness, go on using shields,
178 with unaltered escutcheons, taken as booty in battle with Negroes (1)
[721]
[177]

1. The fact that Negroes also carry shields of the Masai type, and, to be sure, with similar escutcheons, is a consequence of the above-mentioned Masaization.

or half-breeds of Negroes and members or bastards of the Masai people or, with the present discord, even those of other Masai.

714 The shields of the el barnot, the recruits, do not appear as gaily
531 colored (Plate 1: Figs. 1 and 8). As soon as the youths have received
• 701 the shields, they ask the most esteemed of the married men, a former
561 speaker of the warriors, for his consent that they be permitted to paint a black emblem on the surface of the shield. At the time he gives his permission, he also determines the form of the emblem, that is, he does not invent a new one, but chooses one from among the old familiar ones. With this and with an ornamental band only drawn in

701
714
531
411

Merker phot.

Ill. 30. Shield escutcheons of young warriors.

/82 cont./

714 black, the youths then paint their shields. The red color may appear
• 70 in the ornamental band only with the carrying of the large red emblem.
531 They carry the black emblem and the ornamental band until they
561 have become the equals of the warriors and are able, by their ability,
to obtain the red emblem by obstinacy or force, for the warriors,
of their own accord, will not let a younger age class carry those
emblems. Therefore, when the youths feel strong enough, they com-
plete their shield escutcheon in the aforesaid way and then carry it
714 /83/ ostentatiously for show. The warriors see it, become angry,
70 and scold. The el barnot, for whom the warriors have until then
531 been persons of respect, answer snappishly and impudently and scoff
561 that the warriors have now become old and weak and neither need
578 nor deserve the red emblem any longer. No one likes to be reminded
of his shortcomings, and a Masai least of all tolerates the reproach --
for that is what it is for the one still in the warrior association --
of incompetence in war, especially if it is hurled at him in street-
urchin fashion out of the taunting mouth of a younger person. At the
[591] same time the youths build a circular barricade of branches and move
in, possibly even before it is filled with huts -- a further provocation
of the warriors, for with that the el barnot declare that they too now
have a right to their own warrior kraal and are no longer to be re-
garded as recruits, but as full-fledged soldiers. The consequence of
this is that during one of the following nights the warriors attack the
growing kraal in order to make the point clear to the el barnot with
force. If the latter are defeated, nothing remains for them for the
time being but to scratch the red emblem from their shields again with
[721] all haste. They give vent to their anger over their defeat by scolding
and by one or two small raids against Negro tribes. Sometimes the
701 warriors then acknowledge them as equals, especially if the raids have
561 brought rich spoils, but often too they must force their recognition as
[531] before. If this succeeds, they may now also carry the red emblem and
[714] are henceforth regarded as true warriors. They continue to build the
kraal that was started and live beside the other warriors, but go to
war with them. Usually, however, this situation does not last long:
rather, the old warriors soon quit the service and marry. It is there-
fore an exception if there are two warrior kraals in one region at the
same time.

[Warrior Kraal]

/83 cont./

XI.

000 Warrior kraal. -- Its inhabitants. -- Work. -- Foods of the warriors. -- Forest meals. -- Organization: the speaker, his badge and tasks; leaders; benefactors. -- Dueling. -- Daily life. -- Mealtimes. -- Dance and song. -- War: permission for it, preparation, forest meal, marching off, march, camp, surgeon, spies. -- Formation of the war march for the attack. -- Battle. -- Booty. -- Captives. -- Distribution of the booty. -- Return of the warriors. -- Defense procedures. -- Attack on caravans. -- Concluding peace. -- March performance. -- Retirement from the warrior standing.

621 701 [361] [634] In each district one usually finds only one warrior kraal, which quarters all the warriors of this area. It lies in the spot from which the district can best be protected from enemy attacks. The warrior kraal (ol manjata or manjada) is not externally differentiated from other kraals by anything. It is inhabited by 50 to 100 warriors, sometimes almost double that number of young girls, the mothers and several younger brothers /84/ of the warriors. In every hut there is a large sleeping place for a warrior, and usually, at the other end of the hut, a small one for one of the mothers. The huts of those who are staying abroad for the time being are common property, and anyone who wants one takes it as quarters for the night by sticking his spear in the ground in front of it toward sundown. The others then often sleep three or four in a hut, as do the mothers.

[342] [513] [423]

621 701 462 [351] [356] The kraal is laid out by the old women, they build and maintain huts and thorn fence. Together with the girls they milk the cattle, clean the kraal every day in that they spread the cow dung, while the former sweep up and carry out the goat dung, fetch water, and keep the huts clean.

[Warrior Kraal]

/84 cont./

836 Every warrior has his favorite girl (na sandja) (1).
• 701

1. /This footnote has been translated from the Latin in the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with this one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the menses and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In wartime parents do not have intercourse for one or two months. Rupturing the hymen is neither a public custom nor a solemn rite.

[881] [848] [842] [847] [834] [833]

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover os sandja and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warriors squatting together and placing it beside the left leg of her lover.

Ill. 31. Warrior in war adornment.

[Warrior Kraal]

/84 cont./

701 836 As long as the latter stays in the kraal, his girl is obliged to remain faithful to him, but if he leaves it, even for only one day, she is entitled to console herself with another kraal companion, provided that between her and him -- as is also a condition for her relationship with her os sandja -- there is no obstacle such as the above-mentioned obstacles to marriage based on lineage affiliation.

233 857 The tending of the livestock falls to the boys. Even at night they sleep outside in order to watch them and are assisted in the watch by the mothers, who take turns several times every night and frighten off wild animals by shouting.

361 /85/ 233 417 [343] [672] Within the ring of huts there is a circular kraal of thorns for the cattle and near that a narrower one for goats and sheep, while beside almost every hut there is a small lean-to for the young calves and a barricade of branches for the older calves of the individual ones. Thus everyone remains responsible for the barricading of his calves and, if at night they should find their way to the cows, has no excuse for starting a quarrel with others in the morning on account of the lack of milk. Milk is the only food that the Ol morani

701 262 264 [273] [276] takes in the kraal, and the lack of it is therefore especially grievous. Outside of it, only meat serves the warriors as food, and, to be sure, only that from cattle, sheep, and goats. They do not take vegetable food, honey beer, and tobacco. The meat meals are always held outside the kraal; a slaughtered head of small livestock is consumed a few hundred meters from the kraal, behind a bush, whereas for the consumption of a head of cattle a more distant spot under a shade tree in the bush /Fig. 18 appears here/ or forest is chosen. For these

701 262 264 574 forest meals (ol bul, e buli) mess companies are formed in every warrior kraal, which are designated sirit' ol bul and which consist of five or six members, each of whom is called os sirit ol bul. Such banquets take place once or twice a month for each mess company and last three or four days each time, during which an ox is consumed. Besides the warriors, one to three girls also take part, and also a few boys as servants for fetching pots, water, and firewood, as well as for kitchen work. Prior to the slaughtering each mess company splits up into two equal-sized parts, each of which is called

000 ol gibet and prepares its own camp. Under a shade tree with thick

[Warrior Kraal]

701 361 342 /85 cont./ Under a shade tree with thick foliage a spot about 20 to 25 square meters in size is cleared and enclosed with a barricade of branches. During the rainy season in place of this kraal a small hut (Fig. 18) is built out of leaves. Its approximately circular ground plan has a diameter of two to three meters. On the side opposite the entrance opening is the common sleeping place of the ol gibet companions; between this and the door, the hearth; beside the door the space for firewood. [415] [237] [276] Close beside the sleeping place hangs the stomach or bladder -- from the head of cattle just slaughtered -- filled with an extract of roots and barks that acts as a nerve stimulant and is drunk whenever one is thirsty (ol oōni).

Fig. 18.

a) Sleeping place. b) Drinking bag. c) Pole for meat. d) Hearth. e) Firewood. f) Entrance.

[251] 701 342 In the vicinity of the hearth the meat supply, is hung on sticks (ol alele). In the vicinity of the warrior hut the serving boys build themselves their own, considerably smaller one. One calls kraal or hut eng adji ol bul. Each ol gibet receives a longitudinal half of the 701 262 264 slaughtered head of cattle, from which, however, it immediately gives back the pieces intended for cooking for the common meals of the day. /86/ The picked-out fat is cooked together with this [252] [276] meat, and to the whole are added extracts or decoctions from roots and barks (especially from ol getalassua (1),

1. Myrica kilimandscharica Engl.

ol giloriti (2),

2. Acacia abyssinica.

[Warrior Kraal]

which have a strong stimulating effect. The rest of the meat, roasted at an open fire, is then eaten by each ol gibet in common, and, to be sure, at a morning and an evening meal. The head of cattle is furnished in turn by the participants or their fathers.

The longest forest meal takes place as a rule in the month kipër. Since the pasture is poor then, the livestock gives so little milk that the warriors sometimes live for a whole month on almost only meat.

701
537
[293]
[237]

At the head of the warriors of a kraal stands the speaker (ol aigwenani or ol airohani). The badge of his office is an especially beautifully worked club or rhinoceros horn (4)

4. The straight horn of a species of Rhinoceros bicornis not yet described to my knowledge, which the author found at the beginning of 1896 in the steppe southeast of Kilimandscharo, is especially popular for making these clubs. The horns of this species (or variety) differ from those of the ones described thus far by the fact that they are quite straight and in cross-section never round, but rather so strongly compressed laterally that they appear sword-shaped; the front horn is often shorter than the back one.

or ebony wood. It is swung like a baton in connection with the speeches accompanied by numerous gestures, in order to give emphasis to individual words. This is also achieved in the manner of speaking, by the fact that one pronounces the emphasized words long drawn out and repeats the emphasized sentence several times. The speech to a larger gathering is always delivered very loudly and vigorously. While the listeners squat on the ground, the orator [516] stands erect, his glance directed alternately toward one or the other of the chief persons among the listeners. What the orator lacks in logic he tries to make up for by verbosity, dialectic, and higher pitch in tone. The members of the audience often give the impression of rapt attention, their glance is almost continually directed at the one

[Warrior Kraal]

/86 cont./

701 speaking, yet their facial expression usually remains unchanging,
537 neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Negroes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting ɛ̄, ē, or hm that he has understood the words spoken. The task of the speaker consists chiefly of arousing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /87/ which
701 will facilitate for the latter a sudden, predatory attack. Moreover,
726 he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture,
701 where they stay at night, where the fewest warriors live, etc. The
[554] speaker himself need not be a brave warrior; rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice incumbent upon
[692] him; he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 A leading role among the warriors is played, furthermore, by
554 the el oiñok (1)

1. Sing. ol oiñoni.

(= the bulls), of whom there are five or six in every kraal and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a
[714] sign of their rank they wear, in dancing and in hand-to-hand
[534]

[Warrior Kraal]

/87 cont./

701 554 fighting, large leg bells (el duallan kitwa), the tinkling of which in
[714] the latter instance serves to prevent a going astray by the individual
[534] warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the ñ gâminini = benefac-
[556] tors. They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive oxen for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 Accordingly, miserliness is sharply condemned, and a miserly
703 warrior or one who has miserly parents is treated badly and, in case
577 of illness or wounding on the way, is not infrequently left to lie helpless.

701 Speaker and leader live like other warriors and are not surrounded
578 by any special ceremonial. Off duty they are treated with respect,
[554] which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword and club, but only very rarely
[683] wound each other seriously. If this should happen sometime, in a few districts the wounded one receives from the victor a fine con-
[431] sisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /88/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also
701 the exchange of the skin cape (e megiti). The matter becomes more
578 serious if one is killed in a duel. First the father of the victor is then
682 condemned to pay a larger number of cattle. If he hands them over, the affair is settled. If he refuses them, however, the friends of the man killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one robbed also try to rescue them again. This goes on until they have become tired

[Warrior Kraal]

701 578 682 [613] [614] [669]

/88 cont./

of the fight, or until one party remains the victor two or more times in succession. The fight assumes greater dimensions if the two duelists belonged to different lineages or even different tribes. Then

701 535 291

C. G. Schillings phot.

701 578 682 [613] [614] [669]

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

[192] [726]

A war in which Masai stand against Masai is called ol arabal (pl. el arabali), not en djóre (n djorīn) as a war between Masai and foreign tribes is called.

701 574

/89/ In peacetime the warrior spends only the least time in his own kraal; for the most part he gads about on visits in neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime; a guard of at least ten men always remains at home for the protection of the girls and the livestock, while the rest stop to visit at an ol bul (forest meal, see p.111 above) or with other people.

[Warrior Kraal]

512 /89 cont./
701 Life in the kraal begins at sunrise, when the mothers and the
462 girls start milking the livestock. Not until around seven o'clock,
[233] when the boys drive the livestock to pasture, do the warriors get up
[234] to take the first meal (en daã e dadegenja = food in the morning),
[224] consisting of fresh milk. Then the women apply themselves to the
[272]
[262]

Ill. 33. Dance in the warrior kraal II.

512 cleaning of the cattle stalls and other work, as well as to start the
701 cooking of their food, consisting of purchased vegetables. This is
462 eaten around two o'clock in the afternoon (en daã e kat' aré, that
[262] is, the second meal), while then the warriors at the same time
[264] drink the rest of the morning milk, which has already become
[272] somewhat sour (eñg ule naisedjo = slightly sour milk). After that
512 the old women take a nap or busy themselves with sewing and making
535 ornaments, while the warriors along with the girls /90/ amuse
701 themselves with dance and song (os siñgólio) under a nearby shade
tree. For this a row of warriors stands opposite a row of girls. The
former dance in place by slightly lifting the feet and bending the

[Warrior Kraal]

/90 cont./

512 knees. The row of girls moves forward up to the warriors with short,
535 stamping steps, bending their knees and swaying their upper bodies.
• 701 As a rule the dance ends when each girl whose lover is absent ap-
[836] proaches one of the dancing warriors in short high-jumps. This is an
[832] invitation to a rendezvous, which the one concerned answers in
[533] similar fashion as a sign of consent. The dance is always accompanied by singing. Shortly before sunset all return to the kraal.

701
535

Ill. 34. Dance in the warrior kraal III. 1/4 C. G. Schillings phot.

512
701 Soon afterwards the livestock returns home, and, after it is milked,
[234] the people take the evening meal (en daã e téĩba = food in the even-
[264] ing), again consisting of milk. After that the dancing of warriors
[272] and girls begins anew on a small open place in the kraal, close to
[535] the entrance, and is interrupted only from time to time in order to moisten with milk the throats shouted dry. During this time the
512 mothers are still busy with the livestock. It takes quite a while
234

1/4, [Illustrations 34 and 35 (on p. 119), despite the differences in captions, apparently were both taken at the same location, with only a slight time differential--Analyst]

[Warrior Kraal]

/90 cont./

512 before the milking is finished, then the calves are allowed to go to
[234] the cows for about an hour, and finally /91/ the former must again be separated and shut up, so that there will be enough milk in the morning. At ten o'clock it becomes quiet, the people retire into the huts, except for the boys who lie down to sleep on the ground beside the goats.

136 The silence lying over the vast steppe is broken only now and then by the howl of the spotted hyena (Hyaena crocuta), reminiscent of the whistle of a siren, more rarely by the hoarse laughter of the striped hyena (Hyaena striata and Hyaena Schillingsi). Sometimes
825 the roar and growl of a lion can also be heard, and if the latter slinks about silently sometime, one becomes aware of its approach

535
• 701

Ill. 35. Dance in the war camp IV.

825 by the behavior of the cattle: they snort, stamp, and crowd together, or race wildly through the kraal. Then a number of women immediately hasten out of the huts, in order to drive away the beast
000 of prey by shrill, trilling cries (ol gijoi). A few intrepid warriors also

[Warrior Kraal]

224 /91 cont./ A few intrepid warriors also
• 701 leave the kraal, spear in hand, in order to attack the lion, but as a rule soon return unsuccessful.

721 If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol aigwenani). The warriors of a few neighboring kraals have already /92/ promised their participation and have also pressed their speakers, who then all together go to the ol aunoni with whose consent the war becomes a settled matter, for the waging of which only the permission of the ol oiboni is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Masai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

[626] 1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Masai themselves or a competitor to them in the plundering of other tribes -- the ol aunoni or one of the speakers lets himself be carried away to secure a majority for the war by calling the vacillating ones el konono,
[578] that is, blacksmiths. He always achieves the desired result with this, but in the following days may leave his hut only under the protection of influential warriors, in order to avoid assaults on the part of the reviled ones.

721 If they have finally succeeded, however, the leaders of the majority
726 make an end to further debate by invoking the en dorosi, a sort of
714 Rütli oath. /Rütli, a meadow in Switzerland where the first league of the three cantons was formed in 1307./ Then every warrior of the kraals concerned has to put on immediately the visible sign of the

/94 cont./
726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red
[325] earth or wrap them with grass or cloth so that their gleaming in the sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind will be deceiving concerning their direction of march. During the
704 march comradeships are formed by two men in each case, each of
• 701 which calls the other ge tirit ai, that is, my companion. /Ill. 37 ap-
726 pears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the ebg adji en djuré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/95 cont./

726
714
411

Ill. 37. Section camp on the war march.

726 the time for the attack. /96/ The leader of the section is one of the
• [701] above-mentioned benefactors, recognizable by an ornament called
[714] el doroglo or el gabadio, which consists of strings of iron or glass
[431] beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

708 Accompanying the warriors are one or more surgeons (el ahdo, el
726 ahdo), whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

726 Toward midnight the spies (el ajendaisi, el ajendaisi) set out to go to Kabe. On the way they adapt their ornaments in clothing and ornaments as much as possible to that of the Wakabe and hide /Ill. 38 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populace, trading in their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kabe cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

/38 cont./

727 is for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutilated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as *ehay ainin*. But

[1184] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few

[583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child

[579] exactly like his own. A ceremony of adoption does not exist; the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the house lands; in the evening a thorn fence is again built, and at the same time the share of the booty destined for the *of ennemi* is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit earlier. It is called, for example, *Ikiriko*, because men fell on both sides. Other names are *Ishabab* if the provisions in living livestock taken along on the expedition did not lack, and the warriors, out of hunger and contrary to the existing custom, had to eat tree fruit; *Ogbid* if the Ilmoran suffered on the way because of a shortage of water; *Ogolla*, formed from the call *ooolgoin fin*, that is, approximately "only courage, if it is not possible, what does it matter," a frequent saying

[1105] if one believes oneself inferior to the opponent in strength. The next morning, early, before the departure, the leaders distribute the booty

Ill. 41. On picket duty.

/100 cont./

After a battle of the Masai among themselves, the conclusion of peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called enkenchage engilio — exchange of skin capes.

The length of the marches covered on war expeditions, in comparison to that of their neighbors carrying on agriculture, is often astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers, however, that the training of warriors consist only of marching, that, aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry troop. The tales of the caravan people relate miraculous things about the speed and endurance of the Masai warriors, and even European travelers have contributed to the speed of this legend in that they compare the physical performances of the Masai with those of the Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their long migrations. The Masai, however, knows perfectly every little spot of the steppes, he knows every rocky basin, every tiny spring, he also knows where an apparently dry trunk bed carries subterranean water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made out of four-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited by their water content to quench thirst. They serve him, /104/ just as the wild honey, our infusoport in the steppes, also serves as food on the march. A curious bird, the honey indicator (Cuculus indicator, called ol jokoni by the Masai), leads the Masai to the concealed honey holes. As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

701 /104 cont./
182 a little while, will then lead them farther. Otherwise they leave it
222 the rest.
[525] When the warriors of an oi boror notice that their bones are
701 getting old and the ei barnot surpass them in strength, they agree
561 that it is now time to think of marriage. After they have obtained
582 the permission of the speaker and then that of the chief, one after the
other leaves the warrior association, each one shortly before his
701 wedding. He announces his retirement by means of a feast, the oi
561 geteh i oi bäi, that is, or slaughtering with a tournament. To this
574 all the inhabitants of the nearest kraals are invited and are shown
hospitality with the meat of one or several head of cattle. As soon
as these are killed, each warrior cuts off a piece of meat for himself
and devours it behind a bush standing somewhat apart. Then each of
those present receives his share, while the remainder is strung on
sticks two meters high. For these the warriors fight with the girls
and women in a game in which the latter vigorously swing the sticks,
before which the former has more fear than the women, somewhat
[526] accustomed to beatings. Then the younger ones amuse themselves
and play, for instance, tag (tosudja).
[539] Before there is thought of departure, about five o'clock in the afternoon, a married man and his
principal wife go to the host and make the following speech: "adjogi
megur' ira oi morŭsi dada ir' oi mŏrao, iñors ŏ gischu inomu, ŏ gera
inonu, iñors naleñ, tabala 'mbaa ei mŏrao, ida tada oi mŏrao,
tabala n dogirin bŏgin ei mŏrao, ida tada oi mŏrao"; in translations
I say, you are no longer Oi morŭsi, but Oi mŏrao, take care of your
cattle and your goats and sheep and watch over them well, leave the
occupation of the warriors, now you are oi mŏrao, refrain from all
things of the warriors, now you are oi mŏrao.
701 After this feast it is up to the warrior whether he takes part more
561 or less regularly in the expeditions of war. As a rule he soon marries
[582] and lives with his wife either in the father's kraal or in the warrior
kraal until all his contemporaries are married. Only then are they
[591] considered oi mŏrao: each one builds his own kraal and removes
[145] clothing, ornaments, and braid of the warriors. He is now at the end
of the twenties, his best strength has been spent. In general the Masai,
just like all members of the black race, spend their lives very quickly,
they age early, without ever attaining a really advanced age.

/111 cont./

[564] [322] luck and would cause their inhabitants illness and death for man and beast. Even in an emergency one never claims the hospitality [579] [579] of a blacksmith, any more than one ever grants him guest privileges. The warriors coming from blacksmith families do not live in the [701] ordinary warrior kraals, but in the smaller blacksmith warrior-kraal (ol manjata l ei mdrau l ei kononi) and only with daughters of blacksmiths. They do not set out for the battlefield with the other warriors either, but alone, and naturally being alone, since they /112/ are few in number, only a little booty each time, which then often enough is simply taken away from them by the other warriors. An-[582] other Masai does not marry the daughter of an ol kononi, just as the latter's son dare not desire in marriage the daughter of a man who [137] does not belong to the despised blacksmith caste. Even the extra-marital association with a woman or girl belonging to the black-smiths is regarded as disastrous for any other Masai. It is believed that he will sooner or later lose his mind, will never be able to become the father of a healthy child, or on the next field expedition he will be killed by the spear or arrow of an enemy. How despised [784] the blacksmiths are is shown by the fact that a Masai does not dare [792] to pronounce the word "ol kononi" after the onset of darkness (1).

[564] [322] [114] [784] [142]

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the ol kononi, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "It would not have happened if you had not spoken about the ol kononi last evening; we have so often told you this."

361 /177 cont./
233 animals that go forward only with difficulty are carried in the arms.
[561] Boys take care of the livestock driving, under the supervision of
• [701] married men. With each party is found a stronger guard of warriors.
[492] Meanwhile the women are still busy with the loading of the donkeys, on which all the household equipment is packed. More rarely a few oxen or cows must help out. After this work is finished, the herd of donkeys follows the tracks of the livestock. Behind them come the women, girls, and children; almost every one of them also drags along some household object or at least a small-livestock or neat
[701] skin. Oddly enough, a guard of warriors is not found with this party, as there was with all the preceding ones, but rather at most a few old men armed with spears or bows and arrows. Usually the destination is reached on the same day. If this is not the case, however, camp is pitched during the night within a hastily constructed barricade of thorny branches. The next morning the march then continues
361 before daybreak. After arrival at the new site the women immedi-
462 ately start laying out the kraal. First the thorn barricade is laid out, and in the following days the huts are built. Erecting the kraal proceeds very rapidly; as a rule it is finished in a week at the latest. The old kraal was not destroyed upon being vacated. It is left standing and reoccupied later, after the pasture has recovered. Meanwhile, of course, much has deteriorated, so that the work of reconstruction almost equals that of a new installation. In the last
[136] few years, since the sand flea (Pulex penetrans) has become a pest in East Africa, the reoccupation of old kraals is declining more and more. In order to destroy the noxious insects inhabiting them, they are burned when vacated.

000 It is obvious that the European who wants to engage in stock-breeding here cannot move about with his herd in the manner of the Masai. Moreover, a division of the herd in such a way that sufficient grass is present throughout the year within range of the kraal for the individual parts does not seem feasible, and, to be sure, especially because of the difficulty of personal supervision and observation of the sicknesses arising, as well as of isolation in case of an epidemic. An improvement of the pasture by means of

/216 cont./

687 There is no special punishment for cowardice in war. The
[626] warriors, however, mock the coward in front of the girls and make
him ridiculous in their eyes. One who makes anyone ill through
683 sorcery pays a head of cattle to the one bewitched. If the latter
dies, the sorcerer must pay the fine levied for murder and is himself
driven away.

681 The death penalty is carried out in that a band of armed men
attack the defenseless sinner and kill him with spears. For a war
/217/ traitor the execution is carried out by warriors, for an arsonist,
by those injured by him. Fines are usually paid in installments. In
general their amount is not fixed for the individual offenses. In the
one area this, in the other that is regarded as the norm. Diminished
ability to pay because of precious livestock sicknesses or unsuccess-
ful wars naturally lowers the fine. Moreover, if in the district the
fellow members of the lineage or tribe of the perpetrator have a
preponderance in numbers or power over those of the injured one,
the fines are considerably smaller than in the opposite case: then
murder is often punished as negligent homicide, or many a time
even left entirely unpunished, just like other crimes or misdemeanors.
[672] Irresponsibility is regarded as mitigating in some districts, in others
not. An attempt is not punished. Self-defense is not mitigating.
[714] A degrading punishment exists only for the warriors and consists of
[701] cutting off the guilty man's braid-coiffure, as is well known, one
[684] of the insignia of his standing. This punishment is said to be inflicted
[685] most frequently for rape committed on a married woman, less often
also as additional punishment for theft. Innocent accused persons
734 are remunerated with a goat or a sheep. The mentally ill occupy
672 an exceptional position in the legal world only insofar as they are
unable to pay fines. In most cases their people are then liable.
The latter therefore keep in fetters the sick person who is inclined
[755] toward misdemeanors or crimes. Frequently, too, if an ol goiatiki
does not succeed in curing him through magic remedies, he is tied
to a tree at some distance from the kraal, to be devoured by pred-
atory animals.

for Tanganyika.

561 181 (b) Age grade: The age grade system is of great importance in the life of a Masai man, since it regulates his conduct toward other men and women and is the baisis for the political organization of the tribe. The system is also of significant use in dating past events (Fosbrooke, 1954).

721 181 Warfare was of great importance to the Masai prior to the 1900's. The whole social organization of the tribe was built around the production and maintenance of an effective fighting force. Although actual fighting is relatively rare now, the customs and social organization remain basically the same.

857 233 881 561 701 Until his early teens the primary duties of a boy are herding livestock (Fig. 9).[1] Roughly every seven years there are a series of ceremonies culminating in a circumcision ceremony. This ceremony is taken by all the young men of the correct age (roughly in their mid teens), and it produces a class of warriors each of whom is known as ol-murrani, or moran. This is considered the most important occasion in the life of a Masai man, and from then on he is a full member of the tribe. Each group to be circumsized is given an age

[1] [See p. 53.--Analyst]

class name, and is allied with the next (or previous) group, the first being the right hand grade and the other being the left hand grade. After several years the junior warriors go through another ceremony and become full warriors. Their total period of warrior duty may be about 15 years. The warriors are distinguished by their hair style and spear.

The hair style involves a complicated plating of the hair with some combination of cords, pieces of hide or gut, bark, or stick; all liberally plastered with sheep or cow fat and red ochre. Elliott (1948) has detailed the methods and materials used and variations in style between areas.

The warriors' spear is often over five feet long. It has a long, narrow, double-edged blade, an equally long but round and pointed tail, and between them a very short wooden hand grip serving as a shaft. Warriors also carry a flat, double-bladed long knife or short sword called a simi. These useful weapons are carried at the waist in a red leather sheath. Originally the metal weapons were produced by metal-working tribes. They now come from England and the first thing a moran does after buying a spear or simi is to file off the brand name. When in ceremonial dress or at war the

411 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 701 Originally during the period of warriorhood the morani were not expected to do any work except [712] fight. They lived in a separate village, called a [562] manyatta, and were generally taken care of by the [836] unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisors whom they obeyed.

224 Ostrichs were hunted to obtain feathers [223] for ornaments, buffalo and giraffe for shields, and lion [301] for the highly prized mane. Traditionally the moran [411] was expected to blood his spear on a lion. The dramatic 177 Masai lion hunts are famous. (Simon, 1962). At 178 present warfare and lion hunting are illegal. The obvious 561 701 result is a large body of young men with absolutely 224 nothing to do for a period of up to 15 years of what 721 could be the most energetic period of their lives. *[233] They tend the livestock some, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the morani than they did

177 178 224 561 701 721 previously. There is a considerable amount of raiding to steal stock from surrounding tribes. This precipitated several minor wars when we were there, and administrative action prevented one major war with thousands of combatants. Some lions are still killed, and the moranl have been blooding their spears on a variety of other animals, most notably rhinos.

561 Following the period of service as warriors, each age class goes through another ceremony. Two age classes, a right hand and left hand together, take the ceremony and they then receive another age grade name which they retain the rest of their lives. Thus these elder age grades each span a period of about 15 years (Grant, 1957).

177 178 561 Periodically the administration has tried to discourage the moran system. In late years some of the elders have also tried to change the system in order to maintain better control over the young men. The system still continues in Western Masailand but it is much less regular than previously.

561 593 591 When a warrior becomes circumcised he may take his mother with him to the warrior' manyatta, or he may leave her home or apparently even stay home himself.

234 hair styles. The gourds are grown by nearby cultivators
415 and purchased or traded by the Masai. The calabashes
[264] are cleaned between usings by washing in water (if available) and then purified with a mixture of urine and wood ash. After being carried in one of these containers the milk has a rather characteristic, somewhat smoky-sweet taste that may stay with one for several days.

443 The maize meal is purchased or traded from the dukas or trading post cum general stores which are found at Narok, Loliondo, and at other points around the periphery of the area.

262 Meat comes from the Masai livestock and occasionally
272 game. The old traditions laid down specified rules for who in the tribe might eat what kind of meat, and at
[701] what times. Apparently the warriors had a right to demand milk and sometimes meat from anyone, at least in their section. Milk and meat were not to be consumed on the same day, but blood could be mixed with the milk.

701 When not fighting the warriors could carry out
[562] an olpul, or meat camp. They would take goats or a bullock and make camp in the bush, kill and eat the animals. The olpul might take from a week to a month,
[826] depending on the available time and meat. We presume that

701 the principle was that the meat and blood strengthened
[826] the warriors for fighting. We periodically came upon
[252] moran cooking fresh meat. It was usually goat or sheep, although occasionally bovine, and they cooked it either by skewering pieces on green limbs which they held over the fire, or by placing the strips of meat on a wooden
[857] grill above the fire. Youngish children usually
701 accompanied the moran. Gower (1948b:79) notes that in
562 Tanganyika Masailand:

> At an olpul a few moran (warriors) will go into the bush and slaughter a bullock or goats. They take with them a few uncircumcised boys and girls. They camp in the bush for any period from 10 to 30 days, depending on how many bullocks they have to slaughter. For the first few days they eat the meat roasted and cooked; thereafter they subsist on soup. The Masai consider that this diet gives considerable strength.

We never observed moran cooking meat far out in the bush. Usually these feasts were close to a boma.

We were told that eland and buffalo were considered close enough to cows to be proper food for Masai and this was also postulated by Grzimek and Grzimek (1960a)
562 and described by Huntingford (1953:109). The women
[843] apparently could eat game meat, especially gazelles, during pregnancy. From the reception of the meat we brought to bomas, we believe that in addition to women and children elders and a few moran will gladly

/76 cont./

561 According to this, the institution of the age classes together
701 with the existence of the age grades, which were more sharply defined and made more prominent in their meaning by the former, seems so important for the maintenance of a constantly war-ready troop that the thought obtrudes as to whether that institution did not first become formed out of a striving for such a band of warriors.
[703] The warriors' living together as a valuable impetus for comradeship and esprit de corps, in which lies a chief condition for success in war, leads further to celibacy and then to free love; one can see as its sequel the women's society that belongs to an age class. This in turn then is the first step for mother right, of which, indeed, we also find remnants among the Masai.

X.

000 Introduction of the youths to the warrior life. -- Their first war expedition. -- The ol oiboni gives them the name for the age class. -- Shield escutcheon: its individual constituent parts and their meaning. -- The youths become warriors.

701 As soon as the circumcision wound has healed, the circumcised
• 702 exchange the long apron (ol gelí, el gelíni) for the short skin-cape
561 (e megiti, /77/ megitin), again put on their ornaments, anoint their
[291] bodies with red paint and, after they have once more shaved their
[302] heads, set out as el barnot (sing. ol barnoti, formed from barno =
[411] bald-headed), armed with spear, club, sword, and shield, into the bush to celebrate the ol geted l od gutui. Spear, shield, and sword are gifts from their fathers; they have carved the club themselves. As we shall learn later in connection with the warriors, they divide themselves into mess-groups of five or six. In the forest they erect
[342] a kraal of thorns for themselves or even build small huts out of leaves.
701 The festival consists of consuming large quantities of meat and noth-
702 ing but meat. For this each participant furnishes a fat ox obtained
561 from his father, which must be plain-colored, black if possible.
522
[262]
[822]

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments: they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors
or invented themselves, and thus stimulate their imaginations, just as
the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild,
to which also the taking, still strange to them, of various roots and
barks with a nerve-stimulating effect (which will be discussed later),
which they add to the cooking meat, contributes a great deal. All
their yearning is directed toward war and murder, everything in them
is pressing toward killing an enemy, and enemies for them are all non-
Masai. Each of them would like soon to be no longer an ebor alem =
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently
they turn against defenseless caravans if such happen to be in the
vicinity. Whether or not spoils are to be taken in this is of no im-
portance, only killing and murdering, they do not think any further.
Many attacks on caravans have come about in this way. Such op-
portunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to im-
prove themselves in the art of war. They accompany the warriors on
their raids and now and then also take part in their forest meals.
Nevertheless they do not gain admittance into the warrior kraal,
which is just as wounding to their self-confidence as the circumstance
that they are looked down upon by the warriors and treated almost
like boys. The wish to be on an equal footing with the warriors grows
ever keener in them. But they still lack two things for that: the
name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

1. Any gathering for a consultation is called this.

/103 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called etabaschage megitin = exchange of skin capes.

726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptional if one considers,
[702] however, that the training of warriors consists only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[823] water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made
[824] out of foot-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
182 the wild honey, not infrequent in the steppes, also serves as food on the
222 march. A cuckoo bird, the honey indicator (Cuculus indicator, called
[825] eů joboroi by the Masai), leads the Masai to the concealed honey holes.
[136] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it
[825] in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

has a cow, which he looks after and tends, it bears, and by so doing enables him to live, for he can marry, and have children, and thus become rich. 233 181 [556]

Now cattle feed on grass, and the Masai love grass on this account. [824]

82A

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God. [782]

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign. [728]

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them. [703]

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle. [627] [186]

Again, if a man who is proceeding on a journey [illegible] o tree which has [484]

714 531 613 [661] The illustrations give the lineage emblems that the members of the el meruwut age class carried before the livestock epidemics around the year 1890. It furthermore seems that even in the times in which the carrying of lineage emblems was customary they were not generally carried by all lineages, but only by those whose members predominated in number in the part of the country concerned. The practical utility of this mode of procedure was to keep constantly before the eyes of compeers of other lineages the fact that these lineages were particularly strong and that therefore the individual belonging to them was entitled to a larger share of the spoils, in accordance with the principle: might comes before right. The emblem of such a lineage was then also sometimes adopted by all the warriors of that part of the country.

714 531 [703] Those warriors who take the lead in battle, the el kigelani, have the right to carry the emblem of heavy on their shields. This is the small colored emblem that is on the periphery of a longitudinal side and is to be found in Figures 9, 10, 12, 16, and 17 of Plate 1. It is still commonly used today.

[704] The last emblem that may be included in the shield escutcheon is the one mentioned above as the section emblem. By section is to be understood here one of the many small divisions out of which the camp of a troop found on a war expedition is made up. In accordance with its secondary significance, the emblem is not very striking to the eye. A comparison of illustrations 11 and 13, Plate 1, shows an example. These represent the escutcheons of two shields whose owners belonged to one company and within it to different sections.

714 531 176 It is also to be mentioned that both the shield escutcheon as a whole and its individual constituent parts were probably always dependent on fashion and other circumstances of the moment. Sometimes simplicity was fancied, sometimes gaudiness. Sometimes a close feeling of comradeship prevented the carrying of the clique-forming lineage emblem, sometimes internal discord involving grounds of penal law or civil law called forth the opposite. The above-mentioned shield paintings of old men proved to me that the shield escutcheons of a province were uniform during periods of successful warfare. On the [721] other hand, /82/ one can observe almost daily on the bikani wagons that

[Warrior Kraal]

/97 cont./

701 864 [714] [534] fighting, large leg bells (el duelles kiwo), the tinkling of which in the latter instance serves to prevent a going astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

[556] A special position is also occupied by the ñ gdeniani a benefactor. They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive cows for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

701 703 977 According, miserliness is sharply condemned, and a miserly warrior or one who has miserly parents is treated badly and, in case of illness or wounding on the way, is not infrequently left to its helpless.

701 578 [554] Speaker and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to dueling, in which the opponents go after each other with sword and club, but only very rarely [583] wound each other seriously. If this should happen sometimes, in a few districts the wounded one receives from the victor a fine consisting of livestock; in other districts, only if a bone is broken. In [431] general immediately after the duel /98/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also 701 the exchange of the skin caps (e mugin). The matter becomes more serious if one is killed in a duel. Then the father of the victor is then 578 condemned to pay a larger number of cattle. If he hands them over, 682 the affair is settled. If he refuses them, however, the friends of the one killed attack his kraal and rob him of his entire herd. But they have scarcely brought them home before the friends of the one robbed also try to rescue them again. This goes on until they have become tired

/91 cont./

721 *ni ikonk*, the *ni ikonk*. For the warriors this consists of three or four
726 leather strips cut from the apron of their favorite girls, which are
704 adorned with stitched-on beads and, beside them, tied-on pieces of wood
(from twigs of the *ni ewuki*) and *ni ekiki* (cont), while the leaders
wear as *ni ikonk* the borrowed tobacco box of a married man or his
fly switch. The *ni ikonk* obliges every warrior to take part in the ex-
702 pedition. Anyone who nevertheless says away out of fear is most
deeply despised and outlawed; any warrior may kill him without
penalty. In order to give the faintheartedness courage, the most daring
ones set infrequently stick a bell, which has a diameter of 10-12
centimeters and is made out of black ostrich feathers, on the tips of
their spears. Through this they express their firm determination to
attack the opponent and to stand up to him in hand-to-hand combat,
for the bell may be removed from the spear point only by one's running
it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and,
to be sure, only cattle. War is not undertaken for gain and deep.
Boys may go to steal small livestock. Only the capture of cattle is
worthy of a warrior; he only takes small livestock along as well when
he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
722 together betake themselves to the *ni ekiwi* and put before him the
wishes of the warriors. None of the latter accompany them, since
they would behave too uncouthly in the presence of the great man,
who wishes calmness and clarity in the consultations.

721 /92/ The *ni ekiwi* keeps himself accurately informed both about
722 the strength of the individual warrior bands and about all the condi-
tions of the surrounding secretary tribes coming into consideration for
721 a war, so that he is in a very good position to judge accurately the
prospects of victory for either side with great probability. He also
keeps himself posted about unimportant and secondary matters with
regard to the opponent and weaves all this knowledge directly to-
gether in his answer, so that it sounds like a seer's pronouncement and is
taken as such by the speakers and warriors. His answer -- as the
speakers report it -- runs, for example: "You will attack the Kalos
(724) ones: it is strong, and you will therefore first build a twelve-day

/90 cont./

727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutilated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as *ebor ekiko*. But

[718] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few

[515] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child

[577] exactly like his own. A ceremony of adoption does not exist: the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal; in the evening a thorn fence is again built, and at the same time the share of the booty destined for the *ol ponnet* is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, *Ikiima*, because men fell on both sides. Other names were *Ishabab* if the provisions in living livestock taken along on the expedition did not last, and the warriors, out of hunger and contrary to the existing custom, had to eat tree fruit; *Ashef* if the Il ooiyos suffered on the way because of a shortage of water; *Ilgolio*, formed from the call *mwilgolio ilo*, that is, approximately: "only courage, if it is not possible, what does it matter," a frequent saying if one believes oneself inferior to the opponent in strength. The next

[103] morning, early, before the departure, the leaders distribute the booty

Ill. 48. On picket duty.

/98 cont./

727 in shares as equal as possible: one warrior receives as much as the
[103] other, but before that a few head of cattle are distributed as a special reward and first to those warriors who killed an enemy in battle, then to the benefactors (d gamainai), then to the one who captured the first head of cattle and to the spies who went ahead (ol aigedalak), and finally to the wounded, each of whom is entitled to the head of cattle that he marked with the blood gushing out of the wound. The number of cattle that the individual of the ones mentioned receives, except for the last who is entitled to only one head of cattle, is determined by the size of the booty and the proportion of the size of the booty's parts according to the above order of succession. /99/ Every
727 warrior strives as quickly as possible to drive off from the others his
579 share of the booty, but each one also tries to take along with it one or more head not belonging to him. This, of course, gives rise to another brawl, in which there are almost always several wounded men.
[614] If the booty is too small for an equal division, the warriors form two parties, on the one side the Il muleijan, on the other the 'L aiser and Il menjana. The former have as slaughtering cry the term pôo mulgi = the red cattle, the latter the term nanok gered = the black cattle, after which they are also sometimes named (for example, I heard it in songs). A fight decides which one of the two parties receives the entire booty.

722 At home in the kraals it was very quiet during the warriors' absence. After the farewell, those remaining behind went home, each somewhat heavy-hearted in the anxiety about a son or lover, which, however, was soon more or less pushed into the background by the expectation of the spoils that they would bring back. Soon after the farewell the old man was again
[237] squatting in quiet contemplation in front of
[136] his hut and chasing away from his face and head, also as before, with a fly switch (ol enjua, el enjuai) (Fig. 20/) consisting of a gnu's tail, the flies constituting a veritable
[782] plague in the Masai kraals. Then he took a hair from the switch and made a knot in it for each of his sons who had gone to war.

Fig. 20

714 531 613 [561] The illustrations give the lineage emblems that the members of the *ol meruturut* age class carried before the livestock epidemics around the year 1890. It furthermore seems that even in the times in which the carrying of lineage emblems was customary they were not generally carried by all lineages, but only by those whose members predominated in number in the part of the country concerned. The practical utility of this mode of procedure was to keep constantly before the eyes of compeers of other lineages the fact that these lineages were particularly strong and that therefore the individual belonging to them was entitled to a larger share of the spoils, in accordance with the principle might comes before right. The emblem of such a lineage was then also sometimes adopted by all the warriors of that part of the country.

714 531 [103] These warriors who take the lead in battle, the *ol ligelumi*, have the right to carry the emblem of bravery on their shields. This is the small colored emblem that is on the periphery of a longitudinal side and is to be found in Figures 9, 10, 15, 16, and 17 of Plate 1. It is still commonly used today.

[104] The last emblem that may be included in the shield escutcheon is the one mentioned above as the section emblem. By section is to be understood here one of the many small divisions out of which the camp of a troop found on a war expedition is made up. In accordance with its secondary significance, the emblem is not very striking to the eye. A comparison of illustrations 11 and 12, Plate 1, shows an example. These represent the escutcheons of two shields whose owners belonged to one company and within it to different sections.

714 531 178 It is also to be mentioned that both the shield escutcheon as a whole and its individual constituent parts were probably always dependent on fashion and other circumstances of the moment. Sometimes simplicity was fancied, sometimes gaudiness. Sometimes a close feeling of comradeship prevented the carrying of the clique-forming lineage emblem, sometimes internal discord involving grounds of penal law or civil law called forth the opposite. The above-mentioned shield paintings of old men proved to me that the shield escutcheons of a province were uniform during periods of successful warfare. On the [121] other hand, /as/ one can observe almost daily on the Masai steppes that

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with it. Many of the latter smear themselves on forehead and cheeks with
726 [237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[325] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other ge ngiti ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the ohg adji ea dipuré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

Ill. 38. Last instruction of the warriors before the battle.

726 The warriors have broken camp about four or five o'clock in the morning and after sunset reached dense bush one to two hours away from Kabe, where they now camp. They are highly elated about the information from the spies, rich booty now indeed seems assured. Soon after midnight the battle march is begun. The warriors split
726 704 up into five different troops. The el ebata (sing. el ebat) hurry ahead as patrols and, having come close to the goal, hidden in the foliage of tall trees, take /97/ a look around: following them at a distance of a few thousand meters, each led by an el oiboni, are the three or four divisions of the el ónoi (sing. el ónoi) = buffalo, each of which goes in another direction toward the battle area. They consist of the most daring men, and the success of the attack depends primarily upon them. Behind the el anoi, swarming out at some distance, follow the largest divisions, the el dimito (sing. el dim) or herds, the flanks of which are made up of picked men, the el

/97 cont./

726 emouerak (sing. ol emouo) = horns. As soon as the ones in front
• 70L come across livestock, they call the others by long drawn-out dr
[72] shouts, so that they will round up the booty, which consists only of livestock. While the el aroi engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

78
78-

Ill. 39. Prayer before the battle.

72 booty away from the el dimito again. In connection with this fight-
70 ing there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the el dimito and pushed toward the steppe, out of the hostile area. The fourth troop, the el kigeiónì, seeks to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the os sioki, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The el dimito and el kigeiónì strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp. [727] Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon every warrior receives a portion of meat. The warriors /98/ must 727 lay out a fence of thorns so that the livestock is safely sheltered in 417 it for the night.

/95 cont./

726
714
411

Ill. 37. Section camp on the war march.

726 the time for the attack. /96/ The leader of the section is one of the
[701] above-mentioned benefactors, recognizable by an ornament called
[714] el dorogên or el gabatên, which consists of strings of iron or glass
[431] beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

• 708 726 Accompanying the warriors are one or more surgeons (ol abâni, el abâk), whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

726 Toward midnight the spies (ol aigedalani, el aigedalak) set out to go to Kahe. On the way they adapt their externals in clothing and ornaments as much as possible to that of the Wakahe and hide /Ill. 38 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populace, trusting in their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kahe cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 (People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up

[177] inside a hyaena. The administration frowns on this

[178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 <u>Food:</u> Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho

237 (maize meal), milk, meat, and occasionally blood. The

462 cows and sometimes goats are milked by the women and little

234 girls. The milk is collected in large calabashes. These

415 calabashes, ochre colored and sometimes ornately

[531] decorated with beads, are almost as much a symbol of the

[384] Masai as the ochre blankets or cloaks, moran spears and

[291] hair styles.

44 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 701 Originally during the period of warriorhood the moranii were not expected to do any work except fight. They lived in a separate village, called a manyatta, and were generally taken care of by the unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisers whom they obeyed.

712 542 836

224 Ostrich's were hunted to obtain feathers for ornaments, buffalo and giraffe for shields, and lion for the highly prized mane. Traditionally the moran was expected to blood his spear on a lion. The dramatic Masai lion hunts are famous. (Simon, 1962). At present warfare and lion hunting are illegal. The obvious result is a large body of young men with absolutely nothing to do for a period of up to 15 years of what could be the most energetic period of their lives. They tend the livestock some, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the moranii than they did

Oo too ahili oo-lyoo, ooiyiblioni lo-'L-ligwoni ol-power tijo ol-epooy, o ol-oolooo tijo.

Concerning the shields and spears of the Masai warriors.

The warriors' shields are not all of one design; they differ.

Each age and each sub-district has its own design.

In consequence, if he warriors meet an enemy, it is known to what age each a one belongs and also to what sub-district.

There are four markings for the shields, the red one, th black one, the ornamental one, and the one for bravery *.

Likewise with the spears, they are not all marked alike.

If a spear is found, it is to be ascertained by looking at th lower part to what age and also t what sub-district its owner belongs.

'L-emoni loo-'ro-loos oo-'L-mirook loo-'L-Masaaa.

Eeiro 'L-mirook i-eiroi lenya loo-'ro-loos oooos ooiro 'L-mooran loo-'ro-ldria.

Too ahili oo-loos, ooiyiblioni ol-ejl lo-'L-epooy o ol-oolooo lenya.

Concerning the arrows of the Masai elders.

The old men have spiral marks for their arrows as the warriors have for their spears.

If an arrow is found, its generation and the sub-district to which its owner belongs can be recognized.

* The Masai make use of four colours in ornamenting their shields—white, red, black, and gray. White is obtained by mixing water with white clay; red clay mixed with the juice of the Asiaoom euphorbiaceous, Kirikiri, produces the red paint; black is procured from the ashes of diverse sorts, Pakii, or from charred pumkinrin and gourds; and gray, which is but rarely used, is obtained from ashes.

Children are very fond of various kinds of fruit, which are also eaten by the old people, but the latter do not care for them very much. 262

Formerly the Masai, when they had plenty of cattle, ate no other kind of food, but nowadays they often have to eat savages' food, such as maize, rice, bananas, and cereals, for they no longer own the vast herds which they formerly possessed[1]. [198]

They, however, do not eat everything. They eat neither birds, nor fish, nor the flesh of wild animals.

Il-ehalgit.

Kenya 'l-Masaai 'l-ehalgit ego eiun eata 'a-gidoo pikin; kake eiun kulikae ainu taata 'l-ehalgit anna 'l-Turtle, anre ainuiiata 'a-gidoo.

Wild animals.

The Masai ate the flesh of no wild animals when in olden days they all had cattle; but some of those who have lost all their cattle are now beginning to eat venison, like the Dorobo. [198]

If Masai boys kill elephants, they only take the tusks, which they exchange for cattle.

When buffaloes are killed, the hide and the horns are kept. From the former the warriors make their shields, and from the latter mortars are cut in which medicines are ground. The medicine-men also use the horns to put stones in for their prophecies. 339 [314] [315] [317]

[1] It was recently estimated that the Masai in the Naivasha Province own [illegible] head of cattle and [illegible] goats and sheep. Those living in the Uganda Province and in German East Africa are, however, much poorer, most of their cattle having died of rinderpest some years ago. [213] [194]

[2] The northern Masai sometimes use e-ningir (pl. i-ningir) for a fish. The southern invariably use e-ningiri (pl. i-ningir).

GN 515 192 head than others. The most aristocratic of these clans are the Ngojé-Masai, Matiliani, Lpusuk, and Lotuyo. These have the finest physical development, and are undoubtedly superior to the others in the shape of the head, the less depressed nose, and thinner lips. Indeed,—but for the prominence of the cheek-bones, a tendency to a Mongolian shape and upward slant of the eyes, the chocolate-coloured skin, and the hair with a tendency to become frizzy—they might pass muster as very respectable and commonplace Europeans. The Ngojé-Masai are the purest breed, and are to be found chiefly around Kilimanjaro. The most degraded tribe physically is that which is known to the coast traders by the name of Wa-kwafi. They seem to have acquired a strain of negro blood, as will be perceived by an examination of the photograph of the Masai of Lykipia (p. 208). The higher development of the Ngojé-Masai is seen in the photo of an aristocratic woman of Njiri.

GN The country is divided into about ten principal districts, such as Sigiroi, Njiri, Matumbaini, Kaputi, Dogilani, Lykipia, Gnar' Ngidon, &c. The various members of the race are generally designated by their native districts. Various clans [204] may be found occupying the same district, but they usually keep in distinct kraals. Hence they speak of the "El-Masai Matumbaini," or El-Masai Kaputi. Each district also is further distinguished by having special heraldic devices on the shields of the warriors, painted with wonderful skill and taste in black, white, red, or yellow colours. Between the various sections of the tribe there is not the slightest schism. [194] [195] GN [62] Wars among themselves are of constant occurrence, though when a state of war is not declared, they are on the most friendly terms,—their feuds not being of that deep-seated character which distinguishes those of semi-civilized lands.

GN [62] 194 Of these internal wars some have been so disastrous or so ill-organized as that between the main mass of the Masai and the Wa-kwafi (I here use the name for convenience). The original home of the latter was the large district lying between Kilimanjaro, Ugono, and Pare on the west, and Teita and U-sambara on the east. This large region is known to the Masai as Mbaruni. Some fifty years ago the Wa-kwafi were numerous and strong, able to hold their own against all comers. About 1880—so far as I can gather—a series of misfortunes fell upon them. In a great war-raid against the Wa-gogo to the south they suffered a severe repulse, and great numbers were slaughtered. The same

1. [and pre-eminent.—Ed.]

6:Thomson K-3 (1883-1884)1887
F112 Maasai F112

ing to his father to learn something about his origin, and this I believe he—among other stories—what he was told. The primal ancestor of the Masai was one Kidongi, who lived at Dongo Eghol (Mount Kenia), was hairy, and had a tail. Filled with the spirit of exploration, he left his home and wandered north. The people of the country, seeing him shaking something in a calabash, were so struck with admiration at the wonderful performance that they brought him women as a present. By these he had children, who, strangely enough, were not hairy, and had no tails, and these were the progenitors of the Masai. As Moran had not heard anything of the theories which were convulsing scientific Europe and America, he remained ignorant of the fact that he had struck upon an interesting legend which the savants of civilized society would have given their hearts to verify.

Meanwhile Moran practised with the spear, and killed innumerable imaginary enemies. He listened intently with beating heart to the stories of daring midnight and sanguinary fights, but as yet he could only dye his spear in the blood of an antelope, or, it might be, of a buffalo. His food still continued to be that of a non-fighter, namely, curdled milk, maize, or millet, and meat. But vegetable paste was the meat of women and children, and he loathed it, though he ate it.

As he approached the age of fourteen he began to develop a truculent and ferocious expression, instead of making himself sick in the attempt to smoke a cigar, or examining his upper lip in the glass, as a lad of proper spirit in England would have done at the same age. It is quite laughable to think of Moran trying to look dangerous, frowning his brow, and generally cultivating the fierceness. And really, I am told, he was the admiration and the envy of all the Lion (Iseye) of the district, and quite was the heartie of the girls.

At last it was agreed that Moran had become a man, and was fit to be a warrior. A certain rite, better known in Africa than in Europe, was performed; and Moran was no longer a boy, he was an Elmoran—a warrior. His father, who was wealthy, resolved to rig him out in the height of military fashion. For this purpose they journeyed to a neighbouring settlement of Ambowiko—a clan who are despised heartily by their distant relatives, the aristocratic Masai, on account of their ignoble mode of gaining a livelihood by the chase. After making the Ambowiko quake in their

6:Thomson G-3 (1883-1884)1887
FL12 Masai FL12

§§ sandals, they chose a handsome shield of buffalo hide, beautifully made, elliptical in shape, and warranted to stand
[79] a tremendous blow from a spear. The price being asked, a bullock was mentioned as the very lowest cost price. But the unfortunate maker had to be content with a scraggy sheep—and a blow. This purchase accomplished—for the Masai never trade shields or spears, though there is nothing in the possession of which they pride themselves so much—
§§ they returned to the kraal, and then called for an El-komono.
§§3 This is an inferior race kept in servitude to the Masai, for whom they make spears and swords. They do not go to war, and are not allowed to intermarry with their superiors. They all speak Masai, though it is believed they have a language of their own. In response to the call a miserable, half-starved object appeared with a selection of most
§§ murderous-looking weapons. After a careful examination
§§ Morua selected a spear, with a blade two feet and a half long, a wooden handle fifteen inches, and a spike at the end about one foot and a half. The blade had an almost uniform width of from two to three inches, up to near the top, where it abruptly formed a point. A sword and a knobkerry of formidable appearance completed his warlike equipment.

§§ These important acquisitions made, our hero now pro-
[302] ceeded to dress himself up as became his new character. He first worked his hair into a mop of strings, those falling over the forehead being cut shorter than the rest. Instead of the ivory ear-stretcher hitherto used, he put in a swell
[303] ear ornament formed of a tassel of iron chain. Round his neck he put a bracelet of coiled wire, and round his wrists a neatly formed bead mitten. On his ankles he bound a strip of the black hair of the *colobus* (monkey) of Central Africa. A glorious layer of grease and clay was plastered on his head and shoulders. This completed, he donned a very
[304] neat and handsomely decorated kid-skin garment, of very scanty dimensions, which served to cover his breast and shoulders, but hardly reached below the waist, and thus *stood forth* the complete military masher, ready for love or war.

§§2 And now the great step of his life was taken. Thus far he had lived in the kraal of the married people, and accordingly had to comport himself as "only a boy." Now he proceeded to a distant kraal in which were none but young, unmarried men and women. To keep up his dignity and supply him with food his father provided him with a number

726 ever, a party had been sent to the chief *lybon* of the Masai —Mbaruton—to seek advice as to the time of their start, and to procure medicines to make them successful. On their return the party mustered, and set off. It was a remarkable sight to behold these blooded young cut-throats on the march, and it is almost an impossibility to convey any clear picture of their appearance in words. The Frontispiece illustration, however, will help to some extent.

724 Let us pause and in imagination watch some enthusiastic
726 young dilis buckling on the armour of her knight. First there is tied round his neck, whence it falls in flowing lengths, the *sikhwit*,—a piece of cotton, six feet long, two feet broad, with a longitudinal stripe of coloured cloth sewed down the middle of it. Over his shoulders is placed
[237] a huge cape of kite's feathers—a regular heap of them. The kid-skin garment which hangs at his shoulder is now folded up, and tied tightly round his waist like a belt, so as
[302] to leave his arms free. His hair is tied into two pigtails, one before and one behind. On his head is placed a remarkable object formed of ostrich feathers stuck in a band of leather, the whole forming an elliptically-shaped head-gear. This is placed diagonally in a line beginning under the lower lip and running in front of the ear to the crown. His legs are ornamented with flowing hair of the *sikhwa*, resembling wings. His bodily adornment is finished off by the customary plastering of oil. His sink or sword is now attached—it does not hang—to his *right* side; and through the belt is pushed the skull-smasher or knobkerry, which may be thrown at an approaching enemy, or may give the coup-de-grâce to a disabled one. His huge shield in his left hand and his great spear in his right complete his extraordinary equipment. For the rest you must imagine an Apollo-like form and the face of a fiend, and you have before you the beau-ideal of a Masai warrior. He takes enormous pride in his weapons, and would part with everything he has rather than his spear. He glories in his scars, as the true laurel and decorative marks of one who delights in battles.

726 With astonishing hardihood, Morus and his comrades, thus terribly armed, shaped their course towards Swahili-
[691] land; for, strangely enough, they have found that they can lift the cattle with greater impunity there than anywhere else—in spite of the Swahili guns and a large population. The reason is the complete absence of anything like patriotism or public spirit among the coast people. Their argument

is called an *ol-oroi*. The boys may carry bows for defence but not spears, for it is said that a spear is a sign of force, and their quest is a peaceful one. Each boy must carry a bow, for the bow is a token of peace. Furthermore it ensures that any reasonable request the boys may make during the *ol-oroi* will be granted. Ile Mami may refuse the request of one who carries a bow in his hand. The boys take no arrows with them. They visit all the principal villages and in dance and song they announce the object of their visit. They then seek out all the bigger boys of the village and add them to their number. If they wish to spend a night at a village they beg an ox for food from the elder of their sponsor's age-group. Elders of other age-groups present them with milk to drink. In this way the news is spread far and wide and finally the boys, now of considerable numbers, return to the elders who despatched them, taking as a gift a large quantity of honey. Then a special village is erected in which only the boys' sponsors and their families may live. The boys borrow ostrich feathers and lion mane head-dresses from the warriors and on the appointed day they collect at the elders' village.

The ceremony commences with a dance called *enghejia*; for this the boys form three files, one wearing ostrich feather head-dresses, the second wearing lion mane head-dresses, and a third, of boys who have decorated their bodies with broad stripes of white earth to resemble zebras.

The latter must be quite nude; those who wish may wear thighbells. They may not carry weapons of any sort, but each carries a thin wood, the length of a spear. After much dancing, the boys form a procession and walk round inside the circle of bois following two leaders, one of whom blows a Kudu horn from time to time. The procession then halts and the leader prays aloud to *Engai Narok*—the Black God, to shower his blessings on the boys. This prayer has been taught them beforehand by the elders, some of whom stand by and prompt when necessary. When the prayers are over, the elders take the boys outside the village and spend some time instructing them in their duties to their sponsors and to the tribe. A return is then made to the village and the elders bring a fire-stick, the one called *el-piron*, also a metal circumcision knife and a small dead bird. This bird may be of any kind other than a dove. The elders break the fire-stick before the assembled boys. They then place a cross upon the circumcision knife and taking the dead bird they break one of its legs and pierce one of its eyes—apparently as an indication of the ill which will befall any boy who dares to be circumcised before the cross is taken off the knife.

In this way, the elders formally lay claim to the ownership of a new age-group. From that time the boys refer to their sponsors as *Il-piron*, whilst the elders refer to the boys as *Il-piron*.

8:Whitehouse U-3 (no date) 1933 FL12 Masai FL12
l'Sigirari

561 lands. They are followed by the moran and the women who not built to mark where the elder has walked. When the circle is demarcated, they set to work to build a thick thorn fence to enclose the village. By the time the work is finished, it is evening. A special piece of olive wood is brought in readiness. The log used in a recent ceremony is described as being four to five feet long, and of the thickness of a man's thigh. It had been part of the trunk of a tree, not a branch. A tree leaning in the direction of the rising sun had to be found. When it was cut, it had not to be allowed to fall to the ground.

In the evening before the cattle return, the olive log is brought and one end is placed in the fire. The wood is ——— and as the log burns away it is pushed further into the fire. The mothers of the moran each come with four small pieces of olive wood to light at the fire; this they take to their temporary hut made of hide to start their fires. No other source of fire may be used. Great care must be taken that the log is burnt completely. A olive guard is kept over it to prevent the cattle from disturbing it and to prevent evil-wishers from taking away the log to make black magic. The moran guard the log through the night and the morning.

In the morning all the moran come and form a circle round the fire; they bring their spears, and wear lion-mane and head-dress. Four elders of known good character, with wives and children, then walk round the moran; two walk one way, two the other. One of each pair has a gourd of milk, the other a gourd of honey wine. As they walk they fill their mouths with milk or honey wine and blow it on to the sitting moran.

561 Each girl has a slipper of green grass which when removed is
534 held in the left hand, the gourd in the right. As the liquid is sprayed,
1 as in the green grass waved toward the moran. As they walk the
elders call down the blessing of the Engare-Narok.

Engai!

formulæ. These bird skins, been fixed to the hair of the head, may not be removed until the general hair-shaving ceremony, when the hair of each novice is shaved off with the skin attached. During the period of the novitiate the boys are known as *ilaitoni* and are free to go anywhere "like women," and, in fact, may even visit the *manyatta* or warrior villages of the existing warrior groups with impunity.

There are special dances, called *osiapolos*, which are danced by the novices alone. [535]

The Shaving Ceremony.—When at length all the candidates have reached the novice stage, the shaving ceremony, which marks the end of the novitiate, takes place. For this ceremony the novices are assembled in territorial groups, and each boy has his hair publicly shaved off by his mother (or in the event of his mother being dead, by another of his father's wives). This shaving ceremony is accompanied by the killing of a ram for each novice, after which his father presents him with a spear, shield, sword and knobkerrie, which are the insignia of his new status as a warrior.

541

Part III.—Warriorhood.

The Age-Group System.—The general word denoting an age-group is *ipuriaini*, and this word is liable to cause considerable confusion unless very great care is taken, as it denotes in a general way several widely different forms of age-groups. All those warriors who pass from the novice stage to the warrior stage at the same time—in fact, all those boys circumcised between a single co-mining ceremony and the succeeding hair-shaving ceremony—are grouped as members of a single age-group which is given a name which lasts for life. Besides this permanent name, however, the age-groups during the warrior stage are known by the alternating names of *ponjiendoo* and *mwanyapilongo*. [541

There may never be more than three age-groups in the warrior class at the same time; and also, a group with the name of *ponjiendoo* must always be the senior warrior group. This, in effect, means that a single age-group cannot be promoted from the warrior class to the elders' class, but that two groups, a *ponjiendoo* and a *mwanyapilongo*, must move out together, leaving the next *ponjiendoo* or senior age-group in the warrior class, and temporarily the only age-group in the class. As soon as the two senior groups have moved out together, the next group, already in the novice stage, transfers into the warrior class with the name of *mwanyapilongo*, and in due course yet a third group will be initiated and enter the age-group as *ponjiendoo*, after which no further transfer of a novice group can take

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group; these all belong to the Il-Kidogi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputei at Ngong (now living among the Lelali), the Kiserian, Il-Aikipiak, Il-Waanto-Aiten and Isinkan also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were* (1) to mention war and to provide protective medicine for those taking part in it; (2) to authorise the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical force for tribal activities. Many laibons also practice witchcraft (as defined above, p. 38). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

When the warriors of a *enkiri* wanted to raid, they approached their *el-aiyanani*, who planned the attack and arranged for the co-operation of other companies if a big raid (*el-oswa*) was intended. The *il-aiyanani* concerned then went to the laibon to get his mention and protective war medicine. Before agreeing, however, the laibon consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in way also getting drunk. The warriors then went to their *il-piol* and hunted on meat to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the east, the Nyika being a frequent objective; Thomson was told that a Masai patrol was once sent to Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the *manyata*, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-ao-ruk-kiap* and *il-ao-do-ongi*, "the black ox" and "the red ox," and fought for the spoil. Small raids, *el-ewanda*, carried out locally by one *enkiri*, were not referred to the laibon, who received no share of the spoil.

Wars between Masai tribal groups were frequent, and formed one of the factors in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmenteita, where two large collections of warriors (in all the number is about 2,000 on each side) were camped a short distance from each other, one camp being that of the Kaputei, the other of the Il-Aikipiak. A detachment of picked men from each side would come out and fight a pitched battle, charged on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Armed with meat, and in the panoply of ostrich-feather head-dress, caps, glittering spear, shield, sword, club, painted face and leg ornaments, the Masai warrior left himself more than a match for anyone.

Prisoners were not often taken, though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed, women seldom. Peace was made by a formal ceremony at which running embers

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

631 chief; but in that year it was recognized that he was in fact no such thing, and the
699 native administration was reconstructed with 14 Native Councils, one for each division (Il-Purko, Il-Dosset, etc.), to replace the original council of the *el-oike*. These Councils were composed of *il-aiguenak*, elders, and senior warriors; and the presidents of each formed a Central Masai Council which met twice a year. Under the Councils were 40 headmen, some of them *il-aiguenak*. The Reserve was divided into nine locations, the numbers of headmen varying according to the population of the locations. In 1930 these Councils were replaced by a Native Tribunal and an Appeal Tribunal in each of the two administrative districts, Narok and Kajiado, into which the Reserve was then divided. The headmen were divided into two grades, headmen (styled *chiefs*) and sub-headmen.

In Tanganyika, the laibon was at first regarded as the head of the Kimaiko; but since this recognition proved unsatisfactory to the people themselves, a Masai Council was formed as Native Authority, consisting of headmen and elders, but possessing only advisory powers. Later, a local council was set up in each area with representatives of age-sets and clans on it; representatives of each local council sit on the Masai Council. There are 41 paid headmen.

MAIN CULTURAL FEATURES

Camps

Housing

342 The Masai hut, *enk-ayi*, pl. *enk-aiyiik*, is a low structure with a flat or fattish
361 roof. It is made of a framework of poles which are bent over and tied together. The interstices are filled with grass or brushwood, and the whole, including the top, is plastered over with mud and cow-dung. In wet weather holes are laid on top to keep out the rain. Huts are not isolated, but are grouped together in kraals. (See above, p. 107.) The huts of the agricultural Il-Tatoga have thatched roofs of the normal East African pattern (p. 111). A temporary skin hut called *el-gulwo* is used for a temporary halt where pasture is poor.

Dress and Ornaments (Traditional)

• 714 Warriors wear a small cape, or goat-skin cape tied over one shoulder, and a small back apron of skin fastened to the belt. Their battle-dress consists of a headdress of ostrich feathers or of lion-skin, a cape of vultures' feathers, a cap made of a goat's bladder, a calf-skin garment, leg-ornaments of monkey-skin, and a piece of goat-skin fastened to the belt. The distinctive warrior's ornament is the long
[306] arm-sheath called *e-ewap*, which has two points sticking upwards and is worn on the upper arm. Warriors also wear ear ornaments, necklaces, bracelets, and leg-bells. A type of garment called *en-kowo* is worn by warriors on certain occasions: Hollis says when going on a raid after sharing an *el-amoni* (*el-ohoni*). Elgon Tatoga call Masai, when they go on a raid after finding a vow to conquer or die. Elders wear
291 skin garments fastened over one shoulder; rich elders wear ivory arm-rings. Boys
[356] wear a sheepskin.
301 Married women wear a skin cape and a skin skirt held in place by a broad belt.
291 They wear coils of iron wire on the arms and legs, often on both the upper and lower arm, and iron bars to ankle. All married women wear flat discs of coiled
301 iron wire, *e-ewuka*, hung by straps from the ear-lobes (like the Dinka neck), and some wear wide collars made of coiled iron wire which stand out round the neck, and are about 6 or 8 ins. wide. They also wear a profusion of necklaces and neck ornaments. Girls wear skin garments tied at the shoulder and fastened round the waist with a belt. They also wear coils of iron wire on the arms and legs, and necklaces.

Warriors do their hair in pigtails, of which other people of both sexes shave their heads periodically. In both sexes the earlobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes.

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of others), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and armlet-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "sword-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged spear is important: senior warriors have black shafts, others reddish-white, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsigis, Kisya, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them.

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 203 is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums.

Beliefs and Dreams

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky), the to ancestor-worship, it is generally said that the Masai do not believe in an after-life (and also of the Ude); but the alleged belief that the soul of a believer or rich man lives (as a snake) implies some belief in the survival of the soul. This matter needs further investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the father who died c. 1900; then Thomson heard the Il-Kidongo prayer to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Naiterukab," which Thomson thought was an earth-spirit, appears in Krapf's book as the Naiterukab, "the mediator between God and men." But the Masai word naiterukab means no more than "that which keeps the earth," and this would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *O-ngie*, the moon, is grammatically masculine.

Death and Burial

The bodies of most people are put out for the hyenas, to the east of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The

/91 cont./

553 lacking such, some older men of her lineage or tribe, given it to him. The festival that is celebrated in this connection is very similar to the one described above at the first name-giving, but considerably more sumptuous. It is never lacking, whenever the other one is often omitted.

He receives his next name as a warrior, after his return from a campaign in which he has killed or seriously wounded one or more enemies. /92/ In full battle array, but without weapons, the warriors assemble toward evening in their kraal; they meet together, with a large number of young girls standing around, while those of them who are to receive the warrior baptism perform war dances with astonishing endurance, spear and shield in hand. After the new names have been agreed upon and have been called out to the men concerned, they are celebrated in impromptu verse. The names refer to warrior virtues, military events, or even concerns that the men honored today were on the last campaign. This festivity is repeated on each of the next two or five days in a neighboring kraal, to which the men newly named wander with a number of their comrades and a crowd of young girls. Thus the new names quickly become generally known and familiar.

[519] [536]

551 Names that the mother or father give to their small men, besides the men previously mentioned, are the following: Kuga = the long one who can reach up high; Lewiga, from ra ngulugi = two eyes; Nimaga, after the like-named men; Ikalu, after a former chief of this name; Ikwelim, after the cloud of dust that the cattle stir up while being driven, may the men acquire as many cattle that their cloud of dust is very great; Ci ngwelim = pan, the copper coin commonly used in New Africa and worth two pfennigs. For a time it was very popular among the Ikwai as an amulet and was worn on a small chain or on wire in the upper rim of the ear; Lehelch = thick lip. Names that boys received as principal names at the age of four or five are: Lemwai = the clever one; Kalaga or Ialing = the fat one; Nwendei = the gun-with-stolen; Kwiga or Nwenga = darling; Ngwila = given by God; Nwiimi, after a new called ciimi, whose

[601]

/??? cows/

of all the age-fellows to fire convened, so that they /??/ may choose a delegation from their midst. To it belongs in the first rank the species, then a rather large number of the strongest and handsomest ol bemen. All are provided with rich adornment, as well as beautiful weapons. Each ol bemen has brought along a fine herd of cattle. The large herd formed by this is taken along by the delegates as a gift for the ol ximani. When they have then presented their request to the mighty one, he directs them to come the next day, when he imparts the answer by giving them, for example, the cows ol gielian. The cows circumcised during the period from 1896 to 1901 were given this one. It is supposed to ensure the generation after them contented and impoverished by the rinderpest. After the

(2. 3). Shield swordsmen of the kraal.

delegation has been dismissed by the ol ximani, they return to their native kraals. At a gathering again held there, all learn the new season and then consult about the choice of a shield swordsman.

/79 cont./

• 714 93 [322] These consist of curves, series of circles, lines and scallops, which are painted on the shield's surface in three colors. Pompeius: red, black, and gray (1).

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs stand out in sharp contrast. One uses for this the red earth mixed with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black, pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

[322] [324] [324]

714 93 [324] [324] Today considerable confusion in the shield escutcheons slowly prevails. The more the war expeditions of the Mexi become, thanks to European domination, the more the old formalities of warfare are dropped off, and ancient rules, which formerly were never transgressed, are today all too often ignored; their purpose has lost its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lerma-Zacatecas civil wars, in which, for the first time, long-lasting struggles between the Mexi are taking place. The confusion in the escutcheons is not of itself unknown or here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 93 A shield escutcheon (Plate I) may contain 1. the red escutcheon (or mere' ocelotl), 2. the black ocelotl (1).

1. To which the rare gray also belongs.

3. the commonest head (or eagle [or eagle]), 4. the escutcheon of the lizards, 5. the emblem of the serpent, and, finally, 6. an emblem

6

/78 cont./

• 714 which only the brave are entitled to wear, the *ce ovoro i ci bigiong*.
531 A shield emblem is complete if, in addition to the ornamental band, it also contains the red warrior-emblem.

The ornamental band is the stripe painted in the longitudinal diameter of the shield. Actually *ce mgiko* is the name of the cowrie shells that, sewed on leather strips, adorn the gourd bottles. The similarity of such an ornamental band with the longitudinal stripe on the surface of the shield explains the Mawri word used for this and my translation as ornamental band. The drawing of the ornamental band is unimportant and is often subject to the caprice of the moment. Considerable differences exist both between the provinces and within the individual case.

714 531 634 184 The most important emblem on the shield of the warriors is the red warrior-emblem. Three forms of it are distinguished: the double wedge (Plate 1: Figs. 2, 4, 6, 8, 13, 14, 15, 17) along the ornamental band belongs to Kiwaiga Province, the segments of circles (Plate 1: Figs. 5, 7, 16, 18) on the ornamental band are the emblem for Lalia Province, and the peripheral emblem (Plate 1: Figs. 11, 12, 19) shows that the bearer of such a shield belongs to Ci Bragga Province. The warrior emblem is either on both halves of the shield or only on one: the former is the rule in Ci Bragga and Lalia, the latter /78/ in Kiwaiga. Lalia and Kiwaiga, however, show more exceptions. If the red emblem is painted on both halves of the shield, the one half shows the mirror image of the other, so that a symmetrical double emblem results, the center line of which is formed by the ornamental band. According to my explorations, this seems to have been the fashion especially after heavy-rich war expeditions. On the other hand, where the red emblem is found on only one side, the other half of the shield shows one or two large, black, bow-shaped emblems (Plate 1: Figs. 2, 3, 8, 13, 15, 17, 18). These are commonly found in Kiwaiga, where they have been customary for as long as the memory of the people extends. They are seen in Lalia /11. It appears here/ and, to be sure, really only since the death of Ishoyan. Ishoyan resides in Kiwaiga, and his bodyguard consisted of Kiwaiga warriors. After his death Zandua put together a guard made up of Lalia warriors and also stayed largely in Lalia in order to avoid the

/90 cont./

31. 30. Shield escutcheons of the Ainu.

influence of the Ainu's military series heros. The answer to the question concerning the meaning of the Ainu's bows are always merely that they probably served as ornamentation. Here, with the exception of the warrior emblem on the one side, the other half of the shield would look unattractively empty, and only a few old men opined that it was originally a lineage emblem of the Ainu gods. This conception seems to me the right one, and it would explain why the emblem /91/ has been commonly used to lineage from time immemorial and then also came to life after Mikoyoo's death.

The lineage emblem is almost never found on the shields of today; thus I did not come across it until I had down by a number of old men the shield escutcheons carried by them to their youth. The illustrations of Plate 23 show a collection of lineage emblems. We see there that the emblem is sometimes applied on the front of the shield surface, sometimes on the back of the shield. While the warrior emblems have remained the same for a long time, the lineage emblems were always quite variable, and it seems that each age class made up its own.

1. [See p. 609--dam][ya]

/[illegible]/

The illustrations give the lineage outlines for the members of the [illegible] age class carried before the Iroquois epidemic around the year 1800. It furthermore seems that even in the times in which the carrying of lineage outlines was customary they were not generally carried by all lineages, but only by those whose numbers predominated in number in the part of the country concerned. The practical utility of this mode of procedure was to keep constantly before the eyes of members of other lineages the fact that these lineages were particularly strong and for therefore the individual belonging to them was entitled to a larger share of the spoils, in accordance with the principle: might comes before right. The outlines of such a lineage were then also sometimes adopted by all the members of that part of the country.

[illegible]

These sections who take the lead in battle, the [illegible] have the right to carry the outlines of bravery on their shields. This is the much colored outline that is on the periphery of a longitudinal side and is to be found in Figures 6, 10, 15, 16, and 17 of Plate 1. It is still commonly used today.

The few outlines that may be included in the shield sections in the one mentioned above or the series outline. By series is to be understood here one of the many small divisions out of which the army of a war found on a war expedition is made up. In accordance with its secondary significance, the outline is not very striking to the eye. A comparison of illustrations 11 and 15, Plate 1, does not suffice. These represent the sections of two shields whose owner belonged to one company but within to different sections.

[illegible]

It is also to be mentioned that both the shield sections as a whole and its individual constituent parts were probably always dependent on fashion and other circumstances of the moment. Sometimes simplicity was fashion, sometimes gorgeous. Sometimes a close feeling of comradeship prevented the carrying of the class-forming lineage outline, sometimes several shield involving grounds of pride (as or civil) (as called forth the opposite. The above-mentioned shield paintings of old men proved to me that the shield sections of a previous were subject during periods of successful warfare. On the other hand, /[illegible]/ one can observe clearly on the latest wagon that

[illegible]

[illegible]

[illegible]

/90 cont./

• 214 70 231 [illegible] Stark, the youths then pass their shields. The red color may appear to the uninvented head only with the carrying of the large red emblem. They carry the black emblem and the uninvented head until they have because the equals of the warriors and are able, by their ability, to obtain the red emblem by obtaining or force, for the warriors, of their own accord, will not let a younger age class carry these trophies. Therefore, when the youths feel strong enough, they complete their shield ceremonies in the aforesaid way and then carry it /90/ ceremoniously for show. The warriors see it, become angry, and world. The ai hanga, for whom the warriors have until then been persons of respect, answer insolently and impudently and scoff that the warriors have now become old and weak and neither need nor deserve the red emblem any longer. No one likes to be reminded of his shortcomings, and a blood feud of all concerns the approach — for that is what it is for the one side in the warrior association — of incompetence to war, especially if it is buried or tries to wear-cuttle fashion out of the counting counts of a younger person. At the same time the youths build a circular barricade of branches and move in, possibly even before it is filled with hate — a further provocation of the warriors, for with that the ai hanga declare that they too now have a right to their own warrior level and are no longer to be regarded as recruits, but as full-fledged soldiers. The consequence of this is that during one of the following nights the warriors attack the growing level in order to make the point clear to the ai hanga with force. If the issue are delivered, nothing remains for them for the time being but to scratch the red emblem from their shields again with all haste. They give vent to their anger over their defeat by scolding [illegible] 70 231 [illegible] 231 [illegible] and by one or two small raids against huge tribes. Sometimes the warriors then acknowledge them as equals, especially if the raids have brought rich spoils, but often too they must have their recognition as before. If this succeeds, they may now also carry the red emblem and are henceforth regarded as true warriors. They continue to build the level that was started and live beside the other warriors, but go to war with them. Usually, however, this situation does not last long rather, the old warriors soon quit the service and every. It is therefore no exception if there are two warrior levels in one region at the same time.

[Warrior Grail]

/Ha nawi./

Every warrior has his favorite girl (ha nawi) (1).

1. /This footnote has been translated from the Latin to the original source./ Girls not yet "circumcised" live with the fighting men, sleeping with his one today, that one tomorrow. Pregnancy for a girl not yet circumcised is considered an outrage and is avoided either by interrupting cohabitation during the cycle and the six days following or by withdrawing the penis before ejaculation. A pregnant girl gets rid of the fetus by an abortion brought about by medicaments. In warriors prowess do not have tomorrows for one or two months. Repeating the hymen is neither a public ceremony a minor rite.

As long as he is at home she lives with him, takes care of his livestock, and makes part of his ornaments. The girl calls her lover ha nawi and shows the others the coming about of this relationship by bringing a gourd bottle full of milk to the warrior squatting together and placing it beside the left leg of her lover.

[illegible]

/[illegible]/

speaking, yet their facial expression usually remains unchanging, neither agreement nor difference of opinion may be read into it. The scene is not interrupted any more than he is forced to become alert by the continuous of the lessons. Each one is allowed to deliver his speech addressed to the out. We have here the simple flowing speech, in contrast to the dialogue type of the Dragon, where another respected man would or equals opposite the speaker and in every punctuation pause, or every comma of the speech gives jeddy to choppy sentences, makes known by an unintelligibly exaggerating, more or less grunting E. I. or has that he has underscored the words spoken. The task of the speaker consists chiefly of sensing, by means of a feigned friendship with the chiefs of Iroquois-rich peoples, in the hero a blind confidence in the tribes, /[illegible]/ which will facilitate for the hero a sudden, predatory attack. Moreover, he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether to perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most Iroquois might be, where they pasture, where they may go night, where the fewest warriors live, etc. The speaker himself need not be a brave warrior: cellen, running, deceptions, guile are the characteristics that qualify him for the political aspect of his office.

Another task is the administration of justice between spectators: he is the deciding judge in civil and penal litigation for the overtaken of his tribal.

A leading role among the warriors is played, furthermore, by the [illegible] (1)

1. Sing. [illegible]

(a the bulk), of whom there are five or six in every band and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a sign of their rank they wear, in dancing and in hand-to-hand

[Survivor Brawl]

[illegible]

fighting, large log bells (at duelling sites), the ringing of which to the latter instance serves to prevent a going astray by the individual warriors and a scattering of the troops. Where the bell sounds is a rallying point.

A special position is also occupied by the [illegible] a benefactor. They are warriors who, themselves generous, also have a generous, well-to-do father. From him they often receive cows for slaughtering and then distribute the meat among their comrades and all strangers, without distinction as to age and sex. If such a benefactor is wounded in battle or if he suffers an injury elsewhere on the march or at home, the others are concerned about him and compete with one another to help him to the best of their ability.

Accordingly, misfortune is sharply condemned, and a miserly warrior or one who has miserly parents is treated badly and, in case of illness or wounding on the way, is not infrequently left to his helpless.

Spartan and leader live like other warriors and are not surrounded by any special ceremonial. Off duty they are treated with respect, which is shown especially by the fact that people avoid coming too close to their girls or lightly seizing an excuse for a quarrel with them. Among the other warriors these two things almost daily lead to serious disputes and often enough to duelling, in which the opponents go after each other with sword and club, but only very rarely wound each other seriously. If this should happen sometimes, in a few districts the wounded one receives from the victor a fine consisting of livestock; in other districts, only if a bone is broken. In general immediately after the duel /[illegible]/ sometimes only after the healing of the wound, reconciliation follows, the formality of which consists of the mutual exchange of sandal thongs and sometimes also the exchange of the skin caps (a sought). The matter becomes more serious if one is killed in a duel. Then the father of the victor is then condemned to pay a larger number of cattle. If he heads them over, the affair is settled. If he refuses them, however, the friends of the man killed attack his head and rob him of his entire herd. But they have scarcely brought them home before the friends of the one killed also try to rescue them again. This goes on until they have because tired

[Warrior Kraal]

/71 cont./ A few intrepid warriors also leave the kraal, spear in hand, in order to attack the lion, but as a rule some return unsuccessful.

72 If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol eigwenani). The warriors of a few neighboring kraals have already /73/ promised their participation and have also pressed their speakers, who then all together go to the ol xumani with whose consent the war becomes a settled matter, for the waging of which only the permission of the ol oiboni is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Masai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

(1) 1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Masai themselves or a competitor to them in the plundering of other tribes -- the ol xumani or one of the speakers lets himself be carried away to secure a majority for the war by calling the vacillating ones ol kenono, that is, blacksmiths. He always achieves the desired result with this, but in the following days may leave his hut only under the protection of influential warriors, in order to avoid assaults on the part of the reviled ones.

73 If they have finally succeeded, however, the leaders of the majority make an end to further debate by invoking the en dorani, a sort of Rütli oath. /Rütli, a meadow in Switzerland where the first league of the three cantons was formed in 1307./ Then every warrior of the kraals concerned has to put on immediately the visible sign of the

/92 cont./

721 en dorosi, the en dorse. For the warriors this consists of three or four
726 leather strips cut from the apron of their favorite girls, which are
714 adorned with stitched-on beads and, beside them, tied-on pieces of wood (from twigs of the oi arachi and en siaki trees), while the leaders wear as en dorse the borrowed tobacco box of a married man or his fly switch. The en dorosi obliges every warrior to take part in the ex-
708 pedition. Anyone who nevertheless stays away out of fear is most deeply despised and outlawed: any warrior may kill him without penalty. In order to give the faintheartedness courage, the most daring ones not infrequently stick a ball, which has a diameter of 10-12 centimeters and is made out of black ostrich feathers, on the tips of their spears. Through this they express their firm determination to attack the opponent and to stand up to him in hand-to-hand combat, for the ball may be removed from the spear point only by one's running it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and, to be sure, only cattle. War is not undertaken for goats and sheep. Boys may go to steal small livestock. Only the capture of cattle is worthy of a warrior; he only takes small livestock along as well when he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
791 together betake themselves to the oi oiboni and put before him the wishes of the warriors. None of the latter accompany them, since they would behave too uncouthly in the presence of the great man, who wishes calmness and clarity in the consultations.

721 /93/ The oi oiboni keeps himself accurately informed both about
726 the strength of the individual warrior kraals and about all the condi-
791 tions of the surrounding sedentary tribes coming into consideration for a war, so that he is in a very good position to judge accurately the prospects of victory for either side with great probability. He also keeps himself posted about unimportant and secondary matters with regard to the opponent and weaves all this knowledge adroitly together in his answer, so that it sounds like a seer's pronouncement and is taken as such by the speakers and warriors. His answer -- as the speakers report it -- runs, for example: "You will attack the Kabe
[264] area; it is strong, and you will therefore first hold a twelve-day

721
724
727

/721 cont./
Seven meat (1).

1. ol hol or, if an en dorai has taken place, ol hol en dorai, or, in short for that, en dorai, with which the present-day language also designates every forest meat prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gabe. On the following day, ol ondori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kalu boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol ondori day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
• 724 to the carelessness or mistakes of the warriors. Furthermore, for the
727 spies sent ahead of the expedition, the ol ithoni given them a few
789 amulets (e nanaiko ol ithoni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is white egg (nomoro ol ewuarai). A large leg-bell (ol ewuile kiuak, Fig. 18) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal: weapons, pots, and the livestock needed are gathered together, and two by two the en sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorai in particular all the many vegetable spices that the

the time for the attack. /36/ The leader of the warriors is one of the above-mentioned beneficiaries, recognizable by an ornament called *si tanagila* or *si gimbila*, which consists of strings of iron or glass beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

Accompanying the warriors are one or more surgeons (*si sidia*, *si sidia*), whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

Toward midnight the spies (*si sigadaiya*, *si sigadaiya*) set out to go to Kabe. On the way they adapt their ornaments in clothing and ornaments as much as possible to that of the Wakabe and hide /Ill. 38 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populace, trusting in their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kabe cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

/[illegible]/

[illegible]. [illegible]. Last conversation of the warriors before the battle.

The warriors have broken camp about four or five o'clock in the morning and after seven reached some bush one to two hours away from Kabu, where they now camp. They are highly elated about the information from the spies, rich booty now indeed seems assured. Soon after midnight the battle march is begun. The warriors split up into five different troops. The *ei ekoko* (sing. *ei ekoko*) have about 40 people and, having come close to the goal, hidden in the foliage of tall trees, take /[illegible]/ a back seously following them at a distance of a few thousand meters, each led by an *ei ekiami*, are the three or four divisions of the *ei ikoi* (sing. *ei ikoi*) a hundred, each of which goes in another direction toward the beetle area. They consist of the most doiling men, and the success of the attack depends primarily upon them. Behind the *ei ami*, remaining out at some distance, follow the largest division, the *ei ikoiko* (sing. *ei ikoi*) or horde, the finale of which are made up of picked men, the *ei*

[illegible] The beautifully worked wooden [illegible] (Fig. [illegible]) and [illegible]) is made from gemsbok or ram's hide and dyed with the red juice of the root of the desh of [illegible] (b)

b. [illegible]

on the back side is found a longitudinal middle seam and on the front side a corresponding longitudinal fold. Twelve centimeters from the upper edge [illegible] of the wooden face six on the front side an oblong cavity [illegible] through which the back [illegible] (Fig. [illegible]) were wound the bags in stock. The lower is made of ram's skin and decorated with several longitudinal folds. There is a hole [illegible] at one end, and at the other one a small leather drop [illegible]. The sword is worn on the right side and down with the right hand. Left-handed men wore it on the left side. This carrying method seems to point to the fact that formerly the people did not carry swords, but daggers, for a sword can be drawn with the right hand better from the left side, whereas a dagger is more quickly ready for a throw from the right. Moreover, the sword, even today, is also frequently handled like a dagger.

According to the tradition of the people, the original Masai shields were very small (shield = [illegible]). They had a circular, flat shape, a round notch in the center, and a diameter of 50 centimeters. The grip stick was fastened on the back side with small straps, which were drawn through the shield. The very light shield was carried with two fingers at the grip stick. Accordingly, the hollow of the notch was very small. Gradually the shields became larger, and the reason for this may be sought in the frequent conflicts of the Masai with peoples carrying bows and arrows. Since in original shape, the shield, with its enlargement, had frames, this was increased in that a wooden frame [illegible] was wound around the outer periphery with strips of goat or sheep skin, the shield was bulged out, and, to preserve the longitudinal convexity, two straps [illegible]

/150 cont./

• 714 178 [219] were drawn from each end of the grip stick to the grip (Pl. 24). The present-day shields, like the farmer ones, are also made out of buffalo or giraffe skins. For better protection of the hand, the under is lined with a round patch of the same skin, and, on top of that, in order to prevent the chafing of the finger knuckles, with a piece of soft doeskin. The shield now in use, measured with the curvature, are 1-1.10 meters long and half as wide. The swastika is painted on the front surface of the shield, whereas the reverse side often -- not always -- bears the lineage coat of arms. [511] [512]

714 411 [412] On the march the warrior carries the spear with one hand, the shield in the other one. With arm hanging down, the hand grasps the shield grip so that the smaller diameter of the shield is vertical and the painted surface is turned outward.

411 [229] [230] The club (si gbadu, si gbad) (Fig. 111) is now made out of one piece, generally out of ordinary hard wood, especially from the tree si ekuk and si ohuhunuk (1).

1. Dengere ndokwanda K. Sch.

411 178 [412] only the clubs of the speakers, which serve solely for gesticulating, are made out of ebony wood or dimorrow horn. The old clubs /150/ consisted of two parts: the spherical head, into which the stickline handle was stuck through a central head-hole. The club does not actually serve as a weapon of war; except for accompanying a speech, it is used almost exclusively in fights and -- to break narrow bones of slaughtered livestock. The present clubs are about 40 centimeters long, their head has a diameter of five to six centimeters. A clubline

411 [229] [230] ruelgat (ne ulu), especially out of the wood of si gaiwiler (1).

1. Orlaus Herbert Gilg.

often takes the place of the club. The club is worn in the sword belt; it sticks in it as a rule close to the sword, with the head upward.

411

Fig. 36. (1/10)

Spear, sword, shield, and club are the weapons of the warriors. Old people never carry the shield, rarely a small, to some extent can-off spear, or an old sword, but for the most part only club and bow with arrows. They need bows and poisoned arrows for the defense of their own kraal or against predatory animals. The bitent impoverished through cattle epidemics, who live apart from the others and erroneously call themselves ai danda, also bear gave with them. The bows (Fig. 36) are two-shaded, simply curved.

[187] [214]

[184] [224]

302 Auxiliary hair [illegible] and eyebrows are shaved. Women also shave the pubic hair, whereas men pluck it out with the fingers as [illegible]. Young women let the hair grow out, when it has the necessary length, twist it between two fingers, through which apparently some little balls, which, on closer inspection, prove to be spirals [illegible] and rolled together. Somewhat later it is twisted together [illegible] with red paint, a mixture of animal fat and red earth, which long encircled around the head. Furthermore they are lengthened by twisting in fibres of the bark of the baobab (cf. [illegible]) and of another tree rolled at [illegible]. In order to form one of that the braid-coiffure peculiar to the Masai women, but adopted by many neighboring tribes (Fig. 64, 65, 66 [illegible]). For this the hair is parted crosswise over the head from ear to ear, and then that of the front half of the head is divided into three parts, one over the forehead, the other two at the

Fig. 64 Fig. 65 Fig. 66

/[illegible]/

[illegible] occasions, whereupon the tips of the strands are wrapped with hair to the length of an inch. The hair bair, lengthened up to 50 centimeters, is placed around a foot-long stick and on this wrapped tightly with hair or gum leather wrapped thin, so that it forms a stiff braid (al dalgan) reaching to the waist. Over this braid one can frequently find one to three smaller ones. Often the tips of the little coupie braids (ning, al bahadur al bahad | al gawlu) are joined with that of the main braidhead braid (al bahadur | al gamum) and the former tied together under the chin after a string (bands of Ghent) (3).

[illegible]

1. This hair style has the purpose of preventing the head from the harmful influence of the sun's rays. For this, one lets the hair grow long and, since the long strands fall unsyringly into the face at every movement, put it together into braids. The Tuaregs helped themselves more simply, in that they shaved the front part of the head and left the protection of the thick padding of hair on the back part of the head.

[illegible]

The hair is often perfumed with the root powder of al ib [illegible] (Cyperus spec.). /[illegible]/ /Fig. 40 and 51 appear here./

/[illegible]/ The white facial painting of the newly circumcised has already been mentioned. Younger people, especially women and young girls, on all festive occasions, under the entire body (under as it is not clothed), with red paint, which they like to perfume with the pulverized leaves of al [illegible] (Lawsonia spectabilis Hch.), which smell like vanilla. With one finger the women then often strip it off the skin hence in serpentine lines (al [illegible], al [illegible]), so that a kind of drawing is produced. One who has killed an enemy to war paints his body at the following dance festivals with white and red earth in stripes (Fig. 47). This painting is called as /Figs. 47-49 appear here/ [illegible]. At festivals one also often sees on the face of the warriors a red triangle, in spec starting at the eye and widening out up to the middle of the cheeks (Fig. 48). When boys

[illegible]

There is no special punishment for cowardice in war. The warriors, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

The death penalty is carried out in that a band of armed men attack the delinquent alone and kill him with spears. For a war chief, rather the execution is carried out by warriors, for an ancestor, by those injured by him. Fines are usually paid to bereavers. In general their amount is not fixed for the individual offenses. In the one case this is the other that is regarded as the more. Diminished ability to pay because of previous livestock sickness or unnecessary wars currently lessen the fine. Moreover, if in the district the fellow resident of the lineage or tribe of the perpetrator have a predominant in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; thus murder is often punished as negligent homicide, or many a time even left entirely unpunished. Just like other crimes or misdemeanors, irresponsibility is regarded as mitigating in some districts, in others not. Insanity is not punished. Self-defense is not mitigating.

A degrading punishment exists only for the warriors and consists of cutting off the guilty man's braid-ruffles, as is well known, one of the insignia of his standing. This punishment is said to be inflicted most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons are reconciled with a goat or a sheep. The mentally ill occupy an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The lower therefore keep to behave the sick person who is inclined toward misdemeanors or crimes. Frequently, too, if an oracle does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

561 class name, and is allied with the next (or previous)
701 group, the first being the right hand grade and the other
[881] being the left hand grade. After several years the
[884] junior warriors go through another ceremony and become
full warriors. Their total period of warrior duty may
714 be about 15 years. The warriors are distinguished by
their hair style and spear.

714 The hair style involves a complicated
302 plating of the hair with some combination of cords,
pieces of hide or gut, bark, or stick; all liberally
plastered with sheep or cow fat and red ochre. Elliott
(1948) has detailed the methods and materials used and
variations in style between areas.

714 The warriors' spear is often over five feet
411 long. It has a long, narrow, double-edged blade, an
equally long but round and pointed tail, and between
them a very short wooden hand grip serving as a shaft.
Warriors also carry a flat, double-bladed long knife or
short sword called a simi. These useful weapons are
177 carried at the waist in a red leather sheath. Originally
411 the metal weapons were produced by metal-working tribes.
326 They now come from England and the first thing a moran
does after buying a spear or simi is to file off the
411 brand name. When in ceremonial dress or at war the

301 Women and occasionally men wear necklaces of beads. Women have ornate jewelry consisting of rings, beads, beaded bracelets, and wire loops around their [304] neck, wrists and ankles. Both men and women pierce and stretch their ear lobes; the women wear large ear bangles through them and the men use them to carry snuff containers or other articles about the size of a 35 mm film casette.

411 Spears, simis, and knobkerries and shields may [714] be carried by the men. Elders often carry a long staff [561] instead of a spear. Cooking utensils are simple, some-
415 times consisting of a few pots and pans. Bedding consists [513] of hides, with sometimes a blanket. The gourds mentioned
492 above are always present. When moving from one place to another a pack saddle is used which consists of two large (two by three feet) flat rounded plates made of sticks bound and laced by leather thongs. These are tied above and on either side of the donkeys' backs, giving the appearance of semi-folded wings. Hides, lodgepoles, cooking utensils, and other kit are placed on
443 the donkey's back between these. Trade goods are purchased or traded from small dukas around the edge of the area or more recently from itinerate traders who visit the larger and more accessable bomas in trucks.

*233
182 every opportunity. There the purpose is primarily to
232 clear new grazing land. During the 30 months of our
824 major study period, we were in sight of the Mau forest (at the foot of the Mau Escarpment) at least twice a month, often in the rains, and only once did we not see smoke from a fire burning in the trees or brush.

*13 Relations with Wildlife
648

The most significant influence the Masai have exerted upon the wildlife is their protection through
[171] excluding hunting tribes from Masailand. The Wanderobo are an exception, but there are relatively so few Wanderobo that they have little effect. The areas of East Africa where the finest assemblages of grassland wildlife still exist are those in Masailand.

224 The animals Masai hunt or have hunted include
[237] buffalo for shields and possibly food, eland for food and
• [714] , giraffe for hides
the hides/and tail hairs (to ornament gourds and dresses,
[531] according to Millais, 1920), lions and sometimes leopard
[825] for defense and for lion manes, and rhinoceros for horns and to spite national park authorities (particularly
*[233] in the past decade). In times of drought the Masai may spear various animals for defense or to avoid competition for scarce water. They will even spear elephants at such times (Grant, 1957).

Ore p' eaku en-nëä en-gima, nějökīni 'l-muran, amu eitashe pôkin ti-aulo: 'Eidipe.'

When the fire is dying down, the warriors standing outside are called, and told that, 'it is finished.' 622 574

Nekwet il-muran pôkin samurutôkīno idya-mōuo.

They all run towards the spot, racing to get the horn.

Ore ol-oitera abaïki, nepik eng-aina atwa en-gima, neitau e-mōuo, neitório eng-aina, neitadol il-kulikae idya-mōuo, nějo: 'Aidipa.'

The one who arrives first puts his hand in the fire, and, taking out the horn, stretches out his arm. He shows it to the others, and cries out: 'I have finished it.'

Ōnaa, neidipayu e-unoto.

With this the E-unoto feast terminates.

Nebarni ol-aunōni te-innaoloñg o ol-aigwenani ōatai opa ake eton eitu emurati.

The Aunoni, or chief, is shaved on the same day together with the Aigwenani, or Counsellor, who was elected before the feast of circumcision. 622 302

Nebarni si ninje 'l-kulikaemuran too-'n-gulye-oloñgi.

Afterwards the warriors may be shaved whenever they wish.

Ore p' eidipi aatuun, něyeñgisho 'l-muran, netoni 'l-apaïtin ooñgwan ana imyet, nepwo en-jore naji En-oo-'n-dorosi araki En-e-'unoto.

When the warriors have elected their chief, they slaughter cattle, and wait for four or five months, at the expiration of which they proceed on a raid. This is called The (fulfilment) of the vow *or* The (selection) of the chief. 721

Neishop 'l-karash ooji sii 'N-dorosi, nepik il-arash.

They wear cotton cloths[1], called The vow[2], on which are sewn the seeds of the ekirikiti tree[3]. [292] [804]

Nepik sii 'n-gäk e-'syaïti 'murto naaji 'mangäk, ne'ya 'l-kulikae 'l-kidoñgi lo-'l-kumbau araki 'l-lenyok le-menye.

They also wear necklaces made of twigs of the e-syaïti tree[4], and called Mangäk, and some carry their fathers' snuff-boxes or fans with them. [301] [824] [293]

[1] Before cotton cloths were introduced, dressed skins sewn together were worn. 'N-dorosi garments are worn like the Spanish poncho, a slit being made in the middle for the head to pass through.

[2] A raid undertaken after a long peace is also called en-oo-'n-dorosi. Any warrior who shirks his duties on an occasion of this sort can be put to death, and his murderer will not be punished. [686] [627]

great political importance, in reply to which the elder indicated that such did not necessarily follow as 'we can always tell the *launon* what order to give ". 561 624

c) The sacrifice of a bull is then performed with great ceremonial. HOLLIS,[99] describes the contest in which the candidates compete in getting hold of a hor which was previously thrown into a fire. [787]

With reference to this sacrifice a special officer is appointed. He is called *aboruengene*; he has a ceremonial status and must prepare the hide-rings from the skin of the bull. He is also described by the author of *MS.* 48 as " the official charmmaker of the *moran* ". His function, however, seems to be limited to *Unoto*.

Great emphasis is laid by WHITEHOUSE,[100] on what he calls " the fire-drilling ceremony ", which as Fosbrooke also says, " must in fact be the *unoto* ". The ceremony is described by Whitehouse in connection with the first erection of the segregated village of the initiates or *manyatta*.[101] [621]

The fire is ceremonially lighted by the elders, and it must be carried into the new awellings of the village. The next morning after this ceremony, the candidates who have become senior initiates are blessed, and prayers to the black God are offered for them.[102]

At the *unoto*, the *aunon* first, and then the other initiates, shave their hair. Pig-tails, however, are again fitted after the ceremony. 884 721

Some (four or five) months after the ceremony, when the senior 561

[99] HOLLIS, *l. c.*, pp. 300 ss.

[100] WHITEHOUSE, *l. c.*, p. 153.

[101] This circumstance supports MERKER's statement that one of the privileges demanded by the junior initiates is the building of their own segregated village, *l. c.*, pp. 35 ss.

[102] It is of some interest to reproduce here from WHITEHOUSE, the prayer recited by the elders on this occasion. It shows clearly how the senior initiates are about to enter the most important stage of their life as members of Masai society. This is the prayer: " Be trustworthy, Oh, return safely, O God. — Become ye ours and of God. — May the illness pass you by. — Wish those who hate us that they may find dry rives on their journeys. — Lenana and Sufeit and Mbatian wish the safe return. — Grow up. Become possessed of wise heads. Become as great as the Kilimanjaro. — Be the fathers of my children, and bring them up well. Have many wives. — May God love you. May the red bull of the night guard thee. May our age be the bravest ". The expression of the first verse " return safely " probably refers to the raid which fullows *unoto*. Lenana, Sufeit, Mbatian were prophets. [782]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

884 721 561 initiates have returned from a meat festival in the bush a raid is organised. According to HOLLIS this is called, "the (fulfilment) of the vow" or "the (selection) of the chief" (*En-oo-'n-dorosi araki En-e-'unoto*).[103]

The main reason for this raid, is the strong desire of the new senior initiates to show their ability and enjoy the satisfaction of the military efficiency they have reached.

At the *unoto* the age-unit assumes a new name.[104]

884 561 *Unoto* if seen with relation to the social status of the initiates is undoubtedly a promotion ceremony. Junior become senior initiates. But if we consider the ceremony in connection with the institution of the age-unit, we find that *Unoto* brings together all those who have been individually initiated during previous years. In other words it merges into one body the three minimal divisions, it gives them a corporate status and institutes the age-unit. The performance of individual initiation is not ended with *Unoto*. It still takes place, but irregularly, and all those initiated at this time form the fourth minimal division, *el oirogua*, as reported by MERKER.[105] The ceremony closing the age-unit's legal period for individual initiation is *Endungore*, which, as we have seen, is performed by the *piron*-elders of the next age-unit.

561 Thus the institution of the age-unit is brought about by three different ceremonies, namely, *Engibata* as the opening ceremony, *Unoto* as the instituting ceremony, and *Endungore* as the closing ceremony.

The closing value of *Endungore* is due to the negative aspect of this ceremony as we noted.

The point raised by the interval between all these various ceremonies is most confusing. The reason for this is that the interval is defined by all our authorities in terms which are foreign to Masai age-system. Therefore, we must accept the number of years which they suggest as more or less broad approximations.

[103] "The (fulfilment) of the vow" is not a special term for the raid which follows *unoto*, but is applied to any raid undertaken after a long peace. Cf. HOLLIS, *l. c.*, p. 301, n. 3.

[104] FOX, *l. c.*, p. 449, writes that "the present (1939) age (unit) of Purko warriors was called *il-tiegi* prior to the *E-Unoto* when they took the name of *Il-Salaash*.

[105] FOSBROOKE, *l. c.*, p. 27, speaks of a "hiatus" between the age-units, and we think that such hiatus is that period which runs between the *Unoto* and the *Endungore-Engibata*.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

527
561

they last for three or four days and generally take place before a raid. [136]

701

At this point it is relevant to discuss the relationship of military organisation and the age units. MERKER, [136] gives a description of Masai military organization. He assumes the existence of a standing army (das stehende Heer), in which he distinguishes the recruits, the warriors and the reserve.

The recruits are " the shaved ones " (*el barnot*). [137] These, together with " the warriors " (*el moran* = initiates) [138] constitute the peacetime force (Friedensstärke), under conscription. [139]

The junior elders come into action in time of war but they may be reckoned as members of the standing army (" ... kann man als Reserve ansehen und mit zum stehenden Heer rechnen... "). The senior elders take arms only in defence of their own territorial areas and sections (Distrikt).

The above description appears to be very formal. [140] It shows, however, that military activity is not confined to the initiates but extends to the classes of elders. And this is a relevant point. We can say, therefore, that the initiates become warriors not to the exclusion of the other classes above them. A further point brought out by MERKER's description is the distinction between an offensive army constituted by the so called recruits, the warriors and the reserve, and a defensive army in which the senior elders are also incorporated.

721
701

It would be of great interest to know how the organisation of a raid or any other military action is formed, and whether there is any relationship between such an organisation and the *manyatta*

[136] MERKER, *l. c.*, p. 84. See also HOLLIS, *l. c.*, p. 317. At p. 292, n. 1, he states that " il *puli* are special places erected in the woods, to which the warriors retire when they slaughter cattle ".

[137] MERKER, *l. c.*, p. 73.

[137] " The shaved ones ", (*ol barnoti*, pl. *el barnot*), is the term applied to those who have just come out of their individual initiation and have been given the warriors' arms. They are the junior initiates.

[138] We may assume that the general term " warriors " as used by MERKER at this place (see also p. 56) refers to the senior initiates.

[139] MERKER, *l. c.*, p. 73, regards circumcision as a kind of compulsory conscription (... seiner — der allgemeinen — Wehrpflicht ins Heer...).

[140] One may note here that it is MERKER's tendency to describe Masai customs in a way which fits his own scheme. As known, his thesis on the semitic origin of the Masai has so influenced his way as to make his informations in many a case unreliable. [114]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

721
701

system. Unfortunately, no such information is available. MERKER,[141] describes the actual action in detail but from a purely tactical or strategical point of view.

701
554

Special distinctions may be attained by the initiates either in military actions or in social life. Thus, if a warrior is outstanding in war for his courage and he " kills many savages " (HOLLIS (a) he is called " the bull ", *ol oingok*; if he is liberal and through the assistance of his father " frequently slaughters bullocks " for his comrades, he is called " the benefactor ", *N-gamini*. These distinctions as described by MERKER,[142] would suggest the existence of special offices with structural significance. He states that " the bulls " play a leading role (eine führende Rolle), and are the leaders in the fight (" Sie sind die Anführer im Kampf "); " the benefactors " retain a special position (eine besondere stellung). It seems, however, that there are no such institutionalised office as " the Bulls " and " the Benefactors "; they represent two different distinctions which may be attained by any of the initiates. This seems to be the opinion also of HOLLIS,[143] when he states that " the warriors are fond of the titles '*L-oingok* (the bulls) and '*N-gamini* (the generous people), for they may then wear bells or a bracelet called *il-torongen* ".

561

The internal structure of the age-unit, we may now conclude, is based on various principles, which give shape to different groupings.

The essential principle is the contemporaneity of initiation either during the same season in which the minimal age divisions are instituted, or during the same initiation period in which all the minimal divisions merge into a single age-unit.

[621]

A second principle is the residential principle, on which the *manyatta* and the *sirit* are organised. The *sirit ol bul*, or the grouping for the meat festival in special segregated huts also seems to be due to this principle.

[701]
[572]

The military principle seems to give a special military aspect to the *sirit* proper, as found in the *manyatta*, and, apparently, the same principle extends to the temporary capillary formation of special partnership between two fighting warriors.

[624]

Corresponding to these various groupings there are leaders, as mentioned above, who organise their age mates in the performance of the various ceremonies and functions of the age-unit. It is very

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 riors to the exclusion of other classes above them. Their status is
701 that of trainees in the case of junior initiates, and of full warriors in the case of senior initiates. Although it is not incorrect to state that they are in a condition of conscripts it is wrong to say that military activity is solely their privilege.

Residential segregation is generally connected with the military
[621] activity of the initiates. MERKER states that the *manyat* were ordinarly situated in the strategic positions of the country.[146]

561 But there are other points to show that this segregation was not intended only for military purposes. Thus the initiates are not allowed to form their own family until they are elders. They are
[262] also forbidden to eat meat "seen by women", and because their mothers and girls reside with them in their village, the initiates hold their meat festivals on their own in a secluded place. Similarly, they are not allowed to have milk unless they are in groups of two or three at least.[147]

It is difficult to see any relationship between these restrictions and the initiates' military activity. It seems evident that members of the age-units are still considered not sufficiently qualified to deal with cattle, and matters connected with them such as meat and milk, with complete freedom. Apparently, they do not have the
[421] full possession of any cattle; the share of their mother's cattle to which they have right remains the property of their fathers until
[721] they get married. And to the father goes the best part of the booty which they take from a raid.[148] Since cattle are the primary source
[593] of wealth and food, we must conclude that the initiates are still in a state of dependence on their fathers socially and economically.

This conclusion is corroborated by the fact that an analogous dependence holds true of their political activity. On this they depend entirely on their *piron*-elders.[149]

[146] The statement is confirmed by HINDE's description *l. c.*, p. 91. He
[361] says that the *manyat* were always built free from any kind of cover, "if possible on a plateau overlooking a good water supply", and "commanding many miles of plain".

[147] The initates have a right to ask everybody for milk which cannot be refused. Generally they address themselves to their *piron*-elders.

[148] MERKER, *l. c.*, p. 30: "Das Verdienst der zu Kriegern herangewachsenen Söhne besteht in erbeuteten Vieh und fliesst in der Hauptsache zur Herde des Vaters".

[149] Other restrictions such as the prohibition against snuffing and drin-
[554] king beer, both privileges of the elders, confirm the general status of inferiority of the initiates with relation to the elders.

An important factor in the tribal system of the Masai is the presence of medicine-men whose duties are in general connected with the divination of future events, with the administration of drugs, and with the practice of witchcraft. There appear to be three grades of medicine-men, whose spheres of influence are divided into these three categories, but, for practical purposes, it is only necessary to consider the position of the first grade, represented by the person of the Laibon, or "Ol-oiboni," who is the Chief Medicine-Man of the tribe. The history of the Laibons is recorded in Mr. Hollis' book on the Masai, pp. 324–330, and it is unnecessary to enter into it here, but it may be mentioned that Mbatian, who died about 1890, and Lenana, his son and successor, acquired such great influence over all sections of the Masai that the position of Laibon came to be regarded by certain of the European officers who had not carefully investigated the facts of the case, as synonymous with that of a paramount chief. It does not appear, however, that the Laibons have ever attempted to assume a position resembling that of kings of native tribes, and the appointment by Government of Lenana, and at his death, of his son Seggi, to the office of Paramount Chief of the Masai was, in fact, the result of a misunderstanding of the normal state of affairs which steps have now been taken to rectify.

The medicine-men. [791]

The Laibon.

The prowess displayed by the pastoral Masai "Muran" in raids on surrounding tribes combined with their ceaseless activity in following this pursuit made their name dreaded throughout East Africa and hindered for many years the passage of caravans by the direct route from Uganda to the Coast. When eventually Europeans penetrated the highlands of British East Africa, they found the Masai with their flocks and herds scattered over a wide area. The story of how they were eventually concentrated in one reserve is told in Chapter III., but it is necessary to draw attention here to the effect which this concentration, combined with the introduction of veterinary skill and the cessation of raiding by and against them, had on the Masai. In 1904, before any administrative limit had been placed on the movements of the tribe, it was estimated that the Masai possessed 50,000 head of cattle. In 1911, 80,000 head were said to be in the Northern Reserve alone, and this estimate was subsequently increased to 200,000 when the mobs which were attempting to move south had been more thoroughly examined. 50,000 head of cattle moved south in 1911, but in the final move from Laikipia in 1912 and 1913, nearly 200,000 head were counted. By March 1914 all the Masai herds being located in one reserve, the total estimate for the tribe had leaped up to 600,000 and the number of cattle in the possession of the Masai is now supposed to be in the neighburhood of three-quarters of a million. These latter figures are the estimates of Mr. R. W. Hemsted, who has been the Officer-in-Charge of the Masai Reserve for more than five years, and, in spite of the objection taken by the Masai on superstitious grounds to the counting of their stock, they must be taken to be substantially accurate. It is scarcely reasonable to suppose that the earlier figures, particularly the first two mentioned, are in any way so exact, but, after allowances have been made for this, it is obvious that an enormous increase in stock has taken place. In addition to this cattle, the Masai are said to possess something over two million sheep and ten thousand donkeys. The stock-carrying capacity of the 14,600 square miles included within the borders of the Masai Reserve, is limited to a certain extent by the aversion shown by the natives to grazing cattle in areas which from past experience they believe to be infected by disease, and, in parts of the Reserve, land which appears to be admirably suited for stock remains untenanted on that account, no attempt having been made to utilize veterinary skill and treatment in rendering their cattle immune from the disease. With the exception of these areas, the Reserve may fairly be said to be stocked to its fullest capacity, and the Masai, who number all told about 43,000 souls, possess capital to an average amount of rather more than £110 per head. They are thus, in all probability, the richest uncivilised tribe in the world. It is not surprising, therefore, considering their conception of manual labour as degrading, the limitations of their personal requirements and their immense wealth in livestock, to find that they are unwilling to work for wages as do the members of other tribes. Their national diet is meat and milk, both of which they have in plenty, and they can procure any other food or commodity they desire by sale or barter of stock.

The Masai as a stockman. [233] [921] [648] [232] [131] [161] [934] [471] [961]

CHAPTER II.

EARLY HISTORY OF THE MASAI.

Origin of the Masai—Pastoral and Agricultural sections—Settlements of 'L-Oikop—Sir Charles Eliot's theory—European influence—Wakwavi—Early history of the Masai—The Masai as a power—Masai raids—Rebmann's visits to Chagga—Dr. Krapf—Dr. Krapf's description—Discovery of the source of the Nile—Dr. Fischer's tour to Naivasha—Mr. Thomson's journey through Masailand—Count Teleki's expedition—Mr. Jackson's journey—Dr. Peters—Masai and modern firearms—Decline of Masai power—A Masai raid—Cattle plague—Small-pox—Relations between Masai and Wakamba—Machakos Station—Ngong—Dagoretti—Relations between Masai and Kikuyu—Mr. George Wilson—Sack of Dagoretti—Trading treaty—Fort Smith—Masai hostile—Meeting at Mathaiga—Uganda Railway survey—Debates in the House of Commons—Position of the Masai in 1895—Removal to Ngong—Protectorate over Uganda—East Africa Protectorate—Kedong Massacre—Mr. Andrew Dick—Lenana's first visit—Sir Arthur Hardinge's report—Sir Charles Eliot's report—Inclusion of Uganda Provinces in East Africa Protectorate—Uganda Railway—Sir Charles Eliot's report, April, 1903—The year 1903-1904—Conclusion.

173 Origin of the Masai.

Little is known of the early history of the Masai tribe, but it seems to be an established fact that the original home of this people was the country between the north of Lake Rudolf and the Nile, from which area the Masai are said to have moved in a south-easterly direction so long ago that tradition does not recall any incidents of the exodus, nor the reason therefor.

101 173 Pastoral and agricultural sections.

It seems, also, that there were two distinct sections of the Masai, distinct in point of habits of life and customs, though not of language or ancestry, between which sections continual war was waged, wars which now form the greater part of the traditional history of the tribe as it is known at the present day to its members. The sections are usually defined as the agricultural and pastoral sections, the former, known as 'L-Oikop, being more or less settled, while the latter was entirely nomadic, and never practised agriculture in any form. Masai tradition does not extend back for more than one hundred years, but the history of that century shows, to the exclusion of all other topics, a conflict between these two sections, which resulted in the practical annihilation of the 'L-Oikop, who have now ceased to exist, with the exception of small settlements found at Nguruman, to the north of Lake Natron, two villages, Great and Little Njempa, to the south of Lake Baringo, possibly the so-called Uasin Gishu Masai, now located near Eldama Ravine, and in Kavirondo country, and certain individual settlements of Masai among neighbouring tribes, where they have assimilated the customs and adopted the language of their protectors, and from whom it is now difficult to distinguish them.

[361]

Settlements of 'L-Oikop.

174 114 Sir Charles Eliot's theory.

The theory suggested by Sir Charles Eliot, is that the nomad pastoral state cannot be assumed to be primitive or very ancient, and that it is quite probable that there was a large agricultural settlement on the Uasin Gishu plateau, from which the more adventurous of the warriors detached themselves.

177 European influence.

It is this conflict which made the Masai name what it was and which has rendered so complex the question of the administration of the conquering pastoral section. The victors depended entirely on cattle for their means of subsistence, and were driven to raiding other tribes, in order to amass sufficient herds of cattle. The introduction of the European element, therefore, deprived the Masai of their one pursuit, and had the inevitable result of reducing the Masai from the first to a very low rank of economic importance among East African tribes.

[921]

101 Wakwavi.

The term Wakwavi (Wakuafi of Krapf) is frequently used by the early writers in reference to the Masai, but it appears that this term has, in fact, no connection with the agricultural section, being merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning places.

*648 Turkana raid on Masai, June, 1912.

2. A large party of Turkana raided Kune, about forty miles north of Rumuruti, in June, 1912, and carried off cattle estimated by the District Commissioner to number 158 head. One Masai elder was killed. Fifty-eight of the cattle were recovered by the District Commissioner, Turkana. A patrol which toured Turkana at the beginning of 1913 captured from them a number of cattle, and one hundred head of the captured stock was reserved as compensation for the Masai. Owing, however, to an outbreak of disease, it became necessary to sell the remainder, and eventually, at the end of 1915, Rs. 3,621 were paid to the Masai, a further Rs. 1,500 being subsequently added in compensation for loss and as blood money.

*648 509 721 Raids on Samburu, June, 1912, October, 1912.

3. In June, 1912, the Samburu of the Embarta plains were raided by a small party of Masai. On the 28th of October, the Samburu in the same place were again raided by similar people. No trace of the stolen cattle was found, though it was reported on reliable information that they had been taken into the Southern Masai Reserve.

*648 563 Forcible removal of Masai into German territory, July, 1912.

4. In July, 1912, a number of Masai Wandorobo living near the border were raided by German patrols and were forcibly removed with their stock across the border into German territory. A meeting was arranged between Herr Altmann, Imperial Secretary of Schirati District, and the District Commissioner, South Kavirondo District, when the affair was investigated on the spot where the outrage was supposed to have been committed, but with no good results.

Further enquiries were made and the assistance of the German Governor was solicited, but the evidence obtained was inconclusive, and as it was stated that the Wandorobo in question had, until shortly before the incident, lived in German territory the matter was allowed to drop.

*648 509 [721] Raids on Meru and Kikuyu in Nyeri District, August and September, 1912.

5. On August 1st, 1912, the sub-district of Sigania in the Nyeri District was raided, five men were killed and ninety head of cattle taken.

On September 5th, a trading party of Kikuyu were attacked at the Siki River on the Nyeri-Meru road. One Kikuyu youth was killed.

On September 20th and 22nd raids were attempted on Kikuyu kraals close to Nyeri.

Murder of two Kikuyu, September, 1912.

6. In September, 1912, two Kikuyu natives were murdered by the Masai near Lenana's old kraal some fifteen miles from Nairobi. Two Masai were arrested, convicted, and hung for the offence.

Friction with the Lumbwa, October, 1912.

7. In October, 1912, while the Masai move was in progress, a certain amount of friction was noticeable between the Masai and the natives from Lumbwa and Sotik and raids were reported from Ol-Orokuti and Norgunono. A patrol under Captain W. B. Brook operated in Sotik country along the Mara River to keep such raids in check.

Raids and murders towards the end of 1912.

8. Several isolated raids and murders which took place during the last few months of 1912 were traced to parties of unidentified warriors, believed to belong to the Purko and Loita divisions of the Masai who were then settled on the western boundary of the Southern Masai Reserve. Five such incidents were reported, namely :—

(1) The murder of two Lumbwa men and one woman on the south side of the Mara River close to Lemek Valley.

[721]

(2) An attempted theft, on the 16th of December, of forty head of cattle from Mr. Johnson's farm, during which attempt three Lumbwa were killed.

(3) An attempted theft in Uregi, a location in the South Kavirondo District, in the course of which one native of that location was killed. One of the natives implicated in this affair was a Purko, who alleged he had been accompanied by a Loita.

[721]

(4) A raid into German territory among natives known as Ngoroimi, in the course of which fifty head of cattle were stolen and a woman and child were killed.

(5) An alleged theft of ten head of cattle from natives in German territory. This was probably the work of some other tribe.

As it proved impossible to discover the identity of the offenders in these cases, the probability of the guilt of the Muran of the Purko and Loita divisions, enhanced by their refusal to render assistance in locating the criminals, was considered sufficient to warrant the imposition of a fine under the Collective Punishments Ordinance, 1909, and the Secretary of State approved the collection of a fine of one hundred head of cattle on each village of the two sections. There were, in all, one Loita and four Purko villages,* and after the payment of compensatory blood money to the relatives of the deceased, it was decided to devote the remainder of the fine collected to the undertaking of works for the improvement of the reserve.

698* 579 [628]

The imposition of this fine served largely as an object lesson to the Masai indicating that raids must cease. A military patrol then operating in the Sotik and Masai country and in the Chepalungu Forest was detained in the area with a view to ensuring the collection of the fine. Some slight trouble was caused by the younger Muran, but the full number of cattle was obtained by the end of February, 1913, and about one hundred head were disposed of as blood money. This is the first occasion on which a fine under the Collective Punishments Ordinance was imposed on the Masai.

9. In December, 1912, a raid was made into German territory by some Masai, in the course of which 82 head of cattle and three donkeys belonging to a German planter named Koenig were stolen and an Arab and two Wasukuma were killed. Very little evidence in connection with the matter was adduced by the German Authorities, and it was not until February, 1914, that any witnesses were forthcoming who could identify the stolen stock. The Masai chiefs and elders took no steps to discover the identity of the perpetrators of the raid, and there was no direct evidence to connect any individuals with the offences committed. Fines were therefore inflicted in May, 1914, to the extent of 150 head of cattle on the Salei division; 50 head of cattle on the L'Utayok Muran; 50 head of cattle on the Kisarani "Sirit" of the Purko Muran.

Raid into German territory, December, 1912. [121]

Herr Koenig was to be awarded the sum of Rs. 2,500 as compensation from the proceeds of the sale of the cattle, but the outbreak of hostilities prevented this payment and the money so reserved was devoted to the reimbursement of certain Masai for loss incurred at the hands of German natives, *vide* Incident No. 21. The balance of the fine was utilised in the demarcation of the reserve and in the irrigation of Narok Station.

10. Two porters belonging to a shooting party were murdered on the Gilgil-Rumuruti road about four miles from Rumuruti on the 1st of January, 1913, by Muran from the extended Southern Reserve who had returned to Laikipia to assist their relatives with the movement of cattle. The murderers in this case were captured and convicted, but, in order to prevent further similar outrages, steps were taken to restrict the movement of Masai from the Southern Reserve.

Murders near Rumuruti, January, 1913.

11. Complaints made by the Railway Magistrate, Magadi Railway, that on five occasions iron bolts and similar heavy pieces of metal had been placed on the rails led to suspicion falling on the neighbouring Masai who were thought to have wished to flatten the bolts for spear heads and knife blades. One slight accident was caused, and as the practice continued, two Masai villages near the Railway were removed.

Iron bolts on Magadi Railway, January, 1913.

12. About January, 1913, two murders were committed on different dates but in the same locality. The victims were a Lumbwa and a Kavirondo respectively who were returning to their homes by a track passing through a portion of the Masai Reserve. About this time, considerable ill-feeling and mutual suspicion existed between the Masai and Lumbwa tribes, more especially among the Muran, and the Masai are known to have been responsible for the murders of some six Lumbwa between August and December, 1912. (*Vide* Incident No. 8).

Murder of Lumbwa and Kavirondo January, 1913.

No great hostility existed between the Kavirondo and the Masai, but the desire of the Muran of the latter tribe to blood their spears is so keen that they would have no scruples on that account.

* Loita village called Kisarani. Purko villages called Njeuri, Kisarani, Il Hotiabe and Il Kipelyani.

[103]

*648
579

The only natives of the warrior class who lived within thirty miles of the locality where the murders were committed were the Muran of the Kisaruni "Sirit" of the Purko division and the officer-in-charge of the Masai Reserve was convinced that the outrages in question had been perpetrated by this division, that the murderers were perfectly well-known to the Masai in general and, in fact, that they openly boasted of their prowess. All attempts to identify the culprits were, however, unavailing.

A fine of 150 heifers under the Collective Punishments Ordinance was accordingly inflicted on the Muran of that "Sirit," who numbered about four hundred and fifty souls. Fifty head of cattle from the proceeds of the fine were utilized in the construction of a road from Mara Bridge to Gelegele Hill, connection being thus effected between the Mara River and Kisii Stations.

[721]

Raid on the Moshi District, February, 1912.

13. Two members of the Laitokitok division were suspected of being the perpetrators of a raid on the farm of a Boer named Malan, residing on the Engare Nairobi in the Moshi district, which was carried out on the 10th of February, 1912. Fourteen head of cattle stolen from the farm were traced into British territory near Longido, but no evidence was adduced and the cattle were not identified.

Masai raid on Suk, February, 1912.

14. A series of thefts occurred in the neighbourhood of Laikipia towards the end of 1912 and in the early part of 1913, and an unsuccessful raid on the Suk was carried out at a place eight miles from Baringo on the 16th of February, 1912. Seven Muran took part, one of whom was killed, and although no definite evidence was forthcoming, it was thought that the culprits belonged to the Laikipia Masai Wandorobo. Arrangements were made for a military patrol to drive the bush country near Lake Hannington. (*Vide* Incident No. 16).

Reserve boundaries broken, April, 1912.

15. In spite of police efforts to prevent such a movement, certain Masai owners of Manyattas broke back on lands adjacent to farms in the vicinity of Elmenteita and Nakuru in April, 1912. In several cases such Masai were convicted, and in particular, sixteen Elders and ten Muran were fined five bullocks each for each of two offences, namely, the contravention of the Native Passes Regulations as applied to the Masai Reserve and of the Diseases of Animals Ordinance, 1906.

*648

721

Cattle thefts on Laikipia, April, 1912.

16. A large number of undetected cattle thefts occured on Laikipia during the first half of the year 1912, while the exodus to the Southern Reserve was in progress and at a time when the Masai were moving freely between the reserves. Details of each case are not obtainable but the following particulars have been recorded :—

On April 17th, eighty-three trade oxen were stolen from near Rumuruti by a band of fifteen natives suspected of being Masai or Masai Wandorobo from a Manyatta some twenty miles north-east of Baringo. Of the four Somalis herding the cattle, two were injured.

Twenty-six cows were stolen from a herd of seventy-seven belonging to Murray Brothers which was under the supervision of the veterinary authorities at Rumuruti. In this case the raiders were said to be Masai living near Archer's Post.

Sixty-nine head of cattle were stolen in broad daylight on the 24th of April. The thieves were said to be Manuyi Masai from near Meru, and the tracks of the stolen cattle were traced to the junction of the Northern Uaso Narok and Uaso Nyiro.

Seventy-nine head of cattle were driven off from near Rumuruti when in charge of a Somali named Ali Hassan.

Three similar incidents occurred in May when one hundred and thirty-four head were looted.

Laikipia patrol, June, 1912.

In May, 1912, a patrol of the King's African Rifles, which had been operating in Marakwet country, was relieved by police and was recalled to Gilgil. Immediately on arrival, the Officer in Command, Lieutenant E. A. B. Orr, was instructed to tour the Laikipia country with the object of recovering the cattle that had been stolen—which amounted in all to some two hundred and ninety head—and of removing from the area any Wandorobo who might be found on Laikipia.

*648

within five miles on either side of the Kajiado-Longido road, and thus make way for the military transport animals. The Masai had taken no steps to comply with these instructions by the middle of January and the Officer-in-Charge of the Transport asked that they might be enforced. The rendering of this large area unavailable for the Masai occurred inopportunely as, owing to the fact that the long rains of 1914 had terminated unusually early while the small rains had failed completely, a serious drought took place during the early part of 1915, and the grazing throughout the reserve became inadequate. Application was accordingly made for permission for the Masai to graze their herds on alienated farms near the railway, on the Kenani Fibre Estates, by payment of rent and on certain Crown lands. This permission was granted in March, 1915, and the Masai were also allowed access to an area on the Mau Narok as well as to the Kedong River by arrangement with the Manager of the Kedong Valley Syndicate. These concessions remained in force until February, 1916, when the grazing in the reserve was considered sufficient to support the Masai herds.

*648 579 ● 721

Raid into German territory.

30. The Laitokitok Masai, some of whom were armed with rifles, made a raid into German territory during the time their country was in the occupation of the military forces and are reported to have looted a number of cattle some of which were the property of certain Greeks. It is possible that the raid may have been carried out as a retaliatory measure for the raid made on them by the Germans and Wachagga. (*Vide* Incident No. 22.)

Raid into German territory, February, 1915.

31. In February, 1915, a party of five Muran of whom three were from German and two of the L'Odo Kilani division from British territory, raided a cattle boma belonging to a German planter at Ngotiek on the Osobugo L'ool Tatua. Fifty-five head of cattle were captured and it is believed that one German and several natives were killed. The cattle were taken to the head Muran of the L'Odo Kilani division who delivered them over to the Government. They were eventually confiscated and the proceeds of sale were credited to Miscellaneous Revenue.

Raid on the Ngoroimi, April, 1915.

32. Early in April, 1915, some two hundred Muran of the Pelyani section of the Purko Muran crossed the border on a raiding expedition against the Ngoroimi of German East Africa. They succeeded in capturing about one hundred head of cattle, but lost eighteen killed and fifteen wounded at the hands of two German askaris. Though all Masai Muran had been constantly warned against making raids on their own account, and though it had been explained to them that the Germans would probably retaliate, it appears that the prospect of military glory and of looting cattle was irresistible. In this case the offence of these Muran was aggravated by their adoption of a most hostile attitude towards the individual who reported the raid, and it was the firm opinion of Legalishu and Masikondi that a caution would not be sufficient deterrent from similar action in future. A fine of 150 bullocks was accordingly imposed upon the Pelyani section this being estimated to represent approximately the value of the cattle looted.

*648

German raid south of Lake Magadi, June, 1915.

33. About the beginning of June, 1915, the Germans carried out a raid on the Masai residing near Ol Shombole and the German boundary south of Lake Magadi. Nine mounted Europeans took part guided by an Arusha native; two Masai kraals were attacked and about five hundred head of cattle were taken. An attempt was made by the Muran to recover the cattle, but this resulted in four Masai being killed and two wounded. It is possible that this raid may have been undertaken in retaliation for raids by the British Masai into German territory. The counter-raid which was organized by the Masai forms the subject of Incident No. 48.

Proposed trough construction along the Magadi Railway.

34. As a result of the German raid described in Incident No. 33, the Masai living in the vicinity of Ol Shombole, who were mostly of the Salei division, moved northwards towards the Magadi Railway and it became necessary to make arrangements for the provision of an adequate supply of water for them. A few Masai camped near Lake Magadi and obtained water from the Magadi Soda Company for which they paid five rupees daily. Mr. E. D. Browne, the Political Officer at Kajiado, approached the Company with a view to the provision of water troughs at suitable points along the Magadi Water Supply Line from the Ngong Hills, and in September the erection of certain water troughs was sanctioned the work to be

undertaken by the Company. An agreement was signed on November 3rd, 1915, providing for the erection of four troughs at various points of the Magadi Railway at which the Masai were to be allowed to water their herds on payment of five rupees per thousand head per day. By December nothing had been done and the country became very dry: by January the short rains having failed, the water supply was regarded as insufficient to support the maintenance of troughs and the work was held over.

C48*

Attempt to return to Laikipia, June, 1916.

35. Early in June, 1916, a determined attempt was made by some of the Purko Muran to return to Laikipia with their stock in defiance of Government orders. Mr. Hemsted threatened to take active measures to stop the movement if persisted in, and with the help of Legalishu, Masikondi and some of the principal Muran, he persuaded them to abandon their intention before they had arrived within thirty miles of the boundary.

Rumours to the effect that such a movement was projected reached Nairobi on June 17th, and steps were immediately taken to garrison the railway line. A double company of 2nd Kashmiri Rifles was despatched to Gilgil on June 21st, and Mr. E. D. Browne accompanied them as Political Officer. As no renewed attempt appeared probable, orders for the return of these troops were given on the 1st of July.

Raid into German territory, July, 1916.

C48* 979 [921]

36. In July, 1916, the Purko Muran of the Il Merisho, L'Aimer, Kisaruni and Mejuali sections and some Muran of the Kakonyukye division made an incursion into German East Africa and captured from seven hundred to one thousand head of cattle and a number of sheep from the neighbouring tribes. They lost about 120 men killed.

This raid was undertaken as a reprisal for a raid made by a German party in the previous month in the course of which some 300 head of cattle were looted and six Muran of the Damat division killed.

Some of the Purko and Loita Muran were called in by the Intelligence Officer-in-Charge of that part of the border with the object of recovering the cattle raided by the enemy. These were joined by the rest of the Purko and some of the Kakonyukye. They entered German territory with the ostensible purpose of recovering their stock but actually to raid when favourable opportunities offered. In view of the provocation received, His Excellency decided that no action should be taken against the Muran concerned.

Attack on Uregi, August, 1916.

37. In August, 1916, some Masai Muran who were searching the country in the neighbourhood of the Isuria Escarpment, in an endeavour to trace the origin of some Germans recently found near Sotik, attacked the Uregi location of the South Kavirondo district. One Masai was killed

German raid, September, 1916.

38. In September, 1916, a party of about two hundred mounted men including fifty Europeans crossed the border from German East Africa near Lemingio and penetrated northwards as far as Narosura. They remained in the Loita country for a week and then returned towards Karungoro. They committed no acts of aggression and it would appear that the object of their visit was a political one.

German raid, December, 1916.

39. In December, 1916, a party of Germans with a large number of native levies raided the villages of Ole Pere (Purko) and Ole Lembaga (Damat) near Ol Keju Talek. They killed three Masai and wounded one, and captured about 6,000 sheep and 200 head of cattle. On their return from the raid they fell in with Mr. Hemsted's safari and captured most of his loads, killing a tribal retainer. They were fired upon and retired hastily abandoning about half the stock they had captured.

Raid into German territory.

40. Towards the end of 1916, four Kakonyukye and three Kaputiei Masai, armed with rifles conducted a raid against German natives and looted some 200 head of cattle. The culprits were tried at Ngong in January, 1917, and a fine of Rs. 175,000 was imposed upon them under the Stock and Produce Theft Ordinance, but the case was quashed by the High Court.

*648 Grazing concessions, December, 1918.

41. In December, 1918, the Masai reported that their grazing in the reserve between Magadi Junction and Ulu Station was finished and that their cattle were dying from want of grass. The areas round Kiu and Kajiado were required for military purposes and permission was accordingly given to the Masai to graze their cattle across the Uganda Railway between these two stations on unoccupied Government ground on condition that the cattle watered and lived in the reserve.

*648 579 721 Kakonyukye raid into German East Africa, January, 1916.

42. In January, 1916, the Kakonyukye Moran of the Il Mojuali "Sirita," some of whom are said to have carried rifles, without provocation, crossed the Anglo-German border with the object of raiding the Nyamonga natives of German East Africa living to the north of the Mara River. They killed about fourteen of the Nyamonga, mostly women and children, and captured a considerable quantity of livestock. The Nyamonga had previously been of great assistance to Intelligence Officers posted to the Eastern Lake Area and this raid had a bad effect on their attitude towards the British. The Officer-in-Charge reported this matter to the Governor and recommended a fine of not less than 2,000 head of cattle for the reasons that the Moran had been repeatedly warned against taking such action on their own account, and that the section in question had always been troublesome and was practically the only one that had failed to give any assistance in guarding the border. As the Masai Reserve was at that time a military area the facts of the case were reported to the military authorities who approved the imposition of a fine of 2,000 head of cattle with a further 1,000 head if a number of rifles which had been handed to members of the tribe by an Intelligence Officer were not returned by the end of February. The Governor subsequently discussed the matter with the military authorities, and the fine was reduced to 1,000 head of cattle plus 500 head in respect of the rifles which had not been returned within the specified time. An attempt to collect the fine was only successful in obtaining payment of a small portion and by June 15th some 600 cattle and 300 sheep had been brought in. The fine had been paid in full before the end of 1916, and it was decided that compensation to the extent of 500 head of cattle and 600 sheep should be paid to the Nyamonga on account of the damage they had suffered. All the rifles were eventually returned and the cattle seized in respect thereof were handed back to their owners. The proceeds of the fine in this case were credited to Masai funds.

*648 Kisumu-Narok telegraph line, January, 1916.

43. In January, 1916, a telegraph line was erected by the military authorities between Narok and Kisumu station to assist in the rapid transmission of intelligence reports. In June, 1917, the military authorities having expressed their desire to remove the line, the Governor-in-Council decided that it should be maintained as far as possible as a civil line by the Officer-in-Charge of the reserve.

Fine imposed on Sighirari Moran, January, 1916.

44. In January, 1916, the Sighirari Moran were fined three hundred bullocks by the military authorities for failing to report the presence of an enemy bombing party near their village.

Application for a collective fine on the L'Otayok division, March, 1916.

45. In March, 1916, a recommendation was made that a fine should be levied under the Collective Punishments Ordinance on the members of the L'Otayok division on the grounds that they had harboured a criminal. No fine was imposed owing to the lack of definite evidence.

*648 579 721 Raid into German East Africa, April, 1916.

46. Early in 1916 a joint raid instigated by the Sulei division was carried out against the Soit Pese in German East Africa by Moran from the Sighirari, Sulei, Il Dalo Lekutuk and Matapato divisions. Some ninety-nine of the Moran were armed with rifles and in the course of the raid thirteen were killed and eighteen wounded. This raid was instigated partly as a reprisal for the German raid described in Incident No. 24, the cattle taken on that raid being supposed to be at Soit Pese. Between three hundred and three hundred and fifty head of cattle were recovered. The Officer-in-Charge applied for a fine to be imposed on these divisions to the extent of Rs. 20,000, but the Governor-in-Council ruled that, in view of the gross provocation suffered by these divisions no action should be taken until their future behaviour had been observed.

Emigration of Sulei Masai, May, 1916.

47. In April and May, 1916, about one hundred Masai, of the Sulei division, moved from the farm of a German named Steinwand, in the neighbourhood of Kerungoro, in German East Africa, and took up their residence in Loita country

4:Sandford C-4,5 (1918) 1919 FL12 Masai FL12
Dorobo FL6

M 648* 579 72

under the aegis of the medicine-man Sendee, with their stock, numbering some 2,000 head of cattle, and ten to twelve thousand sheep. These Masai were subsequently found to be in the possession of seven rifles, the property of Herr Schlentopf, which were recovered and destroyed by the Assistant District Commissioner, Narok.

Cattle theft by the Masai from the Kikuyu.

48. In June, 1916, a series of eleven cattle thefts from the Kikuyu were reported as having taken place, presumably by Masai, between June, 1916, and April, 1916. In three of these instances, the persons implicated were arrested and convicted, but, in the majority, the looted stock was traced to the Masai Reserve and not recovered. Sixty-nine head of cattle had been taken altogether, but only six head had been returned, and the Provincial Commissioner of the Ukambani Province considered that compensation should be paid to the Kikuyu in consideration of their losses. As the information respecting these alleged thefts was too scanty to admit of any fine being imposed on the Masai without further investigation, Mr. Hobley was instructed to hold an enquiry into the circumstances of each case. As a result of his investigations, he considered the case against the Masai to be strong enough to warrant the imposition of a fine under the Collective Punishments Ordinance, and in this opinion the Attorney-General concurred, adding that, in view of the large number of stock stolen from the Kikuyu, the fine might be of an exemplary character. He suggested that the amount and the incidence of the fine might be decided after consultation with the Officer-in-Charge.

Mr. Hemsted, however, thought that insufficient evidence had been forthcoming to prove the complicity of the Masai tribe as a whole, and recommended that a fine of Rs. 1,000 be imposed on the village of Kithondu, and of Rs. 500 on the village of Lokorio, to which villages, situated in the Kedong Valley, stolen cattle had actually been traced. He also suggested that the proceeds should be distributed to the Kikuyu in compensation for lost cattle. This course received the support and approval of the Governor-in-Council on the 11th of September, 1916.

Murders on the Kisii road, July, 1916.

49. Two persons were killed on a road between Kisii and the Masai Reserve, in July, 1916, and some rupees were stolen. An application for the imposition of a collective fine on the Kimwani "Siriti" of the Purko Moran, based on the ground that these Moran were the only warriors near the scene of the outrage, was disallowed on account of the fact that the road in question was much frequented, and that there was nothing to show that any members of the Masai tribe were responsible for the murders.

D 648 579

Raids by Wandorobo.

50. In September, 1916, it was ascertained that the Wandorobo had committed a number of stock thefts in the Ikoma district, after the Intelligence Officers had left the border. Several Wandorobo were killed in one attempted raid. The Wandorobo concerned were arrested and punished by the District Commissioner, Mara.

M 648* 579

Murder of two Kikuyu near Narok, November, 1916.

51. On the 19th of November, 1916, two Indian traders, travelling on the main road some seven miles from Narok, found two bodies of Kikuyu natives lying near the road. These Kikuyu had been murdered and were quite dead when found. They had several wounds on their persons, evidently inflicted by spears and knives. One of the murdered Kikuyu was recognized immediately as the servant of an Indian trader, at Narok, and both had been carrying loads when they met their death. Investigations were immediately instituted by the District Commissioner, Narok, but nothing definite was discovered. In February, 1917, evidence was brought against two Moran, who had been wandering in the vicinity at the time of the crime, but this was insufficient to justify further proceedings being taken against them.

At the end of April, the headmen of the Moran living in the neighbourhood were called on to explain what steps they had taken to find the murderers. The scene of the murder was greatly frequented by the Moran of the three Purko "Siriti," namely Kimwani, L'Aimer and Mojonli, and, as no evidence was brought by any members of these "Siriti," respecting the murders, the District Commissioner recommended the imposition of a fine under the Collective Punishments Ordinance on all three companies.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

726 791 Prior to a major raid, but not before a minor expedition, a visit would be paid by the participants to the laibon, who would give charms to ensure success. No payment was made at the time, but a portion of the captured stock was taken to the laibon on return. It was thus to his material advantage, as well as to that of his reputation, that the raid should be successful; it is consequently only natural that he should pass on any bits of intelligence brought in by previous visitors, and any hints which experience had taught him, to reinforce the efficacy of his charms. Thus a proportion of the spoils, lifted by a combined force of Kissongo Dwati and Dareto from the Lumbwa living beyond Kiteto, about 1916, were taken to Laibon Parrit (16), later gazetted Chief of the Tanganyika Masai, but at that time resident in Kenya.

721 791 The initiative of suggesting such raids seems to have rested with the moran, though the modern technique of an upstart laibon saying "There are plenty of cattle in such-and-such an area, I can't understand why you fellows don't go and take some", was doubtless used in the old days to encourage slovenly sections to action.

Minor raids, from all accounts, were organised locally and carried out without reference to the laibon, to whom none of the captured cattle were presented. The difference between a major and a minor raid appears to have lain not only in the numbers of Masai involved, but also in the strength and reputation of the proposed enemy.

669 791 In the matter of civil war the laibon's position was rather different, as his own position was at stake. In contrast to the usual "We went and raided such-and-such a tribe", Laimer informants frequently refer to the time "when Mbatian called us up to fight the Laikipiak." In the struggle which followed the death of Mbatian, it is obvious that Lenana and Sendeyo were encouraging war for the purpose of furthering their own personal ambitions.

561 791 The second main function of the laibon is that of supervising and blessing the *age grade ceremonies*. It is probable that a laibon at least gives charms, if he does not attend in person the Embolosat ceremony, the commencing ceremony of the age, held by the Kakonyuke section on behalf of the whole tribe. It is certain that he does so both at the Unoto and Ngeherr ceremonies, that is at the promotion and passing out of the warriors. But he is not responsible for the organisation of such matters, nor is it on his initiative that new ages commence or old ones stand down. As this is a matter of prime importance in determining his true position ,it deserves full attention. The closing of the present Merisho age was agreed to at an Ol Kiama (or General Meeting) of the tribe in 1937, and not done at the dictation of the laibon. The il *Piron* elders, i.e. those of the reciprocating age — set next but one above the warrior set — are alone responsible for the initiation, promotion and standing down of the moran. An interesting case occurred in February 1939, after the Endungore, or closing, of the present age, when a Dwati elder at Naibor Murt decided to circumcise his two sons, and brewed beer in preparation for the event. The local Dareto, hearing of this, determined to stop him, marched into his boma, and drank the beer themselves. It

Kenya

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 234 462 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (*see* Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders. 721 [682] [777]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raid the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (*see* Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary novices or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [563]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). 'Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not *vice versa*), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the river before adding them to his flock. [574] [582] [563] [411] [412] [438]

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

791 the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group; these all belong to the In-Kidoqi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputie at Ngong (now living among the Loitai), the Kisonko, Il-Aikipiak, Il-Wuasin-kishu and Sambur also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were[31] (1) to sanction war and to provide protective medicine for those taking part in it; (2) to authorize the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical focus for tribal activities. Many laibons also practise witchcraft (as defined above, p. 39). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

721 When the warriors of a *sirit* wanted to raid, they approached their *ol-aiguenani*,
624 who planned the attack and arranged for the co-operation of other companies if a big raid (*ol-orora*) was intended. The *il-aiguenak* concerned then went to the laibon to get his sanction and protective war medicine. Before agreeing, however, the laibon
726 consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in song after getting drunk. The warriors then went to their *il-puli* and feasted on meat to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Nyika being a frequent objective; Thomson was told that a Masai
727 patrol was once seen in Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the *manyata*, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-oo-rok-kiteg* and *il-oo-do-moyi*, "the black ox" and "the red oxen," and fought for the spoil. Small raids, *ol-wuampa*, carried out locally by one *sirit*, were not referred to the laibon, who received no share of the spoil.

726 Wars between Masai tribal groups were frequent, and formed one of the factors
578 in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmenteita, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputie, the other of the Il-Aikipiak. A detachment of picked men from each side would come out and fight a pitched battle, cheered on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline
701 was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Gorged
[714] with meat, and in the panoply of ostrich-feather head-dress, cape, gleaming spear, shield, sword, club, painted face and leg ornaments, the Masai warrior felt himself more than a match for anyone.

727 Prisoners were not often taken, though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed,
728 women seldom. Peace was made by a formal ceremony at which nursing mothers

000 against the former. The El kuafi recognized the chief (ol oiboni)
174 of the Masai as also their own and seem for a long time to have
184 been on the best of terms with them. Then -- so the tradition
669 tells -- a girl named Matangó, from the family of the ol oiboni
619 Sitonik -- she is usually designated as his sister, more rarely as
726 his aunt -- took a fancy to a member of a legation of El kuafi
[173] warriors sent to Sitonik and went away with her lover. When she bore him a son, the El kuafi proclaimed him their ol oiboni and at the same time refused to obey Sitonik. With this the wars began between Masai and El kuafi. They lasted -- so it seems -- the entire first half of the nineteenth century and occurred sporadically even in the second half of it. One of the decisive battles was at Kisongo, a six-hour march west of Meruberg /Mt. Meru/, where later on the chiefs of the Masai took up their permanent /8/ residence. The ones driven away went into the rugged forests of
[466] Meruberg, where they lived for a long time in constant strife with the Masai, until the chief Mbatyan completely subjugated them and forced them into compulsory service. Other battles took place near Ngurumán, north of Lake Natron: the rest of those conquered still live there, mixed with Wasegedju from nearby Sonjo. The
[361] remnants of the ones defeated in the Serengeti steppe are still to be found in Taveta, Kahe, Aruscha-tschini. The first battles between Masai and El kuafi probably took place in the vicinity of Kenia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi; the ones conquered fled to Ngujuka and then farther to Useguha and Mahgá, where they founded a settlement under the chief 'Lemá.

174 The Masai took a few individuals from among the defeated
184 into their community. The rest split up. One -- larger -- part
619 became sedentary and formed some colonies in the vicinity of
[361] foreign tribes or merged with other tribes. Another -- smaller --
[721] part at first made a living for a time from hunting, until it
[231] succeeded, by means of raids against sedentary peoples, in coming
[101] into the possession of livestock again. Today they again live wholly as before and are distinguished from the Masai only by

/10 cont./

000 superstition and belief in spirits are to be found in the grossest forms, just as all the crimes resulting from these, such as abortion, infanticide, etc., are everyday occurrences. But
648 even a people standing culturally higher than the Masai, with
721 their absolutely quite low culture, would never have arrived at a dominant position peacefully living side by side. The means of attaining it were the wars waged constantly and ruth-
[177] lessly. Their daring raids greatly impressed the Negroes, which is why the latter, in order to be taken for Masai themselves and to be feared as such, adopted their attire on war expeditions.
144 The involuntary admission into these Negro tribes on the part
177 of many Masai women and children, who often fell victim to their neighbors during the constant wars, as well as the compulsory intercourse of those who found help and refuge among the adjacent agriculturalists when the periodically recurring epidemics had carried off their livestock, created circumstances
000 that took shape in the direction of a general Masaization. To the young Negroes the free, lazy existence of the Masai warriors, devoted only to war and raids, seemed worth aspiring to, and the girls found the handsome slender Masai figures more desirable /11/ than the men of their own tribe, who, in their often hideously ugly and wild Negroishness and through the frequently total lack of care of skin and body, stand in coarse contrast to the agreeable, often finely chiseled, and handsome features and the shapely limbs of the former. Thus the Masai
144 gave much of their blood to other tribes, and today in almost all
177 the peoples who have come into close contact with them one finds figures which at first glance one could take for pure Masai.

175
619 /20 cont./
791 understand what such a success meant. Mbatyan demanded thou-
727 sands of workers, and they moved obediently, in endless long lines,
466 men, women and children, toward the steppe area of Kisoṅgo, lying
[466]

791
301

Merker phot.

175
619 Ill. 4. Zendeo, the present chief of the Masai.
791 west of the mountain, where the mighty one resided, like his
727 ancestors. There they had to dig a long water channel, whereby --
466 a further particular humiliation -- the men had to work in rank
[462] and file with the women. Encouraged by these and other successes,
175 the Masai became more and more arrogant, and they extended
648 their war expeditions farther and farther. It was not only the
721 Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175 The belief in the magic means for healing purposes which
791 Mbatyan gave those seeking help, and whose chief ingredient
755 quantitatively was the vanilla-scented, pulverized wood of the ol mogoṅgora liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

/73 cont./
561 634 [791] [787] After he has counted off the little stones of his oracle game for a while, he decides that N., the son of M., is to become ol aunoni. This session is secret, and the speakers also have a duty to keep its result secret for the time being. A man can only become ol [554] aunoni who is distinguished by physical beauty, faultless build, strength, and health. After the speakers have returned home again to their area, they call together all the ol borõr members there and, with these, again set out for the ol oiboni. Then a very large hut (os siñgira otunigi) is built there. When it is finished, the speakers take a number of warriors into their confidence and tell them who has been named ol aunoni. Then all gather in the hut, in the center of which stands a new, neatly carved wooden stool, toward which the one named is inconspicuously pushed by those who know. As soon [301] [291] as this has been accomplished, a few of those standing around him push him down onto the stool, others place a string of blue ring-beads (ñ gonoñgo) around his neck, tie the spiral ear ornament made of copper wire (e surudia), such as is worn by old men and women, into his ear lobes, remove his short, skin-apron (e megiti) of the warrior, and in its place drape around him the long one of the married (the ol gela l ol moruak). Finally all those present cheer the new ol aunoni and cry out tadarawá jo ijõk eñ gischon, that is, remain poor, [556] bring us luck. The Masai in general maintain that every ol aunoni has remained poor; if he were to put livestock in his kraal, he would soon die, his wives would bear him few children, wealth would remain [431] denied him. But he does not need it, for every man under him is obliged to give to the ol aunoni visiting him a fat ox and milk. Hence he is constantly on visiting trips, which explains why he has neither a large stock of cattle nor numerous progeny. In his kraal the lord who keeps the women at work is missing, and the latter in turn indeed have no incentive to work, for, by means of the gifts that fall to their husband, an excess of foodstuffs always prevails.

[574] After the ol aunoni festival is over, the other ol borõr members wander back home and celebrate a long meat feast (ol bul), where- [721] upon they /74/ usually set out on a war expedition, while the ol aunoni himself goes back to his kraal and remains there.

561 /77 cont./
701 Mixed, light colors are the symbol of fickleness, frivolity, flighty,
702 childlike, and childish sentiments; they are not proper for adult men
152 with a serious conception of life. The festival lasts about a month
865 as a rule. During it the youths practice handling the weapons, tell
[822] each other gruesome war stories, which they have heard from warriors
or invented themselves, and thus stimulate their imaginations, just as
the reading of Indian and pirate stories does this on occasion among
[276] European boys. They artificially make themselves positively wild,
to which also the taking, still strange to them, of various roots and
barks with a nerve-stimulating effect (which will be discussed later),
which they add to the cooking meat, contributes a great deal. All
their yearning is directed toward war and murder, everything in them
is pressing toward killing an enemy, and enemies for them are all non-
Masai. Each of them would like soon to be no longer an ebor alem =
[721] white, that is to say, not yet dyed with blood, sword. Not infrequently
they turn against defenseless caravans if such happen to be in the
vicinity. Whether or not spoils are to be taken in this is of no im-
portance, only killing and murdering, they do not think any further.
Many attacks on caravans have come about in this way. Such op-
portunities, however, are always rarities for individual troop of youths.
561 The rule is a war expedition against a sedentary tribe. After the
701 fighting, the el barnot again return to the paternal kraal to live there
702 a few more years. During this time they attach themselves more and
[721] more closely to the warriors, in order to learn from them and to im-
prove themselves in the art of war. They accompany the warriors on
their raids and now and then also take part in their forest meals.
Nevertheless they do not gain admittance into the warrior kraal,
which is just as wounding to their self-confidence as the circumstance
that they are looked down upon by the warriors and treated almost
like boys. The wish to be on an equal footing with the warriors grows
ever keener in them. But they still lack two things for that: the
name for their age class and the shield escutcheon.

561 In order to request the bestowal of the former from the ol oiboni,
[791] a gathering (eñ giguana) (1)

1. Any gathering for a consultation is called this.

/78 cont./

714 These consist of curves, sectors of circles, lines and scallops,
531 which are painted on the shield's surface in three colors, Pompeian
[822] red, black, and gray (1),

1. Gray is very rare. Black and red, on the other hand, are represented on every shield of the warriors.

with which white belongs as a fourth color, /79/ serving as the background color for the shield's surface, from which the colored designs
[386] stand out in sharp contrast. One uses for this the red earth mixed
[824] with blood or with the juice expressed from the fruit of the Solanum campylacanthum, further the white earth that is found in various places on the steppe, which is mixed with water, and, for black,
[239] pulverized, charred gourd shell. Gray is produced out of charred and pulverized cattle bones.

714 Today considerable confusion in the shield escutcheons already
531 prevails. The rarer the war expeditions of the Masai become,
• 721 thanks to European domination, the more the old formalities of war-
178 fare are sloughed off, and ancient rules, which formerly were never
[648] transgressed, are today all too often ignored; their purpose has lost
[669] its meaning in the changing times. A further blurring in the shield escutcheons arose through the Lenana-Zendeo civil wars, in which, for the first time, long-lasting struggles between the Masai are taking place. The confusion in the escutcheons in and of itself interests us here only as one of the many visible proofs of the relaxation of the old strict organization. Therefore a special description of the present-day, often arbitrary escutcheon figures may be omitted. On the other hand, it is important to establish the rules according to which the shield escutcheons were made up.

714 A shield escutcheon (Plate 1)[2] may contain: 1. the red warrior-
531 emblem (os serat' onjugi), 2. the black emblem (os serat' erok) (1),

1. To which the rare gray also belongs.

3. the ornamental band (es segira l el oño), 4. the escutcheon of the lineage, 5. the emblem of the sections, and, finally, 6. an emblem

1, [i.e., the shield escutcheons--Analyst]
2, [See pp. 604-607--Analyst]

/81 cont./

714 531 613 [561] The illustrations give the lineage emblems that the members of the el meruturut age class carried before the livestock epidemics around the year 1890. It furthermore seems that even in the times in which the carrying of lineage emblems was customary they were not generally carried by all lineages, but only by those whose members predominated in number in the part of the country concerned. The practical utility of this mode of procedure was to keep constantly before the eyes of compeers of other lineages the fact that these lineages were particularly strong and that therefore the individual belonging to them was entitled to a larger share of the spoils, in accordance with the principle: might comes before right. The emblem of such a lineage was then also sometimes adopted by all the warriors of that part of the country.

714 531 [703] Those warriors who take the lead in battle, the el kigeloni, have the right to carry the emblem of bravery on their shields. This is the small colored emblem that is on the periphery of a longitudinal side and is to be found in Figures 9, 10, 13, 16, and 17 of Plate 1. It is still commonly used today.

[704] The last emblem that may be included in the shield escutcheon is the one mentioned above as the section emblem. By section is to be understood here one of the many small divisions out of which the camp of a troop found on a war expedition is made up. In accordance with its secondary significance, the emblem is not very striking to the eye. A comparison of Illustrations 11 and 12, Plate 1, shows an example. These represent the escutcheons of two shields whose owners belonged to one company and within it to different sections.

714 531 178 It is also to be mentioned that both the shield escutcheon as a whole and its individual constituent parts were probably always dependent on fashion and other circumstances of the moment. Sometimes simplicity was fancied, sometimes garishness. Sometimes a close feeling of comradeship prevented the carrying of the clique-forming lineage emblem, sometimes internal discord involving grounds of penal law or civil law called forth the opposite. The above-mentioned shield paintings of old men proved to me that the shield escutcheons of a province were uniform during periods of successful warfare. On the [721] other hand, /82/ one can observe almost daily on the Masai steppes that

714 /82 cont./
531 nowadays the warriors, out of boastfulness, go on using shields,
178 with unaltered escutcheons, taken as booty in battle with Negroes (1)
• [721]
[197]

1. The fact that Negroes also carry shields of the Masai type, and, to be sure, with similar escutcheons, is a consequence of the above-mentioned Masaization.

or half-breeds of Negroes and members or bastards of the Masai people or, with the present discord, even those of other Masai.

714 The shields of the el barnot, the recruits, do not appear as gaily
53 colored (Plate 1: Figs. 1 and 8). As soon as the youths have received
701 the shields, they ask the most esteemed of the married men, a former
561 speaker of the warriors, for his consent that they be permitted to paint a black emblem on the surface of the shield. At the time he gives his permission, he also determines the form of the emblem, that is, he does not invent a new one, but chooses one from among the old familiar ones. With this and with an ornamental band only drawn in

701
714
531
411

Merker phot.

Ill. 30. Shield escutcheons of young warriors.

/82 cont./

714 black, the youths then paint their shields. The red color may appear
701 in the ornamental band only with the carrying of the large red emblem.
531 They carry the black emblem and the ornamental band until they
561 have become the equals of the warriors and are able, by their ability,
to obtain the red emblem by obstinacy or force, for the warriors,
of their own accord, will not let a younger age class carry those
emblems. Therefore, when the youths feel strong enough, they com-
plete their shield escutcheon in the aforesaid way and then carry it
714 /83/ ostentatiously for show. The warriors see it, become angry,
701 and scold. The el barnot, for whom the warriors have until then
531 been persons of respect, answer snappishly and impudently and scoff
561 that the warriors have now become old and weak and neither need
578 nor deserve the red emblem any longer. No one likes to be reminded
of his shortcomings, and a Masai least of all tolerates the reproach --
for that is what it is for the one still in the warrior association --
of incompetence in war, especially if it is hurled at him in street-
urchin fashion out of the taunting mouth of a younger person. At the
[591] same time the youths build a circular barricade of branches and move
in, possibly even before it is filled with huts -- a further provocation
of the warriors, for with that the el barnot declare that they too now
have a right to their own warrior kraal and are no longer to be re-
garded as recruits, but as full-fledged soldiers. The consequence of
this is that during one of the following nights the warriors attack the
growing kraal in order to make the point clear to the el barnot with
force. If the latter are defeated, nothing remains for them for the
time being but to scratch the red emblem from their shields again with
[721] all haste. They give vent to their anger over their defeat by scolding
and by one or two small raids against Negro tribes. Sometimes the
701 warriors then acknowledge them as equals, especially if the raids have
561 brought rich spoils, but often too they must force their recognition as
[531] before. If this succeeds, they may now also carry the red emblem and
[714] are henceforth regarded as true warriors. They continue to build the
kraal that was started and live beside the other warriors, but go to
war with them. Usually, however, this situation does not last long;
rather, the old warriors soon quit the service and marry. It is there-
fore an exception if there are two warrior kraals in one region at the
same time.

[Warrior Kraal]

224 701 /91 cont./ A few intrepid warriors also leave the kraal, spear in hand, in order to attack the lion, but as a rule soon return unsuccessful.

• 721 If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol aigwenani). The warriors of a few neighboring kraals have already /92/ promised their participation and have also pressed their speakers, who then all together go to the ol aunoni with whose consent the war becomes a settled matter, for the waging of which only the permission of the ol oiboni is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Masai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

[626] 1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Masai themselves or a competitor to them in the plundering of other tribes -- the ol aunoni or one of the speakers lets himself be carried away to secure a majority for the war by calling the vacillating ones el konono, [578] that is, blacksmiths. He always achieves the desired result with this, but in the following days may leave his hut only under the protection of influential warriors, in order to avoid assaults on the part of the reviled ones.

721 726 714 If they have finally succeeded, however, the leaders of the majority make an end to further debate by invoking the en dorosi, a sort of Rütli oath. /Rütli, a meadow in Switzerland where the first league of the three cantons was formed in 1307./ Then every warrior of the kraals concerned has to put on immediately the visible sign of the

/92 cont./

721 en dorosi, the en doros. For the warriors this consists of three or four
726 leather strips cut from the apron of their favorite girls, which are
714 adorned with stitched-on beads and, beside them, tied-on pieces of wood (from twigs of the ol araschi and os siaiti trees), while the leaders wear as en doros the borrowed tobacco box of a married man or his fly switch. The en dorosi obliges every warrior to take part in the ex-
703 pedition. Anyone who nevertheless stays away out of fear is most deeply despised and outlawed; any warrior may kill him without penalty. In order to give the fainthearted courage, the most daring ones not infrequently stick a ball, which has a diameter of 10-12 centimeters and is made out of black ostrich feathers, on the tips of their spears. Through this they express their firm determination to attack the opponent and to stand up to him in hand-to-hand combat, for the ball may be removed from the spear point only by one's running it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and, to be sure, only cattle. War is not undertaken for goats and sheep. Boys may go to steal small livestock. Only the capture of cattle is worthy of a warrior; he only takes small livestock along as well when he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
791 together betake themselves to the ol oiboni and put before him the wishes of the warriors. None of the latter accompany them, since they would behave too uncouthly in the presence of the great man, who wishes calmness and clarity in the consultations.

721 /93/ The ol oiboni keeps himself accurately informed both about
726 the strength of the individual warrior kraals and about all the condi-
791 tions of the surrounding sedentary tribes coming into consideration for a war, so that he is in a very good position to judge accurately the prospects of victory for either side with great probability. He also keeps himself posted about unimportant and secondary matters with regard to the opponent and weaves all this knowledge adroitly together in his answer, so that it sounds like a seer's pronouncement and is taken as such by the speakers and warriors. His answer -- as the speakers report it -- runs, for example: "You will attack the Kahe
[264] area; it is strong, and you will therefore first hold a twelve-day

• 721 /93 cont./
726 forest meal (1),
791
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mossor ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19. 1/3

726 704 [727] emouerak (sing. ol emouo) = horns. As soon as the ones in front come across livestock, they call the others by long drawn-out dí shouts, so that they will round up the booty, which consists only of livestock. While the el aroi engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

726 782

Ill. 39. Prayer before the battle.

726 704 booty away from the el dimito again. In connection with this fighting there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the el dimito and pushed toward the steppe, out of the hostile area. The fourth troop, the el kigelóni, seeks to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the os sioki, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The el dimito and el kigelóni strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp. [727] Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon 727 every warrior receives a portion of meat. The warriors /98/ must 417 lay out a fence of thorns so that the livestock is safely sheltered in it for the night.

/99 cont./

722 while he was imploring 'Ng ai that he might join together as securely
782 as this knot their body and soul. He prays in similar fashion every morning after leaving the hut. The mother likewise prays to God for protection for her son and each time offers him some milk, which she squirts on the ground either out of a gourd bottle or out of her
722 right breast. The girls are somewhat more cheerful about the affair, in that, instead of other prayers, they accompany their dances with litanies for the preservation of their lovers and the many other loved ones. Today the worrisome thoughts are again particularly intense; the warriors must soon be coming home, and then it will be definite as to whether the son or lover is among them.

727 From afar one already sees isolated little clouds of dust, which the cattle that are driven along stir up. The girls and young women hasten to meet the El moran and warmly welcome all who are approaching. But what is this? There, among the laughing women, stands a young woman who has just kissed her brother heartily on both cheeks; now comes her husband, who still wanted to take part in this one expedition before he remains at home permanently as an old ol móruo, and one would expect at least as hearty a welcome for him. But both act as though they did not see each other, indeed, they even turn away from each other. One might think she is angry with him because he staked his life unnecessarily. She is not angry with him, however; on the contrary, she is secretly happy that he has come back safely
[576] and is bringing along rich booty. But the Masai too /100/ have their
[573] "good breeding" and this requires that married people upon first seeing each other again after an expedition of war, cut each other completely.

From his share of the booty the warrior keeps only one or two milch cows, which he hands over to his loved one. The rest he presents to the mother, the father, the latter's other wives, the brothers, sisters, and one or another of his more distant relatives of whom he is particularly fond. A person who does not receive anything this
[721] time will get his share after the next expedition. He need not wait long, wars follow one another quickly, the interval between two is seldom more than two or three months. Hence the Masai are a veritable scourge for the neighboring tribes, and the rumor, "The Masai are coming," in spite of its frequency, is often enough to disturb whole towns and villages for weeks.

/101 cont./

726 boys, who flee immediately upon the approach of the enemy. Half
725 of the warriors are hidden at the rear of the larger one, while the other half lies in wait toward the front and to one side of the front herd. The enemy first takes possession of the front herd, some of them attempt to drive it away immediately, while the rest try to reach the rear one. Now the moment has come for the Masai warriors to burst forth at both places.

• 727 The fact that the Masai so frequently attack with great success and often strike down to the last man even trade caravans armed with muzzle-loaders they owe nowadays less to their strength than to their cunning. A caravan traveling through the steppes will today be joined by a pair of seemingly poor, hungry Masai, who greet the porters in a friendly way and willingly give them information about the next camping place, etc. Incidentally, but with all the fabricated details possible, it is related that the Masai had recently been in the vicinity, but had now moved off and were camping far from here. After the two have eaten with the porters in the evening, one of them disappears during the night and reports to the warriors of his kraal what has been discovered. Before dawn he is back in the camp and the two travel on with the caravan, having by now become friendly with its men. There are found again the next day two or three "poor" Masai, who pass themselves off as Wandorobbo -- as the first also often do. They have brought along their alleged entire possessions, consisting of a few rhinoceros horns, to sell or even as gifts. They too remain with the caravan: they eat, chat, and joke with the porters and on this occasion reveal a keen understanding in recognizing how far the latter trust them, whether they feel quite safe, etc. If they believe the caravan is quite unconcerned, one of the Masai guests, on this or the next night, fetches the warriors, who then, as a rule, between midnight and three o'clock in the morning, when the porters are sleeping most soundly, attack the camp and without difficulty massacre the sleepers.

/101 cont./

726 721 As has already come out in the foregoing, the Masai are not familiar with a declaration of war in their dealings with foreign tribes. War is rather a sudden attack in the midst of peace, or, more properly, because, as we shall presently see, seriously intended and binding conclusions of peace are indeed not customary, in a state of peace, which the tribe concerned owes merely to the circumstance that the Masai at the time are simply plundering other peoples richer in livestock at the moment.

728 648 If the war concerned a distant area, no peace whatever was concluded, unless it were to deceive those people, so that no difficulty /102/ was to be expected from their side for a later attack on a land neighboring them. For this a few old men were first sent to the just attacked tribe. They carry a bunch of grass (ol gojeta, el gojet = grass) in the right hand and bring a sheep that wears a chain of blue or green ring-beads, ol gomdai, around its neck. These are the peace insignia (ol dogitin ee amani = things of peace). After the old men have put their request before the foreign chief, the latter, happy to be able to make peace with the Masai, gives them a few old men to take along, with whom the speakers then enter into blood friendship (ol mamal). Both parties, surrounded by warriors, sit down under a shade tree in the vicinity of the kraal, closely opposite each other, one of the foreign old men in front of each speaker. Now each one makes a small cut in the left lower arm of the one opposite him and wipes off the blood gushing forth a number of times with a few pieces of partly roasted meat, which he eats. During this ceremony the participants swear eternal peace. The meat used comes from an animal just slaughtered, usually from a head of cattle, more rarely a goat or a sheep. The animal must be perfectly sound, about which both parties convince themselves by an examination of the entrails.

Just as the Masai deceive foreign tribes with this blood friendship, they have also often done this with respect to Europeans. Those concerned simply believed that a blood friendship coming about in this way had the same value as though it had been concluded with sedentary Negro tribes, who have a similar custom. But since in this case it is a mere pretense, there is suggested the conjecture that this is a matter of a custom that is not peculiar to the Masai, but was merely adopted from other peoples. The author regards the possibility of a

/164 cont./

231 Two breeds are distinguished, a shorter and stockier one and a longer-
[613] legged, thinner one. The latter is allegedly found only among the El barnegero lineages.

233 Among the goats a small breed and a large one can be distin-
• [621] guished. The Masai have obtained the latter only through raiding expeditions in Pare, Unyamwesi, etc.; the true Masai goats are small. All have medium long, smooth hair, a markedly projecting forehead, and lop ears. The horns are usually only an inch long and have tips turned back somewhat. Among bucks they are larger, but also only rarely seven to eight inches. /165/ The sheep are only medium-sized compared to European ones. They have curly, coarse hair. Three breeds are distinguished, a large one (eñ ger sabug = large sheep) with fat rump, a medium-sized one (eñ ger kětě = small sheep), white with black head and medium-long fat tail, and a small (eñ ger kiberoto; kiberoto = poor, paltry) breed and with a
[232] long fat tail. Among the young female animals of the last two breeds the fat tail is cropped for fear it might be obstructive to the buck during coition.

The black-headed breed is stronger in North Africa and probably degenerated here, just like the last of the three breeds, which might

Ill. 55. Masai goats and sheep.

/204 cont./

776 improvement. He then does this through sickness, drought, or cattle
779 epidemics.

779 The Masai feel that they are the chosen people of 'Ng ai; all
• 721 other peoples should be subject to them. God created the world with
[186] all that is in it only for them, and thus everything on earth belongs to them. If they obtain booty in war against another tribe, they are only taking what has been given to them by God for their own, what lawfully belongs to them, and what that tribe is unlawfully withholding from them. "If the el meg would voluntarily give us our property, for that is what the livestock in their possession is, we should not have to make war on them. But since they do not do this, we are forced into war." And they are constantly waging this war against the despised, savage heathen, who know nothing about 'Ng ai and do not pray to him, but to spirits, which is why he does not assist them and always makes the Masai victors for a worthy cause.

776 In their journey through life God protects the Masai through
779 guardian angels, who are pictured as winged, invisible beings of human form. The guardian angels are the same sex as their protégés; a male individual has an ol duńgani l Eńg ai, a female one an eń gorojoni Eńg ai, watching over them. The angel accompanies the person always and everywhere and protects him from dangers, so that he will not succumb in the struggle for existence before the lifetime previously set for him by God has run out; only then does the person
[775] die. The angel carries his soul /205/ to the other world and then undertakes the protection of a child born on the same day. Every day a Masai dies and every day one is born, the people say.

775 Into the other world (eń gatambó = cloud land, i.e., the land
779 where the clouds come from) go the souls of all the deceased, both those of the Masai and of non-Masai, both those of the good and those of the bad people. As soon as a soul reaches the portal of the other world, which lies far to the north (Kopekob), God decides its future fate. The souls of good people gain entry into paradise, which is equipped with all the beauties and splendors of nature. Lush pastures with fat cattle alternate with lakes, rivers, and cool glades whose trees bear the most delicious fruits. In the midst of this splendor the good souls live in human fashion, but without care, trouble, or

/346 cont./

182 immorality. Rather, I should call their behavior animalistic-natural
831 and mention in this connection that the Masai, extraordinarily vain
[181] about preserving his youth, handsomeness, and physical strength,
imposes upon himself wise moderation in sexual enjoyment.

182 An outstanding people-preserving factor is a strict organization.
• 721 It can make a small people superior to a larger, less well organized
one, and here has given the Masai a position of power over the Negroes.
A well organized people of the steppes nowhere on earth grazes its
[181] little lambs in quiet contemplation. Rather, such people are always
characterized by a warlike and predatory nature. War makes itself
felt here harmfully above all, since it /347/ devours great masses
of men. It has often happened that only half of those who set out
returned; indeed, they tell of expeditions in which all the warriors
were killed. At the beginning of the nineties -- to cite one example,
several thousand Masai warriors set out against Unyamwesi. They had
assembled a few hours to the west of Meruberg /Mt. Meru/ and had
as a guide an Unyamwesi man by the name of Degénja, who had lived
for a long time among them. During the night before the planned
attack, Degénja betrayed it to his countrymen. The Masai were
repulsed with heavy losses and turned back. Far more than half
of them died of hunger and thirst along the way on the twelve- to
fourteen-day march. Such man killing expeditions of war are by
no means rarities; rather they recur constantly in the history of the
Masai. Certainly the great surplus of women is to be ascribed to
them.

182 With regard to the harm that livestock epidemics (1)
731
233

1. The reason that the epidemics were so destructive around 1896 is, first of all, that two epidemics occurred in quick succession: a pulmonary epidemic and rinderpest, and, on the other hand, the renewal of the herds by war expeditions was in part made difficult, in part rendered impossible, by the military stations.

/347 cont./

182 caused the Masai people in the period before the occupation of the
731 country by Europeans, I have no reliable observations made by myself
233 or by Europeans. Such can scarcely exist, for at that time the Masai were a feared power that every caravan liked to avoid. I am therefore relying on the statements of old men. According to their recollection, the epidemics were never capable of producing actual famine. As soon as the beginning of an epidemic was observed, the Masai fled in wild flight with the herds, leaving the sick animals lying along the way. Half the herd at most is supposed to have succumbed. If one considers the size of the herds at that time, one understands that the surviving part could always still furnish sufficient milk and meat.
• [721] Furthermore, the war expeditions soon brought substitutes for the fallen animals and thus acted to preserve prosperity (2).

2. It is to be inserted here that empirically livestock epidemics caused few losses for the sedentary Negro practicing animal husbandry along with agriculture. This is probably chiefly due to the fact that he calls only very few head his own and keeps these in his hut, which is far from the next one. Through that the Masai were able to replenish their depleted herds quickly and easily.

182 Finally, the Masai's profound contempt for the surrounding Negro
186 tribes was also favorable for the preservation of the people. It kept the people free of foreign elements, which here would only have resulted in a degeneration of the race.

121 The fable that primitive peoples would have continued to develop
177 peacefully and favorably if Europeans, with their corruption, had not disturbingly interfered has long been recognized as such. On the other hand, however, it remains an /348/ undeniable fact that these peoples decline upon contact with the higher culture, and that many even disappear as a people. The reason for this phenomenon lies in the fact that these peoples have already been living on an unhealthy basis and have owed their preservation to means that we designate as

/348 cont./

121 illegal and immoral, because they run contrary to our consciousness
177 of justice and our Christian morality, and which cause to arise in the economic field exploitation in the crassest sense of the word. Now while every state that occupies a savage country has the duty to appear as promoter and guardian of justice and morality and at the same time to promote economic development by guiding production along the paths of our modern principles, along with that it only too often overturns the foundation pillars on which the existence of a primitive people rests.

182 Thus in plague-ridden Africa the Masai largely owe their existence
721 as a nomadic people, whose only resource lies in its livestock holdings,
178 to the fact that they can always replace their losses by expeditions of war and plunder. As soon as the possibility of such expeditions is taken away from them, or at least very much reduced, through the erection
[648] of military stations that grant protection to the victims of the Masai, there must naturally arise a situation in which a gradually increasing weakening of the vitality of a people takes place. What was formerly to their advantage, their war lust and the cowardice of the Negroes, now becomes fatal for them. Both entice them to raiding expeditions again and again. In order to avoid the punishment deserved for that,
[361] they retreat into regions that they formerly avoided as harmful to the health for human beings and livestock, or on account of inferior pastures. If the Masai, when they came under the influence of the
177 European occupation, had still been the strong people of Mbatyan of
182 30 years ago, they might perhaps, after the example of other primitive peoples, have carried from it even though a marked, nevertheless only a temporary weakening in the meeting with the higher culture, and then gradually recovered again when they had become ready for its advantages. But we found the Masai already in a condition that
182 looked very much like ruin. The livestock epidemics around the
731 year 1890, which, not locally restricted, had afflicted the herds of all the Masai to such an extent that actually only miserable remnants were left, had produced a general and extraordinarily sever famine. Hundreds of thousands of Masai, especially men and boys, fell victim to it, and in the year 1895 the author still found the steppes around Kilimandscharo appearing in places as though they

/349 cont./

178 that are started with as a rule and which one therefore finds in all the
241 settlements. Yet despite the ease of production of the field crops,
the transition to agriculture nevertheless is taking place in a way
178 that is reducing the population in extraordinary fashion. First of all,
182 the acclimatization process slowly being accomplished demands a
164 great sacrifice of human lives. The Masai, little afflicted with
165 fever in the dry steppes, suffers with it quite seriously in the moist
regions in which mosquitoes are permanently at home. Thus on two
occasions in the same new settlement I found all the adults and many
children sick with fever. Another one had just been abandoned by
its inhabitants, leaving the sick behind. The ones left behind,
principally men and boys, were badly reduced by fever and, in
addition, suffered to a great extent from virulent leg ulcers, whose
great extent -- in many cases they covered the entire lower leg,
from knee to ankle -- probably is to be traced back to a general
weakening of the body by fever and lack of food; for such ulcers
are not common among nomadic Masai, and, where they occur,
/350/ they remain smaller and show a tendency to heal rapidly.
Other illnesses arise from the unfamiliar diet. The rapid transition
[262] from an almost pure meat diet to an almost pure vegetable diet
makes demands on the stomach and intestines that a body weakened
by fever is seldom equal to. Sickness and death from this cause
are frequent and are increased further by the consumption of bad
water. Thus, more than half the people in one settlement com-
plained of painful diarrhea and bloody stools. All these acclimati-
[842] zation illnesses seem also to manifest their effect in decreased
[163] fertility of the women and increased child mortality. I was repeat-
edly struck by the small number of sucklings (two-year suckling
period) and older children. Thus early in 1902 in Ngaruka, between
Lake Manyara and Lake Natron, among a number of about 50 women,
I found only twelve children, three of them babies. According to
the statements of the parents, very many children had died of various
ailments, especially fever, stomach and intestinal affections, several
178 also had perished in Masai attacks. For the Masai who are becoming
619 sedentary, the ones still living among the "people" as nomads are
721 a scourge that scarcely falls short of the illnesses just mentioned in

/350 cont./

178 its effect. Hated as faithless and despised as agriculturalists, the
619 sedentary ones are constantly plagued by raids that not only cause
• 721 them great loss in human lives, but also take away any possibility
[829] for them to arrive at any improvement in their way of life by keeping
livestock for the attainment of the meat and milk diet so necessary
[177] for them. Moreover, the frequent intercourse with sedentary Negroes
[164] and caravan people leads to an increase in the cases of venereal
diseases. Premature marriages of girls, which can not happen among
582 the Masai still living as nomads, is not rare among the sedentary
178 ones and often enough leads to the death of the young woman who
184 is scarcely more than a child and whose bony structure, despite her
165 attained capability to conceive, is not yet developed. Finally, it
178 must still be mentioned that no doubt the longing for the formerly
182 free life in the broad steppes and the feeling of humiliation over
having become a so deeply despised cultivator of the soil oneself
are factors that have a wasting effect. The latter circumstance also
[186] brings with it a decrease of national pride. The barrier that kept
[177] Negroes out of the community of the Masai has fallen. A disadvan-
[144] tageous race mixture hurting the people is slowly taking place.
Among the Wakuafi this process was more rapid in their period. At
[648] that time no European administration prevented their raiding exped-
[721] itions in Negro regions, from which they brought home livestock
and women experienced in agriculture.

177 In frequent -- almost daily -- intercourse that soon springs up
178 and then continues to exist between the Masai who have become
sedentary and the settled Negroes, the Masai naturally also share
in the disadvantages that /351/ come to the Negroes through the
encounter of their lower culture with our higher one.

178 We have seen how many difficulties sedentation brings to the
177 Masai, and it is therefore not surprising that a part of those who
361 have already become sedentary give up their fixed residences again
after repeated failures. These then often join the Wandorobo, to
live by hunting, and call themselves this.

175 [648] Serengeti are said by the Masai to have been dug by the Il Datwa, and they still call the Ngorongoro Highlands "Osopago lol Datwa" in memory of the people from whom
175 131 they took the area. In the next 15 years the Masai took the flat land immediately south of the highlands. Then, until about 1890, several section and sub sections of the Masai occupied the entire Serengeti Plain, the Ngorongoro Highlands, and the lands immediately west of the Rift. They lost the land south of the highlands through incursion of the tsetse fly, just as they lost other lands to the east and south of the present Masailand.

During the period of 1860 to 1890 the Masai were a prosperous tribe and they probably reached their maximum land holdings and cattle numbers. The area they occupied extended roughly 500 miles from north to south and 150 miles from east to west, an estimated
175 80,000 square miles. Under the leadership of their para-
• 72/ mount Laibon, Mbatian, they raided from Lake Victoria to the Indian Ocean. Sanford (1919) and Simon (1962) quote excerpts from the writings of many early explorers referring to the extent and effect of these Masai raids. The raids were not confined to other tribes, however. Some of their more devestating battles took place between different sections of the Masai themselves.

175 but so was the absolute reign of the Masai. The organiza-
175 tion of the sections was much broken up. Many pastoral
#233 Masai had lost their herds and had taken to hunting or cultivation. Some had been taken in by surrounding tribes and others taken as captives by them. A great many had died or been killed in the combination of famine,
[161] rinderpest, smallpox, and civil war. Therefore the population of Masai in Masailand around 1900 must have been quite low. Its lowest ebb probably came around 1892 or 1893, and there had been some recovery in the next decade. Some Masai had started to rebuild their
[648] herds by stealing cattle. Others bought them by
[721] working for the Germans helping to subdue other tribes.

175 It is uncertain what the fate of the Masai would
648 have been without the intervention of the Europeans. Those most afflicted with Masai-itis insist that the Masai were recovering rapidly and that they would have risen to greater power but for the Europeans, who held them down and took their land. Those on the other side say that the Masai were a dying race and that only the protection of the Europeans enabled them to maintain their way of life. The truth doubtless lies between the extreme views. Even Hollis (1905) who was certainly not anti-Masai felt that they would have to alter their way of life if they were to survive.

123 757 *[114] medical supplies. We had frequent visitors wanting "dawa," medicine, or a "sindano," an injection. The latter we could not provide (although we had a camp helper who stole a hypodermic syringe and for a time had a good business selling injections of water or anything else handy). We did serve as emergency hospital for various injuries, large and small. One warrior came to camp with his hand nearly cut in two. He refused to go to the hospital at Narok, so my wife somewhat reluctantly and dubiously repaired the damage. Several months later when we returned to that campsite, the same Masai came striding across the plain and proudly showed his healed hand. He was profuse in his thanks and wanted to bring us some goats and sheep as a token of his gratitude."

123 829 The Masai greatly enjoy riding in a vehicle. They are willing to walk several miles just to have a ride. Whenever it did not conflict with our scientific work we made it a point to give them rides. These were often odoriferous but always interesting experiences. We learned much about the Masai from them and we became well known to the many villages involved.

123 721 The Masai's apparent acceptance of us as essentially a part of the landscape is illustrated well by an incident in the southern Serengeti Plain. We had camped

123 beside a trail near a Masai village. In the early morning
• 721 a party of Africans from nearby Sukamaland raided the Masai village, killing at least one man and making off with the cattle. At dawn the Masai discovered their loss and ran off in full war regalia to intercept the raiders. Their route took them right through our camp where we were eating breakfast. Coming at a full run with spears and shields they looked rather fearsome, but as they passed they all waved and shouted greetings. shortly thereafter they caught the raiders and bloodily recovered their stock.

123 Being in the position of neutral, nomadic
124 residents it seemed perfectly appropriate and natural for us to casually discuss mutual interests including livestock, grasses, weather and wildlife with passing Masai, and vice versa. Consequently our status in the area helped us greatly in obtaining information. What we were told by the Masai agreed with our own observations, and was often at variance with what they told visiting anthropologists and others.

*233 <u>Social Organization</u>: The Masai in the study
[221] area are essentially semi-nomadic pastoral people. Their
000

for Tanganyika.

561 181 (b) Age grade: The age grade system is of great importance in the life of a Masai man, since it regulates his conduct toward other men and women and is the baisis for the political organization of the tribe. The system is also of significant use in dating past events (Fosbrooke, 1954).

721 181 Warfare was of great importance to the Masai prior to the 1900's. The whole social organization of the tribe was built around the production and maintenance of an effective fighting force. Although actual fighting is relatively rare now, the customs and social organization remain basically the same.

857 *233 881 561 701 Until his early teens the primary duties of a boy are herding livestock (Fig. 9).[1] Roughly every seven years there are a series of ceremonies culminating in a circumcision ceremony. This ceremony is taken by all the young men of the correct age (roughly in their mid teens), and it produces a class of warriors each of whom is known as ol-murrani, or moran. This is considered the most important occasion in the life of a Masai man, and from then on he is a full member of the tribe. Each group to be circumsized is given an age

[1] [See p. 53.--Analyst]

411 warriors also carry a narrow oval shield made of buffalo or giraffe hide on a wooden frame, and painted with insignia including the warrior's age grade and clan.

561 701 Originally during the period of warriorhood the morani were not expected to do any work except [712] fight. They lived in a separate village, called a [562] manyatta, and were generally taken care of by the [836] unmarried girls of the tribe. Discipline was reputed to have been extremely good. The warriors had older advisors whom they obeyed.

224 Ostrich's were hunted to obtain feathers [223] for ornaments, buffalo and giraffe for shields, and lion [301] for the highly prized mane. Traditionally the moran [411] was expected to blood his spear on a lion. The dramatic 177 Masai lion hunts are famous. (Simon, 1962). At 178 present warfare and lion hunting are illegal. The obvious 561 result is a large body of young men with absolutely 701 nothing to do for a period of up to 15 years of what 224 721 could be the most energetic period of their lives. * [233] They tend the livestock some, but much of the time there is nothing for them to do. As a consequence discipline is breaking down. The elders apparently have much less influence or control over the morani than they did

177 178 224 561 701 721 previously. There is a considerable amount of raiding to steal stock from surrounding tribes. This precipitated several minor wars when we were there, and administrative action prevented one major war with thousands of combatants. Some lions are still killed, and the morani have been blooding their spears on a variety of other animals, most notably rhinos.

561 Following the period of service as warriors, each age class goes through another ceremony. Two age classes, a right hand and left hand together, take the ceremony and they then receive another age grade name which they retain the rest of their lives. Thus these elder age grades each span a period of about 15 years (Grant, 1957).

177 178 561 Periodically the administration has tried to discourage the moran system. In late years some of the elders have also tried to change the system in order to maintain better control over the young men. The system still continues in Western Masailand but it is much less regular than previously.

561 593 591 When a warrior becomes circumcised he may take his mother with him to the warrior' manyatta, or he may leave her home or apparently even stay home himself.

178 *233 above made it difficult to amass large herds for any long period of time. The cattle numbers probably fluctuated greatly, depending on factors such as disease and drought. The English administration has provided excellent veterinary services, all but eliminating most diseases. They have provided water holes in otherwise dry areas to spread the grazing pressure. Predators have been killed wherever they molest Masai livestock. [724] Cattle raiding has been considerably reduced, and in Western Masailand most of the raiding is by Masai augmenting their herds from neighboring tribes, rather than vice versa.

With the other natural limiting factors largely removed and no artificial ones imposed in their place there has been nothing to stop the increase in herds but the carrying capacity of their rangelands.

*233 231 In Narok District, for example, in April 1956 the cattle population was about 330,000 head (Dept. Vet. Services, 1958). By April 1958 the population had risen to about 378,000 head (Ibid.), and in May of 1960 it was reported at 450,000 head (Mann, 1960). This represented an increase of over 36 per cent in four years.

*233
*136 Southern Asia by both Arab and Indian traders following
231 the Arab invasion of A.D. 669 and it is still spreading (Williamson and Payne, 1959).

The present cattle represent what the Masai have bought, traded, or stolen since the 1890's. Since these processes, especially the latter, are still going on, the cattle appear very mixed. One can even see an occasional Holstein among the mixed zebu in Masai herds.

*233
231
577
• 721 I should be pointed out, however, that stealing is a relative term. According to the Masai, all cattle in the world belong to them, or at least were created for them. It appears that in their way of looking at things, it is not wrong to steal if the object is a cow; they are merely rectifying an obvious administrative error. Doubtless also the excitement and danger involved in a raid appeals to bored moran who have been brought up on stories of the glories of warfare.

*136 Occasional prize steers will weigh over 1,000 pounds,
231
*233 but because of the animal husbandry practices the average weight of Masai range cattle is nearer 350 pounds. These animals require five to seven years to reach adult weight. The average liveweight gain per day is in the neighborhood of 0.3 pounds (Ledger, et. al., 1961). The cows will breed when about three and a half years old. These

in building cattle-pens and huts, herding sheep and goats and cattle, and above all, did their physical exercises which kept them fit for defence or attack. These activities were organised according to seasons. When there was plenty of work in the fields, the warriors took their full share in it and arranged their dances and songs to take place in the evenings, but when there was less work in the fields, then numerous day dances and songs were arranged. Different age-groups competed in dances, and in dexterity in throwing spears and fencing, as well as high and long jumps.

The Cause of Tribal Warfare

M K 721

Let us consider for a moment the reason why the tribal wars were fought. The main cause of friction between tribes, especially in Kenya, was economic. There was no war of annexation of territory or subjection of one tribe to another. The fights which were carried on from time to time between various tribes, such as the Masai, the Gikuyu and the Wakamba, can hardly be called " wars," because all fights were in the nature of armed raids. For example, when cattle disease invaded the Masai country and reduced their livestock below minimum, the Masai, whose lives depended entirely on meat, milk, and blood of the animals, were forced by necessity to raid the stock of their neighbours or die of hunger and starvation. In order to save their livelihood, spies were sent out to investigate how a successful raid could be carried out, and in what district in the neighbouring tribes the stock were abundant and least protected.

M 721 726

M 726

After the spies had reported a raid was at once organised, and the warriors set out to get food for the tribe. Sometimes it took days to cover a short distance, for the raiding party

4: Kenyatta I-5 (no date) 1953
FL10 Kikuyu FL10
MASAI FL12

K M 131

perished by starvation, thus feeding vultures and hungry hyenas. In places where there were no such natural barriers, and where the two tribes came into contact frequently, peace treaties were signed and friendly relations established. In this case intermarriages were one form of peace-making.

K M 728 581

K M 648 581

To take a concrete case, my grandmother, on my father's side, was a Masai woman called Mosana, and in reciprocity for this friendly feeling, my aunt (i.e. elder sister of my father) was married to a Masai chief called Sendeu, and was treated as the head-wife. Exchange visits were made on both sides, and I had the opportunity of visiting her and stayed there for some months as a member of the family.

K M 648 721

In territories where this friendly relationship was established, especially between the Kaptei Masai and the Southern Gikuyu, the warriors of the two tribes joined together to invade another section of Masai, like Loita or a section of Gikuyu, like Mbeere or Tharaka. This information was given to me by my grandfather, Kongo wa Magana, who led several of these attacks as a fighting warrior and later as a magician of war.

000

It can be said that the relation between one tribe and another was no more or less than the relations existing in the present day between various tribes of Europe and America. The only difference is that the relations between European countries involve great suffering for the majority of the people, either through economic fights, tariff barriers and distribution of wealth, etc., or through actual fights in battle-fields. The case of the Spanish Civil War, where one tribe is fighting between itself, or the case of Japan and China, where a strong tribe is trying to dominate a weaker one, are illustrations.

K 722

The raids in the tribal warfare affected only a few villages,

/93 cont./

726 Masai know for stimulating the nerves find use. Their effect will be
[263] discussed in a later section (X).
[276]

X. cf. XIX. Nerve Ailments: the ego bowhoma sickness.

If the opponent is particularly strong, a forest meal sometimes lasts a whole month by order of the ol oibonot.

• 722 /94/ During this the boys pass as lords in the warrior kraal, but the girls bravely defend themselves with sticks. Every day in connection with their dances the girls sing songs of prayer: May Ng ai make the warriors strong and strongest of all the os sanja, etc. The mothers, on the other hand, pray silently in their huts for the same purpose.

726 Still in the forest the El molonn put their weapons, ornaments, and clothing in order. Upon their return from the meat meal they remain only a few hours in the kraal, in order to fetch something
[882] forgotten and to take along livestock as travel provisions. Here a few fathers and mothers have already appeared in order to call down

726 137

Ill. 38. Consultation on the war expedition.

/98 cont./

727 [103] in shares as equal as possible: one warrior receives as much as the other, but believe that a few head of cattle are distributed as a special reward and first to those warriors who killed an enemy in battle, then to the benefactors (il gumisini), then to the one who captured the first head of cattle and to the spies who went ahead (ol aigedaisi), and finally to the wounded, each of whom is entitled to the head of cattle that he marked with the blood gushing out of the wound. The number of cattle that the individual of the ones mentioned receives, except for the last who is entitled to only one head of cattle, is determined by the size of the booty and the proportion of the size of the booty's parts according to the above order of succession. /99/ Every

727 579 warrior strives as quickly as possible to drive off from the others his share of the booty, but each one also tries to take along with it one or more head not belonging to him. This, of course, gives rise to another brawl, in which there are almost always several wounded men. If the booty is too small for an equal division, the warriors form two

[619] parties, on the one side the Il molelian, on the other the 'L aiser and Il molgana. The former have as slaughtering cry the term ado molgi = the red cattle, the latter the term nanok gnaai = the black cattle, after which they are also sometimes named (for example, I heard it in songs). A fight decides which one of the two parties receives the entire booty.

• 782 At home in the kraals it was very quiet during the warriors' absence. After the farewell, those remaining behind went home, each somewhat heavy-hearted in the anxiety about a son or lover, which, however, was soon more or less pushed into the background by the expectation of the spoils that they would bring back. Soon after the farewell the old man was again

[237] squatting in quiet contemplation in front of

[136] his hut and chasing away from his face and head, also as before, with a fly switch (ol ekiok, el ekiai (Fig. 70)) consisting of a gnu's tail, the flies constituting a veritable

[782] plague in the Masai kraals. Then he took a hair from the switch and made a knot in it for each of his sons who had gone to war.

Fig. 70

/99 cont./

722 while he was imploring 'Ng ai that he might join together as securely
782 as this knot their body and soul. He prays in similar fashion every morning after leaving the hut. The mother likewise prays to God for protection for her son and each time offers him some milk, which she squirts on the ground either out of a gourd bottle or out of her
722 right breast. The girls are somewhat more cheerful about the affair, in that, instead of other prayers, they accompany their dances with litanies for the preservation of their lovers and the many other loved ones. Today the worrisome thoughts are again particularly intense; the warriors must soon be coming home, and then it will be definite as to whether the son or lover is among them.

727 From afar one already sees isolated little clouds of dust, which the cattle that are driven along stir up. The girls and young women hasten to meet the El mórran and warmly welcome all who are approaching. But what is this? There, among the laughing women, stands a young woman who has just kissed her brother heartily on both cheeks; now comes her husband, who still wanted to take part in this one expedition before he remains at home permanently as an old ol mórua, and one would expect at least as hearty a welcome for him. But both act as though they did not see each other, indeed, they even turn away from each other. One might think she is angry with him because he staked his life unnecessarily. She is not angry with him, however; on the contrary, she is secretly happy that he has come back safely
[576] and is bringing along rich booty. But the Masai too /100/ have their
[593] "good breeding" and this requires that married people upon first seeing each other again after an expedition of war, cut each other completely.

From his share of the booty the warrior keeps only one or two milch cows, which he hands over to his loved one. The rest he presents to the mother, the father, the latter's other wives, the brothers, sisters, and one or another of his more distant relatives of whom he is particularly fond. A person who does not receive anything this
[721] time will get his share after the next expedition. He need not wait long, wars follow one another quickly, the interval between two is seldom more than two or three months. Hence the Masai are a veritable scourge for the neighboring tribes, and the rumor, "The Masai are coming," in spite of its frequency, is often enough to disturb whole towns and villages for weeks.

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with it. Many of the latter smear themselves on forehead and cheeks with
726 [237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
• [325] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other ol sirit ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/100 cont./

726
• 725 Let us now consider the defense procedures of the Masai. As soon as it is learned through spies that a sedentary Negro tribe is planning an attack on the kraals, a picket consisting of six to eight men (eñ germi) is moved out during the day a few thousand meters in the anticipated direction of attack. It takes up its position on an elevation from which it can survey both the foreground and that in the middle of which the livestock are grazing. Where features of the terrain obstruct the view, patrols must remedy this disadvantage. As soon as the approach of the enemy has been observed, a warrior brings the corresponding announcement to the kraals, where the warriors immediately prepare themselves for combat. They set out to meet the enemy only if special circumstances seem to require it; as a rule, however, they wait until he is on the point of rounding up the herd, which is always the primary goal. Now they break out, they rush upon the opponent from all sides, and, in the ensuing hand-to-hand combat, they are almost always the victors. There is a good reason for the preliminary waiting: first of all, the enemy's main attention, as soon as he approaches the herds, is on them, so that the Masai are now able to appear with more surprise; then the multitude and the bellowing of the livestock easily confuse the Negro not accustomed to it, and, finally, in hand-to-hand fighting the Masai has the advantage of needing to concern himself only with the enemy, whereas the latter, in his greed for booty, thinks first of holding and driving away the livestock and only then of defense. Thus the Masai succeed in making the defeat of the opponent a considerable one and in discouraging him from further undertakings for some time. If they attacked him before he reached the herds, he would immediately retreat and try his luck again within one of the next few weeks. The Masai would again have to reckon with the probability of an attack on their kraals and would be unable to undertake any raiding expeditions themselves during this time.

Another procedure consists of the warriors hiding in the rounded-up cattle herds until the approach of the enemy and /101/ dashing out from there as soon as the opponent has come close. This is modified further in the following manner: The herd is divided into two parts; the front and smaller part remains in the care of a few

/101 cont./

726 boys, who flee immediately upon the approach of the enemy. Half
• 725 of the warriors are hidden at the rear of the larger one, while the other half lies in wait toward the front and to one side of the front herd. The enemy first takes possession of the front herd, some of them attempt to drive it away immediately, while the rest try to reach the rear one. Now the moment has come for the Masai warriors to burst forth at both places.

[721] The fact that the Masai so frequently attack with great success and often strike down to the last man even trade caravans armed with muzzle-loaders they owe nowadays less to their strength than to their cunning. A caravan traveling through the steppes will today be joined by a pair of seemingly poor, hungry Masai, who greet the porters in a friendly way and willingly give them information about the next camping place, etc. Incidentally, but with all the fabricated details possible, it is related that the Masai had recently been in the vicinity, but had now moved off and were camping far from here. After the two have eaten with the porters in the evening, one of them disappears during the night and reports to the warriors of his kraal what has been discovered. Before dawn he is back in the camp and the two travel on with the caravan, having by now become friendly with its men. There are found again the next day two or three "poor" Masai, who pass themselves off as Wandorobbo -- as the first also often do. They have brought along their alleged entire possessions, consisting of a few rhinoceros horns, to sell or even as gifts. They too remain with the caravan; they eat, chat, and joke with the porters and on this occasion reveal a keen understanding in recognizing how far the latter trust them, whether they feel quite safe, etc. If they believe the caravan is quite unconcerned, one of the Masai guests, on this or the next night, fetches the warriors, who then, as a rule, between midnight and three o'clock in the morning, when the porters are sleeping most soundly, attack the camp and without difficulty massacre the sleepers.

not correct: they must wait until the medicine-man tells them that the event is about to happen. 787

If the medicine-man is going to prophesy by means of the buffalo or ox horn, and there are people on the road, he tells those present that he will wait, as their feet will spoil his prophecy. They always know when people are coming, even if they are afar off.

When a medicine-man makes medicine, he gets drunk before he prophesies. He sings in parables, and the people reply. [533]

For instance, when the medicine-man named The father of Ngupe made medicine for the warriors of Kilepo before they went on a raiding expedition, he sang: 787 726 [533]

'The bulls that cannot move because they are so fat,
They will be beaten by Kilepo.
The bulls that cannot move because they are so fat,
Half of them have been captured.'

The warriors of Kilepo went on their projected raid against the people of Kahe[1], and captured half of their cattle.

They said: 'Thus prophesied the medicine-man.'

All medicine-men belong to the Kidongi family of the Aiser clan, and they are the descendants of Ol-Oimooja or of E-Sigiriaishi[2], the sons of Ol-le-Mweiya[3]. 791 614 [173]

Wa-Kwafi

174 Arusha-wa-jūū. Others, driven south, threw in their lot
166 with the Wa-zeguha, keeping tribally more or less distinct
from them. These are the hybrid tribes visited lately by
[797] the energetic missionaries, Messrs. Last and Baxter, and of
which such interesting accounts have been given in the
"Proceedings of the Royal Geographical Society." Another
section of the Wa-kwafi was driven westward, and now
forms the colonies of Nderserria-ni and Nguruma-ni. The
establishment of these colonies has been an unmitigated
blessing to the country. In every case they have become
the centres of trade, where men's lives and gooods are safe;
and indeed there is no more striking feature in the results of
the enforced change in the people's mode of life than the
remarkable development of peaceable habits and honest
ways. This shows what the Masai, from their distinctly
higher mental development, are capable of, when cut away
from their traditions and brought under conditions more
favourable to their advancement towards civilization. As
throwing light on the origin of minor races and the blending
of two distinct types as at Taveta, the subject is an interest-
ing study.

The Wa-kwafi were not all scattered thus, however, for a
large division of the clan kept together, and contrived to cut
their way through Kikuyu and to reach Lykipia, where they
settled.

175 Another section crossed the meridional trough and reached
the opposite half of the plateau in Guas' Ngishu. In both
726 districts they found superb grazing-grounds and plenty of
628 elbow-room, and there for a time they remained quietly, and
increased rapidly in numbers. At last their wars began
again. Grown bold, they attacked the Masai about fifteen
years ago. The opposing parties formed regular camps, and
fought pitched battles with great fury, thousands being
killed on both sides. The women stood by and watched,
while they incited and urged on the combatants in their
terrible hand-to-hand encounters. The Masai were at first
beaten, but, fighting with the stubbornness of despair, they
disputed every foot of ground. They were driven from the
whole of Naivasha and Kinangop, and their enemies, still
victorious, carried the war into Kaptè. Matters now changed,
however. The Masai of the entire region to the south
gathered together and came to the assistance of their brethren
of Kaptè. Soon the tables were turned, and the Wa-kwafi
were gradually forced back. The great majority of them

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

were killed, and the cattle driven off. Famine came upon them, and they were reduced to the terrible necessity of selling their children. Large numbers took refuge at Njemps and Nyiro, where they had to bow themselves to the cultivation of the soil. The war lasted several years. At last only a remnant of the Wa-kwafi of Lykipia were left, and these contrived to make peace. Not so fortunate were those of Guas' Ngishu. The Masai swept from north to south, and left not a man in the entire land, those who escaped the spear and sword finding refuge in Kavirondo. 195 628 726

Such is the history of the bloody feud between the Masai clans. Now they live peaceably together, with kraals in friendly proximity.

Having thus conveyed to the reader some general notions about the tribe as a whole, we may now conveniently turn to follow with the eye of our imagination the life-history of one of its members.

Very many years ago a matron of the Masai lay in what is pleasingly described as an "interesting condition." Her environment was not of a luxurious or even comfortable nature. She lay on no better a bed than a dressed bullock's hide spread on the bare ground. The hut which protected her from the blazing sun or the cold night was not built on sanitary principles, and was not commodious. It reached a maximum height of three feet and a half, and might be nine feet long by five feet broad. It was constructed of boughs bent over and interwoven together, forming a flat-roofed building with rounded corners. To keep out the wind a composition of cow's dung was liberally plastered over the boughs. This sufficed for the dry season, but for the rainy one a further covering of hides had to be laid upon it. The doorway was of the smallest, and stood at right angles to the line of the house in the manner of a porch. The hut of the expectant Masai lady was one of a circle enclosing a considerable area, in which the cattle were kept during the night. As this central space was never swept up, its condition may be better imagined than described. The smells were strikingly suggestive of the farmyard; and if the reader is so inclined, he may imagine some charming picture of full-uddered kine, with their mild eyes and expression of repose as they contentedly chew the cud. For any such picture, however, I can accept no responsibility. Outside the circle of huts there extends a strong fence of thorns as a protection from wild beasts, and in case of an attack. Inside 844 [352] 844 342 [237] [361] [364] 844 [351]

FL12 Masai FL12

The *Lytunu* is a warrior elected by a number of kraals as their captain or leader, with absolute power of life and death. He is their judge in cases of dispute. He directs their battles, though, curiously enough, he does not lead his men, but, like the general of a civilized army, he stands aside and watches the progress of the fight under the direct command of the *Lygonani*. If, however, he sees symptoms of his men wavering, he forthwith precipitates himself with his body-guard into the battle. Of course he holds his office purely on sufferance, and if he fails to give satisfaction he is summarily deposed. This, indeed, is almost the only attempt at a form of government. Each war-district elects its own *Lytunu*. The *Lygonani*, again, is a very different personage. He is the public leader of a kraal, leads and guides the debate in cases of dispute. To be such arrogant and pugnacious savages, the Masai are the most remarkable speakers and debaters imaginable. In some American novels we have the Indian belauded for his eloquence and dignity; but commend me to the Masai for grace and oratorical power, for order and decorum in debate; and, indeed, for most of the good qualities which in these days are conspicuous by their absence in our own House of Talking. Not that their genius in this line is always worthily applied; for in their finical persistency in talking out a question they might even beat our Parliamentary Obstructionists. They will spend days discussing the most trivial matter—nothing, indeed, can be settled without endless talk. But we must proceed with our history.

The *Lytunu* and *Lygonani* having been elected, a raid to the coast was determined on. For a month they devoted themselves to an indispensable, though somewhat revolting, preparation. This consisted in their retiring in small parties to the forest, and there gorging themselves with beef. This they did under the belief that they were storing up a supply of muscle and ferocity of the most pronounced type. This strange process being finished, and the day fixed on, the women of the kraal went outside before sunrise, with grass dipped in the cream of a cow's milk. Then they danced and invoked Ngai for a favourable issue to the enterprise, after which they threw the grass in the direction of the enemy. The young men spent several hours at their devotions, howling out in the most ludicrous street-singer fashion, "Aman Ngăi-ăi! Aman Mbaratien!" (We pray to God! We pray to Mbaratien!"). Previous to this, how-

6: Thomson K-3. (1883-1884) 1887
FL12 Masai FL12

726 ever, a party had been sent to the chief lybon of the Masai —Mbaratien—to seek advice as to the time of their start, and to procure medicines to make them successful. On their return the party mustered, and set off. It was a remarkable sight to behold these bloated young cut-throats on the march, and it is almost an impossibility to convey any clear picture of their appearance in words. The Frontispiece illustration, however, will help to some extent.

714 Let us pause and in imagination watch some enthusiastic
726 young ditto buckling on the armour of her knight. First there is tied round his neck, whence it falls in flowing lengths, the *năiberè*,—a piece of cotton, six feet long, two feet broad, with a longitudinal stripe of coloured cloth sewed down the middle of it. Over his shoulders is placed
[237] a huge cape of kite's feathers—a regular heap of them. The kid-skin garment which hangs at his shoulder is now folded up, and tied tightly round his waist like a belt, so as
[302] to leave his arms free. His hair is tied into two pigtails, one before and one behind. On his head is placed a remarkable object formed of ostrich feathers stuck in a band of leather, the whole forming an elliptically-shaped head-gear. This is placed diagonally in a line beginning under the lower lip and running in front of the ear to the crown. His legs are ornamented with flowing hair of the colobus, resembling wings. His bodily adornment is finished off by the customary plastering of oil. His simè or sword is now attached—it does not hang—to his *right* side; and through the belt is pushed the skull-smasher or knobkerry, which may be thrown at an approaching enemy, or may give the quietus to a disabled one. His huge shield in his left hand and his great spear in his right complete his extraordinary equipment. For the rest you must imagine an Apollo-like form and the face of a fiend, and you have before you the beau-ideal of a Masai warrior. He takes enormous pride in his weapons, and would part with everything he has rather than his spear. He glories in his scars, as the true laurel and decorative marks of one who delights in battles.

726 With astonishing hardihood, Moran and his comrades,
[648] thus terribly arrayed, shaped their course towards Swahili-land; for, strangely enough, they have found that they can lift the cattle with greater impunity there than anywhere else—in spite of the Swahili guns and a large population. The reason is the complete absence of anything like patriotism or public spirit among the coast people. Their argument

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

is that they receive no benefit from the cattle of their neighbours. "We get neither meat nor milk," they say; "why, therefore, should we fight for the preservation of your cattle?" With a consummate knowledge of the region, the Masai warriors threaded their way by special pathways, passing Taveta, and crossing the Nyika. Nearing the coast, they stowed themselves away in the bush, while a few of the bravest went forward to spy out the land, knowing, however, full well that the very sight of one of their number was quite sufficient to stampede a hundred Wa-nyika or Wa-digo. Sadi, indeed, told me that on one occasion he actually met some of these spies *in the town of Mombasa at midnight*. This is, I think, doubtful, but it shows what they are considered capable of; and there can be no doubt as to the astonishing hardihood of these scouts. Stories are continually heard to that effect, thus rendering the Masai a terror in the land; and it is a fact that they have even reached Bagamoyo, opposite Zanzibar. 726

The raid was, of course, *successful*, and our savage friends returned in great glee. On reaching their homes, however, matters had to be squared up, and the spoil divided. So many head of the captured cattle were set apart as the portion of the lybon Mbaratien, who had directed them so well, and whose medicines had been so potent. Then followed a sanguinary scene over the apportionment of the remainder. There was no attempt at a fair division. The braver men and bullies of the party, consulting only their own desires, took possession of such cattle as pleased them, and dared the rest to come and seize them. The understood rule was that if any warrior could hold his own in single combat against all comers for three days, the cattle were his. And thus began the real fighting of the expedition, revealing sickening sights of savage ferocity. There were more warriors killed over the division of the spoil than in the original capturing of it. To kill a man in this manner was considered all fair and above board. Blood feuds were unknown, a man not being considered worth avenging who could not hold his own life safe. If, however, a man was murdered treacherously, the criminal had to pay forty-nine bullocks. Our young warrior, as he was only as yet winning his spurs, had to be content with the honour and glory of the raid, and he had the modesty not to pit himself against abler and more ferocious fighters. It must be remembered that the cattle thus captured did not remain 727 [791] 727 578 [628] 727 [421]

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

choice resting on the general consent of the tribe. He whom the previous laibon had held in greatest esteem, and trained and nominated for the office, would normally be chosen. The past reputation of the candidate would, however, be a matter for consideration; if someone, other than the deceased's choice, had proved himself extremely powerful, it is possible that he would be chosen, for fear of the consequences were he overlooked. The maxim of English law, that none should benefit by his crime, is also applied. For the death of a laibon is as a matter of course attributed to witchcraft by a fellow Engidong, and the first step in choosing a new laibon is to ascertain who killed the old; such person is automatically barred from succession. 791 [671]

It has been represented that the above theory of late development of the institution stands or falls on a Masai legend. The answer to that is that very few legends are found without some foundation of fact, and secondly that there are many indications that it is a feature not fully assimilated by the Masai organisation. [182]

B. **Pre-European Functions of the Laibon: Raids and War — Age-grade ceremonies (with certain restrictions) — local ceremonies — tribute — supposed administrative actions.**

Immediately prior to his death in 1890 Mbatian was living at Namanga, but had previously lived, as had his father Subet (8), at Lashaine Hill, immediately below the Mondul District Office. He was nominally the official laibon for the whole of the tribe, though his brother Mako lived and practised as a laibon at Engutoto lol Mako, in Ngorongoro Crater. It is also significant that Thomson refers to "the important Lybons (medicine men) Lengobe, Mbaration, and Lembarsacout," without singling out Mbatian as the leader. If he in fact occupied the position, bordering on chieftainship, that many Masai elders would have us believe, it is improbable that even an early traveller would fail to note and comment on it. 791

There can be little doubt that at this time a laibon's chief functions were:

i. Dispensing charms for raids.
ii. Supervising and blessing the age grade ceremonies.
iii. Propounding the ritual and giving charms for local ceremonies, concerned with fertility and disease (both human and bovine) and with rainfall.

It is probable that any acts which he performed in the executive sphere arose from these three main duties, which must now be examined more fully.

In the matter of providing *charms for raids*, it should be noted that raids are divided by the Masai into two types, major (*ol orora*), and minor (*ol wamba*). Both these names also signify a group of moran fitted out for war, the former larger than the latter. A third term, which might well be recorded here is *o remore*, signifying a fight with spears, more particularly the deliberate killing of an alien for the purpose of acquiring a reputation. 726 791 [555]

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

726 791 Prior to a major raid, but not before a minor expedition, a visit would be paid by the participants to the laibon, who would give charms to ensure success. No payment was made at the time, but a portion of the captured stock was taken to the laibon on return. It was thus to his material advantage, as well as to that of his reputation, that the raid should be successful; it is consequently only natural that he should pass on any bits of intelligence brought in by previous visitors, and any hints which experience had taught him, to reinforce the efficacy of his charms. Thus a proportion of the spoils, lifted by a combined force of Kissongo Dwati and Dareto from the Lumbwa living beyond Kiteto, about 1916, were taken to Laibon Parrit (16), later gazetted Chief of the Tanganyika Masai, but at that time resident in Kenya.

721 791 The initiative of suggesting such raids seems to have rested with the moran, though the modern technique of an upstart laibon saying "There are plenty of cattle in such-and-such an area, I can't understand why you fellows don't go and take some", was doubtless used in the old days to encourage slovenly sections to action.

Minor raids, from all accounts, were organised locally and carried out without reference to the laibon, to whom none of the captured cattle were presented. The difference between a major and a minor raid appears to have lain not only in the numbers of Masai involved, but also in the strength and reputation of the proposed enemy.

669 791 In the matter of civil war the laibon's position was rather different, as his own position was at stake. In contrast to the usual "We went and raided such-and-such a tribe", Laimer informants frequently refer to the time "when Mbatian called us up to fight the Laikipiak." In the struggle which followed the death of Mbatian, it is obvious that Lenana and Sendeyo were encouraging war for the purpose of furthering their own personal ambitions.

561 791 The second main function of the laibon is that of supervising and blessing the *age grade ceremonies*. It is probable that a laibon at least gives charms, if he does not attend in person the Emboloat ceremony, the commencing ceremony of the age, held by the Kakonyuke section on behalf of the whole tribe. It is certain that he does so both at the Unoto and Ngeherr ceremonies, that is at the promotion and passing out of the warriors. But he is not responsible for the organisation of such matters, nor is it on his initiative that new ages commence or old ones stand down. As this is a matter of prime importance in determining his true position ,it deserves full attention. The closing of the present Meriabo age was agreed to at an Ol Kiama (or General Meeting) of the tribe in 1937, and not done at the dictation of the laibon. The il *Piron* elders, i.e. those of the reciprocating age — set next but one above the warrior set — are alone responsible for the initiation, promotion and standing down of the moran. An interesting case occurred in February 1938, after the Endungore, or closing, of the present age, when a Dwati elder at Naibor Murt decided to circumcise his two sons, and brewed beer in preparation for the event. The local Dareto, hearing of this, determined to stop him, marched into his boma, and drank the beer themselves. It

Agricultural Masai

439 whose warlike qualities appeal to the Masai. Honey, honey-wine, and ivory are got from the Dorobo. Ivory was used in the old days for trading with the Swahili caravans for cloth, beads, wire, and so forth. Trade outside Masailand is conducted
● [126] mostly by the women, for by mutual arrangement they were allowed to pass unharmed from tribe to tribe even during the progress of a war.

Hunting

224 Though the Masai do not hunt habitually, and despise those who do, they used occasionally to kill wild animals—elephants for their tusks, buffalo and eland for the meat and hides, ostriches for their feathers, and lion and leopard to protect their cattle.

Labour

44 Although deprived of their only real occupation, fighting, the Masai have not yet as a people accepted any substitute for it, being, as Sandford noted, "too proud to work," *i.e.*, for wages. A small number have accepted employment as herdsmen on farms, and some have done good service in the Police and K.A.R., though even in a military capacity most of them are still unwilling to submit to a form of discipline that is not their own. Though a few have taken to cultivation, the majority have not yet consented to stoop to what they consider labour unworthy of a Masai.

THE AGRICULTURAL MASAI

101 The agricultural Masai, the I-Loompua (Lumbwa) and Il-Oloop of former days,
175 are people of Masai stock who, having lost their cattle through disease or defeat,
[178] were forced to take up agriculture in order to survive, and by so doing incurred the lasting contempt of the pastoral Masai. It is in most cases uncertain how long the various groups of Il-Oloop have been agriculturalists; some of the southern Masai, for example, were defeated by the Gogo early in the 19th century and took to agriculture. Fischer in 1882 reported groups of "Wakuavi," as he called them, living on the southern edge of the Mau; at Nduarisani (Ndaru ariani), 15 miles south-west of Naivasha; in the region known as Ngarumen (ne-karuma, "the farms") for about 30 miles north of Lake Natron; at the southern foot of Mt. Meru; and at Kibo.* Von Höhnel adds Ndarikwo, 20 miles north-west of Lake Natron.* Another group is named by Thomson and von Höhnel** at Tavetta; while the map in Hollis's *The Masai* shows them as extending for about 100 miles south-south-east of Lake Naivasha. The best known, however, are the northern group called Il-Tiamus or En-ponani (Nyempu) near Lake Baringo, concerning whom we have (such as it is) the fullest information.

184 With the exception of the Tavetta group, the agricultural Masai in general
22 resemble the pastoral Masai in appearance, dress, and general culture, and though they cultivate the ground, still have the acquisition of cattle as their chief ambition. Those of Tavetta have mingled with the Tavetta,** and have become the most successful cultivators among the Masai; the rest of the agricultural Masai in the days of Thomson and Teleki grew mainly eleusine and millet, while the Il-Tiamus grew also pumpkins, and tried unsuccessfully to grow maize. Most of the agricultural Masai supplemented their diet by hunting, bee-keeping, and, where possible, by fishing.

the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group; these all belong to the Ir-Kidogi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputei at Ngong (now living among the Loitai), the Kisonko, Il-Ariplesh, Il-Winesi-kidos and Isuriaor also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were:* (1) to mention war and to provide protective medicine for those taking part in it; (2) to authorize the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical force for tribal activities. Many laibons also practise witchcraft (as defined above, p. 30). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

When the warriors of a unit wanted to raid, they approached their *el-ajaroni*, who planned the attack and arranged for the co-operation of other companies. If a big raid (*el-ewan*) was intended, the *il-ajaroni* concerned then went to the laibon to get his mention and protective war medicine. Before agreeing, however, the laibon consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in song after getting drunk. The warriors then went to their *il-ipul* and hunted on meat to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Nyika being a frequent objective. Thomson was told that a Masai patrol was once seen in Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the manyatta, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-ma-ruk-kiang* and *il-ma-ko-ongi*, "the black ox" and "the red cows," and fought for the spoil. Small raids, *el-ewanda*, carried out locally by one unit, were not referred to the laibon, who received no share of the spoil.

Wars between Masai tribal groups were frequent, and formed one of the factors in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmenteita, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputei, the other of the Il-Ariplesh. A detachment of picked men from each side would come out and fight a pitched battle, observed on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Armed with spears, and in the panoply of ostrich-feather head-dress, cape, dangling spears, shield, sword, club, painted face and leg ornaments, the Masai warrior felt himself more than a match for anyone.

Prisoners were not often taken, though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed, women widows. Peace was made by a formal ceremony at which mating embers

* Fadiman, pp. 10-12.

/1 cont./

against the former. The El kuafi recognized the chief (ol olkoni) of the Masai as also their own and seem for a long time to have been on the best of terms with them. Then -- so the tradition tells -- a girl named Matangi, from the family of the ol olkoni Sinonik -- she is usually designated as his sister, more rarely as his aunt -- took a fancy to a member of a legation of El kuafi warriors sent to Sinonik and went away with her lover. When she bore him a son, the El kuafi proclaimed him their ol olkoni and at the same time refused to obey Sinonik. With this the war began between Masai and El kuafi. They lasted -- so it seems -- the entire first half of the nineteenth century and occurred sporadically even in the second half of it. One of the decisive battles was at Kimogo, a six-hour march west of Mandeng /Mt. Meru/, where later on the chiefs of the Masai took up their permanent /?/ residence. The ones driven away went into the rugged forests of Mandeng, where they lived for a long time in constant strife with the Masai, until the chief Mbatyan completely subjugated them and forced them into compulsory service. Other battles took place near Ngarumdo, north of Lake Natron: the rest of those conquered still live there, mixed with Wasegeju from nearby Longo. The remnants of the ones defeated in the Serengeti steppe are still to be found in Tarera, Kalu, Arusha-nekini. The first battles between Masai and El kuafi probably took place in the vicinity of Kasia /Mt. Kenya/, and led to making the latter sedentary.

One of the last great clashes was in the steppe area Sogonoi: the ones conquered fled to Ngojoka and then farther to Usegeka and Mkuga, where they founded a settlement under the chief Lenai.

The Masai took a few individuals from among the defeated into their community. The rest split up. One -- larger -- part became sedentary and formed some colonies in the vicinity of foreign tribes or merged with other tribes. Another -- smaller -- part at first made a living for a time from hunting, until it succeeded, by means of raids against sedentary peoples, in coming into the possession of livestock again. Today they again live wholly as before and are distinguished from the Masai only by

791 /19 cont./
175 was followed by Subgt and the latter by Mbatyan. After the latter's
[619] death the Masai split up. One part placed itself under Lenana,
the eldest son of the principal wife, who was born before the accession of Mbatyan, the other under Zendeo, who was the old man's favorite son and named by him to be his successor. The people relate that Lenana cheated Zendeo out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tied-on goatskin, it was made possible in the former case by the gloom of the hut in which old, weak Mbatyan was lying on his sick-bed. He thought he had Zendeo before him and instructed Lenana in the secret arts of the ol oibonI. The two are now bitter enemies,
[669] who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 40 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Nairobi, whereas Zendeo, ten years younger, inhabits, with his hordes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an
175 outstanding place in the succession of chiefs. Under him the Masai
619 experienced their last golden age. After his forefathers Sitonik and
791 Subgt had subjugated the Wakuafi, it rested upon him to keep down
• 726 their constant uprisings and to weaken and enslave them so that no
[468] danger from them could threaten the Masai any longer. Through a well-organized spy system Mbatyan kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack those very Wakuafi settlements in which a war expedition /20/ against the Masai was being prepared. The most trouble here was made by the Wakuafi of Meruberg /Mt. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on
175 neighboring Masai kraals. Finally, however, the Meru people were
619 successfully mastered: indeed, they even became so pliable that
791 they performed compulsory labor for their oppressors. One must
727 bear in mind with what deep contempt all men of the Masai people
466 look upon any kind of work, which they regard as something dis-
461 graceful, not compatible with a man's dignity, in order to

[Warrior Kraal]

/96 cont./

701 537 speaking, yet their facial expression usually remains unchanging, neither agreement nor difference of opinion may be read into it. The orator is not interrupted any more than he is forced to become silent by the restlessness of the listeners. Each one is allowed to deliver his speech unhindered to the end. We have here the simple flowing speech, in contrast to the dialogue type of the Negroes, where another respected man stands or squats opposite the speaker and at every punctuation pause, at every comma of the speech given jerkily in choppy sentences, makes known by an unbelievably stupid-sounding, more or less grunting E, E, or hm that he has understood the words spoken. The task of the speaker consists chiefly of amusing, by means of a feigned friendship with the chiefs of livestock-rich peoples, in the latter a blind confidence in the Masai, /97/ which

701 726 will facilitate for the latter a sudden, predatory attack. Moreover, he constantly keeps himself informed through spies (often old women and a couple of boys) about all the questions of importance for the success of a war expedition, for example, concerning the strength of the opponent, whether he perhaps, for example, might be especially suspicious, where and how one might most easily take him by surprise, where the most livestock might be, where they pasture, where they stay at night, where the fewest warriors live, etc. The

701 [554] speaker himself need not be a brave warrior; rather, cunning, deception, guile are the characteristics that qualify him for the political aspect of his office.

[692] Another task is the administration of justice incumbent upon him: he is the deciding judge in civil and penal matters for the warriors of his kraal.

701 554 A leading role among the warriors is played, furthermore, by the ol oiboki (1)

1. Sing. ol oiboni.

(= the bulls), of whom there are five or six in every kraal and who gain their position by courage and bravery in war, as well as by superior physical strength. They are the leaders in battle. As a

the two lineages or the two tribes make war on each other insofar as they live in one district; a conflict that is equivalent to a small civil war arises. Members of these lineages or tribes who live in a more distant district do not take part in the fight.

[192] [726]

A war in which Masai stand against Masai is called oi arahai (pl. ei arahali), not en djóre (n djorín) as a war between Masai and foreign tribes is called.

701 574

/89/ In peacetime the warrior spends only the least time in his own kraal; for the most part he gads about on visits in neighboring ones, often several days' march away. Never may all leave the kraal together in peacetime; a guard of at least ten men always remains at home for the protection of the girls and the livestock, while the rest stop to visit at an oi hoi (forest meal, see p. 111 above) or with other people.

[Warrior Kraal]

224 701 /91 cont./ A few intrepid warriors also leave the kraal, spear in hand, in order to attack the lion, but as a rule soon return unsuccessful.

721 If peace has lasted for a couple of months, the warriors long for war and, becoming more and more violent, express their wish to the speaker (ol aigwenani). The warriors of a few neighboring kraals have already /92/ promised their participation and have also pressed their speakers, who then all together go to the ol aunoni with whose consent the war becomes a settled matter, for the waging of which only the permission of the ol oiboni is still lacking. The consultations and decisions for undertaking a war expedition, however, do not always proceed so smoothly, and they are most heated when they have for a subject the repetition of an expedition that has already ended one or several times with a defeat for the Masai. Naturally then the opinions about the success of the expedition are greatly divided, and the speakers and leaders often have great difficulty gaining a majority for the undertaking (1).

[626] 1. In an extreme case -- if, for example, the war is urgent on economic-political grounds, because the opponent threatens to become so powerful that he will be a serious danger to the Masai themselves or a competitor to them in the plundering of other tribes -- the ol aunoni or one of the speakers lets himself be carried away to secure a majority for the war by calling the vacillating ones el konono, [578] that is, blacksmiths. He always achieves the desired result with this, but in the following days may leave his hut only under the protection of influential warriors, in order to avoid assaults on the part of the reviled ones.

721 726 714 If they have finally succeeded, however, the leaders of the majority make an end to further debate by invoking the en dorosi, a sort of Rütli oath. /Rütli, a meadow in Switzerland where the first league of the three cantons was formed in 1307./ Then every warrior of the kraals concerned has to put on immediately the visible sign of the

/92 cont./

721 en dorosi, the en doros. For the warriors this consists of three or four
• 726 leather strips cut from the apron of their favorite girls, which are
714 adorned with stitched-on beads and, beside them, tied-on pieces of wood (from twigs of the ol araschi and os siaiti trees), while the leaders wear as en doros the borrowed tobacco box of a married man or his fly switch. The en dorosi obliges every warrior to take part in the ex-
703 pedition. Anyone who nevertheless stays away out of fear is most deeply despised and outlawed; any warrior may kill him without penalty. In order to give the fainthearted courage, the most daring ones not infrequently stick a ball, which has a diameter of 10-12 centimeters and is made out of black ostrich feathers, on the tips of their spears. Through this they express their firm determination to attack the opponent and to stand up to him in hand-to-hand combat, for the ball may be removed from the spear point only by one's running it into the body of the enemy.

721 The purpose of a war is always only the capture of livestock, and, to be sure, only cattle. War is not undertaken for goats and sheep. Boys may go to steal small livestock. Only the capture of cattle is worthy of a warrior; he only takes small livestock along as well when he can directly achieve this together with the cattle.

721 In order to get permission for the war expedition, the speakers
791 together betake themselves to the ol oiboni and put before him the wishes of the warriors. None of the latter accompany them, since they would behave too uncouthly in the presence of the great man, who wishes calmness and clarity in the consultations.

721 /93/ The ol oiboni keeps himself accurately informed both about
726 the strength of the individual warrior kraals and about all the condi-
791 tions of the surrounding sedentary tribes coming into consideration for a war, so that he is in a very good position to judge accurately the prospects of victory for either side with great probability. He also keeps himself posted about unimportant and secondary matters with regard to the opponent and weaves all this knowledge adroitly together in his answer, so that it sounds like a seer's pronouncement and is taken as such by the speakers and warriors. His answer -- as the speakers report it -- runs, for example: "You will attack the Kahe
[264] area; it is strong, and you will therefore first hold a twelve-day

721 /93 cont./
• 726 forest meal (1),
791
[264]

1. Ol bul or, if an en dorosi has taken place, ol bul en dorosi, or, in short for that, en dorosi, with which the present-day language also designates every forest meal prior to a war expedition.

in order to strengthen yourselves. Then you will set out for war on the day ol gadet. On the following day, ol ondjori, you will pass an old camping place. Then, before you reach your camp, you will meet a single Kahe boy. Do not kill him, but bring him to me; otherwise you would be defeated. On the ol onjugi day you will
726 fight and conquer, etc. etc." If something does not fit in, it is due
714 to the carelessness or mistakes of the warriors. Furthermore, for the
791 spies sent ahead of the expedition, the ol oiboni gives them a few
789 amulets (e mascho ol oiboni), which make their wearers invisible. The amulets contain one of his magic remedies and are tied around the wrist or to the spear or shield. Another war medicine consists of a mixture whose chief ingredient is snake eggs (mossor ol assurai). A large leg-bell (ol dualla kitok, Fig. 19) is filled with the medicine. In war it is tied to a club and hurled at the enemy offering resistance, so that he will flee, or it is tossed into his herd in order to drive apart the livestock, which then is caught by the Masai. In order to have the expected effect, it is desirable that the
726 medicine be hurled by a left-handed warrior. The speakers convey the chief's answer to the warriors, who have most impatiently awaited their return. Hastily they prepare themselves for the forest meal; weapons, pots, and the livestock needed are gathered together, and two by two the es sirit set out together for the nearest bush. Whereas
[263] in the ordinary meat meals only relatively few spices are used, for
[276] the en dorosi in particular all the many vegetable agents that the

Fig. 19. 2/3

/93 cont./

726 Masai know for stimulating the nerves find use. Their effect will be
[263] discussed in a later section (2).
[276]

2. cf. XIX, Nerve Ailments: the em boschona sickness.

If the opponent is particularly strong, a forest meal sometimes lasts a whole month by order of the ol oiboni.

722 /94/ During this the boys pose as lords in the warrior kraal, but the girls bravely defend themselves with sticks. Every day in connection with their dances the girls sing songs of prayer: May 'Ng ai make the warriors strong and strongest of all the os sandja, etc. The mothers, on the other hand, pray silently in their huts for the same purpose.

726 Still in the forest the El móran put their weapons, ornaments, and clothing in order. Upon their return from the meat meal they remain only a few hours in the kraal, in order to fetch something
[782] forgotten and to take along livestock as travel provisions. Here a few fathers and mothers have already appeared in order to call down

726
137

Ill. 36. Consultation on the war expedition.

/94 cont./

726 'Ng ai's blessing upon the sons and their companions going off to war.
782 The old men hold a small gourd bottle of honey beer in the right hand, a similar one of milk in the left one, while the women have a filled milk-vessel only in the right hand. During the prayers loudly called out to heaven, they gradually pour out the contents of the gourd bottles as an offering to God and also sprinkle the warriors with
726 it. Many of the latter smear themselves on forehead and cheeks with
[237] fresh cattle dung, while the girls and the old women living in the warrior kraal put such, together with a bunch of fresh grass, on the hut roof close above the door. The custom expresses the confident hope of rich spoils in livestock.

/95/ Then the warriors march off, and, after a march of two to
[252] three hours, they pitch camp around sunset. Several head of cattle
[262] are slaughtered, the meat of which is roasted at the fire and eaten.
[411] At the same time they smear the thrusting spears with a paste of red earth or wrap them with grass or cloth so that their gleaming in the
[725] sun, visible very far away, will not betray them. Finally, they loosen the thongs of the sandals and fasten them on the underside in such a way that the sandal may be worn with the tip in the rear and the heel part toward the front, so that the footprints left behind
704 will be deceiving concerning their direction of march. During the
701 march comradeships are formed by two men in each case, each of
726 which calls the other os sirit ai, that is, my companion. /Ill. 37 appears here./ The duty of the companion is to stand by the other one in battle and, if he falls, to bring his weapon to safety. Five to ten such comradeships combine to make a section (ol ale), each of which
726 erects its own small camp. During the first days of march, still far from the enemy, it is fortified for the night by a few branches of thorns. On the evening before the attack it is replaced by the eñg adji en djoré. The spears are stuck in the ground in a semicircle about five paces in diameter, and against them, on the outside, the shields are placed in such a way that one overlaps the other like scales. The warriors lie or squat in this semicircle, armed with their weapons, awaiting

/95 cont./

• 726
714
411

Ill. 37. Section camp on the war march.

726 the time for the attack. /96/ The leader of the section is one of the
[701] above-mentioned benefactors, recognizable by an ornament called
[714] el dorogén or el gabatén, which consists of strings of iron or glass
[431] beads and is worn around the right lower-arm, a gift of those who have benefited by his generosity.

708 Accompanying the warriors are one or more surgeons (ol abíni, el
726 abík), whose duty is the immediate treatment of the wounded. They choose their "dressing station" approximately half an hour from the battlefield on an elevation made known and easy to find.

726 Toward midnight the spies (ol aigedalani, el aigedalak) set out to go to Kahe. On the way they adapt their externals in clothing and ornaments as much as possible to that of the Wakahe and hide /Ill. 38 appears here/ shield and spear along the way. With enviable inoffensiveness they move about among the foreign populace, trusting in their amulets. With a little fresh cattle dung and a few tail hairs plucked from the Kahe cattle, as proof that they have actually seen cattle, they return to the warriors in great haste.

Merker phot.

Ill. 38. Last instruction of the warriors before the battle.

726 The warriors have broken camp about four or five o'clock in the morning and after sunset reached dense bush one to two hours away from Kahe, where they now camp. They are highly elated about the information from the spies, rich booty now indeed seems assured.
726 704 Soon after midnight the battle march is begun. The warriors split up into five different troops. The el ebéta (sing. ol ebét) hurry ahead as patrols and, having come close to the goal, hidden in the foliage of tall trees, take /97/ a look around; following them at a distance of a few thousand meters, each led by an ol oiñoni, are the three or four divisions of the el ároi (sing. ol áro) = buffalo, each of which goes in another direction toward the hostile area. They consist of the most dashing men, and the success of the attack depends primarily upon them. Behind the el aroi, swarming out at some distance, follow the largest divisions, the el dimito (sing. ol dim) = herds, the flanks of which are made up of picked men, the el

/97 cont./

• 726 704 [727] emouerak (sing. ol emouo) = horns. As soon as the ones in front come across livestock, they call the others by long drawn-out ñí shouts, so that they will round up the booty, which consists only of livestock. While the el aroi engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

726 782

Merker phot.

Ill. 39. Prayer before the battle.

726 704 booty away from the el dimito again. In connection with this fighting there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the el dimito and pushed toward the steppe, out of the hostile area. The fourth troop, the el kigelóni, seeks to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the os sioki, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The el dimito and el kigelóni strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp. [727] Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon 727 every warrior receives a portion of meat. The warriors /98/ must 417 lay out a fence of thorns so that the livestock is safely sheltered in it for the night.

/100 cont./

726
725

Let us now consider the defense procedures of the Masai. As soon as it is learned through spies that a sedentary Negro tribe is planning an attack on the kraals, a picket consisting of six to eight men (eri gerni) is moved out during the day a few thousand meters in the anticipated direction of attack. It takes up its position on an elevation from which it can survey both the foreground and that in the middle of which the livestock are grazing. Where features of the terrain obstruct the view, patrols must remedy this disadvantage. As soon as the approach of the enemy has been observed, a warrior brings the corresponding announcement to the kraals, where the warriors immediately prepare themselves for combat. They set out to meet the enemy only if special circumstances seem to require it; as a rule, however, they wait until he is on the point of rounding up the herd, which is always the primary goal. Now they break out, they rush upon the opponent from all sides, and, in the ensuing hand-to-hand combat, they are almost always the victors. There is a good reason for the preliminary waiting: first of all, the enemy's main attention, as soon as he approaches the herds, is on them, so that the Masai are now able to appear with more surprise; then the multitude and the bellowing of the livestock easily confuse the Negro not accustomed to it, and, finally, in hand-to-hand fighting the Masai has the advantage of needing to concern himself only with the enemy, whereas the latter, in his greed for booty, thinks first of holding and driving away the livestock and only then of defense. Thus the Masai succeed in making the defeat of the opponent a considerable one and in discouraging him from further undertakings for some time. If they attacked him before he reached the herds, he would immediately retreat and try his luck again within one of the next few weeks. The Masai would again have to reckon with the probability of an attack on their kraals and would be unable to undertake any raiding expeditions themselves during this time.

Another procedure consists of the warriors hiding in the rounded-up cattle herds until the approach of the enemy and /101/ dashing out from there as soon as the opponent has come close. This is modified further in the following manner: The herd is divided into two parts; the front and smaller part remains in the care of a few

/101 cont./

726 boys, who flee immediately upon the approach of the enemy. Half
725 of the warriors are hidden at the rear of the larger one, while the other half lies in wait toward the front and to one side of the front herd. The enemy first takes possession of the front herd, some of them attempt to drive it away immediately, while the rest try to reach the rear one. Now the moment has come for the Masai warriors to burst forth at both places.

[721] The fact that the Masai so frequently attack with great success and often strike down to the last man even trade caravans armed with muzzle-loaders they owe nowadays less to their strength than to their cunning. A caravan traveling through the steppes will today be joined by a pair of seemingly poor, hungry Masai, who greet the porters in a friendly way and willingly give them information about the next camping place, etc. Incidentally, but with all the fabricated details possible, it is related that the Masai had recently been in the vicinity, but had now moved off and were camping far from here. After the two have eaten with the porters in the evening, one of them disappears during the night and reports to the warriors of his kraal what has been discovered. Before dawn he is back in the camp and the two travel on with the caravan, having by now become friendly with its men. There are found again the next day two or three "poor" Masai, who pass themselves off as Wandorobbo -- as the first also often do. They have brought along their alleged entire possessions, consisting of a few rhinoceros horns, to sell or even as gifts. They too remain with the caravan; they eat, chat, and joke with the porters and on this occasion reveal a keen understanding in recognizing how far the latter trust them, whether they feel quite safe, etc. If they believe the caravan is quite unconcerned, one of the Masai guests, on this or the next night, fetches the warriors, who then, as a rule, between midnight and three o'clock in the morning, when the porters are sleeping most soundly, attack the camp and without difficulty massacre the sleepers.

/101 cont./

726 721 As has already come out in the foregoing, the Masai are not familiar with a declaration of war in their dealings with foreign tribes. War is rather a sudden attack in the midst of peace, or, more properly, because, as we shall presently see, seriously intended and binding conclusions of peace are indeed not customary, in a state of peace, which the tribe concerned owes merely to the circumstance that the Masai at the time are simply plundering other peoples richer in livestock at the moment.

728 648 If the war concerned a distant area [illegible] whatever was concluded, unless it were to deceive [illegible] people, so that no difficulty /102/ was to be expected fr[illegible] side for a later attack on a land neighboring them. For this a few old men were first sent to the just attacked tribe. They carry a bunch of grass (ol godjeta, el godjet = grass) in the right hand and bring a sheep that wears a chain of blue or green ring-beads, eñ gonodoi, around its neck. These are the peace insignia (eñ dogitin os sotoa = things of peace). After the old men have put their request before the foreign chief, the latter, happy to be able to make peace with the Masai, gives them a few old men to take along, with whom the speakers then enter into blood friendship (ol momai). Both parties, surrounded by warriors, sit down under a shade tree in the vicinity of the kraal, closely opposite each other, one of the foreign old men in front of each speaker. Now each one makes a small cut in the left lower arm of the one opposite him and wipes off the blood gushing forth a number of times with a few pieces of partly roasted meat, which he eats. During this ceremony the participants swear eternal peace. The meat used comes from an animal just slaughtered, usually from a head of cattle, more rarely a goat or a sheep. The animal must be perfectly sound, about which both parties convince themselves by an examination of the entrails.

Just as the Masai deceive foreign tribes with this blood friendship, they have also often done this with respect to Europeans. Those concerned simply believed that a blood friendship coming about in this way had the same value as though it had been concluded with sedentary Negro tribes, who have a similar custom. But since in this case it is a mere pretense, there is suggested the conjecture that this is a matter of a custom that is not peculiar to the Masai, but was merely adopted from other peoples. The author regards the possibility of a

/103 cont./

619 After a battle of the Masai among themselves, the conclusion of
728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called etabaschage megitin -- exchange of skin capes.

• 726 The length of the stretches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consist only of marching, that,
[276] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the caravan people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the tropics. The untenableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a gourd bottle of water on their
701 long migrations. The Masai, however, knows perfectly every little
182 spot of the steppes, he knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[823] water. Where water has collected in old hollow trees, and especially in baobabs, this is accessible to him through a series of steps made
[824] out of foot-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited
701 by their water content to quench thirst. They serve him, /104/ just as
182 the wild honey, not infrequent in the steppes, also serves as food on the
222 march. A cuckoo bird, the honey indicator (Cuculus indicator, called
[825] eů joborol by the Masai), leads the Masai to the concealed honey holes.
[136] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it
[825] in order to take out the honey. If the amount found is still not sufficient for the warriors, they bury the chewed comb, whereupon the bird, after

/184 cont./

757 With toothache (eng ga ol alai) one bites on a very hot residuum
[164] of fat with the aching tooth. Pieces of twigs of o'remit (Salvadora
[515] persica L.) and ol abalasas (Dodonaea viscosa L.) chewed to resemble
a brush at one end serve as toothbrushes.

[152] For rheumatic pains in the muscles one makes use of massage,
which is practiced by the women, or one makes poultices with the
pulp of the pulverized root of o'remit (Salvadora persica), which
[593] also finds use otherwise as a "mustard plaster." Married men have
[385] themselves massages by their wives to get rid of pains in the leg
muscles after long marches, whereas the warriors scorn this help as
unmanly. Furthermore one administers a root decoction, preferably
mixed with a broth from steer meat, of o'rarait (Cissus rotundifolia
[Forsk.] Vahl.) or of ol logiono (Pentas zanzibarica [Kl.] Vtke.),
or also a decoction of the wood of ol gonji (Rhamnus prinoides
l'Herit.). For rheumatic pains in the back one drinks a root decoction,
sweetened with honey, of ol asasia l os subertai (Osyris tenuifolia
Engl.). To cure articular rheumatism a root decoction of ol ogino
(Boerhavia diffusa L.) is administered. Besides these remedies, those
that are regarded as diaphoretic, especially the above-mentioned ol
ambochi (Momordica cardiospermoides Kl.) and eng altetoijai kete
(Anetlema johnstonii K. Sch.), are also given.

296 Other than for curative purposes the warriors regularly, and, to
be sure, for the entire duration of their membership in the warrior
• [126] standing, take various nerve /185/ stimulants. These are taken
especially on war expeditions and, even more, during the meat
feasts forming the preparation for these. One of the most popular
stimulants is the bark of the frequently mentioned ol mokotan
(Albizzia anthelmintica). One pounds a piece of bark best the size
of two hand-palms with a club and then lets it steep for a few minutes
in still hot meat broth. The other stimulants are: ol dinjai or os
sogutai (Cissus quadrangularis); an arm-long piece is cut up and
boiled in water. The extract is taken mixed with goat-meat broth.
Equally strong in effect is the root of ol olorua (?). One takes a
piece of root three centimeters thick and approximately ten centi-
meters long, chops it twice, and cooks it with beef broth. The
decoction smells disgusting.

/313 cont./

*121 It also appears not impossible, however, that the image of the fall
*773 of man first developed from these views. At yet another point we
*171 find among the Masai the belief in a mysterious power of destruction
*539 inherent in the snake. I mean the custom according to which the
[825] warrior in battle hurls toward the enemy a leg bell that is filled with
• [726] a mixture whose quantitatively largest and most effective ingredient
[789] is all or part of the contents of a snake's egg.

The Deluge

According to the myth of the Masai, God decided on the terrible punishment of the deluge when the wickedness of the human beings reached its height through the perpetration of the first murder. At that time there lived on earth a good, devout man named Tumbaihot. God wanted to save him, along with his family, in order to preserve the good branch of the human race on earth. He therefore commanded him to build a wooden ark and to enter it with his people and a few animals of all species. As soon as everyone and everything was stowed away in the ark, the downpour began. After a time, when the waters had destroyed all living creatures outside the ark, God let the earth gradually become dry. Since meanwhile food had become scarce in the ark, Tumbaihot wanted to find out about the level of the flood and sent forth first a dove, which showed him by its weariness in the evening upon its return to the ark that it had found no resting place, therefore the water must still be high. After a few days he then sent a carrion vulture, on which he had tied an arrow to a tail feather. When this bird returned in the evening, it lacked the arrow and the tail feather. Both could have been lost only because the arrow, after the vulture had alighted, was caught with its barb. When the waters had subsided, the ark landed in the steppe, where human beings and animals disembarked. When Tumbaihot stepped out, he saw four rainbows, one at each cardinal point, as a sign that God's wrath had subsided. Of Tumbaihot's six sons, the three from his principal wife founded the three tribes; the three from the other wife, the three lineage groups.

/348 cont./

182 had been sown with the bleaching skulls of those who had starved and
731 out of the stricken animals. Any of the women and girls who had not
died of hunger sought and found refuge among Negroes practicing
[448] agriculture, who always like to buy or kidnap female individuals.
A mother would sell her child for a handful of maize and would sell
herself a day later for a similar price, in order to avoid starvation.
Negroes and caravans /349/ took possession of the will-less ones, in
order to resell them as slaves. Many have since come back, in part
through flight, in part through redemption by their relatives, but
more are still found in strange hands. The latter, even though their
blood lives on beneficially in the new mixture with Negroes, are
182 permanently lost to the Masai people. So greatly has the misfortune,
731 to which an opposite effect is so often attributed, broken up the
669 former organization, the firm unity, that, soon after the end of the
epidemics, the unhappy quarrel between the brothers Lenana-Zendeo
about the undivided rule over the Masai could begin. With its con-
tinuing civil wars it acts powerfully toward the completion of the
destructive work of the epidemics. The Negroes, with whom alone
• [726] the Masai formerly waged war, except for smaller undertakings
[18] among themselves, which bore more the character of provocations
than of serious battles, were opponents inferior to them. Now equal
parties stand opposite each other, which makes the wars bloodier,
more destructive.

178 Through increasing impoverishment as a result of these epidemics
24 and civil wars, there is now going on among the Masai -- as formerly
[433] among the Wakuafi -- a change from nomadism to sedentation.
[361] Agriculture is taking the place of animal husbandry. The ones
deserting the "people" in this manner are founding settlements, in
part self-sufficient, in part supported by Negro tribes, somewhat
removed from the dry steppes, there where the watering is adequate
for the laying out of plantings. No one expects them to prove to be
particularly skillful at this; but Nature, which goes so far to meet
her children in the tropics, helps here too. A moderate watering
suffices to make the batata shoot stuck in the virgin soil grow and
produce tubers. Maize for the most part appears just as easily
satisfied as advantageous. These then are the principal useful plants

MASAI FL12

K 701 702

in building cattle-pens and huts, herding sheep and goats and cattle, and above all, did their physical exercises which kept them fit for defence or attack. These activities were organized according to seasons. When there was plenty of work in the fields, the warriors took their full share in it and arranged their dances and songs to take place in the evenings, but when there was less work in the fields, then numerous day dances and songs were arranged. Different age-groups competed in dances, and in dexterity in throwing spears and fencing, as well as high and long jumps.

The Cause of Tribal Warfare

M K 721

Let us consider for a moment the reason why the tribal wars were fought. The main cause of friction between tribes, especially in Kenya, was economic. There was no war of annexation of territory or subjection of one tribe to another. The fights which were carried on from time to time between various tribes, such as the Masai, the Gikuyu and the Wakamba, can hardly be called "wars," because all fights were in the nature of armed raids. For example, when cattle disease invaded the Masai country and reduced their livestock below minimum, the Masai, whose lives depended entirely on meat, milk, and blood of the animals, were forced by necessity to raid the stock of their neighbours or die of hunger and starvation. In order to save their livelihood, spies were sent out to investigate how a successful raid could be carried out, and in what district in the neighbouring tribes the stock were abundant and least protected.

M 721 724

M 726

After the spies had reported a raid was at once organized, and the warriors set out to get food for the tribe. Sometimes it took days to cover a short distance, for the raiding party

Masai FL12

M or parties travelled mostly during the night and spent the daytime in hiding, eating and preparing for the attack. After they located the cattle-pens they slept in a forest nearby until the dead of night, when they stealthily crept through the darkness and took the few herdsmen by surprise. The cattle-pens were surrounded and a few of the herdsmen killed to avoid any cry that would give the signal to the warriors of the enemy's tribe. The cattle were captured in this way and led away as quickly as possible, in a zigzag way, and at the same time some of the warriors were left behind to cover the trail and also to await the enemy who might follow; so that while they were engaged in fighting, the cattle would reach the starving families in Masailand. Sometimes it took some days before the raid was discovered, especially when the cattle were grazing far away from the homestead.

K In this way the stock was lost and the lives of a few M herdsmen. We can therefore compare the "tribal war-fare" with the "smash-and-grab" practised in civilised Europe and in America. The only difference between the two systems is that smash-and-grab is a frequent practice, whereas the tribal warfare was an occasional raid, with long intervals in between. In some parts of the Gikuyu country, especially in the centre of the country, a generation passed without experiencing any raid at all.

K Apart from the fighting strength of, say, the Gikuyu M or the Masai, there were natural features dividing the two tribes, such as huge forests full of all kinds of dangerous wild animals and snakes, which made the forests a very effective blockade. Sometimes, it is said that a party of warriors entered in the forests and never came back again, not that they fell in the hands of the enemy, but that they lost their way and were either devoured by the animals or

CATALOGUE.*

DRESS AND ADORNMENT.

Dress. Of tanned goat skins, ribbed with red ochre, beaded on the edges. Sections of skin are pieced together into a sort of shawl. There are no sleeves and apparently no means of fastening the garment. Worn by boys and girls.

We Chaga tribe; Mount Kilima-Njaro, East Africa.

Dress. Of dressed goat skins dyed with red ochre, fringed on three sides.

We Chaga tribe; Moshono, Mount Kilima-Njaro, East Africa.

Face-cover. Of ostrich feathers, fastened between two oval plates of leather. The rims of the plates are decorated with a line of red paint on a white ground. Worn around the border of the face in war. Loops on the front are for insertion of white ostrich plumes, generally two in number. [Fig. 5, page [11].]

Dimensions, 6 by 10 inches.

Masai tribe; Mount Kilima-Njaro, East Africa.

The manner of wearing this ruff is shown in one of the plates in Fischer's "Masailand", Mitteil. Geog. Gesellsch. in Hamburg, 1882-3, Heft, 11.

Face-cover. Of black feathers sewed between oval plates of leather. Worn around the face by Chaga warriors in imitation of the Masai.

Outside dimensions, 10 by 16 inches.

We Chaga tribe; Mount Kilima-Njaro, East Africa.

Face-cover. Halo of dark plumes set into an oval structure of leather. Worn around the face by warriors in imitation of the Masai.

We Chaga tribe; Mount Kilima-Njaro, East Africa.

Face-cover. Oval ring of leather without feathers. Worn around the face in war.

Masai tribe; Njiri, East Africa.

Ostrich Plumes. Used as ornaments on apex of face ruffs.

Masai tribe; Mount Kilima-Njaro, East Africa.

*The numbers in this catalogue relate to the entries in the Museum catalogue books of the Ethnological Series.

Eji sii kulikae-repeta. The following are other examples:

Solo. Ol-le-Langui, ol-murani ólo, 'l-memutana
Latukuyanye. (*Chorus*) En-deipa neitu lepeta.
Solo. Ajo edo. (*Chorus*) Keikajita! (*Solo*) Kat'-uni to-'l-epa tiu.
Chorus. Arui le-'ng-aág aág náitadoli 'N-Jówaine[1].
Nekeltiki en-bwoto te-Kimar'[2] elkararo.

Solo. Ol-le-Langui, the warrior who has reddened the ground with the blood
Of those whose country had not been reconnoitred.
Chorus. Who ran on ahead and returned in the evening to the van.
Solo. I tell you he has killed. (*Chorus*) How often? (*Solo*) Three times in one month.
Chorus. The cows with the crumpled horns which were shown to Ainsworth were in the kraal.
We captured them because he climbed to Kimare to take the place of those who had retired.

Free Translation.

I

Sing we the praise of that foremost of fighters,
Ol-le-Langui, whose spear was ne'er wielded in vain,
Who spied out the land for our warriors advancing
And made the ground red with the blood of the slain.

II

Slumbered the foemen unwitting of danger,
Though we knew not the country, we felt no dismay,
But a bitter awakening was theirs in the morning
When thrice in one month thou their bravest didst slay.

III

Mighty the spoil from the kraal that we captured,
The herds of horned cattle we drove o'er the plain.
To Ainsworth[1] we showed them. Thine, thine is the glory,
Ol-le-Langui, whose spear was ne'er wielded in vain.

[1] C. Ainsworth, Esq., C.M.G., H.B.M. Commissioner, Uganda Protectorate.
[2] Kimare is the Masai name for a district in Elkeyo.

Solo. It is said the son of Tema has an ostrich feather head-dress which has not been worn.

Chorus. I did not refuse to give you the credit of killing the herdsman.

Solo. They are seeking a stronger herdsman for you now.

Chorus. You killed another by the doum palm as we entered the country.

Free Translation.

When Tema's son first donned the ostrich plumes—
The manly dress that marks the warrior's pride—
Two foes he slew before the raid was done,
And in their blood his maiden spear was dyed.
The first was in the border marches slain
Beside the palm-tree, next the neatherd fell.
Sendeyo seeks a stronger herdsman now
To guard his kine 'gainst one who fights so well.

EN-GIDIPATA

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

is that they receive no benefit from the cattle of their neighbours. "We get neither meat nor milk," they say; "why, therefore, should we fight for the preservation of your cattle?" With a consummate knowledge of the region, the Masai warriors threaded their way by special pathways, passing Taveta, and crossing the Nyika. Nearing the coast, they stowed themselves away in the bush, while a few of the bravest went forward to spy out the land, knowing, however, full well that the very sight of one of their number was quite sufficient to stampede a hundred Wa-nyika or Wa-digo. Sadi, indeed, told me that on one occasion he actually met some of these spies *in the town of Mombasa at midnight*. This is, I think, doubtful, but it shows what they are considered capable of; and there can be no doubt as to the astonishing hardihood of these scouts. Stories are continually heard to that effect, thus rendering the Masai a terror in the land; and it is a fact that they have even reached Bagamoyo, opposite Zanzibar. 726

The raid was, of course, successful, and our savage friends returned in great glee. On reaching their homes, however, matters had to be squared up, and the spoil divided. So many head of the captured cattle were set apart as the portion of the lybon Mbaratien, who had directed them so well, and whose medicines had been so potent. Then followed a sanguinary scene over the apportionment of the remainder. There was no attempt at a fair division. The braver men and bullies of the party, consulting only their own desires, took possession of such cattle as pleased them, and dared the rest to come and seize them. The understood rule was that if any warrior could hold his own in single combat against all comers for three days, the cattle were his. And thus began the real fighting of the expedition, revealing sickening sights of savage ferocity. There were more warriors killed over the division of the spoil than in the original capturing of it. To kill a man in this manner was considered all fair and above board. Blood feuds were unknown, a man not being considered worth avenging who could not hold his own life safe. If, however, a man was murdered treacherously, the criminal had to pay forty-nine bullocks. Our young warrior, as he was only as yet [illegible] [illegible] to consent with the honour and glory of the raid, and he had the modesty not to pit himself against abler and more ferocious fighters. It must be remembered that the cattle thus captured did not remain 727 [791] 727 578 [628] 727 [721]

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

727 the property of the successful warriors. A warrior can have no property, and hence they all become his father's.
[421] The spoil being divided, the party were next able to do full honour to the men lost in the raid—those being considered worthy of all praise "who *rush* into the field, and foremost fighting *fall*;" while men who die ignobly at home are only worthy to be despised and thrown to the vultures. Hence the warriors howled and jumped into the air in the dance, till the dead were duly commemorated.

648 In this manner, Moran saw a good deal of fighting, and soon rose to fame in many a campaign to U-kambani, Galla-land, the Coast region, Sûk, Kavirondo, Elgumi, and Nandi. The two latter tribes proved to be the most difficult to deal with, the one from its great numbers, the other from its fighting powers.

669 Civil war next broke out, and he had to proceed to the assistance of his brethren of Naivasha, who were hard pressed by the Wa-kwafi. In these civil wars, the affair was gone about in a very civilized fashion: Sudden and unexpected attacks were not indulged in. A cause of war was first discovered—probably, as in more civilized countries, merely to keep their hands in or as an outlet for internal unrest. Preliminaries were then settled most amicably, and the stakes arranged. A place was next chosen as the field of battle, and to this all the warriors of the two districts came with their cattle and young women. As the fighting would be protracted, a truce was declared, while kraals were built in the opposing camps. A certain number then proceeded from both sides, and like gladiators in the arena, they closed in furious strife, spurred to deeds of daring by the women on both sides. The Wa-kwafi were the conquerors, and the cattle of the Masai fell into their hands; and following up their advantage, they nearly drove their brethren from the entire region. (Of this war I have already spoken.)

522 As a mild relief, and a variation from these serious matters,
186 it was the dearest delight of our swaggering young friend Moran to "draw the badger" in the person of the Swahili porters who might be meekly endeavouring to pass through his country. These he would dub "donkeys," in allusion to their being burden-bearers like those interesting quadrupeds. He could keep the kraal in a roar of delight, as he described how he had frightened the one out of his wits, or spitted another on his spear, or smashed the skull
431 of a third into jelly. The sennegi and the beads he re-

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

and alien children; the latter frequently come to be regarded as tribesmen by this process. 597

First of all a Masai adopts any child born to his wife by anyone other than himself, including those born prior to marriage: in fact a betrothed girl is frequently left in her father's boma until she bears a child. The child of one's own loins is called *oiunoto*, that of another *engera oilaitalak*. No distinction is made between the two, and the latter term is generally used playfully. [192]

If a man has one wife with a number of children, and another who is barren, when the former gives birth to another child, there is a ceremony by which the latter may adopt this child. The adopting mother sits on the after-birth, and pays to the true mother a cow and calf called *nongeya*. She takes over the child as her own ,and it is asserted that by stimulation of the breasts and special food, lactation can be artificially induced, even when the foster-mother has never given birth. The fact that a woman has adopted a child in this manner is seldom referred to afterwards — the child is regarded as though she herself had given birth to it.

In the olden days children were frequently captured in war and adopted into the tribe: such a child is referred to as *ol arnoti lembere*. It was, and still is, not uncommon for a Masai to adopt an alien's child; at times this will occur when the Masai marries the alien's daughter and adopts a younger son; or in time of famine amongst aliens, the Masai may find an abandoned child, or be given one to look after; or he may give some cattle to the alien for the privilege of adopting the child. The use of the word 'purchase' has been deliberately avoided, for neither party looks on the transaction in this light. A son acquired in this manner is called *otaberno*. These last two categories of adoptee can inherit the cattle of their foster-mother's house, whilst their children can inherit the 'gate' like any other Masai. 597 727 597

A peculiar custom of adoption exists amongst the Engidong or laibon's clan. Any Masai, child or adult, can attach himself to a member of the clan, and such person must treat him as a son, giving him cattle, and arranging his circumcision and/or marriage. Such a person is called *ol oniio*, as also are the numerous Kikuyu received into the clan. The relationship is terminable at will, the adoptee shaving and departing, but leaving behind everything that he has been given. Though theoretically applicable to the whole clan, such adoptions usually only take place in the laibon's immediate family . 597 184

These notes on adoption are by no means full: they may, however, be sufficient to emphasise that it is a mistake to regard the Masai as being racially pure. If they come in time to accept new ideas as readily as they accept new blood, their rapid advancement would be assured. 144

It is important for a number of reasons to know who holds the purse-strings in a Masai family group, but it is a question to which no definite answer can be given. Rules, where they exist, are seldom followed — in such intimate family matters it is personality that counts. 422, 593 [183]

The cattle which have been allocated to a woman in trust for her children are nominally in her control. The elder looks after the animal

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

791 the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one to each tribal group; these all belong to the In-Kidogi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputie at Ngong (now living among the Loitai), the Kisonko, Il-Aikipiak, Il-Wuasin-kishu and Samburu also had their own; though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were[*] (1) to sanction war and to provide protective medicine for those taking part in it; (2) to authorize the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical focus for tribal activities. Many laibons also practise witchcraft (as defined above, p. 39). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organization

724 When the warriors of a *sirit* wanted to raid, they approached their *ol-oigurenani*,
624 who planned the attack and arranged for the co-operation of other companies if a big raid (*ol-orora*) was intended. The *il-oigurenak* concerned then went to the laibon
726 to get his sanction and protective war medicine. Before agreeing, however, the laibon consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in song after getting drunk. The warriors then went to their *il-pull* and feasted on meat to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Nyika being a frequent objective; Thomson was told that a Masai
727 patrol was once seen in Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the *manyata*, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-oo-rub-kiteg* and *il-oo-do-ongi*, "the black ox" and "the red ox," and fought for the spoil. Small raids, *ol-waempu*, carried out locally by one *sirit*, were not referred to the laibon, who received no share of the spoil.

726 Wars between Masai tribal groups were frequent, and formed one of the factors
578 in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Elmenteita, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputie, the other of the Il-Aikipiak. A detachment of picked men from each side would come out and fight a pitched battle, cheered on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline
701 was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Grouped
[illegible] shield, sword, club, painted face and leg ornaments, the Masai warrior felt himself
[illegible] more than a match for anyone.

727 Prisoners were not often taken, though sometimes a man would capture a woman
728 whom he would make his wife, or a child whom he would adopt. Men were killed, women seldom. Peace was made by a formal ceremony at which morning sacrifices

[*] Fosbrooke, pp. 11-15.

/12 cont./

619 142 144 In connectin with the somatic view of the three Masai branches the following is to be considered. The band that immigrated last, the true Masai, have kept themselves quite pure as a race. They practically never subscribed to the kidnapping of women and children in war, otherwise customary everywhere in Africa, they did not marry Negresses and did not take Negroes into their community.

[127] [171] [582] [583] 291 301 142

Ill. 2. Three Masai women.

619 142 144 Therefore they not clearly show the racial characteristics peculiar to the Masai people. The same was true of the Wakuafi until the time when they became sedentary. Then, however, they needed [178] [361] not only replacements for their lost cattle, but also many hands trained in the cultivation of the soil. For this reason on war expe- [727] ditions they dragged off, not only the livestock of the enemy, as before, but also the women and children. The degree of mixture between Wakuafi and Negroes is very different in the individual

[i.e. the Masai, Wakuafi and the Wandorobo --dmalyet]

791 /19 cont./
175 was followed by Subgt and the latter by Mbatyan. After the latter's
[619] death the Masai split up. One part placed itself under Lenana, the eldest son of the principal wife, who was born before the accession of Mbatyan, the other under Zendeo, who was the old man's favorite son and named by him to be his successor. The people relate that Lenana cheated Zendeo out of the succession in a way similar to how Jacob cheated Esau out of the right of the first-born. Whereas the deception was achieved in the latter case through the tied-on goatskin, it was made possible in the former case by the gloom of the hut in which old, weak Mbatyan was lying on his sickbed. He thought he had Zendeo before him and instructed Lenana in the secret arts of the oi olbeni. The two are now bitter enemies,
[669] who maintain a continuous civil war, to the misfortune of the Masai people. Lenana, now a man about 40 years old, lives with his followers in British East Africa, in the vicinity of the railroad station Nairobi, whereas Zendeo, ten years younger, inhabits, with his hordes, the steppes of German East Africa. Both are merely phantom figures in comparison with their father, who had occupied an
175 outstanding place in the succession of chiefs. Under him the Masai
619 experienced their last golden age. After his forefathers Sinoik and
791 Subgt had subjugated the Wakuafi, it rested upon him to keep down
726 their constant uprisings and to weaken and enslave them so that no
[669] danger from them could threaten the Masai any longer. Through a well-organized spy system Mbatyan kept himself continuously informed about the conditions of his opponents, so that the rapacious warriors could always attack those very Wakuafi settlements in which a war expedition /20/ against the Masai was being prepared. The most trouble here was made by the Wakuafi of Meruberg /Mt. Meru/, who found safe hiding places for women and livestock in the clefted mountain forests, while the men undertook raids on
175 neighboring Masai kraals. Finally, however, the Meru people were
619 successfully mastered; indeed, they even became so pliable that
791 they performed compulsory labor for their oppressors. One must
• 729 bear in mind with what deep contempt all men of the Masai people
466 look upon any kind of work, which they regard as something dis-
461 graceful, not compatible with a man's dignity, in order to

175
619 /20 cont./
791 understand what such a success meant. Mbatyan demanded thou-
• 727 sands of workers, and they moved obediently, in endless long lines,

west of the mountain, where the mighty one resided, like his ancestors. There they had to dig a long water channel, whereby -- a further particular humiliation -- the men had to work in rank and file with the women. Encouraged by these and other successes, the Masai became more and more arrogant, and they extended their war expeditions farther and farther. It was not only the Negro tribes of the interior who had to suffer under their lust for robbery and murder, they even penetrated into the immediate hinterland of the coast and directly approached the coastal cities of Mombasa, Tanga, Bagamoyo, and others.

175
791
755

The belief in the magic means for healing purposes which Mbatyan gave those seeking help, and whose chief ingredient quantitatively was the vanilla-scented, *pulverized wood of the* of mugongore liana, was so deep-seated in the people /21/ that it was often supposed to have actually brought to the people

/97 cont./

726 704 [127] emoweak (sing. ol emoue) or horns. As soon as the ones in front come across livestock, they call the others by long drawn-out ff shouts, so that they will round up the booty, which consists only of livestock. While the ol arai engage in hand-to-hand combat with the opponent, the latter's troops, joining together, seek to wrest the

Ill. 39. Prayer before the battle.

726 704 booty away from the ol diniko again. In connection with this fighting there are the most wounded and killed. In order to shorten it and take the livestock quickly to safety, the latter are constantly urged on by the ol diniko and pushed toward the enyppe, out of the hostile area. The fourth troop, the ol kigeléni, seek to keep the way open for them and, from the front, to disperse the enemy pressing upon the herd. The last division is the ee nisi, that is, the cowards, who were afraid to go along with the others, but now, when there is no longer any danger, slink around the herd like animals of prey, in order to steal. The ol diniko and ol kigeléni strike at them with their clubs, and a great row arises until the arrival of the leaders in the camp. Then the latter separate a number of cattle from the herd, which is still common property, and have them slaughtered, whereupon every warrior receives a portion of meat. The warriors /98/ must lay out a fence of thorns so that the livestock is safely sheltered in it for the night.

• 727 it for the night. Thus captives are not taken. The men from the enemy who can be taken are killed, but not mutilated; the women, on the contrary, are usually spared and freed. It also happens, however, that those warriors who are undertaking their first expedition also strike down women, in order not to return as *ehor aldon*. But
[784] even in this case pregnant women are spared, for it is believed that God punishes the murderer of a pregnant woman by the death of his own children. Only very exceptionally does one take along a few
[583] women or children. The latter, however, do not become slaves; rather, the captured woman very soon becomes the lawful wife of the one who captured her, just as he also regards the kidnapped child
[577] exactly like his own. A ceremony of adoption does not exist: the man simply hands the child over to his wife, who treats it like her own. The next day they march on toward the home kraal: in the evening a thorn fence is again built, and at the same time the share of the booty destined for the *ol pononi* is set apart. The total booty of every war expedition is given a name. This is determined on this second evening, while the men sit eating. It is called, for example, *kirima*, because men fall on both sides. Other names are *ldgdeb* if the provisions in living livestock taken along on the expedition did not last, and the warriors, out of hunger and contrary to the existing custom, had to eat cow fruit; *ñgdeb* if the Il

molon suffered on the way because of a shortage of water; *ñgdeb*, formed from the call *nanyiñgie ñgo*, that is, approximately: "only courage, if it is not possible, what does it matter," a frequent saying
[703] if one believes oneself inferior to the opponent in strength. The next morning, early, before the departure, the leaders distribute the booty

/98 cont./

727 [103] in shares as equal as possible: one warrior receives as much as the other, but believe that a few head of cattle are distributed as a special reward and first to those warriors who killed an enemy in battle, then to the benefactors (il gendalei), then to the one who captured the first head of cattle and to the spies who went ahead (el aigendalei), and finally to the wounded, each of whom is entitled to the head of cattle that he marked with the blood gushing out of the wound. The number of cattle that the individual of the one mentioned receives, except for the last who is entitled to only one head of cattle, is determined by the size of the booty and the proportion of the size of the booty's parts according to the above order of succession. /99/ Every

727 579 warrior strives as quickly as possible to drive off from the others his share of the booty, but each one also tries to take along with it one or more head not belonging to him. This, of course, gives rise to another brawl, in which there are almost always several wounded men. If the booty is too small for an equal division, the warriors form two

[419] parties, on the one side the Il molelian, on the other the Il oiner and Il molgana. The former have as slaughtering cry the term pio molgi = the red cattle, the latter the term nanyk gnol = the black cattle, after which they are also sometimes named (for example, I heard it in ongol). A fight decides which one of the two parties receives the entire booty.

722 At home in the kraals it was very quiet during the warriors' absence. After the farewell, those remaining behind went home, each somewhat heavy-hearted in the anxiety about a son or lover, which, however, was more or less pushed into the background by the expectation of the spoils that they would bring back soon after the farewell the old man was again

[237] squatting in quiet contemplation in front of

[236] his hut and chasing away from his face and head, also as before, with a fly switch (el ngiro, il ngiro) (Fig. 91) consisting of a goat's tail, the flies constituting a veritable plague in the lower kraals. Then he took a

[492] hair from the switch and made a knot in it for each of his sons who had gone to war.

Fig. 91

/99 cont./

722 while he was imploring 'Ng ai that he might join together as securely
722 as this knot their body and soul. He prays in similar fashion every morning after leaving the hut. The mother likewise prays to God for protection for her son and each time offers him some milk, which she spurts on the ground either out of a gourd bottle or out of her
722 right breast. The girls are somewhat more cheerful about the affair, in that, instead of other prayers, they accompany their dances with litanies for the preservation of their lovers and the many other loved ones. Today the warriors thoughts are again particularly intense; the warriors must soon be coming home, and then it will be definite as to whether the son or lover is among them.

• 727 From afar one already sees isolated little clouds of dust, which the cattle that are driven along stir up. The girls and young women hasten to meet the El oiboni and warmly welcome all who are approaching. But what is this? There, among the laughing women, stands a young woman who has just kissed her brother heartily on both cheeks; now comes her husband, who still wanted to take part in this one expedition before he remains at home permanently as an old or mature man, and one would expect at least as hearty a welcome for him. But both act as though they did not see each other, indeed, they even turn away from each other. One might think she is angry with him because he asked his life unnecessarily. She is not angry with him, however; on the contrary, she is secretly happy that he has come back safely
[976] and is bringing along rich booty. But the Masai too /100/ have their
[975] "good breeding" and this requires that married people upon first seeing each other again after an expedition of war, cut each other completely.

From his share of the booty the warrior keeps only one or two milch cows, which he hands over to his loved one. The rest he presents to the mother, the father, the latter's other wives, the brothers, sisters, and one or another of his more distant relatives of whom he is particularly fond. A person who does not receive anything this
[921] time will get his share after the next expedition. He need not wait long, wars follow one another quickly, the interval between two is seldom more than two or three months. Hence the Masai are a veritable scourge for the neighboring tribes, and the rumor, "The Masai are coming," in spite of its frequency, is often enough to disturb whole towns and villages for weeks.

/134 cont./

411 [136] [137] Sacks in the branches of the trees surrounding the kraals, waiting for some kind of animal waste. In addition to the iron points, one also finds awl-shaped wooden points; the latter are often poisoned, the former only rarely. The Masai do not make the poison (ol [139] Chemi) themselves, but buy it from Wandorobo, who obtain it from /135/ the olmorijai (Acocanthera abyssinica) tree by boiling the roots and the wood. The arrows are carried in a leather quiver (e mutian, mutiani), which is slung over the shoulder on a leather [137] strap. It consists of a tube 70 centimeters long and made out of goat's skin, with a bottom stitched in and a similarly worked, twelve-centimeter lid that can be turned up high.

Firearms, which at times almost entirely replaced the spears and bows among sedentary Bagusu (1),

1. For example, in a few areas at Kilimandjaro.

[140] [141] are not generally carried by the Masai. Although in the battles with the Pomeranian Troops they have at various times captured guns and ammunition from Salim Askari, I never observed or learned that they used these weapons. They never bought muzzle-loaders from trade caravans, and the ones that I found in one of their kraals showed by the lack of cock or pieces, or by other damage, that they were not carried along by the Masai for the [141] purpose of use, but merely as trophies. It was not until April, 1905, that a troop of Masai warriors armed with English Snyder breech-loaders came into my field of observation. The troop came from the Masai province of Ol Doupe, and, to be sure, from the English station of Naivoki, located on the Uganda railway, and attempted an invasion in the Kilimandjaro area of Bantu. With a loss of approximately 30 per cent dead and bearyless, however, they were sent home by the Wazaraba, armed only with spears.

12:Dundas G-5 (ca. 1900) 1908 F1A Dundas F1A
F-Group F1/0
Pages F1/2

Engi is said to have instructed the Dundas to bring him a pair of sandals made of leather having hair on both sides, the Masai to bring him a bull, the dung of which was pure white, and the Elkeyo an animal called Kaka (a burrowing rat or mole).

The Dundas cut off the ears of a donkey, and produced them as the required sandals before Engi; the Masai brought a bull hot on milk only; and the Elkeyo the animal called Kaka.

Engi then told each tribe to take its respective share and to smash the enemy separately and at different points.

The Masai, marching into Elkeyo from Kaiwaka, fell upon the emigrant Ilot, and taking all their stock drove them on to the Elkeyo, who in their turn drove them on to the Dundas, by whom they were finally routed.

The Masai or Galla were thus disposed of, and only by the same Engi, which was given to the generation that fought with and expelled them, and by a few women of their tribe, taken prisoners by the Dundas, are we reminded of their settlement in Elkeyo. Amongst these prisoners may be mentioned an old woman called Bandiro, who is still alive and resides in one of Bangi's villages. She was formerly Chief Karoli's mother.

Needless to say the Masai kept off the cattle which they captured, and this caused a rupture between them and the Dundas and Elkeyo, who joined forces and waged war on them. After a time had been made the Dundas and Elkeyo fought amongst themselves.

If the Elkeyo were to live and increase they had to cultivate the ground, and to do so they were obliged to destroy the forests. The very existence, however, of the Dundas depended on the preservation of the forests, and hence arose a struggle for survival, which allowed of no compromise and could have but one end.*

In an incredibly short time the great primeval forests, the home of the Dundas, were destroyed, and with them this interesting people ceased to exist as a tribe. Deprived of the means of living, many died, some took to cultivation, whilst the majority migrated to other regions, where they formed small colonies, such as are to be found at Bariaga, Kaiwaka, Bartos, Kipkio, on Lakipia and Mau, at Tuwala, in Gwassi East (Kisii), and even, it is said, in places as remote as Elmenyo—(the chief that went to this last place was the Agaitio). This scattering of the tribe accounts for the peculiar fact that Dundas living in widely different localities speak the same language.† The Bariaga, Kaiwaka, Kipkio, and Bartos Dundas, and those of similar colonies with, if questioned as to whence they came from, usually mention Kaiwaka and Kaiwaka as the birthplace of their fathers.

As regards the origin of this interesting tribe, we know little or nothing. There appear to have been two branches, the Agaitio and the Ghidi; the former hunted the game on the plains, the latter in the forests. They lived in pits dug in the ground and covered over with leaves of the wild banana; these pits may be seen everywhere in the Elkeyo country, though of course they become less numerous the nearer one approaches the forest. They are also said to have hunted their

* The fact Elkeyo is some how the country appears to have been almost without complete patrons and they accordingly did not interfere at all with the Dundas. The tree outside who seem to have protected the Dundas, purchased from African Dundas the right to certain plots of land on them. The same means or other has also been the case in Kaiwaka, or Kaiwaka, and Kaiwaka, and a similar way growing because the grain appears to have arisen amongst the Elkeyo. The way here that the to use of the source the Elkeyo may have had through obtained a large amount of cattle, or than they have been just as the that a certain tribe of agricultural nature.

† Dundas. (In colonies not to speak with Dundas-speaking tribes, the younger generation is rapidly forgetting the language.)

has a cow, which he looks after and tends, it bears, and by so doing enables him to live, for he can marry, and have children, and thus become rich.

Now cattle feed on grass, and the Masai love grass on this account.

Whenever there is a drought, the women fasten grass on to their clothes, and go and offer up prayers to God.

If a warrior beats a boy on the grazing ground, the boy tears up some grass, and when the warrior sees that the child has grass in his hand, he stops beating him.

Again, if the Masai fight with an enemy, and wish to make peace, they hold out some grass as a sign.

Whenever warriors return from a raid, and it is desired to praise those who have killed some of the enemy, a girl takes a small gourd of milk, and having covered it with green grass, sprinkles it over them.

Then, if people move from one kraal to another, they tie grass on to the gourds.

Should one man ask forgiveness of another with grass in his hand and his request be not attended to, it is said that the man who refuses to listen to his prayer is a Dorobo, and that he does not know about cattle.

Again, if a man who is proceeding on a journey sees a tree which has

Games.

Small Masai children collect pebbles or berries, with which they play at cattle and sheep. They also build huts and kraals in the sand, and they make spears out of bulrushes. Little girls make dolls of the fruit of the sesame-tree[1]. [§24]

Big boys play about in the herds of cattle. They choose a quiet animal, and pretend it is a hut. One boy stands by the cow whilst the others go and hide. When the latter return, the one who is standing by the cow chases them away. If one of the boys who is driven off is caught, they say the enemy have killed him; anybody who manages to escape and touch the cow has won. This game is called Sambwen.

The old men likewise have their game. This is played on a board containing many compartments, in which they circulate pebbles called 'n-doto. This game is called en-gushoi. [§24A]

The warriors also play this game, but they do not care about it much. They have no boards, and make holes in the earth.

Peace.

If the Masai make peace with other people, whether enemies or other Masai with whom they have fought, the warriors seize two im- [§25]

portant elders, and take a ewe which has a calf, and a woman who has a baby; and the enemy do the same.

They then meet together at a certain spot, everybody present holding grass in his right hand, and exchange the cattle, the Masai taking the enemy's ewe and the enemy the Masai's. The enemy's child is suckled at the breast of the Masai woman, and the Masai baby at the breast of the woman belonging to the enemy.

After this they return to their kraals, knowing that a solemn peace has been entered into.

Thus was peace restored between the Lenkiwa Masai and the Masai proper[1], in the year of the ewe[2], at the place called the Ford of Ingarusia[3].

Formerly when the Masai did not wish to make a solemn peace with the savages, they entered into blood brotherhood with them.

A Masai elder would sit down with one of the elders of the savages; each of them would then cut his left arm, and after dipping in the blood some meat of a bullock which was killed on the spot, would eat it.

When they had finished, the Masai went away, but they did not keep the peace.

[113] [1] Hobley (*Eastern Uganda*, p. 41) and Johnston (*The Uganda Protectorate*, p. 864) describe a similar ceremony after a war between the Masai and the Lenkiwa or Kip-sikisi.

[2] The year of the great famine (1894).

the laibons into three categories: (1) the private practitioner, who works in a small way as a diviner and doctor among a limited circle of clients; (2) the private practitioner who has gained a wider reputation and is consulted by several districts, and includes rain-making among his activities; and (3) the senior laibons, of whom there is one in each tribal group, these all belong to the Il-Kidongi sub-clan of the Il-Aiser clan, and the different tribal laibons were all fellow-clansmen, if not actually related. Thus, in addition to the laibons of the Kaputiei at Ngong (now living among the Lotuko), the Elmolos, Il-Ariplanis, Il-Waamo-Kidos and Serikon also had their own, though it is possible that the Ngong laibon had a higher standing throughout Masailand than the others. In pre-European days the functions of a head laibon were* (1) to sacrifice ox and to provide protective medicine for those taking part in it; (2) to authorise the ceremonies connected with the age-sets and circumcision; (3) to ensure the fertility and well-being of his people; (4) to make rain. In the exercise of these duties he is both an intermediary between man and the other world, and a mystical force for tribal activities. Many laibons also practise witchcraft (as defined above, p. 38). But the laibon is not a chief, and his authority depends on his mystical powers.

War Organisation

When the warriors of a sub-sect wanted to raid, they approached their *il-ajonani*, who planned the attack and arranged for the co-operation of other companies if a big raid (*al-ewan*) was intended. The *il-ajonani* concerned then went to the laibon to get his sanction and protective war medicine. Before agreeing, however, the laibon consulted the omens to see if the circumstances were propitious; and having done so, he gave his consent, sometimes in very after getting drunk. The warriors then went to their *il-jali* and hunted an ewe to prepare them for the raid; patrols were also sent out, and when all was ready the party set out by the shortest route to their destination. Raids were made on most of the tribes round them, and extended to the coast, the Nyika being a frequent objective. Thomson was told that a Masai patrol was once sent to Mombasa itself. On their return, the raided cattle were divided. First, a number were set aside for the laibon; then some were given to those who had distinguished themselves; the rest were divided among the warriors, who gave one or two to their lovers in the manyatta, but handed the rest of their shares to their families. If there were not enough cattle to divide fairly, the warriors separated into two groups, *il-ao-ndi-kiang* and *il-ao-da-mapi*, "the black ox" and "the red ones," and fought for the spoil. Small raids, *al-ewanjo*, carried out locally by one sub, were not referred to the laibon, who received no share of the spoil.

Wars between Masai tribal groups were frequent, and formed one of the factors in the disintegration of the Kenya Masai at the end of the 19th century. In such wars, large numbers of men were collected in camps, such as Thomson saw in 1883 near Uasin-Gishu, where two large collections of warriors (he put the number at about 3,000 on each side) were camped a short distance from each other, one camp being that of the Kaputiei, the other of the Il-Ariplanis. A detachment of picked men from each side would come out and fight a pitched battle, observed on by their women-folk, the winning side taking the cattle of the vanquished. The basis of military discipline was pride, strengthened by fear and respect of the laibon, and fear of public disapproval. The Masai also had some idea of drill and of acting in unison. Coupled with these, and in the example of switch-feathers head-dress, caps, glittering spears, shield, sword, club, painted face and leg ornaments, the Masai warrior left himself more than a match for anyone.

Prisoners were not often taken. Though sometimes a man would capture a woman whom he would make his wife, or a child whom he would adopt. Men were killed, women seldom. Peace was made by a formal ceremony at which mutual uniform

* Underwood, pp. 10-15.

from each side walked each other's bulls. Peace was then kept till it suited one side to break it. With Dorobo tribes the Masai sometimes made stock blood-brotherhood with intent to slaughter, for they have no blood-brotherhood of their own. Among the Dorobi, grass is a sign of peace, and a handful of grass constitutes a pledge for money recognized by the Masai and those whom they could as more or less equals, the *Il-moipit* or "*ewenton*," such as other pastoralists, but not *Il-moran*, the Masai agricultural tribes.

Legal Sanctions

The Masai legal system seems to be less organized than that of the Dorobi, and to depend even more on the force of public opinion than on the position and status of the council leader. It appears that only in cases of homicide is there anything like a regular procedure. The Masai distinguish between intentional and accidental homicide, the difference being that for the latter there is no blood feud and the amount of compensation is smaller. The number of blood-cattle paid as compensation, *ol-kiko ool-ebeg*, "murder cattle," varies, but may be as high as two to three hundred for a man; Hollis says 50 for a boy, and Merker 10 head of cattle and 10 goats and sheep for a woman. Tadayoshi gives the figures as 60 for a circumcised man, and 20 for a woman or uncircumcised man. The *Il-Arusa* are recognized as a group which pays and receives blood-cattle. The murder may be avenged by the dead person's brothers who may try to kill the murderer, and if compensation is not paid, the resulting feud may involve all agnatic kinsmen on both sides. It is not clear whether killing of the murderer makes the avengers also liable to compensation. If the victim belongs to the same *ol-chaki* as the murderer, no compensation is paid either side. If they belong to different *ol-chaki* of the same clan, or to different clans, all members of the murderer's *ol-chaki* contribute, and the cattle are divided among the members of the victim's *ol-chaki* after the senior brother has received half the stock. When a settlement has been made, peace is made between the families concerned by an exchange of garments. Hollis gives details of three methods of dealing with cases of murder. (1) The relatives of the victim take all the murderer's cattle; they hold a council and, after giving a few cattle to certain elders and old women, the bellmen, bull-calves, and cows near calving are returned to the owner; the rest they divide among themselves. (2) If action is not taken at once, the relatives of the murderer send a *ilchi* to the relatives of the victim, the occupants of which implore an appointment to meet and settle the matter, and compensation is arranged, the figure named being 40 head of cattle, with nine more added to symbolize the human body (reckoned by the number of its orifices). (3) Sometimes the relatives of the victim do not take action for two years or more; they then send the murderer's kraal by night and demand the number they want. For killing a smith, *ol-doroni*, no compensation was payable, nor was there a blood feud. If a smith killed a Masai, several smiths set out and killed several smiths. Their (usage of cattle) is apparently considered of little account: "If a Masai steals milk or meat or other small things, he is not fined. Grown-up people rarely steal," says Hollis. For cattle thefts, the thieves when caught were fined, and a blood feud with each man concerned.

The general principle that a man is entitled to compensation for a wrong suffered is recognized by all Masai; and this recognition is extended to "foreigners" like Dorobo, provided the people concerned are well known to each other. On being accused, a man may submit to an oath, *ol-mamai*. In some cases a division of the type called *ol-gumbi* by Merker is employed to find a guilty person. The whole subject of Masai legal institutions needs detailed investigation.

Modern Administration

The Masai political structure has proved even more difficult of adaptation than that of the Dorobi, since it lacked the clear-cut parental divisions of the latter. Up to 1918 the chief taken in Kenya was accepted by the Administration as a permanent

/151 cont./

As has already come out in the foregoing, the Mawi are not familiar with a declaration of war in their dealings with foreign tribes. War is rather a sudden attack in the midst of peace, or, more properly, because, as we shall presently see, seriously intended and binding conclusions of peace are indeed not customary, in a state of peace, which the tribe concerned owes merely to the circumstance that the Mawi at the time are simply plundering other peoples richer in livestock at the moment.

If the war concerned a distant area, no peace whatever was concluded, unless it were to deceive these people, so that no difficulty /152/ was to be expected from their side for a later attack on a land neighboring them. For this a few old men were first sent to the just attacked tribe. They carry a bunch of grass (al gedjem, al gedjer = grass) in the right hand and bring a sheep that wears a chain of blue or green ring-beads, al gendjel, wound to neck. These are the peace insignia (al dagiim ar wawa = things of peace). After the old men have put their request before the foreign chief, the latter, happy to be able to make peace with the Mawi, gives them a few old men to take along, with whom the speakers then enter into blood friendship (al mawali). Both parties, surrounded by women, sit down under a shade tree in the vicinity of the kraal, closely opposite each other, one of the foreign old men in front of each speaker. Now each one cuts a small cut in the left lower arm of the one opposite him and wipes off the blood gushing forth a number of times with a few pieces of partly roasted meat, which he eats. During this ceremony the participants swear eternal peace. The meat used comes from an animal just slaughtered, usually from a head of cattle, more rarely a goat or a sheep. The animal must be perfectly sound, about which both parties convince themselves by an examination of the entrails.

Just as the Mawi contract foreign tribes with this blood friendship, they have also often done this with whites in European. These concerned simply believed that a blood friendship running about in this way had the same value as though it had been concluded with ordinary Negro tribes, who have a similar custom. But since in this case it is a mere pretense, there is suggested the conjecture that this is a matter of a custom that is not peculiar to the Mawi, but was merely adopted from other peoples. The author regards the possibility of a

/108 cont./

• 728 648 lasting conclusion of friendship between Europeans and Masai as completely impossible, both on the basis of an experience of almost eight years and also according to the statements of a large number of Masai, who, in the course of a long personal acquaintance, gained so much confidence as to express themselves frankly about this point.

[109] According to their view a friendship, in whatever form it might be concluded, would only ever have the result that individual persons in the service of the Europeans concerned would find a hospitable reception in the Masai kraals. It could no more bring about a lasting friendship than it would induce the Masai to follow the orders and the laws of the Europeans.

[110] On the other hand, if the Masai seriously mean peace because the tribe waged upon lives close to them and they are dependent on it for buying vegetable food there (as, for example, in the above-mentioned Kahe), they make an <u>ensata ruhaechage ñ gera</u> - suckling of exchanged children. After they have sent off an old man, as before, and he has returned together with a few foreign old men, it is agreed in consultation that the Kahe chief, a Kahe woman with a suckling child, and a number /109/ of witnesses should come to a certain designated place in the steppe between Kahe and the Masai kraals. At the appointed time, there will also be found there a woman from the Masai (not a true Masai, however, but one from another tribe captured in a previous war) with a suckling child, as well as the speaker, the leaders, and other warriors as witnesses. The two women now exchange their children, and each puts the foreign child to her breast for a moment. They then take the children on their backs in the leather apron and conclude blood friendship with each other. One of the witnesses makes a few incisions in the skin of the abdomen of each of the two women and hands her a small piece of the heart of a just slaughtered head of livestock. After each one has wiped off the blood coming out of her cut with this, she sticks it to the mouth of the other. While this ceremony is going on, the speaker and the chief of Kahe affirm eternal friendship in the name of their peoples: they call upon God as their witness and pray to him that he might exterminate them if they do not maintain the friendship. Every conclusion of peace has as its consequence the obligation for mutual hospitality.

/135 cont./

619 After a battle of the Masai among themselves, the conclusion of
• 728 peace is that the speakers, in the presence of a number of warriors of both parties, exchange their skin capes and sandal thongs. This is called ntabeshage ngolio -- exchange of skin capes.

726 The length of the marches covered on war expeditions, in com-
701 parison to that of their neighbors carrying on agriculture, is often
484 astonishing. Performances of 60 to 80 kilometers a day, three or four days in succession, are by no means exceptions. If one considers,
[702] however, that the training of warriors consists only of marching, that,
[706] aside from their weapons, they carry nothing heavy, and before their marches, as well as during them, they partake copiously of stimulants, their performances in no way exceed those of a German infantry
701 troop. The tales of the excess people relate miraculous things about
182 the speed and endurance of the Masai warriors, and even European
147 travelers have contributed to the spread of this legend in that they
271 compare the physical performances of the Masai with those of the Europeans in the colonies. The unreliableness of such a comparison is obvious. One also often hears how the Masai are admired for their alleged ability to be able to give up the drinking of water on their marches. Presumably this rumor arose from the fact that these people, in contrast to other tribes, never carry a good bottle of water on their
701 long migrations. The Masai, however, know perfectly every little
182 spot of the steppes. He knows every rocky basin, every tiny spring,
271 he also knows where an apparently dry brook bed carries subterranean
[183] water. Where water has collected in old hollow trees, and especially in buckets, this is accessible to him through a series of steps made
[824] out of four-long taps bored in horizontally. Finally, there are a number of water-rich roots and tubers, which, chewed, are very well suited by their water content to quench thirst. They serve him, /136/ just as
701 the wild honey, not infrequent in the steppes, also serves as food on the
182 march. A curious bird, the honey indicator (Cuculus indicator, called
[726] ol jokoni by the Masai), leads the Masai to the concealed honey holes.
[184] As soon as it sees human beings it calls with a strident sound and then flies slowly to the nearest honey place, to which the people follow it in order to take out the honey. If the amount found is still not sufficient
[714] for the warriors, they bury the chewed roots, whereupon the bird, after

Masai FL12

perished by starvation, thus feeding vultures and hungry hyenas. In places where there were no such natural barriers, and where the two tribes came into contact frequently, peace treaties were signed and friendly relations established. In this case intermarriages were one form of peace-making.

To take a concrete case, my grandmother, on my father's side, was a Masai woman called Moraa, and in reciprocity for this friendly feeling, my aunt (i.e. elder sister of my father) was married to a Masai chief called Senderu, and was treated as the head-wife. Exchange visits were made on both sides, and I had the opportunity of visiting her and stayed there for some months as a member of the family.

In territories where this friendly relationship was established, especially between the Kapsi Masai and the Southern Gikuyu, the warriors of the two tribes joined together to invade another section of Masai, like Loita or a section of Gikuyu, like Mbere or Tharaka. This information was given to me by my grandfather, Kongo wa Magana, who led several of these attacks as a fighting warrior and later as a magician of war.

It can be said that the relation between one tribe and another was no more or less than the religions existing in the present day between various tribes of Europe and America. The only difference is that the relations between European countries involve great suffering for the majority of the people, either through economic fights, tariff barriers and distribution of wealth, etc., or through actual fights in battle-fields. The case of the Spanish Civil War, where one tribe is fighting between itself, or the case of Japan and China, where a strong tribe is trying to dominate a weaker one, are illustrations.

The raids in the tribal warfare affected only a few villages,

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

174 A tribe coming from the north like the Masai, and possibly at one time in touch with races influenced by ancient Egypt, may conceivably represent not an improvement of the primaeval African stock but a degeneration of some other race. Still, the accounts which we have of the Dorl and Dinka ascribe to them the same vague belief in a supernatural power, which most inquirers have reported as existing among the Masai, and an absence of traditions respecting the origin of the human race[1].

175 The history of the Masai, so far as we know it for the last hundred years, presents as its most important feature a conflict between the pastoral and agricultural nations, ending in the victory of the former and the annihilation of large settlements of the latter. The conflict was disastrous for the race, for the portion which survived depended entirely on cattle and raiding for subsistence. The herds suffered severely from plague in the eighties, and the advent of Europeans and the gradual introduction of the Pax Britannica could not be otherwise than unfavourable to the pre-eminence of a tribe whose prosperity depended so largely on continually plundering their neighbours. Nevertheless from at least 1830 to the early eighties the pastoral Masai were a formidable power in East Africa. They successfully asserted themselves against the Arab slave-traders, took tribute from all who passed through their country, and treated other races, whether Africans or not, with the greatest arrogance. About 1839 they raided Tanga, on the coast near the present German frontier. Thomson (*Through Masai Land*, 1885) describes how, in 1883, they entered his camp and ordered about the whole caravan, including himself, as if they had been masters and the travellers slaves. This period of triumph was succeeded by one of disaster. Rinderpest attacked the cattle and small-pox human beings. The surrounding tribes who had suffered from their raids were not slow to revenge themselves for the oppression and plunder of the past, and a severe famine completed the catalogue of misfortunes. The numbers of the Masai were undoubtedly greatly reduced, and at present they found in British East Africa only amount to a very modest figure, variously estimated at from 15,000 to 19,000. The latter estimate, which is the latest and perhaps the most correct, is based on the assumption that there are 3,500 in the

[1] See Kidd's Introduction, *The Dinka Grammar*, 1904, p. 48, fn. It is true that some expressions practised in the Dinka, such as 'By the sun burn—the sun and moon—they are only, lower,' might be interpreted as a consciousness of the law of traditions.

1:Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Naivasha province and 5,000 between Kikuyu and Kilima-Njaro.

The expansion of the tribe seems to have come to an end about the middle of the last century. About 1840 they reached their furthest recorded point in the south and were driven back by the Wagogo and Wahehe. The southward movements of the Galla and Somalis kept them back on the north-east, though as late as the nineties they raided on the Tana river. It would appear that about 1840 the Turkana drove the most westerly branch of the Masai from the west to the south of Lake Rudolf, where they are now settled. Somewhere about the same period—at the time an old man can remember according to the native expression—the Masai dwelling on the Uasin-Gishu plateau attacked those of Naivasha, and after defeating them were in their turn thoroughly defeated by a combination of Naivasha and allies from Kilima-Njaro. The inhabitants of the Uasin-Gishu were scattered to the four winds; those who escaped their brethren were annihilated by the Nandi, and only a few fragmentary remnants survive in Kavirondo, Lumbwa, and the two villages called Great and Little Enjemsai at the south end of Lake Baringo. Another branch called L-Oingalla or Sogoiti took refuge in the Nyando valley but were wiped out by the Nandi and Lumbwa. The Laikipia plateau, which is now uninhabited like the Uasin-Gishu, was not depopulated in 1884, when Peters crossed it and had many fights with the Masai. According to one story, the people of Laikipia raided some other Masai near Naivasha about 1840 and carried off their cattle. These cattle were suffering from rinderpest, and the result was that all the stock of the Laikipia took the disease and died. This was considered as a judgment on the Laikipia for raiding their brethren.

At present the agricultural Masai are found chiefly near Lake Natron and south of Mount Meru in German territory. In our Protectorate they are represented only by a few scattered settlements, such as the people of Enjemsai, the Sotkonoi, and perhaps the people of Samburu in the Rendile country. It would appear that the name Wakwavi, often applied to the agriculturists, is merely a Swahili nickname borrowed from the Masai Kwavi or Kwapi, meaning plains. The pastoral section classify themselves under five districts, with many subdivisions, namely Kapotei (Kapiti plains), Ilo-siriaka (Naivasha), Kisongo (the district south and west of Kilima-Njaro), Uasin-Gishu, and L-Kiliptigak. The two last districts, as mentioned, have ceased to exist, and those who

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

[195] permanent by the present administrative arrangement, but were not established by it. The land which divides the Samburu in the north from the Kapiti in the south of Kenya, was once the home of the Loikipiak and the Uasin Gishu Masai. In those days, Masailand was a continuous strip of land stretching over the plains south of Mt. Kilimanjaro and Mt. Meru up to the shores of Lake Rudolph. At the end of 19th century a great cattle plague and, even more, civil wars (the Kapiti versus the Loikipiak and Uasin Gishu) wrought havoc among the latter, who were almost destroyed. The few survivors have been absorbed by other Masai tribes, especially the Kapiti and the Kisongo. The Loikipiak plains west of Nanyuki which in 1904 had first been set aside as a special reserve (the Northern Masai reserve), were subsequently declared open to European settlement, and by 1911 Agreement the Southern Masai Reserve was enlarged into what is now the Rift Provincial District of the Masai in Kenya Colony.*

[63] A comparative analysis of the literature shows the existence of three graded territorial units, the major and the minor territorial sections, and the village. A character common to the first two sections is the absence of a clear limit or boundary. The sections are spoken of in terms of watering and grazing rights. The nomadic aspect of Masai life is chiefly responsible for this territorial vagueness. The absence of any centralized authority to check people and cattle's transhumance is another important cause of the vagueness of Masai territorial organization.

[63] [64] [65] The major territorial section is made up by the area in which the movements of a full tribe usually take place. The existence of

* Sandeman, *An Administrative and Political History of the Masai Reserve*, London 1919, Appendix; *E. A. C. R.*, p. 108. One may note that the Uasin Gishu and the Loikipiak, together with the Siria and the Lumbwa were despised as inferior, for they were not considered as "pure Masai" by the other tribes who regarded themselves as descendants of Mandaile. See Fosbrooke, p. 1. This thinking may explain in part, the fury with which the Kapiti fought against the Loikipiak and the Uasin Gishu.

[194] In December 1956, I visited the Dilgori Dorobo at Dol Dol on the Mukogodo Hills, some 80 miles north west of Nanyuki. They claim to have been dependent on the Loikipiak Masai, and they survived the slaughter thanks to their seclusion in the forests. Their present outlook seems to be entirely Masai. The custom of their age-classes are consonant with those of the Masai.

visited in that year. A graphic account of a Masai visitation to the country east of Mount Kenya is given by Commander Dundas, R.N., in the "Royal Geographical Magazine" of March, 1909. Commander Dundas navigated the Tana River to a point 300 miles from its mouth in the early nineties, and then proceeded overland towards Mount Kenya.

A Masai raid

"On our return," he writes, "through the Wa country, a most harrowing night presented itself: what only a few days before were prosperous villages, abounding with fields of grain, now were smoking ruins. Bodies of dead men, women and children, half-burnt, lay in all directions. Here and there might be seen a few solitary individuals, sitting with their heads locked in their hands, hardly noticing the passing caravan, and apparently in the lowest depths of misery and despair. On questioning several of these unhappy beings, I was informed that the Masai had unexpectedly arrived one morning at dawn, spearing and burning all before them, and carrying off some 200 women and large herds of cattle. Only a few of the unfortunate people had escaped by flying to the mountains."

Cattle plague

Massai raids

In the end of 1896, a cattle plague started on the East Coast, opposite Lamu, and spread inland. In the spring of 1897 it had not reached the Masai country, but by the autumn of that year it had spread through Kaudhani and Uhumba and the majority of cattle and buffalo were dead. Simultaneously, the Masai were attacked by smallpox and their numbers considerably reduced. The cattle plague forced their emigrants and hungry deputed there of their means of subsistence and the subsequent disease forced them east, still hungry and killed all large numbers. From this date Masai migrations ceased to exist and, though the force of their name long outlived their presence in the east areas, the tribes surrounding the Masai country were not able to take their revenge for the oppression and plunder they had suffered in the past, and on the advent of the Company's administration, the Masai were in a pitiable plight.

Relations between Masai and Wakamba

An extract from Captain (now General Sir F. D.) Lugard's diary is interesting as showing the relations of the Wakamba and the Masai at this transition stage:—

"These Wakamba are at constant war with the Masai. They have sentry out along the hills and on the lookout, by day and night, I believe, so that the approach of any Masai is at once known, and they assemble in numbers, almost instantaneously, to fight them. However, every day little parties pass my camp (at Machakos) on their way to buy cattle from the Masai. Some at least do a little, perhaps running further on (where they get on their own ground). It is a daily sight, and one sees them going and returning all day long on their errands. Altogether, they seem to make it pretty hot for the Masai about here. In turn the Masai lift Wakamba cattle, etc."

Rudolph Mission

Nyeri

A station was established by the Imperial British East Africa Company at Machakos in 1889, and on being sent on the mission to Uganda Captain Lugard had received instructions to build a station at Nyeri Nyeri. This site, however, he found to be a more remote field, unfavourable except for passing Masai, who were in the habit of grazing their herds and herds in their neighbourhood during the dry seasons. As the object of this station was to be the foundation of a depot for the purchase of food for caravans proceeding to Uganda, he decided to build at the northern extremity of Kikuyu, as close as possible to Mombasa, so as to get in touch with the tribe but within the borders of the rich and fertile food-producing country, and he consequently selected Dagoretti as a suitable site, in October, 1890.

Dagoretti

Massai raids, Masai and Kikuyu

In describing the Kikuyu relations with the Masai at the time of the first visit, Captain Lugard writes:—"These people are at constant war with the Masai, who periodically raid the country in strong war-parties. The Wa-Kikuyu, however, had their wits, rather sharpened or whetted by compounding here. I saw clay one of the main roads a piece of pits concealed in the usual fashion for the fall of the pits, and was told that, in the event of a Masai raid, everyone would conceal themselves in each of these pits, and spear the Masai as they passed."

133 [illegible] the permanent water supply. The area is well wooded, but there is no doubt that a larger head of cattle could be carried there if such improvements were effected.

In the north-western extremity of the Lake Plains lies the Lowell Valley, the scene of certain engineering activity in the construction of dams and an weir which was considered suitable for European occupation before it was decided to concentrate the Bland from Lakeyan in the Kimberley Southern Bland Reserve. This valley possesses no permanent watercourse but provides excellent grazing during the wet weather when water abounds. To the east stand the Lowell Hills, the highest point of which, Lakeyan (Explorer), rises to an altitude of nearly 1,000 feet, while to the north, Spafer separates the Lowell Valley from the Bore River.

South of the Lowell Range lies the country known as Cherry, Lowell and [illegible], while on the west the country descends to the Lowell Plain through which flows the Bore River. In the vicinity of Bore Station another lower hill is reached adjacent on both sides of the river, forming the southern extremity of the Chinnalinga Forest which acts as a buffer space between the Bland and Field on the right bank of the Bore.

The [illegible] plains

The Bore River area of the Bland Reserve may be described as an elevated tableland of an average height of some 1,000 feet with a long central range of hills running up to 1 from south to north and there averaging into a still higher plateau of an undulating surface, many of the extremities of which attain an altitude of about 1,200 feet. On the south, this plateau is considerably broken along the eastern side by the Lucia Escarpment, leaving there about a thousand feet to the Bore River which flows at the base in a southerly direction. Through this area flows the Gull (Bogan) River, the small tributary branch of which rises to the west of Lakeyan and flows directly southwards until it passes the long flat-topped hill known as Longgarrie. It then turns west. The area is covered with bush in varying density but was built in two-thirds of the whole is excellent grass land which is all within reach of one branch or the other of the Gull River.

• [illegible] The portion of the reserve was previously occupied for Bland who was previously established by small grant in 1901, while on the south there were also granted to the spokesman of Mallangah.

The northern area consists of rolling hills and valleys interspersed with well drained flats and smaller hills, the whole being heavily grassed with [illegible] vegetation and abundant grass. It is fairly well watered, especially near the extremity of the Chinnalinga Forest, but there are also large [illegible] of wood or bush. The available water supply is ample for any number of stock.

The western area lies at a lower altitude and has an average rainfall of not less than 30 inches. The grazing is long and rank and there is bush over about one-third of it.

Between the Gull River and the Lucia Escarpment the country consists of change of bush with excellent grazing in the other parts. It is rather poorly watered but several springs exist which do not dry up altogether.

The country below the escarpment is fairly well watered and is used by the Bland in the dry seasons.

[pages preceding p. 161 not processed]

SECTION VII

THE MASAI EXTRA PROVINCIAL DISTRICT

GENERAL NOTE

MASAILAND constitutes an Extra Provincial District under an Officer in Charge, holding the powers of a Provincial Commissioner, with two District Commissioners, stationed at Kajiado and Narok. The legislation in force in other parts of the Colony applies in the District, but the Outlying District Ordinance, No. 23 of 1930, has also been applied to it, in order to provide a means for controlling immigration from other areas, a matter to which, as will be subsequently shown, much importance is attached by Masai officials. The area of the District is 13,777 square miles and the population was estimated in 1945 as 55,000.[1] The density is thus 3.9 per square mile.

The Masai District contains in its more northern section a considerable area of land which rivals the agricultural or pastoral purposes with parts of the neighbouring Highlands reserved for Europeans use, though it is to be noted that the rainfall here is more variable than in the central part of the Highlands. The lower parts of the District have a lower and even more variable rainfall, with the result that there is an area, comparatively estimated as a little over 3,000 square miles, which is arid and for all practical purposes unusable.[2] But the value of the large area held by the Masai is not to be judged by its agricultural possibilities, for if the Masai no longer justify the character assigned to them by historians as "a virile tribe of predatory nomads," they have at all events maintained their traditional habit of life as a pastoral people, and though there is some cultivation in the Naivasha-Ngong area and also near Ngong, this forms only an infinitesimal part of the District, and is for the most part carried out by Kikuyu immigrants on behalf of the local Masai.

It is of interest to note that in 1904 the number of cattle was estimated at only 50,000 and the sheep and goats at 800,000. This may have been an underestimate, though it must be realized that the country was still in some sense suffering from the effects of the great rinderpest epidemic of 1891, which had wrought such catastrophic results both on the numbers and the military power of the Masai. By 1919 the estimate had gone up to 800,000 head of cattle and over a million and half sheep and goats.[3] The Masai herds suffered severely in the drought of 1922 and 1923, when their losses of cattle were estimated at over a quarter of a million. But a recent estimate has put the number of cattle at over 700,000, with 800,000 sheep and a large number of donkeys. The further increase in the number of cattle is to some extent affected by the existence of fly, which is prevalent on the South Kavirondo boundary, in the extreme west, and also in the middle area, where the Kajiado and Narok Districts join. But if the present estimate of the herds is correct,

[1] Kenya Colony Blue Book, 1948, page 12.
[2] There is a summary of the climatic conditions of the district by L. Gwynn in page 20 of Spring, January, 1949, together with a useful bibliography.
[3] Commissioner's 22d Annual Report, of the Masai Reserve, C. R. Cardinall, 1918, page 9.

divided into two sections, the agricultural (Tulloy) and the pastoral Masai, there are remains in Tanganyika little vestige of the former.* A few cultivated plots are cultivated by Masai, but it is with the help of alien labour. For the rest, there is little cultivation by the small Sonjo Tribe (1,500 in the 1948 Census), a people living below the Rift Wall who have not been assimilated by the Masai. The only other tribe in the District, the Dorobo (believed to number about 1,500), who are known traditionally as the "hunting people," are possibly a survival of the original inhabitants, and have become practically a servile class to the Masai.

As a pastoral people the Masai are semi-nomadic in the sense that they move with their herds in order to avoid deterioration of the seasonal variations in water supplies, so that they in effect practise a system of rotational grazing. They are credited with the possession of three-quarters of a million cattle and large herds of sheep and goats, but the number of their stock is subject to large and rapid variation in times of drought, and successive East Coast fever, rinderpest and other diseases take a heavy toll of them. In the last 'eighties a combination of drought and disease almost wiped out their cattle and greatly reduced the numbers of the people themselves. Though like many other African pastoral tribes they make a cult of their cattle, they show little interest in improving their quality, and in the past have been prepared to dispose of them only in so far as they might need cash for their Poll Tax or for the few articles of food required to satisfy a people whose ordinary diet is limited to milk, meat and blood. To some extent, this position was improved during the recent War, which provided a stimulus to production of beasts for sale.

From an economic point of view therefore the Masai present a difficult problem, since the contribution they make to the economy of the Territory does little to justify their occupation of an area as large as twelve million acres. From a social point of view they are also a problem, owing to their reluctance to avail themselves of facilities for education. And as will be further explained in the following pages, they present an equally difficult problem of native administration, for their social system is still reminiscent of a period when their chief concern was in fighting or raiding at the expense of their neighbours.

THE FORMATION OF THE SYSTEM OF NATIVE AUTHORITIES

As already indicated, the diverse social and economic conditions prevailing in different parts of the Province have been reflected in the variety of forms taken by the Native Authorities as now constituted. Before, however, proceeding to describe these in detail, it will be convenient to give here a summary which summarizes their chief features. See page 40a.

THE MASAI NATIVE AUTHORITIES

In the Masai District the present formation of the Chiefs Native Authorities is the result of a somewhat radical reorganization carried out in 1948. Up to that time the Chiefs had been split up into numerous chiefdoms, divided from each other not only physically by the deep ravines of the mountain ends, but also politically by the obstacles due feuds and jealousies of past days. These chiefdoms were all treated as of equal standing, though their jurisdiction varied from [illegible] square miles in the Maitumbo chiefdom to [illegible] in the Moita. They were united in a Council of Chiefs Chiefs, which was responsible mainly

* The Masai, J. C. Hollis, 1905, page 4 and 5.

[illegible]

junior ages are concerned, beginning to regard themselves as a unit. Ngorongoro is another area where unique conditions pertain.

C. **Recent History: Famine — civil war — German Policy.**

Again taking up the thread of history, the period 1890 to 1900 is regarded by the Masai as one of prosperity. Mbatian was the laibon at this time; it was he who called up the Moita Masai to fight the Uasingishu and Laikipiak sub-tribes. But the period was mainly occupied with wars and raids against neighbouring tribes, the devastating effects of such raids, as noted by early explorers, are graphically illustrated by extracts from their writings reproduced in the "Administrative History".

But about 1900 the Masai were visited by the triple calamities of famine, smallpox and rinderpest. Whole families, together with their stock, were wiped out. In some cases the survivors lived by hunting or agriculture, in others they were adopted into, or carried off into captivity by, neighbouring tribes. The tribe was in fact scattered from Lake Victoria to the Coast. But such was the urge to the nomadic pastoral life that, in the course of the next few years, most of the wanderers returned, and from their earthings or rivalings commenced to build up new herds.

During the famine Mbatian died, and the tribe was divided by civil war. For two of Mbatian's sons, Lenana and Sendeyo, were rivals for the position of laibon. The former had a following of Purko and other sections, the latter was backed up by the Loita. After various skirmishes round Narok, Sendeyo turned south, and his Loita host to turn the Laitayok, Salei and Serengeti of the Loitokitok area, thus finishing up at Ngorongoro. From there they descended to Kisongo, some of the Loita spreading to Longido and Olmolog. At one time Sendeyo himself lived at Loangwani, but later returned to Ngorongoro. There below the Rift he had numerous skirmishes with the Germans, and also with the Kisongo, supported by the Purko. His final defeat was brought about by a clever flanking movement, the Kisongo, by this time recovering from the effects of the famine, approached Loiborn, who agreed to send his Purko from the north, via Loitokitok, whilst the Kisongo attacked from the east. Thus both parties would converge on Sendeyo at Ngorongoro. When Sendeyo heard of this, he saw that the struggle was hopeless and fled by night to Loiborn to admit defeat. Loiborn allowed him to return as laibon to the Loita section.

An important feature of recent history is the policy which the German Government pursued in relation to the Masai. When they first made contact with the tribe, the Masai of Tanganyika, being scattered by the famine, must have been very few in number. The area south of the Moshi—Arusha—Mbagathi road was therefore thought sufficient as a Masai Reserve, and the objective was to keep Monduli, Longido, Ngorongoro and Loitokitok areas free for alienation. This meant that the Laitayok and Kisongoro Loita of Loitokitok, the Salei and Serengeti west of the Rift, the Wiramdoi of north Moru and Monduli, the Siglimori of Sanya and the Matapato of Longido, were all debarred from their grazing grounds. During the war, when the policy was relaxed, the various sections began to

/27

In these mighty ways that followed one another at long intervals, the Ainoi people came from the north down toward the seacoast. The long separation from one another in space and time, their different length of residence in the new Ainu-kirshi homeland, and the different shaping of their lives conditioned by that make them appear to us today as three branches of the Ainoi people.

The ancestors of the earliest immigrant band are the Ainu, more generally known under the name of Wanderer /Wanderer/ in Ainu formation from the Ainoi word Ainu derive - the people, of whom they form only a part.

Although the tradition of the Ainu has nothing to say about a former possession of Ainmark, one must nevertheless assume, especially on the basis of their ethnography, that they immigrated as wandering nomads and, as such, took possession of large parts of the steppes. Wars among themselves, Ainmark epidemics, and, finally, the pressure by the Tungu combined the Ainu to such an extent that it was easy for the second band of Ainoi, the Ainu band, the five sections of which were the Ainu hamlet, and the later were the Ainu mark, when it came to, to drive out the mixed race altogether. A part of them found refuge among the neighboring agriculturists, with whom they merged, another part among their opponents, who adopted them as members of the tribe; the rest, however, withdrew into the forests and bush of the steppes, where still today, in great poverty, they make a poor living by hunting.

The fate of the Ainu, however, was not to be spared the Ainu bush either. After a rather long period during which they contended with the Tungu for dominion in the steppes, the Ainu people appeared again several times and, as before, brought poverty and death. And again, as before, the one antiterrorism did not remain alone. The third band, the Ainu [illegible] (Ainu, or [illegible]), immigrated here from the north, and it looked as though it would rapidly complete, by means of bloody fighting, the destructive work of the epidemics. But the pressure of the Tungu, who in places were just as powerful as they were feared, diverted the hostility of the Ainoi. They joined the Ainu band for the common fight against the former.

/[illegible]/

so that it was taken as a tribal name, and people spoke of ol ellek-Wawel and ol ellek-Wakwafi. El ellek (sing. el ellekwa) means fellow, rough, brutal person, and is an invective with which the Wandorobo, Wakwafi, and the Maasai blackmailer (el kaasai) designate their opponents, the Maasai. Fischer mistakenly translates the word as "owners of the land"; this, however, would be called el ngiti l el gik.

The Wakwafi live in their colonies as more or less peaceful, sedentary cultivators. Whenever they found peaceful neighbors after their defeats, they too became calm. On the other hand, where they remained in close contact with the Maasai and were exposed to their contact with, the old bellicosity remained in them. An example of this is the population of Ngombeng /Mt. Meru/ in the Great Arusha /Arusha/ and there even. In spite of a very considerable mixture with Wadelaggo from nearly Kilimandjaro, they have completely kept their original character traits. Their temperament, capacity, and running equal that of the Maasai in courage, on the other hand, they even surpass them. Their numerous attacks on the camps of Europeans and trade caravans reveal them as brigands. The relationship between Wakwafi and Maasai is in general not bad. The latter regard the former as fellow citizens, even though as inferior ones, because they work the soil and own only a little livestock. They are free one citizen and friends the next! And both must always reconcile themselves to each other, for the Maasai cannot do without them as suppliers of vegetable foods, after the rinderpest at the end of the eighties again raged so destructively among their herds.

While among the Wakwafi one can still clearly recognize their war-like power and greatness, this is no longer the case at all among the Kaki. Some of them, just like the El ellek, timidly and concealed in the bush of the steppes, live in miserable little grass and leaf huts which can be reached only by hidden paths. Their food consists of game, which they kill with poisoned arrows and poisoned javelins, honey, agricultural products which they obtain in barter, various wild beasties, roots, and herbs. Where they dwell in the vicinity of the Maasai, they live in a certain

/72 cont./

Wakuli settlements. In general, naturally, the mixture is greatest where the Wakuli have already been sedentary longest, least and often scarcely /73/ noticeable or even not at all where they did not become sedentary until the last half of the nineteenth century. The cattle epidemics, which constantly brought new blood elements to the Wakuli, had a retrograde effect on the mixture. In many cases one can quite accurately determine whether and what kind of foreign blood a single individual has by careful questioning about the family tree. Among the Wandamba who live far from the Bagoro, in the midst of the most inhospitable bush of the steppes, for the most part probably no mixture with Bagoro blood has taken place, or all, against which, to be sure, such with the Swahs, belonging to the ethnically related Tonga, must be assumed with certainty on grounds of a linguistic and linguistic nature, as well as according to the tradition. Degeneration through inbreeding also seems excluded from the outset, for they constantly had an influx of blood women and children, whose husbands and fathers had perished in the famine following a cattle epidemic.

If one examines the somatic characteristics of the three blood families from these points of view and with the elimination of all cases in which a mixture has been proved or is not excluded, one comes to the conclusion that one has before one a homogeneous race. Their characteristic traits are the following: the bodies are tall and slender. They do not, however, appear unnaturally thin, but rather give the impression of elegant, flexible mobility. The thin, fine bones are surrounded by well-developed muscles, which, to be sure, stand out clearly, but, in conformity with the slenderness, not excessively. One sees especially beautiful forms among young girls. They are gracile, slender figures whose limbs show only just enough roundness in order to make them appear comely. Shapelessness, relatively anyhow one really finds only among older women. The skin color varies between deep dark-brown and light chocolate-brown. The heads are high and narrow, the oval face often has finely chiseled, attractive features and is less prognathous than among Bagoro, not infrequently even orthognathous. The high, narrow forehead is well arched, the

Ill. 5. Kraal on the steppe between Kilimandscharo and Marsberg.

342 out of material available everywhere. Like every task in the
[342] kraal, but construction is the duty of the women. After the site
for the individual hut (Fig. 3) is cleared of grass and brush and
then leveled, the spiral-oval ground plan is undertaken in that
the woman scratches it on the ground with her foot. They do not
[304] use any auxiliary means for measuring ;:: measuring by eye is
sufficient for the woman who, even as a child, helped her mother
with this work. Into the ground plan, at four-long intervals, poles
342 (ol ŋiri, ol ŋiri) about 1 1/2 meters long are stuck in the ground
335 and joined lattice-like with thumb-thick cross-switches (ol gerani,
ol gerani). Then in the longitudinal diagonal seven to eight
supports (ŋon ŋaŋiki) are dug in, over which a longitudinal bar
(ol oomboro, ol oomboro) is put from one end of the hut to the
other. Over this the poles are arched and the opposite ends lashed
[324] together with papyrus grass (ŋo ŋolja). By interplaiting finger-
[324] thick switches (ŋo ŋaŋiki, o ŋaŋiki) walls /24/ and roof are made
342 tight. The lattice-like framework is about 1 1/2 to 1 3/4 meters
high, 4 to 5 meters long and 3 meters wide. Ness' skins served
[291] principally for roofing before the rinderpest raged among the
[131] Dramark around the year 1890. Now, /Figs. 2 and 3 appear here/
[324] when the kraal herds have become vanishing small in contrast
[324] to former times, the switch framework is first packed with a
[291] layer of dry, long-bladed grass (ol ŋoljeda or ol ŋoljeda) 15 to

/30 cont./

592 422 [434] The earnings of the sons who are growing up to become warriors consist of captured livestock and in the main passes into the father's herd. Actual separate goods for the individual members of the family are only clothing and ornaments, for the sons also their weapons, and further for boys the livestock given to them by the father, for youths and warriors the share of the captured cattle which they keep for themselves.

592 593 The family head is the father of the family. If an older man of his family also lives with him or in the same or a closely neighboring kraal, the two share in the office of the head in such a manner that in all decisions people listen to and heed the counsel of the older one. Legally the head can be deposed by his brethren for mismanagement and incompetence, but this seems to take place only very exceptionally. The head makes the decisions in all family matters. A right to kill and penalize the members does not belong to the father of the family: just as he is not responsible for their debts and misdeeds, neither may he sell or pledge them. The fact that during the famine caused by two cattle epidemics that followed each other in a short time around the year 1890 children and women were given into slavery by their relatives does not prove anything to the contrary. When the corpses of many thousands of the starved lay in the steppes and there was no food of any kind for the survivors, no escape remained for them other than to give themselves or their relatives as serfs to such people as could feed them. [731] [567]

593 591 613 Individual members may detach themselves on account of bad treatment. One who detaches himself flees to another of his lineage or to the one from which his mother stems and purchases his admission with a few cattle that he has stolen from his father's herd and taken along. If he found acceptance in the latter, he must return to his own as soon as he becomes a father.

If a girl is expelled, she may freely choose her future abode, irrespective of tribe or lineage. Wherever she finds admittance /31/ she usually remains permanently, in that she marries a member of this lineage. That is, the men and girls taken in remain nonmembers of the lineage, despite their admission, so that they can enter into a legal marriage with members of the lineage concerned.

/91 cont./

527 For the most part an atmosphere of dullness and boredom lies
536 over the head of the married (sig ni ri morsi). Only on moon-
[539] lit evenings /92/ do the women amuse themselves with song, es-
pecially if a few warriors are there on a visit and give the impetus
for the gaiety. Women and warriors dance in separate groups.
For dancing the women station themselves in a row, move forward
a short distance, then make a "right turn" and, with short steps,
dance in a row back to the former place. The married men dance
only on festive occasions, but by themselves. The text of the
accompanying song naturally refers to the life prevailing here.

517 Otherwise quiet prevails in the family kraal after darkness has
521 set in: in good weather the people will sit for a while in front of
513 the huts, silently or softly conversing, and go to rest already at
8:00 o'clock or 8:30.

621 Even 13-14 years ago, before the kraal lost their huge
[illegible] livestock-holdings in two great epidemics, each family had its
[illegible] own kraal; now, on the other hand, almost everywhere several
[illegible] families live together.
• 351

In the morning life begins around 6:00 o'clock, at which time
512 the women fetch the quite young calves from the compartments
[264] and take them to the cows, where they remain for the driving out
[235] to pasture. At daybreak the milking commences, for which all
[239] the women appear. After it is finished, breakfast, consisting of
264 fresh milk, is taken. Milk, soups, and thin porridge are drunk
[512] from gourd bottles; foods of greater consistency are put in the
[262] mouth with the fingers. Meat is partially cut up with a knife and
[415] completely torn into bits with the teeth. The hands are not washed
[412] before a meal. Smacking and belching while eating show good
breeding. Men and women eat apart and have their separate
vessels for eating and drinking. Those of the latter are shared by
the children. If the man wishes to eat in the hut, the woman has
to leave it beforehand.

/at cost./

[582] Father-in-law must return the bride price if he grants his daughter
[614] admission. If the woman who has run away has had children, her
husband keeps them: in this case the woman's parents do not pay
back anything.

[631] On the day the parents-in-law receive the bride price, the
[613] bridegroom gives the elder brother of the bride a year-old heifer,
each of her other brothers and each sister of the bride a male head
of cattle. This is only a gift of friendship and has nothing to do with
the bride price. Exchange of wives occurs, but does not result in a
valid marriage, any more than does wife stealing. On the other hand,
it is not infrequent that the girl flees from her renewal but so soon
as she reaches marriageable age and runs to her lover. It often hap-
pens then that the girl's father sends a band of boys armed with sticks
after her so that through the beating she will be induced to return.
Since the boys act at the command of the old man, neither the
bridegroom nor anyone else may hinder them. In order to protect the
girl from such violence, only one course remains to the bridegroom,
to leave the kraal with her immediately and move into the forest
for a few days. With this he makes it understood that he will oppose
with weapons anyone who might still venture to take his bride from
him and at the same time it deprives the girl's father of any further
right to object. As soon as the couple in the forest have consumed
a cow, they return to the kraal, where, without further ceremony,
[613] they are recognized as married. Only the girls of the Ki nagomo and
Ki ishwile do not have this possibility of self-help, for both lineages
believe that a girl who goes to her lover in order to remain with him
as his wife without her father's consent will die in only a few days
after the flight.

[582] In olden times the bride was not supposed to belong to the tribe
[614] of her bridegroom. The livestock epidemics of the last 20 years,
[178] however, which resulted in the death of many thousands of head,
• [731] have modified this law somewhat. Accordingly, /at/ a man may
[613] marry a woman who belongs to his tribe, but not to his lineage,
whereby in individual districts there is the further prerequisite that
the girl came to him of her own free will and, after being sent back

/[illegible] cont./

232 Bulls that develop unfavorably and seem unsuitable for breeding are castrated by the crushing of the spermatic cords with the club between the wood and string of a bow (c-[illegible]). The testicles are not removed, but are left to atrophy. In the same /[illegible]/ way one proceeds to castrate goats, sheep, and donkeys, but the latter always
[illegible] not until they are fully grown. Bulls and horses with unnatural sexual
[illegible] instincts are slaughtered as soon as the vice is noticed, since they
[illegible] are regarded as bringing bad luck. It is believed that, as a result of
[illegible] their behavior, they bring the punishment of God upon the herd in
[illegible] the form of an epidemic.

231 The donkeys are small, square-built, strong, and excellent. With nicely arched croppers, a rounded neck, fine and finky hoofs, they are very similar in shape to the zebra. Their coloring is a uniform light gray with a black cross over the back and shoulders.
[illegible] They serve only as carry burdens, whereas mules are only rarely used.

233

Fig. 14. Hawaii goats and sheep.

[illegible]

/[illegible] man./

[illegible] community. Rather, I should call their behavior extremely-varied and mention in this connection that the blacks, extraordinarily rate about preserving his youth, handsomeness, and physical strength, suppose upon himself also moderation in sexual enjoyment.

[illegible] An outstanding people-preserving factor is a strict organization. It can make a small people superior to a larger, less well organized one, and have has given the blacks a position of power over the Negroes. A well organized people of the suppose workers on each grades in little tribes in quite cosmopolitan. Rather, such people are always characterized by a warlike and predatory nature. The native tribe fell have harmfully above all, above in /[illegible]/ dozens great masses of men. It has often happened that only half of those who set out remained behind, they tell of expeditions in which all the warriors were killed. In the beginning of the slaughter — in the one example, several thousand blacks warriors set out against Unyaweni. They had assembled a few hours in the west of Mandang /[illegible] blacks/ and had as a guide an Unyaweni man by the name of Dagbeja, who had lived for a long time among them. During the night before the planned attack, Dagbeja betrayed it to his countrymen. The blacks were repulsed with heavy losses and turned back. Far more than half of them died of hunger and thirst along the way on the return- to fourteen-day march. Such wars killing expeditions of war are by no means rarities rather they were constantly in the history of the blacks. Certainly the great majority of women is to be ascribed to them.

[illegible] With regard to the harm that Livingstone's epidemics (1)

1. The reason that the epidemics were so destructive around 1800 is, first of all, that two epidemics occurred in quick succession: a pulmonary epidemic and dysentery, and, on the other hand, the renewal of the lands by war expeditions was in part made difficult, in part rendered impossible, by the military [illegible].

/Def. cont./

192 caused the Mawai people in the period before the occupation of the
• 231 country by Europeans. I have no reliable observations made by myself
233 or by Europeans. Such can scarcely exist, for at that time the Mawai were a feared power that every caravan tried to avoid. I am therefore relying on the statements of old men. According to their recollection, the epidemics were never capable of producing actual famine. As soon as the beginning of an epidemic was observed, the Mawai fled to wild flight with the herds, leaving the sick animals lying along the way. Half the herd at most is supposed to have succumbed. If one considers the size of the herds at that time, one understands that the surviving part could always still furnish sufficient milk and meat.
[921] Furthermore, the war expeditions were brought adversions for the fallen animals and thus acted to preserve prosperity (5).

> 5. It is to be inserted here that empirically Uvamo's epidemics caused few losses for the sedentary Nagro practicing animal husbandry along with agriculture. This is probably chiefly due to the fact that he calls only very few head his own and keeps them in his hut, which is far from the next one. Through that the Mawai were able to replenish their depleted herds quickly and easily.

182 Finally, the Mawai's profound contempt for the surrounding Nagro
186 tribes was also favorable for the preservation of the people. It kept the people free of foreign elements, which here would only have resulted in a degeneration of the race.

182 The fable that primitive peoples would have continued to develop
187 peacefully and favorably if Europeans, with their corruption, had not disturbingly interfered has long been recognized as such. On the other hand, however, it remains an /fact/ undeniable fact that these peoples decline upon contact with the higher culture, and that many even disappear as a people. The reason for this phenomenon lies in the fact that these peoples have already been living on an unhealthy basis and have owed their preservation to means that we designate as

/[illegible]/

illegal and immoral, because they run contrary to our conscious of justice and our Christian morality, and which come to arise in the economic field exploitation in the common sense of the word. Now while every state that occupies a savage country has the duty to appear as promoter and guardian of justice and morality and at the same time to promote economic development by guiding production along the paths of our modern principles, along with that it only has often overturn the foundation pillars on which the existence of a primitive people rests.

There in plague-ridden Africa the Maasai largely owe their existence as a nomadic people, whose only resource lies in its livestock holdings, to the fact that they can always replace their losses by expeditions of war and plunder. As soon as the possibility of such expeditions is taken away from them, or at least very much reduced, through the exertion of military measures that grant protection to the victims of the Maasai, there must naturally arise a situation in which a gradually increasing weakening of the vitality of a people takes place. What was formerly to their advantage, their war lust and the cowardice of the Negroes, now becomes fatal for them. Both entice them to raiding expeditions again and again. In order to avoid the punishment deserved for that, they retreat into regions that they formerly avoided as harmful to the health for human beings and livestock, or on account of inferior pastures. If the Maasai, when they came under the influence of the European occupation, had still been the strong people of Merayas of 30 years ago, they might perhaps, after the example of other primitive peoples, have carried from it even though a marked, nevertheless only a temporary weakening in the meeting with the higher culture, and then gradually recovered again when they had become ready for its advantages. But we found the Maasai already in a condition that looked very much like ruin. The livestock epidemics around the year 1890, which, not locally restricted, had afflicted the herds of all the Maasai to such an extent that actually only miserable remnants were left, had produced a general and extraordinarily severe famine. Hundreds of thousands of Maasai, especially men and boys, fell victim to it, and in the year 1895 the author still found the steppes around Kilimandscharo appearing in places as though they

/340 cont./

had been seen with the bleaching skulls of those who had starved and died of hunger weight and found refuge among Bagoum practicing agriculture, who always like to buy or kidnap female individuals. A mother would sell her child for a handful of maize and would sell herself a day later for a similar price. In order to avoid starvation, Bagoum and Lucas /340/ took possession of the still-free ones. In order to recall them as slaves. Many have since come back, in part through flight, in part through redemption by their relatives, but some are still found in strange hands. The latter, even though their blood lives so beneficially in the new mixture with Bagoum, are permanently lost to the Ibani people. So greatly has the uniformness, to which an opposite effect is so often attributed, broken up the former organization, the firm unity, that, even after the end of the epidemics, the unhappy quarrel between the brothers Lucas-Cloches about the undivided rule over the Ibani could begin. With its continuing civil war it acts powerfully toward the completion of the destructive work of the epidemics. The Bagoum, with whom alone the Ibani formerly waged war, except for smaller undertakings among themselves, which have more the character of provocations than of serious battles, were opposite infinite to them. Now equal parties stand opposite each other, which makes the war bloodier, more destructive.

Though increasing impoverishment as a result of these epidemics and civil wars, there is now going on among the Ibani -- as formerly among the Wakwafi -- a change from nomadism to sedentarism. Agriculture is taking the place of animal husbandry. The ones deserting the "people" in this manner are founding settlements, in part self-sufficient, in part supported by Bagoo tribes, somewhat removed from the dry savanna, there where the watering is adequate for the laying out of plantings. No one expects them to prove to be particularly skilful at this but Barum, which goes so far to meet her children in the tropics, helps here too. A moderate watering suffices to make the banana shoot sack in the virgin soil grow and produce tubers. Maize for the most part appears just as easily satisfied as advantageous. These then are the principal useful plants

175 [illegible] About 1890, on the peak of their power and prosperity, the Masai were ravaged by famine, smallpox, and disease. The effects of a protracted drought about 1890 were intensified by disease. This infectious cattle disease is often fatal to cattle and many wild ungulates. It was introduced into Abyssinia and Egypt from India and the Black Sea in the late 1800's (Pacchioli, 1928). By 1890 it had swept into South Africa, killing many of Africa's domestic and wild ungulates on the way. The disease entered Mozambique in 1892 via some diseased cattle stolen by the Masai at Ketokitoh (Pacchioli, op. cit.). At really the same time it may have entered Mozambique in the north and south west. It rapidly spread to virtually all the cattle of the Masai, as well as to many of the wild animals. At the same time a smallpox epidemic struck the Masai. Thomson (1894), who entered the Ngorongoro Crater in 1891, wrote a graphic account of the physical condition of the sick and dying Masai he encountered on the Crater Floor.

As a result of these multiple disasters, many areas formerly occupied by the tribe were emptied, the cattle gone, and the people dead or scattered.

175 During the famine, the Tallbee Mission died. His

A general grass[1] drought continued in 1961, and as a result of the extreme overgrazing in Eastern Rhodesia, thousands of cattle and many Nguni died. As was evident on the ground, and as clearly pointed out by many -- even reactionary officers (Huddleston, 1961) -- the mortality was due to starvation on range depleted by overgrazing before the drought. There was plenty of water for the animals to drink. The mortality in the cattle of Eastern Rhodesia ran from [illegible] to over [illegible] head, and I was told that over 1,000 Nguni starved to death also. In spite of this dramatic illustration, the Nguni in also I talked to 1962 blamed their difficulties on the will of God or the Europeans who appropriated their land.

Nguni Ecotypes: The Nguni cattle of Eastern Rhodesia today are a mixture of breeds with short-horned zebu (Bos indicus) predominating. The Nguni slightly prize longer horned animals, and occasional herds still have a massive-horned Cape Africa Bull. It has been suggested (Payne, and Nguni, verbal) that before the rinderpest epidemic of the 1890's the Nguni cattle were predominantly long-horned. The rinderpest epidemic wiped out most of these animals, and the short-horn zebu, with its greater resistance to rinderpest, took their place. The short-horn zebu was introduced from

[illegible]

[illegible] Burning and grazing for up into the same area of the Masai, and the recovered veld that followed the dry period in 1961 created new erosion scars of as great magnitude as those of the earlier period.

[illegible] At the peak of the power of the Masai in the [illegible] they had very large numbers of livestock. Their [illegible] of intensity of livestock grazing, and probably overgrazing, came at the onset of the droughts which culminated in the famine of 1898. Conditions may have been much the same as in 1961. The effect of grazing animals on the vegetation, as well as the impact of flows where there was fuel, probably reached a peak about 1890. It is probable that a break between through overgrazing was already starting in some of the open grasslands.

[illegible] 1890-1918: The result of the combination of disasters that struck the Masai in the 1890's was that they largely vacated the Serengeti Plain and the country to the north all the way to the Lake Plain. There was a period of about 15 years of very much reduced grazing by domestic livestock and apparently reduced grass burning, and for part of this period there was probably almost no regular grazing or burning. This was

[illegible] amongst them, and it is not difficult with a little practice to tell the particular division to which a Ekoyo belongs. Thus the people of Uwet* have pronounced Mbati features, and many of their chiefs are pure or half Mbati by birth. This is due to the fact that when the Ekoyo invaded that district about forty years ago they found it occupied by the remnants of the Ahigbeh and Bete-to-bonti Mbati, who owing to feuds, raids, and other causes were too weak materially to resist them. The new tribes therefore settled down peacefully side by side, and by intermarrying formed one people.

Again, many of the Ekoyo clans claim descent from certain particular tribes; thus, the Jujiro and Chakamajiro clans say they are descended from the Ebube, the Ahiambiko and Jubara from the Esaka, the Isunbo from the Ubagu of Ebiomayon. Anyone supplying into the descent of these present or a meeting of Ekoyo elders will find an extraordinary number of different tribes represented. One is a Mbati, another a Ubagu, a third a Mbati, a fourth a Ebube, a fifth a Isunbo, and so on.

The actual Ekoyo domiciles are said to have come from two tribes called the Ibagiriba and Ugwaba, both of which still exist as tribes somewhere beyond the Mbaro country, north of Mount Kemi.

I cannot speak from experience of the Ibagiriba, but I have met a native of Ugwaba whose appearance resembled my strength of a Ekoyo. This man, who said he had never seen a white man before, told me that his country lay beyond Mbaro and that he had come here to visit relatives. These same Ugwaba are believed to have been originally Isunbo, and Kawai, one of the prominent chiefs of the Ekoyo, who is himself a Isunbo, claims descent from them. The Ugwaba of the present day are probably analogous to the Ekoyo, i.e., they are a mixture of Isunbo and some other tribe or tribes.

Many absolutely foreign tribes have had relations to Ekoyo for shorter or longer periods. A tribe of naggi people called Ogo are stated to have lived for many years on the Cross River, in what is now known as the Fort Hall District. Amadi, Kalla, Bonsu, or some other similar people effected a very strong footing in Ekoyo some fifty or seventy years ago. According to tradition they belonged to the Bendin Lokoloko, Ogbori, and Kakamonsi clans,† and they had settlements at Uyan, Ibiraba, Ejabo, Potto Hills, and generally all over the Ekoyo country.

In these days the Ahigbeh Mbati occupied the Lokoloko Pioneer, the Potto Mbati were at Ibiraba, the Ekpatai in the Ekong Valley, and the Tarawa at Uwet. The Isunbo, who were with the Amadiana tribe, occupied with the Ekoyo the present Ekoyo country.

With all these tribes the Amadi or Kalla lived in a state of chronic warfare. The Lawana, a Ekoyo clan, and the Ajiwa, a Isunbo clan, unable to hold out any longer, migrated. The former here, is to said, preserved to this day their tribal identity and customs, and are still to be found somewhere in the vicinity of Ikiri-mangbeni; the latter now Ikonbana.‡

The remaining tribes appealed for assistance against their oppressors to a great medicine man called Ibaji (or, to give him his correct name, Ekpati), the grandfather of Lawana, the present Mbati chief.

---

* The name Uwet is said to be derived from Ubaniko clan, my Tarawa cousin. Tarawa is the name of the most important clan in this particular section of the Mbati.

† Mr. Kalla informs me that the Ogoja, who have intermarried with the Ogo, a sub-tribe of the Ba-Ejiba, have a tradition to the effect that they were lived on the Cross River.

‡ Isunbo is the Ekoyo, Ogbodo the Mbati for Amadi and Kalla.

§ Ikonbana the people, who live on Mount Mara in Omoro Sub clans.

‖ Mr. Kalla informs me Ajiwa clans were the most generally. According to Mr. Kalla the Ba-Ejiba and Amadiana, and are known to the Kalla as, Wawa, eng., Wayo.

[illegible]

/[illegible]/
observed, there as a rule a new pregnancy ends the nursing period. The pregnant woman reserves the ceremonies that she previously were, in order — as the Ainos explain this custom — not to endure them. During the first five months of pregnancy the woman lives as usual with respect to food and drink. Then she is given a bowl of [illegible] tea, [illegible], and always cooked with a bitter-tasting [illegible] herb (3)

3. Pre[illegible] [illegible].

called [illegible], and milk, only the latter during the last month. Though this the woman is supposed to become so overweight this as possible, so that the birth will proceed easier. She may not see the [illegible] of fallen [illegible]. The husband during this time need not subject himself to any special diet or special acts, but he may not go to war, for it is believed that he could die on the way. Shortly before the delivery the husband may not leave the house or its immediate vicinity. If he should cause a crippled person or even him because of his infirmity, the newborn child would come into the world afflicted with the same defect. /[illegible]/ For a successful delivery the pregnant woman prays: "[illegible] [illegible] [illegible] [illegible] [illegible] [illegible] (3)

4. [illegible] [illegible].

a "God let come out healthy — the woman," as the infant child is called. The woman given birth in her hut, which on this day may be entered only by women and girls. A midwife (ut [illegible]), [illegible] [illegible]) provides or performs the necessary assistance. If the newborn child is a boy, the midwife cuts out that blood should be drawn from as as as food for the woman to childbed; in the other case, from a heifer. Though this the father also leaves the sex of the newborn child. During the birth process the women who are in the hut or standing around it cry to God for help and assistance in drill, often plaintive voices. The birth of a boy is more desired than that of a girl, but the greatest joy prevails at the birth of twins, especially if both are boys. In that case the woman also keeps only the first-born child with her, while the second one is cared by another suitable

[illegible]

[illegible]

[illegible] Names — Male and female names. — Meaning of the names. — Giving names to male individuals. Restrictions, exemption of names. — Giving names to female individuals. Restrictions, exemption of names.

[illegible] A great part of the names used today is of ancient origin. Some have varied or an unusual form, whose perhaps an old man has known or who lives on only to name, but a certain name, which is then given again and again to children or adults. So meaning is not known, perhaps that here was also named after another, without anyone's knowing an explanation for the meaning and origin of the name. Other names are derived from origin, dwellers, experiences, — physical or character traits, times, etc., or signify fortune or, finally, refer to personal favorites in food, clothing, ornaments, and weapons. In these names, too, the attachment to the old can be recognized, since the designations from which they are formed are often no longer used today at all and also are only little known. Male and female names are known, and where are given to unknown form to both sexes. The names of more generally well-known, older men are also /[illegible]/ mentioned by putting the syllable [illegible] or [illegible]. When parents see the names of their children who are at a young age, they add to the male name [illegible], to the female name [illegible], that is, my. Deceased persons who left no descendants are not mentioned by name, but rather one says the deceased son or the deceased daughter of N. There are no special names for twins. A child born with extra fingers or toes is often given the name Bagrasajik. If one sole anyone his name, he usually lacks every and two another are standing beside him anew.

[illegible] Usually before a boy's upper incisors come through, but at the time at the latest, his mother chooses a name. The day of the name-giving is often — not always — celebrated with a festival, the [illegible] [illegible], to which the invited men and women among the relatives are invited and are regaled with beef and honey beer. For the festival the child's head is shaved for the first time, as is the mother's for the first time after her confinement. The hair of both is placed under the latter's sleeping place. Toward three o'clock in the

[120 cont.]

712. [illegible] or incision with sterile cord and set, then the inner and finally the outer cement-edges of the enlarged skin-entry opening. An error point that has penetrated into the bags is taken out in a similar manner.

Some threats to the stickness are not uncommon to war. One or several bowlered cells are probably always injured by this. Moreover, a more or less large bundle of incisions always exists out from the drain-entry opening and that is exposed to the greatest soiling. Against the latter, one proceeds with the general lack of consideration in that a few compresses of the wounded must wash the soiled bowlered parts with cold water or the nearest brook. In a cloth -- sailcloth -- stretched around the neck at the top, around the hip strap at the bottom, the patient carries the soiling-use incisions to the nearest dressing station. The surgeon then first sews up the bowlered tears with sterile cord and set, then washes the incision with warmed water, and then stuffs it through the drain-entry opening back into the abdominal [120] cavity. After that he sews up the outer cement-edges of the abdominal covering with the raised-sewed seams.

If an amputation is indicated, it takes place on the leg below the knee and on the whole arm at the nearest joint. Only on the thigh, even if there exists the probability that a second amputation to the hip joint must be undertaken, is it performed low as much as possible (5 centimeters below the hip joint, or only one or a inch higher than necessary, so that fastening on artificial leg (Fig. 73) is possible. There is nothing special to be said about the technique of severing a limb in the joint. From the limb taken off two flaps of skin are preserved, which are drawn over the ends of the incision and sewed together there. The artificial leg is made of wooden rim length is measured off on the sound leg. The upper hollow into which the leg stump is sent is lined with woolly sheepskin and bears two

Midwifery and Women's Diseases

959 Midwifery is in the hands of older women, who, as a principle rule, all principals, professionally practice the calling of midwives and have at their command a surprisingly accurate anatomical knowledge of the body parts in question. It would then only in

943 exceptional cases are they not called upon at a birth. At the beginning of the last month of pregnancy the midwife examines the pregnant woman several times, in order to determine by palpation of the abdomen the position of the child. The head position is regarded as the most favorable for the birth; thus, if the woman during the remaining five months, the attempts to change it to the desired one by means of a massage.

944 As soon as the first labor pains begin, the midwife, who lives either in the same house or in one nearby, is called in. She finds the woman in labor, who, incidentally, is not regarded as unclean, on the bed in her hut in a squatting, sitting, or lying position. With a normal birth the assisting women remain in attendance without performing any kind of superstitious or medicinal manipulations. On the other hand, if it proves necessary to bring about an intensifying of the labor-pain activity, the midwife, with the help of a few women, first leads the woman in labor around for a few steps and, if the desired result is not obtained in this way, further help is given by means of a light massage. Only if these measures prove insufficiently effective does one attempt the last one: The woman giving birth is /[illegible]/ slowly lifted by her feet by several women until her body hangs vertically and the crown of her head touches the ground, whereupon the midwife massages her abdomen in the direction of the navel.

The use of internal medicine to promote labor-pain activity is rare; a mixture consisting of liquid deep fat and a decoction of [illegible] root (Cordia quercuna Gibbs) is regarded as effective.

The midwives questioned regard the undertaking of turnings through insertion of the hand, in analogy to the birth assistance given livestock,

/216 cont./

687 There is no special punishment for cowardice in war. The
[626] warriors, however, mock the coward in front of the girls and make
683 him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

681 The death penalty is carried out in that a band of armed men attack the defenseless sinner and kill him with spears. For a war /217/ traitor the execution is carried out by warriors, for an arsonist, by those injured by him. Fines are usually paid in installments. In general their amount is not fixed for the individual offenses. In the one area this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sicknesses or unsuccessful wars naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors.
[672] Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating.
[714] A degrading punishment exists only for the warriors and consists of
[701] cutting off the guilty man's braid-coiffure, as is well known, one
[684] of the insignia of his standing. This punishment is said to be inflicted
[685] most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons
• 734 are remunerated with a goat or a sheep. The mentally ill occupy
672 an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined
[755] toward misdemeanors or crimes. Frequently, too, if an ol goiatiki does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

/119 cont./

593 181 [186] The Masai are animated by a deep feeling of solidarity; they stand united against all foreigners. A sincere attachment and love bind the individual members of the family; they vie with one another in order to free a relative who has fallen into slavery. Thus, in 1896, the Masai who returned from the Berlin Exposition immediately used the greater part of their savings to buy back relatives who had become slaves during the great livestock epidemics around the year 1890. The tightest is the bond between parents, especially the mother, and children, as well as between brothers and sisters, looser between married people, where the lowly, oppressed position of the wife is of some importance.

181 461 554 • 735 602 The men scorn any kind of work. Only waging war is worthy of a man. Large herds of livestock and many wives are his supreme happiness. One who has both enjoys respect and prestige. One looks down on a poor devil. Truly poor people, however, are exceptions, since relatives support one another in generous ways. One who does not have such quickly finds accommodations as a rule with one who is well-to-do. He receives food and for that helps the women and children of his benefactor with their work (livestock-tending, kraal-building, night watch for the small livestock, etc.). The condition of /120/ poverty is also always only of brief duration; the poor man soon acquires some prosperity again through gifts from friends or a share of the spoils of war. Toward friends, one is just as generous as one is good-natured; the hospitality to countrymen, no matter where they come from (with the exception of the blacksmiths, of course), is unlimited. Everyone offers a visitor whatever he happens to have in food and drink. Everything that the stranger needs or wishes is at his disposal. He reserves for himself a hut for the night by sticking his spear in the ground in front of it; the host then seeks other quarters for the night and leaves home and wife to the guest. If a woman comes for a visit, the wife leaves the hut for the night, so that the stranger may take her place. Hospitality toward other peoples is known only if peace is concluded with them through the ceremony of infant exchange or through blood friendship. The cruelty of the Masai is no greater than that of the other black peoples, for example, the Negroes neighboring the Masai. If they

000 The future of the Masai People. -- Weighing the effect of the people-preserving and people-destroying factors. -- Polygamy. -- Nutrition. -- Fertility. -- Child mortality. -- Free love. -- Organization. -- Wars. -- Epidemics. -- National pride. -- Clash of the culture of the Masai with that of the Europeans. -- The incompatability of the two hurts the Masai. -- Harmful consequences of the impoverishment. -- Difficulty of becoming sedentary.

121 In order to make a prognosis about the future of the Masai people it seems necessary, first of all, to weigh the people-preserving and people-destroying factors established in the people, in its character and customs, and then to observe the phenomena that appear when the Masai meet the Europeans. We have many examples of the fact
182 that polygamy does not promote an increase in the population to the
595 extent that monogamy does as a rule. As the reason for this phenomenon one finds an accumulation of wives in the hands of the wealthy, and, as a consequence of that, celibacy for lack of women among very many of the less well-to-do and among the poor. It is obvious that under such circumstances polygamy leaves very many women
[162] neglected. But it is different among the Masai, for here there is such a surplus of women -- perhaps in part again as a result of polygamy -- that no man remains celibate, in fact the possession of only one woman is an exception. Hand in hand with this goes the not so
[735] unequal distribution of property; in practice there are scarcely any poor people. Another reason to which /345/ the decline in population among many polygamous peoples is attributed is that polygamous marriages as a rule are relatively poorer in children then monogamous
[842] ones. This objection is not to be taken into consideration here either, for we have seen that the fertility of the Masai women is very great. Yet, in order fully to consider the polygamy of the Masai in its economic effect, we must observe the milieu in which it exists. The polygamous household of the Masai may be compared to a stock company, to which the property, theoretically belonging solely to the house father belongs in practice. The house father is the chief

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

Besides the power of a maternal uncle to stop a fight, he has also the right to take anything which belongs to his nephew. If the uncle desires anything that is the property of his nephew's father, the nephew must buy it from his father, who will at once give it up when he knows for whom it is required. This power of taking property is reciprocal, and in fact applies to all persons who address one another as *ol-apu*, *ol-le-'ng-apu*, etc. A nephew, for instance, can go to his maternal uncle's kraal, and if his uncle is absent, he can slaughter a goat or drink his uncle's milk, and nothing would be said. He cannot, however, drive off a cow without his uncle's sanction, but permission would not be refused. Other relatives have likewise some power of taking property. A boy or man can go to his father's or paternal uncle's kraal and take or demand a goat or milk, and in all probability nothing would be said, but if it were done repeatedly the father or uncle would express dissatisfaction or refuse altogether. A man may also go to his sister's husband or wife's brother (*ol-aputani*) and take anything, but an account is kept and the debt has to be returned. If a man is poor it is customary for him to live with one of his brothers-in-law (*ol-aputani*) and help to look after the stock. He is fed for his trouble, and as payment receives one out of every pair of twin goats born.

First cousins and second cousins may not marry, but there is no objection to third cousins marrying if the relationship is no nearer than *ol-le-'sōtwa* (or *en-e-'sōtwa*). Thus, a man's son's son's son may not marry the man's brother's son's son's daughter, nor may a man's son's son's son marry the sister's son's son's daughter, but there would be no objection to a man's son's son's son marrying the brother's daughter's daughter's daughter or the sister's daughter's daughter's daughter. Likewise though a man's son's son may not marry the man's maternal uncle's son's son's daughter, he may marry the maternal uncle's son's daughter's daughter. These unions are always contingent on the two parties not belonging to the same sub-clan.[1] The rules of consanguinity and affinity which regulate marriage also apply to the sexual intercourse of warriors with immature girls before marriage and to the rights of hospitality after marriage. No warrior may select as his

[1] The Masai are divided into five clans: *Il-Aiser*, *Il-Meñgana*, *Il-Mokesen*, *Il-Mōlelyan*, and *Il-Tarōsero*. Each clan is again divided into sub-clans, *e.g.*, the *Il-Aiser* contain amongst others the following: *In-gidoñgi* and *Il-Parkeneti*. No man belonging to the *In-gidoñgi* sub-clan may take as wife the daughter of a man of the same sub-clan, but he may marry the daughter of the *Il-Parkeneti* or he may marry a daughter of the *Il-Meñgana*, *Il-Mokesen*, *Il-Mōlelyan*, or *Il-Tarōsero* clans. Members of the various sub-clans are usually to be found in all the districts and sub-districts. Marriages are not affected by geographical considerations, and a man has the same lawful marital relations in all the sub-districts as he has in his own home sub-district.

In his recent book, *The Ethnology of the A-Kamba and other East African Tribes* (Cambridge, 1910), Hobley states (p. 121) that the restrictions governing marriage amongst the Masai are far from simple, and he gives a number of complicated instances. As a matter of fact the rules are quite simple if one remembers (i) that though the clans are not exogamous, the sub-clans into which the clans are divided are exogamous; and (ii) that no man may marry a nearer relation than a third cousin, and then only if the terms of address used are *ol-le-'sōtwa* and *en-e-'sōtwa*.

361 /26 cont./
417 are separated from one another by thorn barricades, and the huts
351 are often protected from damage by the cattle by means of thorny
824 branches placed around them.
233

One distinguishes between kraals for the married (eng an el
621 moruak) and such for the warriors (ol manjata). In the former live
361 the married men (ol moruo, el moruak) with their families, in the latter the warriors (ol morani, el moran) with their mothers and the half-grown, uncircumcised girls /27/ (en dito, n doje). One sometimes also finds several kraals built together into one. The author found a village that consisted of five kraals built next to one another, three of which were El moruo kraals. A dense thorn-barricade extended around the entire kraal complex.

595 The married man on the average has five to six wives, wealthy
[556] men have in addition also a few secondary wives to whom they
• [736] are not legally married. The secondary wives are made up of widows who may not marry again or who have not remarried and

342

595 /27 cont./
•[736] see in their position as secondary wife lasting or temporary maintenance. Each wife has her own hut, in which she lives with one or several small children and manages an independent household. The woman married first is the principal wife (en aitero eng an) (1)

1. • the first in the kraal.

and remains such until death; then the woman married next after
[422] her steps into this position. The principal wife is supported the best, in that the husband surrenders to her a large part of his cattle for the usufruct and treats her with distinction before the other wives by means of gifts of ornaments and clothing, as well as by better service. /28/ Her eldest son has prerogatives in the right of succession. The principal wife exercises supervision over the other wives and keeps them at the work when they neglect it.

422 The domestic community does not have any common property. As property there comes into consideration first cattle, goats,
[554] sheep, and donkeys. The size of the herd is the gauge for the social position of its owner, the father of the family. The cattle
[428] handed over by him to each of his wives for care and usufruct remain his own, and only when the wife has a son about ten or twelve years old do they pass, with his consent, into the latter's possession, and sometimes into his ownership. /Ill. 9 appears here./ A presupposition for the latter, however, is that the boy is not needed in the tending of the paternal herds. For as soon
[591] as he receives the livestock, he must leave his father's kraal, along with his mother, in order to lay out a small new kraal for himself at a distance of several kilometers. This is supposed to prevent the two herds from coming together, an opportunity which otherwise the son would often enough take advantage of
422 to steal from the father. Huts and household implements, both
423 only of slight durability and little value, theoretically also belong to the father of the family, but in practice to those of his
[462] wives who use these things. The woman builds the hut, whereby the children or other women help her. What is not used in

000

K 164

child population since those with active yaws are discouraged from attending school. It is known, however, that bone deformities are produced only in the tertiary stage of the disease. Callanan (1926) noted in about 2,000 cases of yaws in children that 32·1 per cent. of male children and 21·6 per cent. of female children had the disease in the tertiary stage. Hence, even assuming that all children have yaws, and that every case of tertiary yaws involves bony deformity, it is obvious that in at least half of the 62·6 per cent. of male children, and 43·7 per cent. of female children with bone deformities, the occurrence of these deformities cannot be explained as due to yaws.

In addition to bone deformities, 40 per cent. of the boys had some obvious dental defect, 48 per cent. were clinically anæmic, and 62 per cent. suffered from spongy gums. There was also a high incidence of enlarged tonsils and cervical adenitis. The general condition was poor.

Kikuyu girls showed a lower incidence of all defects than the boys and were much superior in general condition.

M 164

The Masai village children present a very different picture, bone and dental defects and anæmia being relatively uncommon.

M [146]

The results of the physical examinations are presented graphically in Graphs 7 to 10. It should be noted that, while there appears to be a correlation between diet and the incidence of bone and dental defects and anæmia, there is none between diet and the incidence of enlarged tonsils and cervical adenitis.

K M 164

Table showing percentage Incidence of different Defects in Kikuyu and Masai Children.

	Kikuyu.		Masai.

Enlarged tonsils	56·0	53·3	35·0	52·4
Cervical adenitis	52·0	47·6	40·0	59·8

K M [143]

In the course of the investigation, records of cases attending native hospitals in the Kikuyu and Masai reserves were examined as to the incidence of various conditions. The data for the Kikuyu include figures from the hospitals at Keruguya, Fort Hall, Nyeri and Githumu. Unfortunately, there is only one hospital in the Masai reserve, that at Narok, the seat of the district commissioner and a trading centre. The patients are therefore not all Masai, about 20 per cent. being Indians or natives of other tribes. We have no information as to the distribution of cases between these and Masai. The following table shows the results expressed as percentages of the number of cases analysed :—

How fire is obtained.

When the Masai move and go far[1], the men take with them, or cut on the spot where they intend to stay, a hard pointed stick and a flat piece of wood. They then search for some donkey's dung or dry grass, and produce fire in the centre of the new kraal by drilling the stick into a hole in the wood. When the fire has reached the grass they set light to some leaves of *Cordia ovalis* and throw wood on to the fire. The women obtain their fire from the one which the men have made.

The Masai say that the hard stick is a man and the flat piece of wood his wife.

The hard sticks are cut from *Ficus sycomorus* and *Ekebergia sp.*; the flat pieces of wood from any fibrous tree, such as *Kigelia africana*, *Cordia ovalis*, or *Acacia albida*.

[1] When the journey is a short one the women carry fire with them.

are ready for one night's occupation. Text-fig. 3 shows its ground plan. It takes 342
two to three hours to build. If it is to be occupied for some time the walls and roof are strengthened and the hides are gradually replaced by cow-dung plastered on a backing of *Leleshwa* leaves or other suitable vegetable material. The whole, including the calf pen, is enclosed and roofed with cow-dung plaster. A small hole (*E-Lusye*) is usually made at the top of the wall above the fire-wood store to let out some of the smoke. The beds (*En-Dabash* or *E-Ruat*) are made of hides put on top of poles 352
placed close together and raised about a foot from the ground. Text-fig. 4 shows the ground plan of a finished hut.

Grass tufts on the floor are just left to dry up and get trampled out of existence. 342
Repairs are done by the women of the house, and consist in filling up cracks with [356]
wet cow-dung. Fleas, bugs and rats are uncommon in Masai huts. Dried puff-balls [751]
and dry cow-dung are sometimes burnt as an insectifuge. The young people are 515
not infested with body lice; but these abound on the aged, taking refuge in bead necklaces and other ornaments.

When the people move on the village is usually left to fall into ruins, but it 361
may be reoccupied later if desired, and if it has not yet fallen beyond repair.

Children, as well as young men and women, wear on the fingers as adornment rings (ol gissol, el gisso) made out of four or five coils of copper wire, the ends of which, on the outside, often form flat spirals (Fig. 60). The first ring is stuck on the middle finger of the right hand, the second one on that of the left, the next ones on any other finger. It is not a rarity for a woman to wear rings on all her [751] fingers, including the thumbs. Mothers stick on the second toe of the right foot of their babies a /147/ simple ring of copper wire as protective magic against illness, if previously one or two of their children have already died at an early age. Now and then one also finds rings made out of sheet iron, on which the outer part of the circle bears shieldlike appendages above and below (Fig. 61). The [177] Masai call them es sagahgar and maintain that they stem from the Wakikuyu. It is certain that they are not made by the Masai.

302 Boys and married men frequently shave their heads so that the hair is scarcely more than an inch long. Women shave their heads even more often, and, to be sure, either entirely or only a strip all [412] around. For shaving /Figs. 62-63 and Ill. 48 appear here/ they use

/148 cont./

302 714 temples, whereupon the tips of the strands are wrapped with bast to the length of an inch. The back hair, lengthened up to 50 centimeters, is placed around a foot-long stick and on this wrapped tightly with bast or goat leather scraped thin, so that it forms a stiff braid (ol daiga) reaching to the waist. Over this braid one not in-
[283] frequently finds one to three smaller ones. Often the tips of the little temple braids (sing. ol babeda; el babed l eñ goscho) are joined with that of the little forehead braid (ol babeda l eñ gomum) and the former tied together under the chin with a string (made of fibers) (1).

[751] 1. This hair style has the purpose of protecting the head from the harmful influences of the sun's rays. For that, one first let the hair grow long and, since the long strands fell annoyingly into the face at every movement, put it together into
[171] "braids." The Tatoga helped themselves more simply, in that they shaved the front part of the head and left the protection of the thick padding of hair at the back part of the head.

302 The hair is often perfumed with the root powder of ol ãr kidoñoi
[824] (Croton spec.). /149/ /Ills. 49 and 50 appear here./
/150/ The white facial painting of the newly circumcised has already been mentioned. Younger people, especially warriors and
[824] young girls, on all festive occasions, anoint the entire body insofar as it is not clothed, with red paint, which they like to perfume with the pulverized leaves of ol magirigiriẽni (Lippia asperifolia Rich.), which smell like vanilla. With one finger the warriors then often strip it off the shin bones in serpentine lines (ol kigesáta, el kigesát), so that a kind of drawing is produced. One who has killed an enemy in war paints his body at the following dance festivals with white and red earth in stripes (Fig. 67). This painting is called en /Figs. 67-69 appear here/ gituñguat. At festivals one also often sees on the face
[531] of the warriors a red triangle, its apex starting at the alae and
[751] widening out up to the middle of the cheeks (Fig. 68). When boys

302 and girls, warriors and women (not, however, old men and women)
[151] come into a region in which they have not yet been, they paint
their faces and chests with its earth as protective magic against
[531] sickness and misfortune in this new land. The women paint the
face on both sides with two concentric rings on the cheeks, or with
two or three lines running parallel, which run from the corners of
the mouth vertically to the eyes, then go around these in an out-
ward curve, /151/ and turn vertically upward over the outer corner
[824] of the eyes (Fig. 69 a and b). One uses for this the juice of the
[386] root of ol gneriandus l en doje=plant (Plumbago ceylonica), mixed
with fresh blood.

/180 cont./

757 and the chewing of the root of ol asajét (Withania somnifera Z.) are regarded as acting especially vigorously. Children are given an infusion of the leaves of ol magingi (Moschosma multiflora [Hoch.] Bth.), because it has a considerably milder effect.

753 757 They call another greatly feared fever ol oirobi l'en duhúr and see its original cause in the bite of a kind of tick living underground, which they designate as en duhúri jámon. The patient is given liquid sheep fat mixed with the powdered grains of ol odoa (Maesa lanceolata Forsk.). Presumably this fever is identical with relapsing fever, for [136] which Professor Robert Koch identified as the carrier of the spirilla [164] a species of tick living underground (Ornithodorus Larigni) (2).

> 2. During the day Ornithodorus hides in cracks of buildings or in the ground and emerges as soon as a victim approaches. Merker's conjecture could therefore correspond to the truth, and the more so since to me too the Masai designated and displayed an unquestionable Ornithodorus as the carrier of a fever. The ed. Dr. S.

757 Against chickenpox (e riri or en diaboboń) no medicine is known. [164] The sick person remains in the hut, is given as drink a little milk mixed with fresh blood and sheep-tail fat, two things that are regarded as strengthening; furthermore, as food, a piece of mutton roasted in the skin at the open fire.

For protection against smallpox (ol maschúgu or ol minjaloi) [751] healthy persons are inoculated in two incisions on the forehead with the smallpox pus en gimek) of a sick person. Smallpox patients are [164] given a decoction of the roots of en dulele (Solanum campylacanthum) mixed with cattle blood as a diaphoretic and at the same time a nourishing remedy. In order to increase the sweat secretion, the [758] patient is laid beside the hearth fire. Diet; no drink except the above-mentioned medicine; as food, the head of a sheep roasted in the skin or another piece of mutton similarly prepared.

/182 cont./ In order to
• 751 avoid the onset of a case of diarrhea as a consequence of the very popular copious enjoyment of liquid fat, a root decoction of the above-mentioned ol ama tree (Ximenia americana L.) is administered.

757 Constipation (ol golomi). The most popular remedies in severe
064 cases are a decoction or extraction of the bark of ol jani 'njugi (Embelia kilimandscharica Gilg) mixed with fat, or, in milder cases, the pepperlike grains of ol odoa (Maesa lanceolata Forsk.), which are chewed.

[827] Regarded as aiding digestion is the bark of ol mata (Thespesia Garckeana F. Hoffm. and Dombeya reticulata Mast. vel aff.), of en demgscho, also called ol egurugi (Turraea Volkensii Gürke), which is drunk mixed with meat broth, and of a still unknown Acacia species (ol alili), which is why the warriors, during their meat feasts, add these powdered barks to their drinking water, as well as an extract of the pounded root of ol gbulot (Bridelia cathartica Bert).

"To clean out the stomach" the warriors take, once every three or four months, a medicine called en janigitti, consisting of the bark decoction of ol odoa (Maesa lanceolata), ol mokotan (Albizzia anthelmintica), ol marbait (Croton spec.), ol jani 'njugi (Embelia kilimandscharica Gilg), ol getalassua (Myrica kilimandscharica Engl.), os sugurtuti or ol dinjai (Cissus quadrangularis).

As Tonicum roborans /strengthening tonic/ and beautifying
[826] agent, pulverized bark of ol dimigommi (Pappea capensis Eckl. et Zeyh.) is added to the drinking water. It is supposed to make the skin softer and more elastic, as well as to give rise to an increase in the padding of fat through which sharp contours are rounded. The remedy is especially popular among warriors.

757 For liver pains (aia e munjwa) one drinks a decoction of the
164 bark of os sodjo (Enclea fructuosa).

For spleen pains and spleen swelling (aia ol dasin), the powdered bark of the same tree, stirred to a paste with honey, is eaten or, mixed with honey beer, is drunk, as is a root decoction of os senetoi (Cassia didymobotrya Fres.), which as a rule is mixed with milk.

/197 cont./
844 that I give a gentle tug with a hooklike insertion of the index finger into the armpit of the child."

/198/ In order to hasten the exit of the afterbirth, one of the assisting women tries to promote labor-pain activity by tickling with a feather the palate of the woman giving birth. This manipulation is also used in rare cases during the periods of the preliminary and of the actual labor pains. During the afterbirth period the child's umbilical cord is removed, in that the umbilical cord (os sonua) is first tied close to the body with a cord of bark bast and then cut at a place an inch away from the body with the instrument otherwise serving as a razor, the ol moronja. A navel bandage is unknown. The afterbirth, which is not the object of superstitious customs, is [184] tossed into the livestock kraal by the midwife in some districts, buried there at night in others.

The newborn child is cleaned by a rubbing with liquid fat. According to statements of the people, this treatment, however, is supposed to represent not so much a cleaning as a strengthening and comfort. Then the child is laid beside its mother on a soft leather skin freshly greased. As soon as the latter has recovered from the 846 birth act, she chews four grains of ol odoa (Maesa lanceolata) and [824] gives the child an extract of these as a purgative. On the following [757] day the newborn child is given its first bath, consisting of a tepid [751] extract of the twigs of eh gairetuai (Physalis minima L.) and the stalks of eng aitetoijai (Commelina spec.), to which is ascribed the action of a protective magic against sickness. Cold baths, say, for the purpose of hardening, are unknown. The child remains unclothed.

The woman in childbed leaves her hut as a rule as soon as her 846 condition permits, which is usually already the case on the following 757 day. Her medicinal treatment consists first of all in the administration of laxatives, for which in this case a mixture made out of liquid fat, honey, steppe salt, and a few pounded ol odoa corns, as well as a leaf infusion of os sitetl (Grewia bicolor Juss.), is especially prized. Furthermore, she is given a beef soup seasoned with ol oilale bark (Colubrina asiatica Brongn.), as well as a decoction of ol gebere l e gemma (Sphaerantus microcephalus), a leafy swamp plant, or a leaf infusion of ol edurut (Epaltes gariepina) or also a decoction of

/209 cont./

796 782 participants eats a small piece of the meat, after he has roasted it in the ashes. Furthermore he is given a strip of the skin, from which [751] he then fashions amulet rings, one for himself, the others for his [237] relatives. The ring protects the wearer from sicknesses of every kind. Men wear it on the right middle finger, women wear it on the large spiral-shaped neck ornament of iron wire. During the feast the participants constantly sing

[539]

Hai nasok, oho, Hai kinders ije, oh,
Hai nasok, oho, Hai ndogo ijok oh!

(Hai ndogo ijok = may God feed us; aldog = water the cattle, ndogo ijok = give us to drink, give rain.)

796 782 233 On the following day the women carry fresh cattle dung to the ashes and knead a mash from it, into which is mixed a medicine that an ol goiatiki has prepared and brought along. With these preparations the second part of the supplication feast has begun, which is called ol ogor I oh giachu, i.e., supplication feast for the cattle. Amidst the same songs as above the women spread the medicine on the livestock in the form of lines and curves, and, to be sure, on the spines of the cows and female sheep, on the right side of the belly of the male animals and those females ones that have not yet dropped young. With this the feast is over. The goats are not smeared, but are driven to pasture even before this ceremony. As the reason for this the Masai say that 'Ng ai does not like goats because they do not modestly carry their little tails hanging down as a fig leaf.

796 782 842 791 Another supplication feast is celebrated only by the married women in order to implore God to give them children. It is called iruga 'Ng ai ol adjo, i.e., may God hear the word. In or near the kraal the women gather in the forenoon, together with a sorcerer (ol goiatiki), around whom they station themselves in a circle. Every woman is then given an amulet by him, which she hangs on the hip cord of the skin apron. Then he sprinkles their heads and shoulders with a medicine, which, besides milk and honey beer, also contains one of his secret remedies, for which he is rewarded with a few sheep. Then the women dance and sing throughout the day under a shade tree, during the night in the kraal, until dawn.

775 /210 cont./
825 Allegedly they never bite the El kiboron people; on the other hand
826 the latter often use them as frightening devices against both Masai
613 and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngnaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngnaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise 'Ngnaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (es sétáh), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and 789 the execution of special gestures. The aforementioned amulet ring [751] (ol geretti) protects one against the effect of magic made by another [754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' eñ gebāta feast. The eñ goguroi is tied around the ankle and protects one from ailments of the legs. The ol durgel [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorré protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/360 cont./

824 141. ol durgo (Cordia gharuf [Forsk.] Ehrenb., Cordia quarensis Gürke). The inflamed eyes of livestock are washed out with a decoction of root or bark. About three finger-sized pieces of the [847] root are chewed to induce abortion. The roughly pea-sized vermilion [862] fruits, called en gululu, are edible. At times of food shortage they constitute the chief food in some El kuafi settlements, for example, in Nguruman, where this large shrub occurs very abundantly. The European, after eating a few berries, feels as though his lips were stuck together.

142. ol eberetl (Phyllanthus kilimandscharicus Volkens). A person who has stolen a head of livestock anxiously avoids breaking off a twig of this shrub, since it is believed that otherwise the one robbed would soon recognize the thief as such. The twigs are used as goat fodder.

143. ol ebenya (Cassia obovata Coll.). A decoction of the plant serves as a remedy for stomach-ache for children.

144. ol gbitiro (Dolichos kilimandscharicus Taubert). Named after ol bitir = the wild pig, which likes to eat the plant. One washes young livestock with an extract of the leaves to get rid of fleas.

145. ol eboloña (Vernonia).

146. ol ebuloña (Eragrostis superba Peyr.). Rich fodder for small livestock.

147. ol ebulot (Bridelia cathartica Bert.). An extract of the pounded root is used as an aid to digestion and is therefore regularly drunk by the warriors at the ol bul meals.

148. en ederege (Psychotria fuscula K. Sch.). The sword scabbard is made out of the wood.

149. ol edirangon (Pedicellaria pentaphylla L.). Good fodder for small livestock.

150. ol edurut (Epaltes gariepina). During the first days after delivery, the woman in childbed is given a decoction of the plant, to which is attributed a favorable effect on the recovery of the birth organs.

151. ol egisikon (Cissampelos Pareira L.). Pieces of root are worn [751] as amulets, mostly on the neck ring, for all possible illnesses, and, to be sure, both to prevent them and to cure them.

/363 cont./

M 824 200. eṅ gelen gele (Casia mimosoides L. and Sesbania punctata D.C.). Regarded as rich fodder for goats.

201. ol gerailaṡiṅ (Myrica kilimandscharica var. macrophylla Engl.). A decoction of four finger-sized pieces of root is drunk with beef broth as a stimulant. A smaller dose acts as Tonicum roborans /strengthening tonic/.

D [752] [824] 202. eṅ gerigis (Jatropha spec.). On bruises or sprains the El dorobo make incisions and drip into these the juice or rub in a powder of the charred twigs of the plant.

203. ol geri l ol sibolio (Cleome diandra Burch.). Good fodder for goats.

204. ol gewaget (Schrebera Holstii Gilg).

205. ol gibumbu. Good fodder grass.

206. ol gibumbul (Panicum spec.). Good fodder grass.

207. eṅ gidoṅ on dare = eṅ gaisedjoi.

208. eṅ gijaborr (Indigofera suaveolens Jaub.). Good goat fodder.

209. eṅ giogirgir (Sonchus asper Vill.). The milky juice of the plant is dripped into the patient's eye for eye inflammation.

M [751] 210. eṅ giolio (Pterolobium lacerans R. Br.). Secret medicine of the ol oiboni. He makes an amulet out of the powder of various parts of the plant, which is supposed to protect one against all kinds of illnesses.

211. eṅ giloṅo. If the noses of small children, especially of babies, have been made sore at the nostrils by flies, the mother chews the herb and smears the sore places with the chewed-out juice.

212. ol giorii (Acacia abyssinica Hochst.). At the meat meals the warriors cook two handfuls of the bark in approximately 15 to 20 liters of water and drink the nerve-stimulating decoction as desired.

/364/ 213. ol gine (Scilla spec.). An extract of the pounded bulb is given to calves to drink for fever.

214. ol ginje (Euclea fructuosa). Edible fruits. A root decoction is drunk for spleen pain. The handle of the bow is made from the wood.

215. eṅ ginjoṅjoret. The El kuafi give the small livestock, for diarrhea, a mash made of the pounded leaves and water, with the addition of steppe salt.

/366 cont./

824 260. ol gurschaschi l os subertai (Barleria cephalophora Lindau (2).

2. A new species.

A root decoction is drunk to treat muscular rheumatism.

261. ol güschúrě (Farsetia stenoptesa Hoch.). Fodder for donkeys.

[271] 262. eń gŭsŭŭgě (Rivea kituiensis [Vtke] Hall.). The tuber is chewed en route on marches to quench thirst.

/367/ 263. ol ĭăsŭrĭa (Anticharis linearis Bth.). Fodder for small livestock.

264. eń ĭăsŭrĭa l ol asurai ńĭro l ol jaḣit subugi (Barleria mucronata Lindau). A person bitten by a snake is set over a wood fire on which are thrown leaves of the plant, together with sheep hair, to cause him to perspire profusely from the smoke thus created.

265. ol idońdoń on dare = eń gaisedjoi.

• [751] 266. eńg ischońgĭ. From the plant the ol oiboni makes an amulet against fever.

267. ol iogĕno (Boerhavia plumbaginea Cav.). Good fodder for small livestock.

268. ol ĭŏgĭŏnŏ (1)

1. Designation of the Masai.

(Pentas zanzibarica [Kl.] Vtke.). Older men drink a root decoction as a remedy for muscular rheumatism.

269. en jăbŏrĭ (Tephrosia aff. Uhligii Harms). Good fodder for small livestock.

270. en jăĭĕgŏi (Grewia spec.). Good fodder for small livestock.

271. ol jăni ĭnjŏ (Turraea Volkensii Gürke).

272. ol jăni ĕrŏk (Bersoma Volkensii Gürke). The warriors like to use the soft twigs for making bed padding on marches.

273. ol jăni ĕmŭnj (Glossonema Revoili Franck.). Good livestock fodder.

274. ol jăni l ol sirgon (Cadaba farinosa Forsk.). If donkeys eat a great deal of this, it causes severe constipation, which is said to be frequently fatal.

/368 cont./

824 288. ol jorai = ol jerai (Acacia seyal Del.).

289. ol jorioi os sobugo (Disperis Merkeri Schlechter).

290. ol joroi ate (Acacia arabica Willd.).

291. ol kloge (Courbonia virgata Brogn. and Maerua Grantii Oliv.). Secret medicine of the ol goiatiki.

292. ol legemojik. Collective name for ferns.

• [751] 293. ol legemojik l os soito (Actinopteris radiata Link). From the root the ol oiboni makes an amulet against all kinds of sickness.

294. ol legileña = ol gitende (Haemantus nov. spec.).

295. ol magaragara (Vitex Strickeri Vtke. et Hildebr.).

296. ol magaragara 'l osugo (Justicia uncinulata Oliv.). Fodder for small livestock.

297. ol magiñgi (Moschosma multiflora [Hoch.] Bth.). Adults drink a cold extract of the leaves for abdominal pain. For children a decoction of the leaves is regarded as an emetic.

298. ol magiñgi kětě. Use like the preceding.

299. ol magirigireni (Lippia asperifolia Rich.). The leaves, which smell like peppermint, are powdered and then added to the fat with which one rubs the head.

300. ol mairirgireni oibor. Small-livestock fodder.

301. ol magutian (Sporobolus Rehmanni Hack.). Good fodder grass, especially for cattle.

302. ol magutugut (Clerodendron discolor [Kl.] Vtke.).

303. ol mame. Fodder for small livestock.

304. ol mandaidet (Loranthus). A parasite, found on twigs of ol gamarlasis. It is used like this latter.

305. ol manera ṅ gonjek (Triumfetha flavescens Hoch.). Fodder for small livestock.

306. ol maṅgulai (Grewia villosa Willd.). The woman in childbed, during the first two days after delivery, is given a decoction of approximately 20 finger-sized pieces of root, to which is ascribed a favorable effect for the recovery of the birth organs.

307. ol maṅgulai l eṅ gob (Melhania ferruginea A. Rich.). Is used like ol maṅgulai.

308. ol manuai. Edible fruits. A decoction of approximately ten finger-sized pieces of root is given for feverish gastric catarrh.

/369 cont./

824 [301] 322. ol mogoṅgora, a liana not infrequent in the river forests. The root bark, smelling strongly like vanilla, is twisted, ropelike, and worn by men and women as a neckband. It also finds use as a secret medicine of the ol oiboni and the ol goiatiki.

323. ol mokotan (Albizzia anthelmintica Brongn.). One or two hand-sized pieces of trunk bark or root bark are pounded with a club into fibers and held for a few minutes in boiling meat broth for steeping. This soup is used by warriors as a nerve stimulant, by [832] women as an aphrodisiac. To cure gonorrhea, one adds a small amount of honey to the broth before drinking it. An extract that is made with double or /370/ triple the amount of bark is used to get rid of taeniae and ascarids, or also as an emetic for bilious fever. The fresh bark bast is chewed for constipation.

[262] 324. ol momoi (Solanum nigrum L.). Children eat the berrylike fruits.

325. ol mŏrăn (Ocimim suave Willd.). A root decoction is used as an emetic.

326. ol moridjoi or ol morijoi (Acocanthera abyssinica). The arrow poison is obtained from the roots and wood by boiling.

327. ol marok l on dare.

328. 'mtaṅguju (Maerua rigida Oliv.). From the powdered root [751] the ol oiboni makes an amulet that is supposed to protect one against colds and fever.

329. ol muguti kitok (Caralluma spec.). The soft, fleshy twigs [271] are eaten by warriors on the march, by boys tending cattle, to quench thirst.

330. ol muguti l ol ňodjĭnĕ (Euphorbia spec.). Hyenas allegedly eat this plant.

331. ol muguti l ol ugaru.

332. ol mŭmŭnj (Acacia abyssinica Hoch.). Fodder for small livestock.

333. ol munjagara (1)

1. Also called eṅ gĭtămbŭ.

(Acalypha indica L.). Good fodder for small livestock.

/375 cont./

824 452. os sinande. Secret medicine of the ol oiboni: ingredient of amulets that are supposed to protect one against wounds, sickness, and accidents.

[751]

453. os sinóni (Lantana salviifolia Jacq.). With the wood, /376/ whose smoke smells pleasant, one fumigates the gourd bottles to remove the unpleasant odor arising in them through use.

454. es sisini (Corchorus trilocularis L.). Good fodder for cattle, goats, and sheep.

455. es sisini (Schwabea esbolioides Lind.). Small-livestock fodder.

456. os sisiwet (Ocimim filamentosum Forsk.). Women like to use the bush as padding for the bed, on account of its plesant peppermint-like smell.

457. os siteti (Grewia bicolor Juss.). Fruits are edible. The straight, long, and very thin sticks that older men always carry with them are made from the branches. Pregnant women drink a tea made from the leaves, which has a laxative effect.

458. os sobugét (Dombega).

459. os sodjo (Euclea fructuosa Hiern). Approximately one tablespoon of scraped root bark, mixed in honey beer, is taken as a strong laxative for pain and swelling of the spleen.

460. os sogonoi is an older large tree, which, in the younger stage, is called en doroniki. Its bark is used like that of the last one, but its effect is less vigorous.

[301] 461. os sońgoio (Indigofera spec.). The warriors make fragrant neckbands out of the bark bast.

[862] 462. os suguroi (Aloe). If the child is to be weaned, the mother smears on her nipples the bitter juice of the fleshy leaves and thus makes the breast repugnant to the baby. People who like to drink a great deal of honey beer steep in it two pieces of wood a hand-span long, which has been previously pounded with a club. This addition is supposed to prevent both the indisposition from carousing and an upset stomach. A piece of root is put in the fermenting honey beer for hastening the fermentation.

463. os sugurtuti = ol dinjai (Cissus quadrangularis L.).

464. os sumatégi (Embelia kilimandscharica Gilg). Edible fruits.

362 started in and under the dung it is similar to a peat fire and virtually impossible to put out.

708 Masai also sometimes abandon a boma, or at least the house involved, if a person dies in it.

75 People who are very seriously ill are removed from the boma at least during the day, often to a small thorn boma with a shelter constructed nearby. They may remain there at night also. It was difficult to learn much definite about this practice. A disabled person spending the night outside a boma is very likely to end up [177] inside a hyaena. The administration frowns on this [178] efficient method of disposal and consequently the Masai have become reticent to talk about it. The sick persons' bomas that we saw looked to have been occupied nights as well as days.

262 Food: Traditionally the Masai are supposed to survive entirely on blood and milk (Gunther, 1955). In Western Masailand the Masai diet consists of posho 234 (maize meal), milk, meat, and occasionally blood. The 462 cows and sometimes goats are milked by the women and little 234 girls. The milk is collected in large calabashes. These 415 calabashes, ochre colored and sometimes ornately [531] decorated with beads, are almost as much a symbol of the [386] Masai as the ochre blankets or cloaks, moran spears and [291] hair styles.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Ten eboitare ol-móruo engerai enye araki en-o-'l-poror lenye, torono. Ten eniñg ol-poror lenye, nēari, negili eng-añg, nēyeñgi 'n-gīshu náiyōuni.

If an old man commits adultery with his daughter or with a girl of her age, it is considered a serious crime. The other old men if they hear of it beat him, pull down his kraal, and slaughter whichever of his cattle they want. 684 [561]

'M-bwat.

Nēji en-dōki naji em-bwata, naa 'l-ala aare eitauni li-abori.

The extraction of teeth.

There is something called em-bwata, which means the extracting of the two middle incisors of the lower jaw. 304 752

Neitauni te-'ng-alem.

A knife is used with which to perform the operation.

Eisho 'l-Maasae: nebwa 'ngera enye kat'-are. Ten eīni en-gerai, pe ebaya 'l-apaītin isyet, etubulutua 'l-ala pôkin, nebwai. Netonii.

The Masai extract their children's two middle teeth twice. They extract them first of all when the child is about eight months old, and all its teeth have grown. Then they wait.

Nepwo 'l-ala pôkin, neiñgwari 'l-opa-ootubulutua. Ore p' eitōki aabulu 'l-ala pôkin, nebaya en-gerai anaa en-oo-'l-arin tomon o aare, nebwai em-bwata e-kitoo, nemeitōki aabulu.

After the child has lost all its milk teeth and obtained the permanent set, i. e. when it is about twelve years old, the teeth are extracted a second time, and never grow again.

Ore p' eidip aatōbwa engerai, nesirieki eng-omom il-mur loo-'sirkon, nēji: 'I'rōbija.'

When a child has had its teeth extracted, donkey's dung is put on its face in order to cool it. [237]

Ore opa p' eiteruaki aabwa 'l-tuñganak ēji, pe ten emweiyu ol-tuñgani, p' eitere, neony il-ala, neimyeki eng-are innabwata natōbwaki opa.

The origin of this custom of extracting teeth was to enable people, in the event of a man falling ill or being on the point of death, when his teeth would pain him, to pour water through the orifice[1].

[1] Hinde (*The Last of the Masai*, p. 42) writes: 'The origin of this custom is supposed to date back to a time when tetanus was a great scourge amongst the Masai, and they discovered that it was a comparatively simple matter to feed a man suffering from lockjaw if two of his front teeth were missing.' [113]

Shaving.

Masai elders, women[1], and children shave their heads and eyebrows, and pull out their eyelashes if they enter their eyes.

They also pull out or shave the hairs of the beard, armpits, and pubes, and some singe the hairs of their shins.

If warriors are not in mourning[2], they may not shave their heads until they have held the feast called e-unoto[3], and they grow pigtails.

When a woman gives birth to a child, neither she nor the child are shaved until the latter has four

[113] [171] [174] Sir H. Johnston, in commenting upon this, says (*The Uganda Protectorate*, p. 803): 'It may be this explanation has been invented recently to explain a very ancient custom inherited by the Masai from the Nilotic stock, which was their origin; for amongst these people the removal of the lower incisor teeth is a very common practice.' Hinde's explanation, however, appears to be very widely spread.

[171] [1] This very uncommon practice for women to shave their heads is also followed by the Dinkas, Baris, and Latukas (Cummins, 'Sub-Tribes of the Bahr-el-Ghazal Dinkas,' *Journal of the Anthropological Institute*, June, 1904; and Baker, *The Albert Nyanza*, p. 90, &c.).

Wounds and Surgeons.

752

If a Masai warrior is shot, and an arm or leg broken, the surgeons are able to mend it.

They cut through the flesh, take out the splinters and bring the edges of the bone together, after which they stitch up the wound with the sinew from the back of an ox, and bind the limb securely. 752 237

The only food that is given to a man with a broken limb is roast meat and the thirst-quenching medicine obtained from *Acacia abyssinica*. [278]

Should a man be shot in the belly so that the intestines protrude, the wound is washed and the intestines returned to their place; sheep's fat (a quart or more) is poured into the wound, which is then stitched up.

Again, if a man is shot and a rib broken, the flesh is skinned from the wound, and a sheep's rib is inserted in place of the broken one. Sheep's fat is then poured into the wound, after which it is sewn up.

The wounded man is not allowed to drink milk, and may only eat meat.

If a man is shot with a poisoned arrow, a pregnant cow is slaughtered, and he is given the caul fat to drink. This causes him to vomit and he recovers.

If the surgeons see that a man's bone cannot be mended, they fasten 752

881 in a long leather apron reaching to the feet (ol gelā, el gelāni),
[292] which his mother has made for him for this purpose. On the following day all the boys to be circumcised appear before sunrise at a place in the vicinity of a kraal, chosen by the three or four operators needed each time. The warriors also assemble there at the same time in order to be present at the operation. Since the latter is very painful, the coolest part of the day is chosen. The boys pour cold water over each other, in order to become numb. The operation,
[752] which is professionally performed by old men, especially Wandorobo,
[887] is the following /the following paragraph has been translated from the Latin of the original source/:

881 After the outer skin of the penis has been drawn back and the
304 inner lamella of the foreskin nearest the back of the glans has been cut around with a knife, the glans lies in an elongated sheath, which is then cut on top so that the glans passes through. Half of the skin that thus hangs far down below the glans is removed, and the rest grows together within 14 days and, after healing, looks like an uvula (1).

1. The following should also be mentioned here /the rest of the footnote has been translated from the Latin/: In order to look cut (circumcised), boys sometimes smear the glans with the juice of an herb of the genus Euphorbia, called "ol jugi." The swelling glans prevents the foreskin from sliding forward.

[412] /63/ A finger-long, pointed, and double-edged knife serves as instrument. During the operation the boy sits with legs apart on the
[752] leather apron spread out on the ground. After it, the wounded part is washed with milk, which, caught in the apron together with the blood lost, is carried by the circumcised boy, who strides backwards for this, into his mother's hut and is poured on the ground there. An
[866] agent to stanch the blood is not used. During the circumcision
[626] itself the parents of the boy remain in their hut, for if the latter moans or cries out from the pain, they are punished with abusive

/66 cont./

881 place, they wait until that day. Shared pain is half the pain, and a certain coyness is part of good breeding among the brown Masai maidens too. The circumcision of boys and girls on one day takes place at different spots, and, while no female creature may come near the boys' place, so too no man or boy may enter the hut where, in the presence of her mother, the daughter is circumcised. On the day before the latter's head has been shaved and her hair tossed under the skin of the bed. She has removed all her ornaments and has clothed herself with a long apron (ol gĕla, el gelani), which her mother has made. The latter is now trying /67/ to make the parts coming into question numb

[302] [301] [292] [752] [29 30 142]

Jos. Deeg phot.

Ill. 20. Half-grown Masai girl.

with cold water and, during this, encouraging her little daughter sitting on the ground with beating heart. The operation is a simple excision of the clitoris and is performed with a sharpened piece of sheet iron (ol moronja) such as is used to shave the head. Then the small wound is washed with milk, which, together with the blood shed, seeps into the ground. A blood-stanching agent is not used here either. Until complete healing the girl remains, as es siboli (pl. es sibolio), in the hut of her mother. Instead of the bird skins and ostrich feathers that the boys put on, she wears around her forehead a ring plaited out

[304 412] [752] [301 302]

/183/

• 752 164 Liver and spleen abcesses are supposed to be cut open to drain off the pus. I saw scars in the areas in question several times, but was never able to observe the operation itself.

757 164 For so-called bilious fever (ol odoa = the gall), an emetic is taken first, either a strong dose of grains of the ol odoa (Maesa lanceolata) or a bark extract of olti (Acacia mellifera); then one drinks a root decoction of ol deregeli (?) or of ol manuai (?).

To get rid of intestinal worms (taeniae [ol gurto, el gurt] and ascarids [ol budi, el budok]) one uses decoctions of the bark of ol mokotan (Albizzia anthelmintica), of the root of ol deregeli (?), of the fruits of ol odoa (Maesa lanceolata), or also of the powdered bark of ol jani 'njugi (Embelia kilimandscharica Gilg), the latter of which is always taken with fat since otherwise it is too acrid and easily causes violent abdominal pains with diarrhea.

To cure ancylostomiasis (eńg ǵa eń gijábe) one administers a decoction of the bark bast of ol mokotan (Albizzia anthelmintica); the bark bast is cooked with meat; the patient drinks the meat broth.

Venereal Diseases

757 [164] [548] Gonorrhea and especially lues are quite rare among the Masai. This is due in part to the absence of professional prostitution, and in part to the fact that the Masai are familiar with the dangerousness of these diseases and their easy transmissibility. Those stricken with lues are segregated and may not enter any kraal until the external symptoms of the illness have disappeared; during this time they live outside the kraal in a superficially built hut surrounded by thorn branches for protection against predatory animals. Accordingly lues is called eńg ǵa auló, formed out of eng ǵa = the sickness, auló = outside the kraal. Lues patients drink a great deal of liquid fat and liquid butter for a cure. One drips on the lues ulcers, as well as on [439] those of the chancres, juice of the leaves of ol aisigirai (?), sprinkles on them a powder made out of the leaves of ol agaramóni (?), or burns them with Cuprum sulfuricum, which the Masai obtain in trade with caravans.

/184 cont./

757 With toothache (eńg ga ol alai) one bites on a very hot residuum
[164] of fat with the aching tooth. Pieces of twigs of o'remit (Salvadora
[515] persica L.) and ol abalasas (Dodonaea viscosa L.) chewed to resemble
a brush at one end serve as toothbrushes.

• [152] For rheumatic pains in the muscles one makes use of massage,
which is practiced by the women, or one makes poultices with the
pulp of the pulverized root of o'remit (Salvadora persica), which
[593] also finds use otherwise as a "mustard plaster." Married men have
[885] themselves massages by their wives to get rid of pains in the leg
muscles after long marches, whereas the warriors scorn this help as
unmanly. Furthermore one administers a root decoction, preferably
mixed with a broth from steer meat, of o'rarait (Cissus rotundifolia
[Forsk.] Vahl.) or of ol iogiono (Pentas zanzibarica [Kl.] Vtke.),
or also a decoction of the wood of ol gonjel (Rhamnus prinoides
l'Herit.). For rheumatic pains in the back one drinks a root decoction,
sweetened with honey, of ol asasia l os subertai (Osyris tenuifolia
Engl.). To cure articular rheumatism a root decoction of ol ogino
(Boerhavia diffusa L.) is administered. Besides these remedies, those
that are regarded as diaphoretic, especially the above-mentioned ol
amboschi (Momordica cardiospermoides Kl.) and eńg aitetoijai kete
(Aneilema Johnstonii K. Sch.), are also given.

276 Other than for curative purposes the warriors regularly, and, to
be sure, for the entire duration of their membership in the warrior
[126] standing, take various nerve /185/ stimulants. These are taken
especially on war expeditions and, even more, during the meat
feasts forming the preparation for these. One of the most popular
stimulants is the bark of the frequently mentioned ol mokotan
(Albizzia anthelmintica). One pounds a piece of bark bast the size
of two hand-palms with a club and then lets it steep for a few minutes
in still hot meat broth. The other stimulants are: ol dinjai or os
sogurtuti (Cissus quadrangularis); an arm-long piece is cut up and
boiled in water. The extract is taken mixed with goat-meat broth.
Equally strong in effect is the root of ol oógrua (?). One takes a
piece of root three centimeters thick and approximately ten centi-
meters long, chops it twice, and cooks it with beef broth. The
decoction smells disgusting.

/187 cont./

External Ailments

759 [232] Surgery is the domain of special surgeons (ol abini, el abini) who extend their practice both to human beings and to cattle, goats, sheep, and donkeys. The calling as a rule is handed down from father to son. One cannot speak of a special caste here, however, since the surgeons occupy no special social position -- either in a good or a bad sense. Only the son of an ol abani who knows how to practice the art is ol abani, and, to be sure, only so long as he practices it. If, by way of exception, someone whose father is not a surgeon learns the art, he thereby becomes a surgeon. The surgeon thus practices a open calling.

As payment for help rendered, the ol abani receives, according to the difficulty of the case or the amount of work done by him, a head of livestock, from a head of cattle down to a young goat or a lamb. One should also mention the remarkable arrangement that he can make a claim regarding the payment only if his treatment has had the desired result, and the patient /188/ need not pay before the resulting complete cure. An established custom determines what falls in the department of the surgeon. The ol abani stays within these prescribed limits under all circumstances. If this is not conducive to progress, it has the result, on the other hand, that every Masai, when necessary, entrusts himself immediately to the surgeon without hesitation. He knows that the latter will not undertake an operation on him which he cannot safely perform, but rather that whatever he does, he has often seen and has done with an older colleague or alone. No narcotic agents are available to the surgeon, but his patients have command over very "strong nerves," over an enviable mental sturdiness. [752]

752 The juice of ol gilorit (Acacia abyssinica), chewed out and spat into the wound, and the charcoal powder of ol dukui bark (Harrisonia abyssinica Oliv.) are used as astringent remedies.

Arteries have ligatures applied, if necessary, and, to be sure, by means of a leather strap placed around the limb, which is tightened by a short stick. The cut ends of the artery are then sewed together as quickly as possible with awl and tendon cord, after they

/188 cont./

752 have been grasped with the fingernails and pulled forward.

To the surgeon's department belongs first of all the extraction of teeth. This is done by three different methods. To remove the lower middle incisors, which among children is done for the first time at an early age and is then repeated after the change of teeth, one sticks the thin iron blade of an ax between the teeth and levers them out while tapping moderately hard laterally several times with a stick against the blade. The other front teeth are taken out only when they are already quite loose. One ties a string of cattle tendon around the crown of the tooth and a flat-sized stone at the other end of it. When this is done, the operator, for a very loose tooth, simply lets the stone fall, or, with one resting more firmly, throws it down. To remove a molar, one places a little stick almost finger-thick and approximately 20 centimeters long, with its lower end, notched swallowtail-like, against the tooth, and, to be sure, from inside, at right angles to the dental arch and then directs several vigorous blows against the free end of the stick. An assistant holds the patient's head. Tooth operations, with the exception of the ritual ones of course, are very rare. Among 100 men between the ages of 20 and 30 the author found two who each had a tooth gap. One had had a molar knocked out in the manner just described, the other had lost a front tooth through being butted by a head of cattle.

757 Bloodletting and cupping, on the other hand, are very common, especially for rheumatic pains and headache. To let blood from a vein on the head or at the extremities, /189/ the blood in a skin vein, in a forehead vein on the head, is first blocked by a leather strap placed around the neck or around the limb above the cupping
[411] place. Then the surgeon places himself in front of the patient, the bloodletting arrow (cf. Fig. 76) against the bow, aims, holding the arrow point only five to ten centimeters away from the cupping place, and shoots into the swollen vein. To stop the bleeding, the
[412] aforementioned strap is merely loosened. For cupping on the back, chest, and belly, not the arrow but the razor is used. With it incisions a centimeter long are made in the skin, which has been drawn up roll-like with two fingers. These are arranged in horizontal rows, each of which numbers 15 to 20 cuts. It is by no

/189 cont./

757 means rare that two or three rows are cut for one operation. Most adult Masai have such scars in greater numbers; however, one also often finds people whose entire torso is literally covered with cupping scars. It seems as though the people like to avoid being cut twice in the same spot.

Upon swellings one puts the pulp, allegedly acting as a resolvent, of the chewed plant of ol agaramóni (Crossandra nilotica Oliv.).

• 752 757 164 Abcesses, when they are ripe, are punctured with a small, pointed, double-edged knife and cut open only after the draining of the pus by pressure. Then the wound is washed out with tepid water and cleaned out, using the nail of the index finger, as well as possibly also the aforementioned knife, as a sharp spoon. Finally, one sprinkles on it a caustic powder made from the root of ol gneriandus l en doje (Plumbago ceylonica). The surgeon does not apply a bandage.

Abcesses of the mammary gland are merely punctured and emptied.

With panaritium the nail is removed and the wound washed out.

Suppurating lymph glands (ol gnarnari eti ñ gimek) are treated like abcesses, but the lymph gland is cut out before the application of the caustic powder.

An ailment called ol dododoi l en daré = goat ulcers (1)

1. This is most probably a matter of anthrax carbuncle.

by the Masai manifests itself in that the person afflicted has one, less frequently two, hard lumps the size of a hazelnut under the skin, tapering into a taillike point at the bottom. I saw these ulcers (em boroi) and their scars -- somewhat larger than a mark piece -- on the temples, on the chest, on arms, legs, and on buttocks. As [753] the original cause the people cite the eating of meat of goats or sheep that died of eng ga nairogua = hot sickness (2).

2. Pulmonary anthrax.

758 /189 cont./
759
[152] The hard lumps are cut out. During the illness the patient is given a diet of meat roasted on charcoal and, as medicine, a decoction of the roots of ol demellua /190/ (Solanum setaceum) or ol oki with the addition of honey; a root decoction of eñ gogi (Lycium cf. arabicum Schweinfurth) mixed with milk or meat broth or such of ol amelóki (Maerua Johannis Vlks. et Gilg), which, as a rule, is mixed with a little honey or fresh livestock-blood, is also regarded as curative. The patient drinks this liquid when he is thirsty. The illness is supposed to lead to death if this diet is not adhered to and the patient takes in particular cold water or milk, as well as cooked meat. On the other hand, if the prescribed way of life is observed for two or three months, the lump, gradually pushing outwards, is said to fall off. Since, however, the continuous meat diet is too expensive and the herb medicines cannot be obtained without difficulty, the operation is preferred in by far the most cases.

752 A persistent fever connected with swelling of the three pharyngeal
[164] tonsils, accompanied by violent coughing and considerable loss of strength, especially common in youthful age, the Masai call ert el muli = gland sickness. Very probably it is a matter of adenoidal proud flesh in the nasopharyngeal cavity. The patient turns to the surgeon to be cured. The latter, putting his hand into the patient's mouth, scrapes the pharyngeal tonsils with the nail of his index finger, or with a small knife, so strongly that they bleed profusely. A rather large number of people whom I questioned about the success of the cure asserted that they always could count on certain recovery. Two of my boys, Masai youths about 11 to 12 years old, fell ill with the above symptoms. In spite of careful symptomatic treatment, their recovery of strength was so unsatisfactory that, upon their request, I gave them permission to go to a nearby livestock-kraal in the steppe for relief. After eight to fourteen days they returned, healthy and refreshed, and told me, which corresponds to the truth, that the surgeon had treated them in the manner described.

Fresh, simple wounds (en duñoto, n dungot) are cleaned as was described above for the ulcers, but during this one tries to avoid unnecessary irritation, for fear of greater bleeding. On this account, many surgeons do not proceed with treating the wound until several

/190 cont./

• 752 hours after the wounding. After careful cleaning, the wound is closed by the twined-around suture. The edges of the wound, fitted together, are lifted slightly, as though into a fold, with two fingers of the left hand, whereupon the pointed awl is quickly thrust through the two edges of the wound in such a way that the puncture openings in and out are the same distance from the edge of the wound. Then the awl is drawn out again and in its place is inserted a needle-shaped thorn of ol debbe (Acacia Merkeri), ol debessi (Acacia verrugera), or ol giloriti (Acacia abyssinica). Under the projecting thorn ends a cord [237] twisted out of cattle tendons is led around in a circle in several windings; then the cord ends are knotted /191/ and cut off a short distance above the knot. The individual needles are not placed closer than four centimeters apart, so that the pus can drain out between them unhindered. A fresh wound that seems insignificant for making a suture is covered with a paste, which consists of the scraped meat of the fruit ol darboi (Kigelia aethiopica), or with the leaf of o' rarait (Cissus rotundifolia [Forsk.] Vahl.). One also drips the juice of ol dorotua, of ol aisegerai kitok (Heliotropium Steudneri Vtke.) or of ol aisegerai l eñ gare (Verbena officinalis L.) into the wound.

On the edges of small children's nostrils that have been eaten raw by flies the mother puts a paste of chewed plants of eñ giloño or ekum (Spilanthus Acmella L.).

For penetrating wounds (e remoto, e remot), only the larger of the two openings is sewed up, which, since it is always a matter of spear or sword thrusts, is the thrust-entry opening. If this lies considerably higher than the thrust-exit one, the needles are placed closer than previously; if it lies equally high or lower, what was said above holds. Torn ear-lobes are sewed together like the wounds.

Old wounds (em baldǎga, m baldagani) that will not heal are burned out with a knife made red-hot and then closed with a cooked and heavily thickened paste made out of water and the sifted earth of a termite hill placed on them. The so-called leg ulcers (em baldǎga) are first burned out in the same manner. Then one pastes [237] around the wound a border of cow dung a centimeter high, so that the wound itself forms the bottom of a bowl, and finally pours into it boiling sheep fat. For healing burns they are covered with a thick

/191 cont./

• 752 paste of the pounded leaves of a climbing species of asparagus (em bere e baba). The taking of an extract of the root and bark of ol gelai mixed with cattle blood and milk is regarded as beneficial for the healing of suppurating wounds. The decoction of the wood of a Rhus species (ol mesigiē kete) is supposed to have a similar effect, in that taking it "makes the wound dry."

[237]

Sand fleas (1),

[136]

1. The sand flea was brought into the Masai region in 1897 from Uganda. In June, 1897, it reached Kilimandscharo.

the females of which in particular eat into the soft skin parts of the feet, are removed as soon as they manifest themselves by an itching pressure resulting from their egg-swollen bodies. By means of a sharp scratch with a long acacia thorn, one pierces the layer of skin, usually only quite thin, lying over the sand flea (2)

[114]

2. Here M. is mistaken: The tip of the rear abdomen of the female sand flea juts out into the open, without any skin covering. The Ed. Dr. S.

and then squeezes it out by lateral pressure. During this one is careful to avoid injuring the animal, so that healing will not be delayed.

/192/ For snake bite (a-tonjo 'l assurai) one thoroughly squeezes out the hastily ligated wound, around which one has also made a number of punctures with the sharp thorns of ol gurschaschi (Barleria mucronata) and then cauterizes it with a red-hot iron wire. At the same time the root of ol asajet is chewed, whereupon vomiting follows. This method, however, is customary only if the one bitten is unable to reach a surgeon. Otherwise one has the ol abani fetched immediately and, until his arrival, burns out the immediately ligated wound several times. Swellings of the lymph glands that may occur are also cauterized. If the ol abani regards the bite as only slightly poisonous, he enlarges it by means of a few incisions and sucks it out vigorously. But if he regards it as dangerous to life, he cuts out around the bitten spot a piece of muscle from the size of a nut to

• 752 /192 cont./
that of an egg or even amputates the member (hand, finger, toe), if
[758] this seems to him absolutely necessary. After the operation the patient is given raw sheep kidney to eat and a considerable amount of liquid sheep fat to drink, whereupon severe diarrhea soon sets in. Often one has him go through a sweat cure in that he is set over glowing charcoal on which leaves of Barleria mucronata and sheep hair are thrown.

On a scorpion sting (a-tonjo eñ golówa) one has a woman who has given birth to twins or, lacking such, a pregnant woman spit and rubs the saliva over the painful spot. As long as the pain continues,
[262] [791] the patient eats only raw goat liver, to which is ascribed some kind of marvelous effect -- as is also shown by the fact that it is the only solid food of the ol oiboni.

Into the wound caused by a poisoned arrow another person urinates
[757] as quickly as possible. At the same time the wounded one is given as an emetic a mixture of the juice of the fruit of en dulele (Solanum campylacanthum) and the amniotic fluid (eñ gêba) of a gravid sheep, which is slaughtered for this purpose.

757 For conjunctivitis (eñg ea eñ goño) a tobacco extract (eñ gare ol gumbau) or the juice of leaves of ol ogildia (Coleus kilimandscharicus), ol dungui (Harrisonia abyssinica Oliv.) and ol assajet, or an extract of the leaves of ol gummi, is dripped into the eyes.

752 The surgeon removes the remains of a violently destroyed eye, by drawing it out of the eye socket, with an awl bent hook-shaped, far enough so that he can cut it off with the razor. The eye socket is then washed out with warm water and not bandaged afterwards.

A place that has suffered a sprain or bruise the El dorobo rub
[171] with the juice of ol gerigus (Iatropha spec.). Sometimes they also apply the same drug by the method of rubbing the powder of the charred twigs into small incisions that are made on that place.

/193/ Dislocated limbs are set again and placed in a splint bandage that is not stiff. For a lower-arm dislocation the surgeon sits on the ground in front of the patient, grasps his lower arm just above the wrist, and sets it again by a gradually stronger pulling exerted in the required direction. He then puts around the affected
[237] part, from the middle of the lower arm to that of the upper arm, which are drawn together at an angle of 135°, a padded bandage consisting of a strip of sheep leather that is covered with as much thick and soft hair as possible. The padded bandage is tied with a

/193 cont./

• 752 [237]

narrow leather strap around it. Over this is put a second, stiffer bandage of dehaired neat's leather tied around like the first one. Finally, one fastens on the bandage, on both the inner and outer sides, a correspondingly bent wooden splint, with leather straps as before. The wooden splints are splinter-like and are only supposed to support the arm, not to stiffen it. The arm is tied up, in that one carries it in a sling put around the neck. The bandage is left on for about a month. The procedure is similar for other dislocations. A dislocated finger is not put in a splint. To set the lower extremities the patient lies flat on the ground.

For a bone fracture the surgeon investigates first the location and kind of fracture. With one or two bones lying together with a simple fracture, extension and counter-extension are done, as among us, by two assistants, while the surgeon takes care of the setting. Then he puts on the padded bandage and, on that, two flat, but firm splints, before he fastens the upper bandage of hard neat's skin with leather straps. For an arm fracture the bandage is left on for two months; for a leg fracture, longer. After an arm fracture is healed, the surgeon has the patient lift stones, at first light ones, then heavier ones, to strengthen the arm.

On the other hand, if the surgeon determines by contact that a bone of the lower arm or lower leg is badly crushed, he cuts the limb concerned open lengthwise on the outside as far as is necessary for the removal of the individual bone splinters. When these have been taken out, the arm is sewed up again with the bound-around suture. "Such operations are always successful, but it is more difficult with a crushing of the upper-arm or thigh bone; then one never knows whether one will be able to keep the arm or the leg." This is approximately how a surgeon standing in especially high repute expressed himself to me. Further statements of his revealed that this is far more frequently a matter of compound fractures. If the ol abani comes across such a case, he removes the bone splinters as before and, after he has put the tendons and muscles in order as much as possible, sews up the wound again. If, after eight to ten days, the fracture shows no tendency to heal and the patient suffers from fever, the surgeon proceeds to amputate.

/194/

• 752 [177]

There might be described here a successful operation performed by the aforementioned ol abani: In November, 1901, a boy fractured the right tibia quite close to the knee and, soon after the accident, was carried by his friends to a European settlement several hours away. There they asked the European for his help, but he did not dare undertake the treatment and ordered the people to take the patient to the hospital of the military station of Moschi. Now whether the patient or his bearers did not agree with the plan to embark on a two-day journey is beside the point; in any case, the patient, on the following day, was brought to a rather large livestock-kraal to which the aforementioned surgeon, who, incidentally, lived six hours away, was fetched. He found a large, suppurating wound, out of which the lower end of the tibia projected, the marrow of which was likewise suppurating. The ol abani, proceeding from the wound, now cut open the lower leg on the tibia up to a handbreadth above the ankle and peeled out the lower end of the bone equally far. Then he broke this off about ten centimeters above the lower joint, removed the putrefying marrow from the rest of the tibia, cleaned the wound with warm water and by scraping out the upper part of it, and sewed it up with five thorns. Three months later the boy was already able to walk and to resume his work as herdsman.

Of foreign bodies one finds in wounds arrow points most frequently. Taking them out, is certainly more difficult than to take out other foreign bodies, and it will therefore suffice to discuss the method used for this, since those for the removal of more harmless objects will follow from that. First of all, it leads to an operation, of course, only if -- which is seldom the case -- the arrow is not poisoned or if -- which fortunately often occurs -- the poison has become ineffective through decomposition. Since in battle the torso as a rule is protected by shield and beside the leather cape also often deflects the arrow or at any rate greatly diminishes its force, deeper arrow wounds usually occur occur only on the extremities. If the entire arrow remains stuck in the wound, the operator knows immediately, without a lengthy examination, where the point rests and how it lies. If there are only muscles lying in front of the point in the direction of the shot, he quickly pushes the arrow through and draws out point and tang on the other side, the shaft on the shot-entry side. On the other hand, if bones lie in front of the arrow point, this method is automatically eliminated. Simply pulling out the arrow through the shot-entry

752 /194 cont./
opening is, however, impossible because of the barbs. The surgeon now has two methods. Which one he will employ depends upon the individual case. He either twists the arrow around in the wound until the barbs have become so filled and coated with muscle fibers that they are no longer /195/ able to offer resistance to a pull backwards, or he treats the arrow like a broken-off one, for which he has the following ways of operating. The point palpable by contact from the outside is removed in such a manner that one makes on the shortest path between it and the skin an incision as wide as is necessary in order to permit drawing it through. Since no forceps are at the disposal of the operator, but rather he must grasp with his fingers the arrow point to be removed, the incision must be quite large. A hidden point is sought in the following manner: the surgeon inserts his finger into the shot-entry channel and cuts through at the end of the fingertips from the outside inward, then sticks his finger into this opening and gropes farther into the shot channel, in order to make a second incision where his fingertip now lies. It goes on in this manner until he has reached the arrow point with his finger. If only muscles now lie in front of it, it is pushed forward with the finger in the direction of the shot, until it emerges. If a bone blocks this path, however, the operator either forces the arrow point away from its direction and toward the outside, or he cuts toward the arrow point from the outside in order, as described above, to remove it by way of this new channel.

An arrow point that penetrated into the abdominal cavity from the front is removed by an operation, although, according to statements of the surgeons, the prognosis is unfavorable. The case is more hopeful, on the other hand, if the arrow point penetrated into the abdominal cavity from the back and thereby has already encountered considerable resistance in the strong back muscles. In any case, an attempt to give relief by means of an operation is always made. The surgeon, with his finger, follows the shot-channel, for which this is often enlarged to an extraordinary extent with the knife, until he feels the point. The operation, of course, is most extensive when the arrow point is lodged in the stomach or in an intestine. After he has then drawn it out with his finger, he sutures the cut

/195 cont./

• 752 stomach or intestine with tendon cord and awl, then the inner and finally the outer wound-edges of the enlarged shot-entry opening. An arrow point that has penetrated into the lungs is taken out in a similar manner.

Spear thrusts in the abdomen are not uncommon in war. One or several intestinal coils are probably always injured by this. Moreover, a more or less large bundle of intestines always wells out from the thrust-entry opening and thus is exposed to the greatest soiling. Against the latter, one proceeds with the general lack of consideration in that a few companions of the wounded man wash the soiled intestinal parts with cold water at the nearest brook. In a cloth -- unclean -- attached around the neck at the top, around the hip strap at the bottom, the patient carries the welling-out intestines to the nearest dressing station. The surgeon then first sews up the intestinal tears with tendon cord and awl, then washes the intestine with warmed water, and then stuffs it through the thrust-entry opening back into the abdominal /196/ cavity. After that he sews up the outer wound-edges of the abdominal covering with the twined-around suture.

If an amputation is indicated, it takes place on the leg below the knee and on the whole arm at the nearest joint. Only on the thigh, even if there [732] exists the probability that a second amputation in the hip joint must be undertaken, is it performed first as much as possible 20 centimeters below the hip joint, at any rate not a stroke higher then necessary, so that fastening an artificial leg (Fig. 79) is possible. There is nothing special to be said about the technique of severing a limb in the joint. From the limb taken off two flaps of skin are preserved, which are drawn over the area of the incision and sewed together there. 732 The artificial leg is made of wood; its length is measured off on the sound leg. The upper [237] hollow into which the leg stump is set is lined with woolly sheepskin and bears two

Spitting.

The Masai have two ways of spitting; one is used to show contempt, and the other astonishment. Besides this the medicine-men spit when they wish to heal people[1]. 201

If a Masai wishes to show his contempt for another man, he expectorates a small stream of saliva forcibly through the hole in his teeth into the man's face, and says at the same time: 'You are a dog.'

Formerly when the Masai saw Swahilis, they used to spit on the ground and say: 'These coast people stink like fowls.' They never went near them or touched them if they could help it. [177]

When a Masai sees a baby that he has never seen before, he spits on it slightly several times and says: 'Grow, become accustomed to the eyes of people.' 514 789 [856]

When he sees a child that he has never before beheld, he also spits on it slightly, and says: 'This child is bad.' To himself, however, he says: 'This child is good.' It is believed that if he praises a child it will fall ill. [753]

[1] Amongst the Dinkas it is also customary for the medicine-men to spit on their patients (Kaufmann, *Schilderungen*, p. 128). [171]

[2] The name by which the Swahili were formerly known.

Now disease broke out amongst Sendeyo's people, many of whom died, their cattle all perished, and they were defeated by the Germans; whilst those people who remained with Lenana did not fall ill, and they obtained cattle, as Mbatian had predicted. 173 578 791 628

The two rivals waged war for many years, and eventually Sendeyo was beaten. He came in 1902 to beg his brother to allow him to live with him, and peace was concluded between the two parties.

Before Lenana dies he will select whichever of his sons is acquainted with the work of the medicine-men to succeed him. 791

The principal badge of the medicine-man's office is the iron club[1]. If the medicine-man sends a messenger to tell his people anything, he also sends his club so that it may be known that the message comes from him. 791 293

Should a medicine-man strike anybody with the iron club, that [753]

supported by the 'L-oitai (i. e. the Masai of the 'L-oita sub-district, near Kilima Njaro), with whom he lived for many years. The warriors of the two parties frequently met in deadly strife, and raided each other's cattle. In 1902 Sendeyo gave up the hopeless conflict, and agreed to acknowledge his brother as chief. He now lives not far from Naivasha. Lenana himself says that he and his three brothers Sendeyo, Neliang, and Tolito were examined by their father a short time before the latter's death, and as he possessed a better knowledge of the work of the medicine-men than his brothers, he was given the iron club, &c., and chosen by the elders as Mbatian's successor. [578] [175] [791] [173]

[1] On one occasion the iron club was lost. A messenger was sent by Lenana to the Government authorities at Nairobi, and when crossing the Uganda Railway he was overtaken by a train. He jumped on one side and saved his life, but dropped the club, which was never found again. Its place was taken for some years by a small iron poker, but another club has now been made.

The smiths [1].

All Masai do not know how to make spears and swords; this is the work of the smiths. It is they who make the weapons, and the others purchase from them.

The smiths use in the forge a stone, a hammer, pincers, and bellows, and they make needles, bracelets, axes, anklets, weapons, and other things.

The iron which they work with they purchase from the Swahili, or they smelt the ore which they find in the bed of the Matapato river.

Every clan has its smiths; but there is one clan, the Kipuyoni, to which most men of this class belong.

The other Masai do not marry the daughters of the smiths, for it

564 [1] The Kunono and Dorobo seem to hold much the same position among
1171 the Masai as the Tumalods (smiths) and Ramis (hunters) among the Somali. No free Somali enters a smithy, or shakes hands with a smith; none takes a wife from this stock, or gives his daughter to a member of it. The Tumalods are spread over the whole of Somaliland as the Kunono over Masailand, and no instance is known of them giving up the trade. Still more debased and poorer are the Ramis, who, like the Dorobo, live by hunting game. Cp. Ratzel, *The History of Mankind*, vol. ii, p. 494.

Il-kāk.

Trees and medicines.

Etii 'l-kāk kumok ooitaunye 'l-Maasae 'n-dōkitin.

There are many trees (medicines) of which the Masai make use. 757 824

Il-kāk oooki p' ēar il-tuñganak áitau 'n-dōkitin torok too-'ng-oshua:

The following medicines are used as purgatives:

1. Ol-chani onyokye. Ninye ēoki 'ng-abōbok áitushulaki eng-orno, nēar il-tuñganak aitau 'n-dōkitin torok too-'ng-oshua. Naa nēja etiu 'l-ñganaiyok lenyena ooji 'L-oodua, kake enyaali araki eidoñgi, nepiki kulle náirōua araki o-sarge.

1. *Embelia kilimandscharica*, Gilg. A concoction made from the bark of this so-called red tree mixed with butter. Also the berries of this tree, called The bitter things, which are chewed, or crushed and mixed with hot milk or blood.

2. Ol-mergoit. Ninye ēoki 'ng-abōbok áitushulaki kulle naaoto.

2. The bark of *Croton Elliottianus*, Engl. and Pax, mixed with curdled milk.

3. Ol-mukutan ēoki 'ng-abōbok áitushulaki kulle, araki o-sarge, araki 'mōtori, p' eitau 'l-kuru ootii 'ng-oshua. Ol-chani supat aii to-'supetai.

3. *Albizzia anthelminthica*, A. Brongn. The bark is mixed with milk or blood or soup as a remedy for worms. This medicine is also good for nervous complaints.

4. Ol-okuroi ēoki, neata nabo-kias o ol-mukutan, kake egweti ninye, nepiki kulle náirōua araki eng-are.

4. *Euphorbia polyacantha*, Boiss. This plant, which has the same medicinal qualities as *Albizzia anthelminthica*, is cut up into small pieces and drunk in hot milk or water.

5. O-rupande ēoki 'ng-abōbok áitushulaki kulle náirōua, neyeri.

5. *Commiphora sp.* The bark of this tree is boiled in milk and drunk hot.

6. Ol-ōkorosio. Einos ingera ol-ōkorosio ten eya 'ng-oshua, amu meata en-netiu.

6. *Euphorbia sp.* Children eat this if they are unwell, for it does them no harm.

/32 cont./

512 When the livestock have been driven out of the kraal to pasture,
[462] the women and children start to clean it. Then the fire is lighted
[351] in the huts and on it are placed the pots filled with water in which
[252] the vegetables are to be cooked. These pots (e modi, 'modio) are
[415] not made by the Masai themselves, but are bought from sedentary
[439] tribes or also from the Wandorobo, who presumably learned the
potter's art from them. They are a foot high and globular. In con-
262 trast to the warriors, all the occupants of the family kraal, espe-
[241] cially since the cattle epidemics, eat vegetable food which they
buy from the neighboring peoples, since they themselves do not
262 engage in any agriculture at all. Their favorite foods, however,
272 are, of course, milk, meat, and blood. Milk is always drunk by
[758] healthy people uncooked, as fresh (en gule) or sour (en gule naoto);
boiled milk is food for the sick and as such is usually mixed with
pulverized grains of ol lodoa (Maesa lanceolata). Sheep milk is
especially popular because of its very high fat content. Blood of
cattle, sheep, and goats is drunk fresh or eaten in the clotted
[758] state. Milk mixed with fresh or /33/ cooked blood (en jiwot) is
greatly appreciated; this drink is highly esteemed as invalid soup
[234] for the wounded. Cheese making is unknown. Butter is made by
agitating the cream in a large gourd-bottle (en diagolgol). Fat,
[252] rendered in a pot, is used as an ingredient in other foods, especially
[263] meat broth, but is also drunk without any admixture. Meat is
prepared without adding salt; it is cooked either with various
spices or roasted on a stick at the open fire. One does not eat in
[252] one day cooked meat and milk /Ill. 13 appears here/ together
[753] (1),
[263]

[171] 1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-34, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol mokotan spice (bark of

/33 cont./

462
351
516

C. G. Schillings phot.

Ill. 13. Women cleaning the kraal.

262 Albizzia anthelmintica) always used in the cooking of meat is
272 supposed to cause severe diarrhea. Therefore milk that is offered
• [753] is often refused in the hope that a meal of meat will be obtained
[263] on the same day. One who wishes to partake of both foods in one day -- and where is there a Masai who could resist an invitation to a meal of meat?! -- vomits first before eating the meat, for which he produces the necessary stimulus by means of a blade of grass stuck in the throat. If one has eaten cooked meat today, then /34/ one first drinks some blood in the morning before the milk, not out of considerations of health, but rather because it is believed that the livestock would give less milk as a consequence of neglecting this custom. Bringing milk into contact with meat
[231] is most scrupulously avoided, because, according to the general view, through that the udder of the cow from whom that milk came would become permanently diseased. For this reason the

/47 cont./

585 People gather in the vicinity of this kraal in the cool morning hours under a large shade tree, to which each of the participants brings something edible and potable, a sheep, a goat, a pot of honey, a calabash of milk or honey beer. The children belonging to the family of the bride and to her relatives drive up a head of cattle belonging to the bride's father. The head of cattle is immediately slaughtered to feed the guests. Bride and groom are festively adorned, that is, [302] above all /48/ rubbed on the upper body and head with a paint made out of beef suet and red ocher. Those present sit in a large circle, one half of which is formed by the bridegroom with the men and the other by the bride with the women and children, so that the bride and groom are opposite each other. Whereas the guests partake [753] heartily of the foods, the bridal couple may not take anything because they would become sick from it, would get a rash around their mouths, but rather they must bear patiently a flood of good teachings and advice. After finishing the banquet and the dance following it, which does not come to an end until shortly before midnight, everyone retires; the bride goes with her mother into the latter's hut, the bridegroom together with other warriors into another one. On the following day people again assemble for dancing. On this day only two sheep are slaughtered; the bridegroom brings one, his father-in-law gives the other. Women and girls rub their bodies and skin aprons with the fat of the animals. After the meal the bride is handed over to the bridegroom and the two move into their new hut, to which the man's mother brings a small child from the neighborhood. The man takes the child from her and puts it on the lap of his wife, who gives the [842] child milk to drink out of a gourd bottle. This ceremony is supposed not only to express the wish for numerous progeny, but it is also believed that it has the magic power to bring them forth.

In some regions it is customary for married people to remain together immediately after the wedding, and the wife may not leave the hut either on the wedding day or for the following five days. In others the wife goes for a time, 20 days to two months, to her mother or mother-in-law, or, if her husband already has several wives, to his principal wife, in order to be instructed in the work of the household and, with the help of her hostess, to build a hut of

000 Internal ailments. Infectious diseases: dysentery, malaria, chickenpox, smallpox, elephantiasis, parasitic cutaneous eruption. -- Ailments of the respiratory organs: head colds, bronchial catarrh. -- Ailments of the digestive organs: nausea, diarrhea, constipation, tonicum roborans /strengthening tonic/, liver pains, spleen pains, liver and spleen abscess, bilious fever, intestinal worms, ancylostomiasis. -- Venereal diseases: lues, gonorrhea, cystic catarrh, aphrodisiacum. -- Nerve ailments: headache, earache, toothache, rheumatic muscle pains, nerve stimulants, the em boschona sickness. -- External ailments: surgeons, tooth operations, bloodletting and cupping, swellings, abcesses. The goat-ulcer sickness. The glandular disease. Sand fleas. Snake-bite and scorpion sting. Poison-arrow wounds. Conjunctivitis. Sprains. Dislocations. Bone fractures. Removal of foreign bodies from wounds. Abdominal wounds. Amputation. -- Midwifery and women's ailments. Midwives. Intensifying the labor-pain activity. Pelvic narrowness. Position of the woman in childbirth. Afterbirth. Removal of the umbilical cord. Treatment of the newborn child and the woman in childbed. Nourishment. Care. Nursing. Weaning of the infant. Uterus pains. Abortion. Fertility. Child mortality.

Internal Ailments

• 753 The Masai, in contrast to the Negro peoples, never trace the origin of internal ailments to the work of evil spirits and only rarely to magic prepared against the sick person by one of his personal enemies. In most cases they see the causes of illness in external or
757 internal influences harmful to the organism. Knowledge of the treatment of internal ailments is the common property of all the peoples: a mother treats her small children; older children or adults treat themselves according to traditional methods observed by them or related to them.

/179 cont./

Infectious Diseases

757 164 For dysentery (ehg ga en gobiga en ainge) the sick one is given much liquid sheep-fat or melted butter to drink.

Malaria (ehg ol jolgilai). At the start of the chill, the patient is given an emetic, for example, a cold, strong extract of the bark of ol molotsa (Albizzia anthelmintica). Even before the fever breaks out, a decoction of en ngumai bark is administered, through which, in many cases, the outbreak of the fever is supposed to be prevented or alleviated.

• 753 825 It is interesting that the Masai -- so they say -- have always regarded the bite of the mosquito as a prerequisite for an attack of malaria. They say that the latter, with its bite, inoculates the person with a poison that causes malaria. For this reason they never [361] lay out their kraals in the vicinity of a swamp or other standing water, and also avoid those places in whose surroundings during the rainy season longer standing puddles form. /180/ In order to drive away the mosquitoes they burn (in the camp or in the hut) the peppermint-scented ol olorok (Plectranthus Merkeri, Gürke). If a kraal is badly afflicted with mosquitoes, its inhabitants leave it immediately out of fear of fever (1).

> 1. So they told me as early as 1896. When, at the beginning of 1896, Zandeo with a number of his people came to Mawchi, I received in reply to my question as to whether they had to suffer much with fever the answer: "No, there are no mosquitoes near our kraals."

757 Other emetics are root powder of ol aiwai (Cyathula Lindewina Vlm.), which is taken stirred in water; a decoction of roots and stalks of ol gurwachi (Barleria mucronata Lindau); a root decoction of ol mirra (Solanum nigrum); the boiling down of a handful of bark or root of ol dubgui (Harttonia abyssinica Oliv.); a cold extract of five finger-size pieces of the bark of ol ji (Acacia nilotica Pb.)

/190 cont./

757 and the chewing of the root of *ol asajé* (*Withania somnifera* Z.) are regarded as acting especially vigorously. Children are given an infusion of the leaves of *ol magingi* (*Mowhoma multiflora* [Hoch.] Bth.), because it has a considerably milder effect.

• 753 757 They call another greatly feared fever *ol oinki l'en dabé* and see its original cause in the bite of a kind of tick living underground, which they designate as *en dabéri ilmoo*. The patient is given liquid sheep fat mixed with the powdered grains of *ol odea* (*Maesa lanceolata* Forsk.). Presumably this fever is identical with relapsing fever, for [136] which Professor Robert Koch identified as the carrier of the spirilla [164] a species of tick living underground (*Ornithodorus Lerignei*) (2).

2. During the day Ornithodorus hides in cracks of buildings or in the ground and emerges as soon as a victim approaches. Merker's conjecture could therefore correspond to the truth, and the more so since to me too the Masai designated and displayed an unquestionable Ornithodorus as the carrier of a fever. The ed. Dr. S.

757 Against *chickenpox* (*e rit* or *en diabolod*) no medicine is known. [164] The sick person remains in the hut, is given as a drink a little milk mixed with fresh blood and sheep-tail fat, two things that are regarded as strengthening; furthermore, as food, a piece of mutton roasted in the skin at the open fire.

For *protection against smallpox* (*ol machiga* or *ol minjalol*) [751] healthy persons are inoculated in two incisions on the forehead with the smallpox pus *en gimiki* of a sick person. Smallpox patients are [164] given a decoction of the roots of *en dulele* (*Solanum campylacanthum*) mixed with cattle blood as a diaphoretic and at the same time a nourishing remedy. In order to increase the sweat secretion, the [758] patient is laid beside the hearth fire. Diet: no drink except the above-mentioned medicines; as food, the head of a sheep roasted in the skin or another piece of mutton similarly prepared.

/180 cont./

757 Elephantiasis scroti (en doreńge) is regarded as a punishment of
• 753 God for incest committed. A therapeutic treatment is unknown.
[164] Other forms of elephantiasis are said not to occur among the Masai; the one mentioned seems to be infrequent to the point of having disappeared.

757 /181/ To cure the parasitic cutaneous eruption (1)

> 1. The eruption heals within three days if the affected places on the skin are well covered with a noninritating salve (for example, zinc ointment), after they have been previously cleaned with soap.

(el bebedo) called upele by the coastal people, the body is rubbed with oil obtained from the ol dimusi tree (Commiphora sp.), whereupon healing follows in two to three days -- as I was able to find out for myself a few times.

164 I have never seen among the Masai the frambesialike schiwaki sickness (2)

> 2. Schiwaki is often mistakenly taken for lues. With the administration of potassium iodide the schiwaki sores heal in the course of two to three weeks.

very common on the Kilimandscharo. To a corresponding question I always received the answer that this very infectious disease is unknown to them.

Ailments of the Respiratory Organs

757 Against head colds (ol oirobi l eń gumeschi = cold of the
[164] nostrils) one snuffs tobacco mixed with the powdered bark of the en doroniki tree. In severe cases, as a diaphoretic, one administers the juice of the tuber of ol amboschi (Momordica cardiospermoides Kl.) or a decoction of eńg aitetoijai kete (Anellema Johnstonii K. Sch.).

/189 cont./

757 means rare that two or three rows are cut for one operation. Most adult Masai have such scars in greater numbers; however, one also often finds people whose entire torso is literally covered with cupping scars. It seems as though the people like to avoid being cut twice in the same spot.

Upon swellings one puts the pulp, allegedly acting as a resolvent, of the chewed plant of ol agaramóni (Crossandra nilotica Oliv.).

752 757 164 Abcesses, when they are ripe, are punctured with a small, pointed, double-edged knife and cut open only after the draining of the pus by pressure. Then the wound is washed out with tepid water and cleaned out, using the nail of the index finger, as well as possibly also the aforementioned knife, as a sharp spoon. Finally, one sprinkles on it a caustic powder made from the root of ol gneriandus l en doje (Plumbago ceylonica). The surgeon does not apply a bandage.

Abcesses of the mammary gland are merely punctured and emptied.

With panaritium the nail is removed and the wound washed out.

Suppurating lymph glands (ol gnamari eti ñ gimek) are treated like abcesses, but the lymph gland is cut out before the application of the caustic powder.

An ailment called ol dododoi l en daré = goat ulcers (1)

1. This is most probably a matter of anthrax carbuncle.

by the Masai manifests itself in that the person afflicted has one, less frequently two, hard lumps the size of a hazelnut under the skin, tapering into a tailllike point at the bottom. I saw these ulcers (em borol) and their scars -- somewhat larger than a mark piece -- on the temples, on the chest, on arms, legs, and on buttocks. As the original cause the people cite the eating of meat of goats or [753] sheep that died of ehg ga nairogua = hot sickness (2).

2. Pulmonary anthrax.

FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

warriorhood ". He also states that *Unoto* " is probably the best known and most misconstrued ceremony in the Masai age-grade system ". 884 561

Unoto is not performed at a single place for whole Masailand, but in every territorial section or group of sections. [90] It consists of three main stage: (a) a testing of the candidates by the elders; (b) the election of the ceremonial leader of the unit; (c) a sacrifice of a bull. [634]

a) The first stage takes place in a special hut called *singira*. [91] Not all the candidates, i. e., junior initiates, are allowed into the *singira*, but only those who have kept the sexual regulations which bind junior initiates. In order that no one may enter the *singira* under false pretences the entrance is bewitched by the elders. According to LEAKEY, [92] another test is performed insidie the hut aiming at detecting those who have entered surreptitiously. [346] [834] [754]

In the annual report of the *NAD*, [93] we read that every candidate is expected to give " an account " of his past life. " The importance of the *E-Unoto* " states the same report, " lies in the fact that it imposes an obligation upon a warrior who has disgraced himself in any way to clear himself of the stigma before he can marry and settle down as a respected Elder of the tribe ". " The *O-Singira* " says FOX, [94] " gives the warriors permission to have sexual relations with initiated women ". [783]

b) The nomination of the ceremonial leader (*ol aunoni*, pl. *il aunok*, or *ol otuno*) takes place inside the *singira* hut. The elders 561 624

[90] LEAKEY's statement, p. 194, that at the *Unoto* " all the members of a given group (i. e., age-unit) from the whole of the Masai country, north, south, east and west are required to be present " is emphatically denied by FOX, p. 451, and FOSBROOKE, p. 29. According to FOX the following sections perform it: (a) Purko; (b) Loita and Siria; (c) Damat; (d) Kuputiei, Lodokilani and Matapatu; (e) Laitokitok; (f) Kisongo. And FOSBROOKE says that the *Unoto* is celebrated " by sections or groups of sections " and is attended by as many warriors as possibile, " but by no means all ". SANDFORD, on HEMSTED's authority, recorded that the *Unoto* was held by the Purko, Kakonyuke, Dalalekutuk and Damat on the Kinangop. The Sigirari, Matapatu, Kaputiei and other divisions where it suited them best. [114] [184] [634]

[91] There are contradictory descriptions of the *singira*. MERKER states that it is a 'very big hut'; BAGGE says " not so big "; HOLLIS " small ". Leakey and Fox state respectively " an enormous ", and a " very large " hut. Probably it all depends on the actual number of the initiates involved.

[92] LEAKEY, *l. c.*, p. 195.

[93] *NAD*, p. 21.

[94] FOX, *l. c.*, p. 452.

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

It is possible to consider that solidarity as a kind of class identity. 561
This identity does not exclude the possible variations and differentiations of class-members arising from individual differentiations of talents and character, from leadership, seniority and social prestige attached to the possession of a great number of wives and a large herd of cattle. The main expressions of that identity are the use of a single name for the whole class and some special marriage regulations which apply to class members and, to some extent, to their children.

Thus, a man may not marry the daughter of a member of his [582]
own class. If he fornicates with her he is punished by his own age- [684]
mates. " His kraal is destroyed, he is severely beaten, and a number of his oxen are slaughtered ". Similarly, " if a warrior or boy commits adultery with a wife of a man belonging to his father's age-grade (or class), he is solemnly cursed by the members of that age-grade ". (HOLLIS). Furthermore, any class member when a guest [837]
of any of his age-mates, has a right to cohabit with his host's wife. [587]
MERKER, says that a widow " must not re-marry but she must live with the members of her deceased husband's class ". This " sexual communism ", as HOLLIS calls it, takes place only among members [837]
of the same class. It is limited, of course, by clan and kinship exo- [582]
gamy, which, even for class members, is strictly enforced.

At the performance of the *Embolosat*, *Engibata*, *Unoto*, *Ngeherr* 561
names are given to sets instituted. Names assumed at the *Embolosat*, 552
Engibata, and *Unoto* are temporary, for temporary is the nature of the set thus established. At the *Ngeherr*-proper all previous names are discarded for a single name which is final and applies to the age-class as a whole. It is this name which is handed down to the following generations. Age-class names are, as it were, the milestones by which Masai can order their past into a certain historical perspective. Class names are thus recalled when historical facts are recounted.

Lists of class-names have been recorded by our authorities. It may be of interest to reproduce here some of those lists collected by MERKER, FOX, and FOSBROOKE.[166] FOSBROOKE has attempted

has been shown them, he will enter one. When he has entered, the owner of [574]
the hut leaves him and goes to search for a place to sleep in... A Masai cannot refuse hospitality to a stranger (of his own age) for he is afraid that the other [759]
members of his age will curse him, and he will die ". [626]

[166] MERKER, *l. c.*, p. 289; FOX, *l. c.*, pp. 450, 462; FOSBROOKE, *l. c.*, pp. 11 s.

3: Hollis G-5 (ca. 1894-1904) 1910 FL12 Masai FL12

601 431 Thus, a man gives his brother's wife or his paternal uncle's wife, or his paternal uncle's son's wife a cow, a calf, or a lamb, and the terms of address used by the two, instead of being *par-sidan* or *yeiyo*, as the case may be, are *pa-kiteñg*, *pa-ashe*, or *pa-supen*; a father-in-law gives his daughter-in-law a calf, and the two call one another *pa-ashe;* and a paternal uncle gives his nephew's wife a she-goat and calls her *pa-kine*. Similarly a man's first wife usually presents each successive wife with [595] a calf on her marriage, and instead of using the term *na-aīni* when speaking to one another the two women say *pa-ashe;* a woman gives her husband's brother's wife a donkey as a wedding present, and the two women call one another *pa-sighiria;* and a mother-in-law selects a cow for her daughter-in-law some months after marriage, when she has learnt to keep house for her husband, and the form of address is *pa-kiteñg*. This method of address is carried even further, and is used between men of the same family. A father, for instance, usually gives his son a bull when the boy is eight or nine years of age, and the two call one another *pa-oiñgōni* instead of *papa* and *li-ayōni;* a paternal uncle makes a similar present to his nephew, and the same form of address is used; an elder brother gives his younger brother a heifer, and the two call one another *pa-'n-dauwo*; and paternal cousins often use the terms *pa-oro* or *pa-meregesh* when talking to each other.

The following terms are found: *pa-kiteñg*, the bullock or the cow; *pa-moñgi*, the bullock; *pa-kīshe*, the cows; *pa-oiñgōni*, the bull; *pa-'n-dauwo*, the heifer; *pa-buñgni*, the bull calf; *pa-ashe*, the calf; *pa-kuo*, *pa-oro*, or *pa-sitima*, the he-goat; *pa-kine*, the she-goat; *pa-lulelo*, the kid; *pa-kerr*, the ewe; *pa-meregesh*, the ram; *pa-sighiria*, the donkey; *pa-supen*, the ewe lamb; *pa-mao*, the twin kids.

With one exception, a present of this nature is not made, nor are those terms of address used, outside the father's family. Thus, a brother cannot give his sister a heifer so that the two might call one another *pa-'n-dauwo*, because if the sister marries she will leave the family; a maternal uncle cannot give his nephew a bull and call him *pa-oiñgōni*, and maternal cousins may not address one another by the terms *pa-oro*, etc. The exception to this rule is made when a man marries. He then presents his father-in-law with a bullock and his mother-in-law with an ewe, and the terms of address are *pa-kiteñg* and *pa-kerr*. These presents have nothing [583] to do with the cattle paid for the bride.

604 578 754 A maternal uncle (*ol-apu*) exercises great influence over his nephews, as it is believed that if he were to curse them they would die. He can at any time stop a fight in which one of his nephews is engaged by merely calling on his nephew to desist, as the nephew would be afraid of his right arm withering if he were to [593] disobey. This power is to a certain extent reciprocal, and if a man were to start beating his wife he would have to stop if his maternal nephew ordered him to do 593 so. A father and any old man of the family can also usually stop a fight by telling 626 the combatants to desist, but they are not necessarily listened to. A mother has 754 more influence, and if her son refuses to obey her, she strikes her stomach and says, "You were born in this"; whereupon the son is said to sicken, and can only recover when his mother makes a rope of fibre which she hangs round his neck.

Prior to the meeting, Mr. Hollis visited the Uasin Gishu Native Reserve and several of the adjoining farms and obtained the following information. The Uasin Gishu Masai in this area numbered in all between 1,400 and 1,500 souls, and paid tax on 440 huts. They possessed 15,000 head of cattle and 25,000 sheep and goats. 4,000 head of these cattle were in the habit of grazing on land belonging to Captain Grogan, who received toll in bullocks at the rate of 1 per cent. per annum. There were 30 kraals on Lord Delamere's land, containing 3,000 head of cattle, which were allowed this privilege without payment. The remaining 7,000 or 8,000 cattle were for the most part in the Native Reserve.

Statistics of the Uasin Gishu Masai. 648* 231 [162] [651]

The two reserves occupied by the Uasin Gishu Masai in February, 1911, were separated by a strip of alienated land, and steps were taken to re-acquire parts of adjacent farms belonging to Captain Grogan which would join these two areas and form one native reserve having an area of some 40,000 acres. The Masai were informed that, when this reserve had been allotted to them, they must regard the question of boundaries as definitely settled. They were also given to understand that, in lieu of hut tax, they would be required to pay a cattle tax of R. 1 per head or a stock tax of one beast out of every herd of 100 cattle, sheep or goats.

Further extension of the reserve. 648* 311

In July, 1911, the Provincial Commissioner, Naivasha, reported that dissensions had occurred between Chief Lembere and the hereditary Laibon, Walikondi, leading men in the Masai Reserve. Lembere had been constituted Chief by Mr. (now Sir Frederick) Jackson when he was stationed at Ravine and had acquired a considerable following. Charges of witchcraft had been brought against Walikondi, with the result that he requested permission to move, with the other Masai, from Laikipia into the Southern Masai Reserve. His following expressed a desire to accompany him. It seemed, however, that such a movement would be the cause of friction between the Uasin Gishu and the other Masai, who have little in common, and it was decided to hold the matter over, at any rate until the Masai Move was an accomplished fact.

Dissensions between Lembere and Walikondi. 648* 598 754 791

In May, 1912, the sanction of the Secretary of State was requested to an exchange of land held by Captain Grogan in the Naivasha Province for an area on the Athi Plains. Captain Grogan was willing to exchange 16,638 acres, to be used for an extension of the Uasin Gishu Masai Reserve, for 30,000 acres on the Athi Plains. The Secretary of State approved this arrangement in June, 1912, and the Provincial Commissioner, Naivasha, was instructed to take steps to mark out the extended Uasin Gishu Masai Reserve. 648*

A description of the Uasin Gishu Masai Native Reserve was accordingly drawn up, and read as follows:— Uasin Gishu Masai Reserve boundaries. 648* 131

"The reserve is divided into three parts:

"No. 1. Commencing at the point where the Nakuru Eldama Ravine Road crosses the Enarosuro (or Nassour) River the boundary follows the right bank of this river down stream to its junction with the Esageri (or Sageri) River; thence along the left bank of the Esageri River up stream to the point where it is crossed by the Nakuru Eldama Ravine Road; thence along this road in the direction of Eldama Ravine to the point of commencement.

"No. 2. Commencing at the point where the Esageri River is crossed by the Nakuru Eldama Ravine Road the boundary follows that road in the direction of Nakuru to the most northerly corner or portion L.O. 487; thence in south-westerly direction along the western boundary of L.O. 487 to its intersection with the eastern boundary to L.O. 502; thence northerly and westerly along the eastern and northern boundaries of portion L.O. 502 to the Esageri River; thence along the right bank of the Esageri River down stream to the point of commencement.

"No. 3. Commencing at the most westerly corner of portion L.O. No. 486 on the Eldama Ravine Road the boundary follows the western boundaries of L.O. 485, 484, 483, 661 in a north-easterly direction to the most northerly corner of the latter (which is also the western corner of L.O. 662): thence in a south-easterly direction along the southern boundary of L.O. 662 to the Molo River;

FL12 Masai FL12
Kisongo

685 stolen, the fine is one ox for each sheep stolen. In the cases of thefts from *'l-meek*, the fines are always reduced, because it is held by the Masai that all the cattle in the country belong, in reality, to them.

If the thief has no cattle, he must give his daughter in marriage to the man whom he has robbed if the latter is a Masai. He gets paid the usual dowry for her, however. If the theft is one of money (a practically unknown crime), the amount of the fine is regulated by the amount of money stolen and the fine must be paid in cattle.

The offence of arson is not known, and there is no stated penalty. If, as a result of grass-burning or through carelessness, a man is the accidental cause of another's kraal being destroyed by fire, he is supposed to bring a bottle of honey, or a cow,[1] by way of compensation. No fine is laid down.

EN-GIOPO : ADULTERY. *EN-GITAAPARE* : SEDUCTION

684 [1054] If it be known that a man has lain with a woman of another age, he is cursed and has to pay two bottles of honey and two cows before the Elders will remit the curse.[2] Should he be caught in the act, the friends of the cuckold tie him up at the kraal door and he is beaten, pelted with cow-dung and spat upon by everybody, including the women. If the offender is a warrior, his pigtail is cut off and he is cursed. This humiliating punishment is greatly dreaded.

It is no offence for a man to commit fornication or adultery with a woman or girl of his own age, but should a warrior fertilise an unmarried girl, it is considered very wrong. He [848] must pay a cow and a bottle of honey, and the child will be the property of the man the girl is going to marry.[3] If the girl is not engaged, the child will be the property of her father, or her eventual husband may take it. By arrangement, Masai warriors generally marry the girls they cause to conceive.

[1] The Masai are not definite regarding the cow in this case. In fact, the Elders had a mild squabble on the point when the above information was being taken.

[2] See Hollis, *The Masai*, p. 312.

[3] Masai girls are often engaged to be married from their very earliest years.

6: Thomson K-3 (1883-1884) 1887
FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngăi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngăi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 824 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the 764 day closed for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. These fierce

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

is confirmed by numerous reliable elders, that, even if the laibon had given his sanction for the circumcision, the Dareto elders would have been justified in acting as they did. 561 791

On a safari in June, 1938, laibon Mbeiya laid down a ceremonial for closing the age. It consisted of taking a small bird (dead) and breaking its legs and putting out its eyes. Whitehouse records a similar ritual in the same connection. On further enquiry it appears that this procedure is merely a curse which may be laid on any elder who is determined to circumcise his son during the 'closed season' in defiance of warnings. It is generally considered improbable that such a ceremony will actually be performed. The point of recording this case is to illustrate that the laibon's part in this matter is merely to re-inforce by magical means a decision that had already been taken by the elders. It is also of interest to note that Mbeiya was passing off as original a curse which had been used in Kenya for years. [154]

Although the supervision of the age grade ceremonies has been recorded as an important function of the laibon, this activity is subject to curious restrictions, the principle of which I have been unable to ascertain. The facts, however, show that the laibon of one section may perform the ceremony for another, or alternatively the assistance of an 'unofficial' laibon may be sought; for instance the Ngeherr or passing out ceremony of the Dareto age-set of the Kissongo section was nominally held under Parrit, and the Unoto or promotion ceremony of the Kisale age under Mbeiya, who were respectively the ruling Laibon at the material times. But in fact an old Kikuyu adoptee of the Engidong clan, one Lolkokwa ole Kashungu (now deceased), was called in to assist in both these ceremonies. By agreement the Mondul laibon received the fees in respect of these ceremonies from the Naberera and Kibaya areas, whilst those contributed by the Mondul and Longido Masai went to Lolkokwa at Bisil, Kenya Colony. In another case, Sangoyan, laibon of the Loita section, performed the Unoto or promotion of the Kisale age for the Matapatu and Lodokilani sections, which are nominally under Kimuruai (15). All that can be said, therefore, in our present state of knowledge, is that the 'official' laibon to the section does not necessarily play the leading part in the age grade ceremonies of that section. [597]

In the choice of Laigwanak or Spokesmen of the Age-grades, Whitehouse records "The medicine man always accepts the spokesman presented to him," a statement for which there is ample confirmation throughout Kissongo. Hollis, it is true, states "If the chief medicine man approves of the selection, a cloth is made for the new chief . . . ", but this is with reference to the launon who is a chief of *ceremonies* only, and certainly does not apply to the Laigwanak or Spokesmen.

It is also noteworthy that the il Piron elders keep in very close touch with the laibon, from the time they take charge of the new age, until their charges stand down. Most of the Laigwanak of the Kisale or Senior Warrior Age of to-day state that they were first taken to Laibon Parrit when he was still resident in Kenya, i.e. prior to 1923: they were of course only boys at the time. The laigwanan of Lossogonoi for instance

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

When the time for the ceremony arrives, a very big village is built called *sunubu*, and all the members of that age-grade which is to be transferred from the Junior to the Senior Warriorhood stage assemble here with their friends and relations. The warriors concerned all dress up in their very best finery, and lion skins especially are in great demand; and for nine days they dance a special dance called *Kaibach el moran*. During the whole nine days of dancing a very great number of cattle are slaughtered, and there is great feasting and beer-drinking, but neither the dancing nor the feasting are the important part of the ceremony; they are merely incidentals, centred around the *thingira*. 561 [535] [574]

The Thingira.—Away from the main village an enormous hut has been built which will accommodate anything up to four hundred men at a time. It is said to be round in plan, to have a pointed roof, and to take very many days to build. There are no partitions inside it, but in the centre is dug a circular pit. Outside the hut is a thorn fence with only one entrance. This hut is called *thingira* (a word which has been borrowed by the neighbouring Kikuyu and applied to ordinary bachelor huts), and is the centre of the whole of the *Eunutu* ceremony. During the whole of the nine days of the ceremony this *thingira* is used as a "club-house" by the men of the age-group concerned with the ceremony, but there are certain restrictions, and it is these restrictions which give the key to the meaning of the whole ceremony. It is considered both ignoble and dishonourable for any man in the warrior groups—and more especially the junior warrior groups—to have any sexual relations with any but the uninitiated girls, but, of course, cases do occur either openly (*see* Forced Marriage) or in private. Now all members of the age-group concerned must be present at the *Eunutu* ceremony, but only those who have strictly observed the above regulation and have never had sexual relations with an initiated girl or married woman may enter the *thingira*. In order that no one may do so under false pretences the entrance to the *thingira* is bewitched by the elders, so that if anyone ineligible enters he will surely die. 56 34 [192] [834] [754]

The *thingira* is not big enough for all the warriors concerned to use it simultaneously, and each day for the nine days there is a public ceremony when the various individual territorial groups are expected to enter. For this ceremony all the friends and relations of those who are expected to enter collect round the entrance and each individual as he enters is greeted with applause, as he has shown by entering that he has not dishonoured himself or his family. Those warriors who dare not enter try to slink away unobserved, for they are disgraced. Inside the hut—as mentioned—is a large hole which is used as a cesspool, into which the men who enter the hut must urinate. This cesspool is also bewitched as an extra precaution, and anyone who has falsely entered and evaded the witchcraft of the entrance will certainly die upon urinating in the hole. All those who enter the *thingira* on any given day during the ceremony sleep there that night, and also have milk and meat brought them for food, and sit and talk for hours. During [514] [754]

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

585 837 *Married Sex Life.*—Among the Masai (as already stated) a married woman's first duty to her husband is to bear him children, and husbands do not mind if their wives have intercourse with other men, provided that they do not do so actually at a time when their husbands want them themselves. Even in such a case—apart from private measures which a husband might take—there is no recognized punishment for the woman, or any legal claim against the man, provided, of course, he is a married man of a sub-clan other than the woman's own. [684]

834 *Sex Restrictions.*—There are, of course, certain definite regulations which must be observed, the chief of which are :—

(1) No woman may have intercourse while she is with child (not even with her husband).

(2) No woman may have intercourse during the actual period of menstruation.

(3) No married woman may have intercourse with an uninitiated boy.

(4) No man in the warrior class may have intercourse with a married woman.

(5) No married man may have intercourse with an uninitiated girl.

(6) No woman may have intercourse with a man who is the son of any member of her husband's own age-group ("They are as his own sons, whatever their clan may be").

(7) As already mentioned, the rule of sub-clan exogamy applies as much to general sex life as it does to marriage and, therefore, a woman must avoid all men of her own sub-clan.

684 PENALTIES FOR BREACHES OF THE ABOVE RESTRICTIONS.

Breach of No. 1.—There is no fixed punishment for a breach of this regulation, but the man would be accused of causing damage to the child, and should abortion take place later, or the child be born with any deformity, he would be held responsible.

Breach of No. 2.—There is no punishment for a breach of this regulation, but it is simply "Not done."

Breach of No. 3.—A woman who is found infringing this rule is severely punished in the following way. She is tied up and severely beaten by her husband, so that her whole skin is bruised, and then sheeps' urine is poured over the abrasions. This acid causes very severe pain for many hours. The boy is not punished, as the fault is held to be entirely that of the woman, who should know better. In actual practice the boy is expected to bring the husband a present of honey beer in order to placate him, and so avoid being cursed with a very potent curse. [431] [754]

Breach of No. 4.—There is no punishment for the woman who is found to have broken this rule, nor is there actual punishment for the man, save that if his sin is discovered he is dishonoured at once by his fellow age-group members, and even if not found out at once, his dishonourable conduct will be found out at the *Eunutu* ceremony (*see* p. 194), when his turn comes to enter the *thingira*.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Breach of No. 5.—A married man who breaks this regulation and is found out is very severely punished, the punishment being left to the women of the village, who have the right to hamstring and maim all his cattle. 684

Breach of No. 6.—The punishment for this is as for a breach of No. 3 as far as the woman is concerned, and likewise the man must take beer to the aggrieved husband to avoid a curse. [431] [754]

Breach of No. 7.—A man who breaks this regulation is held to be solely responsible, no guilt whatever attaching to the woman. As this offence (intercourse with a member of one's own sub-clan) is the worst possible, the penalty is very severe indeed. Every animal the man possesses—cattle and sheep alike—is hamstrung and otherwise maimed and left to die, and if the man can be caught he is so severely beaten and maltreated that he is almost certain to die too.

The Marriage Transaction.—The usual number of animals transferred as marriage settlement are :— 583

3 Heifers.
1 Ox.
1 Ewe yearling.
1 Ram.
Also honey beer in large quantities.

Of these, the ram is slaughtered by the mother of the bride, who is anointed with its fat.

When a girl who has conceived before initiation is being married by a man other than the lover who was responsible for her condition, only one heifer is given (instead of the three mentioned above) at the time of the marriage, but the other two heifers must be handed over at such time as the first of her children is initiated.

PART VI.—FAMILY LIFE.

The Relation of Parents to Children.—As already indicated, a man's legal children among the Masai are—as often as not—only his by virtue of his being the husband of their mother, and quite irrespective of physical parentage. Nevertheless, fathers are very proud of their children, and take considerable interest in their welfare. They must always be present at the initiation of a son or daughter, and feel very hurt if for any reason they are prevented from doing so. When a son grows up and eventually forms a village of his own, his father and the other men of the village who belong to his father's generation may not come and feed at the new village until one of them has been presented with a heifer called *ndauu* by the young man. 593 593 361 431

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

427 428 Women possess no property save their ornaments. Of these the beads and the necklaces become the property of the daughters, but the wire ornaments are thrown away.

775 776 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse [775] uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laiseer	(1) Laiseer (2) Legetoi (3) Letoya (4) Lukumai (5) Lamothere (6) Libartimaru (7) Loiger.
No. 2. Ndarosiru	(1) Ndarosiru (2) Lanaboguaru.
No. 3. Molelian	(1) Molelian (2) Mbarakineti
No. 4. Magesen	(1) Magesen (2) Lesegu.

PART IX.—CATTLE AND SHEEP.

233 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well-known to be worth discussion. A few interesting notes were, however, obtained.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

Functions of Laibons.—A *Laibon* is far more than a mere medicine man or purveyor of charms. His function would seem to approach more closely that of a chief priest of the Israelites, and the N-Kidongi sub-clan might be compared to the Levite tribe. 791

He is, or should be, the religious head of the tribe. No ceremony nor important enterprise should be undertaken without his blessing, in return for which he should be given a large present of cattle. He prays to God on behalf of the people. On one occasion Sendeyo arrived in my camp before sunrise, just as I was about to start on an excursion into the deep forest, and made a prayer for our safety. We stood round him and responded "*Na-Ai*" (= "O God") at the pauses; I was too much taken by surprise to remember the details of the prayer except that it was very impressive, and that he ended by giving his genealogy (*see* Hollis, p. 326) in order to show that the prayer was one which should receive attention.

The *Laibons* use charms (*indalingoi*) for various purposes, and their employment is invariably accompanied by prayer to God. I have a few of the charms in my possession and have been instructed in their use, under promise not to reveal my knowledge. Sendeyo once said to me that a good heart was better than charms. [789]

Witchcraft.—Although the *Laibons* use charms, witchcraft, *i.e.* harmful magic, is not indispensable to their office. Some of them, however, are alleged to have made use of it. Witchcraft is not indigenous to the Masai. Such persons as I have found practising black magic in Masai country have learnt it from the Kikuyu of Nyeri District or from the Meru. 754 [179]

Religion.—The Masai believe in one God whom they call En-Gai, which is the same word as they use for rain. They say that God is one, but permeates everything. He may be prayed to as inhabiting a wood, a stream, the earth, etc., but He is all the same God. The Masai only use short prayers such as "Na-Ai" (O God) and "Na-Ai mikiar" (O God do not strike me) except for the prayers at *Il Pul* and those of *Laibons* already mentioned. Some, if not all, of the ceremonies have a religious significance, but I cannot give details without further experience. 771 776

Superstitions.—There are certain old trees with holes in them, in which a Masai puts a handful of grass or leaves when he passes. They have told me that this is equivalent to a prayer, "May I live to be old like this tree." 789

A traveller sometimes puts a stone in the fork of the branch of a tree near the track in order that he may arrive at his destination before nightfall.

There are a few places where the passer-by should tie a knot in the grass. I am uncertain of the reason for this.

When the new moon is first seen people pluck grass and throw it towards the moon, saying, "*Injoki o sesen ol oado naaisho ol dorop*"="Give me the body which is long and I give you the short." I do not know the significance of this.

16:Hamilton U-5 (1959) 1963
[P. 109-B] FL12 Masai FL12
Loita

56 [789] The fourth and last day is called 'The Day of Shaving.' Today the parents take the hide ring off their son's finger and tie it to the stopper of the gourd which his mother uses for milk. On this day, too, each of the *moran* gives a black bead to the *Ol-Oiuse* who makes them into a necklace. In later life, if one of the givers ever [754] does him any harm, the *Ol-Oiuse* throws that one bead away—and the giver dies.

[302] The final act of the ceremony is the shaving of the youths' heads. This is done in the same way as yesterday with the 49. It is a solemn, indeed sad, operation and many a mother was in tears at the thought that her treasured son was no longer a boisterous youth and must soon assume the almost Roman *gravitas* affected by the adult male Masai.

M 614 (186) /18/ The 'L aiñ and El mñeijas to a certain extent stand in contrast to the El mañgana, whom they half-mockingly, half-abusively also call 'N dalata-gatok (1)

M (192) 1. 'N dalata, glutton, en gatok, the mouth: by putting the two words together the idea of the first is supposed to be intensified.

or Ñg-eñ-ñegil-eini (2).

M (192) 2. ; the house of the hard teeth: ñegil a hard, ni eini, the teeth.

and, in contradistinction to them, designate themselves as Ñ- eñ ni ñiñi. As the reason for this, tradition relates that the El mañgana were once separated for a longer period of time from the other two tribes and, upon reuniting, made a bad impression because they no longer observed the divine commandment forbidding the killing of female animals for consumption. This gave rise to the above nicknames, which, freely translated, mean "greedy glutton."

M 613 The El bedjo and El gwé are not infrequently designated as El ainegela, a name formed after that of a war leader, Ou negil. As the reason for the combination, it was said that members of the two sublineages were once notorious cattle thieves.

M 791 (613) (189) The most outstanding lineage, not only of the 'L aiwa tribe, but of the whole bisaal people, is the El gisak, because both the family of the chief (ni ainai) and that of the sorcerer (ni gisak) belong to it. The designation "chief" is actually not quite correct, since the ni ainai does not rule directly and does not exercise any real executive power. He rules only indirectly: the firm belief of his subjects in his prophecies and in his supernatural ability of sorcery gives him an influence over the destinies of the people. Despotism and cruelty, such as we find among all Bagwo rulers, are foreign to him. He is less a ruler than a national saint or a patriarch, in whom the Wakauñ and Aaá also see their head. The people speak of his saintly person in timid awe, and no one would

M (189) D (791)

/156 cont./

802 after the other, from the little finger to the thumb, into the palm of the hand. While one then further counts in like manner on the fingers of the left hand, those of the right one remain closed and only its thumb is moved freely. After turning down the thumb of the left hand, the one counting raises both hands, now closed into fists, and says: tomon (= 10). For counting further, one begins anew in the same way and does not continue, say, on the toes.

801] The Masai count neither human beings nor cattle. It is believed,
[171] as the Israelites also did, according to 1st Chron. 21, that the ones counted would die. Thus, they correctly estimate larger multitudes of living creatures in round numbers, and small ones with quite great certainty. Only dead persons, for example, the fallen warriors, are counted individually.

192 The names of the fingers might be mentioned here: thumb =
826 ol moruo kitok, that is, the big old one. Index finger = en sogutiot
• [754] or ol osokutoni, that is, the sorcerer: if one wants to make someone ill through sorcery, one spreads the magic medicine under the nail of the index finger and, murmuring a curse, one points with it at the person concerned. Middle finger = ol gerti, that is, actually the strip of skin worn ringlike on the middle finger. Fourth finger = ñgoto eñ genenja, that is, mother of the little finger, which is called eñ ginjenje or also eñg ilinda.

802 Ordinals: ol oiturugu = the first /masc./, ol iaré = the second /masc./, ol iguni = the third /masc./; eñ aiturugu = the first /fem./, eñ iaré = the second /fem./, eñ guni = the third /fem./. The /masc./ (the /fem./) (general), ol (eñ) abaye; the last in the meaning of the rearmost is called ol abaye ta goroom; the one standing on the right end of a row (to the right of the one judging) is called ol abaye t' eñ gaina ertatenne (eñ gaina = the hand, ertatenne = on the right). the one standing on the other end, ol abaye t' eñ gaina ekediñaje (ekediñaje = on the left).

Once is called nabo kata (or nabo gadá); twice, kat' aré; three times, kat' uni, etc.

764 [765] /701 cont./ Later, upon passing the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[781] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being. [782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /702/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs: they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 In contrast to the simple exposure of the corpse, that of a chief [791] (ol olkoni), of a married man of the El kiboron lineage, and often [613] also that of a sorcerer (ol gulatiki) is buried. The bottom of a pit a meter deep is covered with a neat's hide moistened with fat, and • [764] upon this the corpse is laid in the position described above. A [787] second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

775
825
826
613

/210 cont./

Allegedly they never bite the El kiboron people: on the other hand the latter often use them as frightening devices against both Masai and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngnaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngnaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise 'Ngnaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (en ekim), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and the execution of special gestures. The aforementioned amulet ring 789 (ol geretti) protects one against the effect of magic made by another [751] [754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' en gebita feast. The en goguroi is tied around the ankle and protects one from ailments of the legs. The ol durgel [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorrá protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/211 cont./

789 amatory adventures. The powder also serves as love magic, in that
[832] the woman sprinkles herself and the man with it, through which his love for her is heightened. If a woman loses her first child soon after birth, she hangs in the doorway of her hut during her next pregnancy an amulet that consists of a few cowrie shells sewed on a small piece of leather and a little bag, made by the ol goiatiki, containing sawdust to protect the expected child from sickness and death. The
[824] plants preferred by the ol goiatiki for the manufacture of his magic medicines are: en gaitetojai (Commelina Merkeri K. Sch.), ol kioge (Courbonia virgata), en gujene (Cyathula Merkeri Gilg), ol assassiai (Osyris tenuifolia), os segi (Cordia quarensis), ol debbe (Acacia Merkeri Harms), en gadardar (Ochna Merkeri Gilg).

• 754 The belief in the evil eye, which makes human beings and livestock sick, is also generally widespread. One afflicted with the evil eye (erta gonjek) may not let himself be seen in the vicinity of the kraals. He is anxiously avoided by all people and therefore builds a kraal of his own, in which he lives alone with his family. If he ventures to enter a strange kraal, he must be prepared to be killed. If a human being or a head of livestock suddenly falls sick or dies without one's being able to explain this by natural causes, it is often believed that the reason for it must be sought in the doings
[784] of an evil sorcerer (ol osukutoni). Only if such a one has not been in the vicinity for a long time is the misfortune traced back to a punishment from God.

/18 cont./

791 dare to appear unsummoned before the mighty one. Thus, the Masai living on the military station of Moschi /Moshi/ remained hidden during Zendeo's presence when the latter visited it at the beginning of 1896, and my Masai servant did not dare deliver a message either to Zendeo or to an attendant sitting beside him.

The aim of the chief's policy is the unity and strengthening of the Masai. By letting the rapacity of the warriors spend itself [648] in expeditions against foreign tribes, he protects his own people from devastating civil wars for which the endless friction of the districts among themselves would give continuous occasion. This influence makes possible for him the belief that a victory is attainable only through the secret power of the war medicine that he alone knows how to manufacture, and a defeat must inevitably come if he predicts it. Neither he nor his closest relatives go to war. He gives remedies against epidemics and sicknesses -- as a [755] rule in the form /19/ of magic medicines -- and orders supplication [782] feasts in honor of the Masai god 'Ng ai. He reads the prophecies [787] from an oracle game of the kind of the counting off of buttons. From a neat's horn provided with a leather cover (Fig. 1) he takes a handful of river pebbles, puts one or several of them aside, and throws back the rest. After he has repeated this several times, he announces his prophetic verdict, which often enough is worded in Pythian ambiguity. The game, like the lineage, is called en gidon. The office of ol oiboni is hereditary and has been handed down until the most recent times from father to the eldest son of the principal wife. The badge of his office is an iron club.

Fig. 1.

791 The Masai do not know much to say about the genealogical 613 tree of the El oibonok. The first four or five names that it contains 173 belong to chiefs who ruled in early times. These names are: 791 Kidonoi, Geriga, Bargumbe (Barnjumbe), and Lesigirieschi. The 175 next chiefs are historical and descend from modern times. The first of them, Kibebete, seems to have ruled at the beginning of the nineteenth century; he was followed by his son Sitonik, who

175
619 /20 cont./
791 understand what such a success meant. Mbatyan demanded thou-
727 sands of workers, and they moved obediently, in endless long lines,
466 men, women and children, toward the steppe area of Kisongo, lying
[46]

Merker phot.

Ill. 4. Zendeo, the present chief of the Masai.

175
619
791 west of the mountain, where the mighty one resided, like his
727 ancestors. There they had to dig a long water channel, whereby --
466 a further particular humiliation -- the men had to work in rank
[462] and file with the women. Encouraged by these and other successes,
175
648 the Masai became more and more arrogant, and they extended
721 their war expeditions farther and farther. It was not only the
Negro tribes of the interior who had to suffer under their lust for
robbery and murder, they even penetrated into the immediate
hinterland of the coast and directly approached the coastal cities
of Mombasa, Tanga, Bagamoyo, and others.

175 The belief in the magic means for healing purposes which
791 Mbatyan gave those seeking help, and whose chief ingredient
755 quantitatively was the vanilla-scented, pulverized wood of the
ol mogongora liana, was so deep-seated in the people /21/ that
it was often supposed to have actually brought to the people

175
791 /21 cont./
[785] recovery from their pains. Mbatyan earned outstanding merit
[232] through the discovery of a protective vaccination against lung
[173] disease of cattle. According to the corresponding accounts of
[787] Zendeo and four old Masai, Mbatyan, several years before his
[648] death, had already prophesied the appearance of rinderpest that did not take place until after it and the subsequent subduing of the Masai by Europeans. In the outward appearance of this man nothing divulged his power. On a thin, average-sized figure sat an ugly head whose face was disfigured more particularly by the lack of one eye -- allegedly a birth defect. This latter circumstance led to the origin of the legend that the chief must always be one-eyed and that the father should destroy in childhood one eye of the son later following him. The face was even more repulsive because of a scanty, slightly gray full beard.
[826] That is, in contrast to the other men, neither the ol oiboni nor
[302] the el goiatek and el kiborōn mentioned farther below may pluck out their beards, because they would lose their supernatural power through the removal of the beard hairs.

791 The chief's village consists of a large number of kraals
621 lying close together, several of which serve as the dwelling of
[361] the ol oiboni with his numerous wives. Mbatyan had about 200
[595] wives; the still young Zendeo has only 20 of them. No strange man may enter these dwelling kraals of the chief and his wives
[623] or appear in their immediate vicinity. Close by are found the rest of the kraals, one of which is intended for conferences and receptions and in which a few older men close to the chief as helpers and advisers (el dunganak oirorie ol oiboni) live with their families, whereas the others are occupied by warriors who form the defense of the village and, on the marches of the chief, his bodyguard. In his last years of life, when Mbatyan was mentally disturbed, he often spent months on the open steppes in a small hut made of branches, around which the warriors accompanying
791 him camped in a large circle. The ceremony in the chief's
576 camp is very simple. One of the men wandering about idly in
609 the village leads the newcomer into the conference kraal, where he waits for the chief. As soon as the latter appears, the stranger

/216 cont./

687 [626] 683 There is no special punishment for cowardice in war. The warriors, however, mock the coward in front of the girls and make him ridiculous in their eyes. One who makes anyone ill through sorcery pays a head of cattle to the one bewitched. If the latter dies, the sorcerer must pay the fine levied for murder and is himself driven away.

681 The death penalty is carried out in that a band of armed men attack the defenseless sinner and kill him with spears. For a war /217/ traitor the execution is carried out by warriors, for an arsonist, by those injured by him. Fines are usually paid in installments. In general their amount is not fixed for the individual offenses. In the one area this, in the other that is regarded as the norm. Diminished ability to pay because of precious livestock sicknesses or unsuccessful wars naturally lowers the fine. Moreover, if in the district the fellow members of the lineage or tribe of the perpetrator have a preponderance in numbers or power over those of the injured one, the fines are considerably smaller than in the opposite case; then murder is often punished as negligent homicide, or many a time even left entirely unpunished, just like other crimes or misdemeanors. [672] Irresponsibility is regarded as mitigating in some districts, in others not. An attempt is not punished. Self-defense is not mitigating. [714] [701] [684] [685] A degrading punishment exists only for the warriors and consists of cutting off the guilty man's braid-coiffure, as is well known, one of the insignia of his standing. This punishment is said to be inflicted most frequently for rape committed on a married woman, less often also as additional punishment for theft. Innocent accused persons 734 are remunerated with a goat or a sheep. The mentally ill occupy 672 an exceptional position in the legal world only insofar as they are unable to pay fines. In most cases their people are then liable. The latter therefore keep in fetters the sick person who is inclined [755] toward misdemeanors or crimes. Frequently, too, if an ol goiatiki does not succeed in curing him through magic remedies, he is tied to a tree at some distance from the kraal, to be devoured by predatory animals.

[Information on Masai medicine men and their primarily divinatory functions in the society will be found in category 791.]

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

the Central Council being the Appeal Court. In the thirties, the system was again modified, and there are now two regularly constituted tribunals in each of the two Kenya Districts, Narok and Kajiado, in the Masai reserve, and an Appeal Tribunal in each district. It Tanganyika changes came later. Only in 1938 the Paramount Chief was abolished and a new system introduced. There is now a Masai Council, acting as the Appeal Court from the six Local Courts established under the authority of a Headman. Lord HAILEY, commenting on the Tanganyika system, remarks that "the whole of the juridical organisation seems on a tentative basis, and in practice it functions irregularly, owing to the nomadic habits of the people". This is more or less true of Kenya. It is a fact that, in Kenya and Tanganyika, the Masai never accepted the authority of the *laibon* or prophet in terms of Paramount Chief, and that they dislike the idea of a formally established court.[34] Nomadism, as Lord HAILEY points out, has much to do with this attitude of the Masai, but it is their social structure which has no place for such institutions. Whatever political authority exists among the Nasai, it is established on the structural basis of the age-system. This system has a dynamic character which can hardly be reconciled with the rigidity of any administrative system imposed from above by the Governement.

The institution of the Masai prophet has been described by FOSBROOKE, p. 13. He distinguishes three types of *laibon*. "First there is the private practitioner who, for suitable remunerations, will perform such service as curing sickness, removing barrenness and ensuring fidelity in wives. He is only consulted by individual patients. The next stage is when a private practitioner has acquired such a reputation that he is consulted by a deputation on behalf of a group of Masai, and provides charms and lays down a ceremonial to be utilized to the advantage of the whole group. Such prac-

[34] Writing of the Native Authority System in Kenya after 1918, Lord HAILEY says in *Native Administration in the British African Territories*. Part I — *East Africa: Uganda, Kenya, Tanganyika*, London 1950, p. 171, "these Tribunal were not generally recognized by the Masai who preferred that such issues as arose between them should be settled in the customary manner by the Headman or Elders". And with regard to the new development he notes, p. 175, that "the preference for referring cases to the arbitration of local headmen or elders persists". He makes a similar comment for Tanganyika on p. 294: "in the Masai District the majority of the issues arising between the tribesmen are settled by arbitration".

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

756
791

tices are alleged to be efficacious for the above-mentioned complaints, and may also prove useful in procuring success in war, adequate rainfall, or immunity from disease, both human and bovine. Such a laibon of course retains his private practice. The final stage is when a laibon is invited to superintend and bless ceremonials affecting the whole tribe, such as circumcision, promotion of warriors, standing down, etc. Such a one retains the duties of the two previous stages, and is in fact the Chief Medicine Man of the section or tribe. This is the status which the term laibon popularly connotes." Therefore, it is clear first that the prophet is essentially a private practictioner, and secondly that his promotion to the higher stages of the practice derive primarily from his personal skill and good luck which give him reputation and, hence, influence on tribal matters. It is significant, however, that the prophet, even when he has reached the highest stage "retains the duties of the two previous stages", in other words, he does not cease to be a private practitioner. Therefore, the title "Chief which FOSBROOKE also uses, does not properly describe the prophet's office and makes it Medicine Man", more formal than it really is.[34] It is for the same over-formalisation that our early authorities and the Administration were misled in the evaluation of the prophet institution.[34]

III – PRELIMINARIES TO THE INSTITUTION OF THE AGE-CLASS

561

The age-system of the Masai consists essentially in a structure of age-classes distinguished from one another in terms of seniority. An age-class is instituted as the final result of a long course of initiation ceremonies, performed during an official approved time.

The age-class must be distinguished from other minor groups such as the age-units. These are formed at different stages of the initiation course as intermediate steps to the establishment of the age-class. The age-class follows from the merging and unification of two age-units.

The Masai term for age-class is *old aje*, pl. *il ajijik*; for age-unit, *ol poror*, pl. *il poror*.[35] These terms are frequently rendered into

[114]

[34] Indeed FOSBROOKE is unable to decide wether the *laibon* is the chief medicine man of the section or tribe.

[34] See also below, and on the relationship of the prophetinstitution to the structure of the age-system as a whole see BERNARDI, *l. c.*, pp. 223, 231.

/21 cont./

791 rises, goes toward him, and, with the customary greeting, extends
576 his hand to him, whereby, not this, but the wrist is grasped. After
609 the concluded discussion, for which there are no particular formalities, he takes his leave with the ordinary farewell.

791 In the way of food, the ol oiboni takes only goat liver roasted
789 on the fire, milk, and honey, for, through any other food, "he
[262] would suffer the loss of the capacity for prophecy and the preparation of efficacious magic charms." Of these arts very little is
[173] supposed to have been handed down to his son Lenana and still less to Zendeo, through which it is all the more explicable that the /22/ Masai today tell of hundreds of different kinds of miracles that Mbatyan allegedly performed. According to them, he could fell large trees by sheer will power, or he had the hut in which he was to be found set afire by his attendant, and, after it had burned down, he appeared, uninjured, out of the ashes.

• 756 From the Ei gidoi lineage there are further supplied, as has
[613] already been mentioned, the sorcerers or medicine men (ol goiatiki, el goiatek), several of whom live in each district. Their office, too, is handed down from father to son, who, however, is usually initiated into the whole secret art only after his marriage. The
[789] most important magic charm in the life of the Masai, the war medicine, the ol goiatiki does not know how to make. Rather, one turns to him only in cases of illness of human beings and livestock for which the well-known remedies fail, or which one traces back to the sorcery of evil neighbors, as well as to determine unknown wrongdoers (thieves, murderers, etc.).

613 The lineage of the El kiboshi of the El molelijan tribe, who,
[776] according to the view of all the people, are especially favored by 'Ng ai, the god of the Masai, which has made them primarily the bearers of the religious traditions, require a special discussion.

613 Corresponding to their position with 'Ng ai, they are distinguished
157 by a relative peaceableness. The young warriors, to be sure, also set out on raiding expeditions with the other lineages, but they thereby seem to avoid any unnecessary roughness or brutality, in which the others often compete. The passion for disputes, quarrels, and vituperation, a prominent trait in the character of the young

seen amongst them, and it is not difficult with a little practice to tell the particular division to which a Kikuyu belongs. Thus the people of Iriini* have pronounced Masai features, and many of their chiefs are pure or half Masai by birth. This is due to the fact that when the Kikuyu invaded that district about forty years ago they found it occupied by the remnants of the Alkipiak and Dato-le-kutuk Masai, who owing to famines, raids, and other causes were too much weakened to resist them. The two tribes therefore settled down peacefully side by side, and by intermarrying formed one people.

Again, many of the Kikuyu clans claim descent from certain particular tribes; thus, the Angiro and Chakamuya clans say they are descended from the Skuba, the Akkachiko and Achura from the Kumba, the Acumbo from the Ukuga of Kitimanjaro. Anyone enquiring into the descent of those present at a meeting of Kikuyu elders will find an extraordinary number of different tribes represented. One is a Moore, another a Ukuga, a third a Masai, a fourth a Skuba, a fifth a Dorobo, and so on.

The actual Kikuyu themselves are said to have come from two tribes called the Shagishu and Ngumbo, both of which still exist as tribes somewhere beyond the Moore country, north of Mount Kenia.

I cannot speak from experience of the Shagishu, but I have met a native of Ngumbo whose appearance reminded me strongly of a Kikuyu. This man, who said he had never seen a white man before, told me that his country lay beyond Moore and that he had come here to visit relatives. These same Ngumbo are believed to have been originally Dorobo, and Kerori, one of the paramount chiefs of the Kikuyu, who is himself a Dorobo, claims descent from them. The Ngumbo of the present day are probably analogous to the Kikuyu, *i.e.*, they are a mixture of Dorobo and some other tribe or tribes.

Many absolutely foreign tribes have had colonies in Kikuyu for shorter or longer periods. A tribe of coast people called Digo are stated to have lived for many years on the Tana River, in what is now known as the Fort Hall District.† Somali, Galla, Boranu, or some other similar people effected a very strong footing in Kikuyu some fifty to seventy years ago. According to tradition they belonged to the Barabio Lokubale, Sigirai, and Endorumoroi clans,‡ and they had settlements at Nyuri, Naivasha, Kijabe, Punda Milia, and generally all over the Kikuyu country.

In those days the Alkipiak Masai occupied the Lalkipia Plateau, the Purko Masai were at Naivasha, the Kaputei in the Kidong Valley, and the Taroboro at Iriini. The Dorobo, who were still the dominant tribe, occupied with the Kikuyu the present Kikuyu country.

With all these tribes the Somali or Galla lived in a state of chronic warfare.

The Lorosa, a Kikuyu clan, and the Atwa, a Dorobo clan, unable to hold out any longer, migrated. The former have, it is said, preserved to this day their tribal identity and customs, and are still to be found somewhere in the vicinity of Kilimanjaro; the latter near Mombasa.§

The remaining tribes appealed for assistance against their oppressors to a great medicine man called Sogi (or, to give him his correct name, Sogoei), the grandfather of Lenana, the present Masai chief.

* The name Iriini is said to be derived from Ni-Sarasaro ainii, my Sarasaro women. Sarasaro is the name of the most important clan in this particular section of the Masai.

† Mr. Hobley informs me that the Sagala, who have intermarried with the Digo, a sub-tribe of the Wa-Pokomo, have a tradition to the effect that they once lived on the Tana River.

‡ Sambu is the Kikuyu, Sigirai the Masai for Somali and Galla.

§ Possibly the Arabs, who live on Mount Mara in Samoa East Africa.

‖ By Mombasa the up-country native often means the coast generally. According to Mr. Hobley the Wa-Kenya call themselves, and are known to the Galla as, Wakwa; sing., Wanya.

3. Ol-darkai. Nanaa ali 'l-nanaa ang-gilua ino ilik ing-ainitok e-'l-darkai ainainkiki ang-ana.

4. 5. Ol-mangiai e Engiaru. Ilak il-nanaa ie-dana enye ainainkiki 'nattari en-'e-dana, anna ainangyak naiutg.

bark or roots are mixed with hot milk and drunk. Old men are very fond of this medicine.

Medicine for the spleen:

1. *Mobo* (?). The roots are boiled, and the medicine is mixed with hot milk, which is drunk.

2. *Rubus fruticosus*, Hiern. The boiled roots are mixed with honey.

3. *Lonchocarpus* sp. The roots are mixed with soup.

The medicines used by the warriors in their slaughter-houses:

1. *Acacia abyssinica*, Hochst. When Masai warriors slaughter a bullock, they make a medicine out of the bark and roots of this tree. This they mix with soup and drink out of the stomach of the bullock. Warriors who have been wounded are also given this medicine in water to quench the thirst.

2. *Fagara zanthoxylum, forma foliis maioribus*, Radlk. Warriors like drinking water in which some of the crushed bark of this tree has been soaked. The water becomes blood-red in appearance and the warriors gain in courage.

3. *Acacia* sp. Warriors also become brave when they drink a medicine made out of the bark of this tree.

4. 5. *Grewia villosa*, Willd., and *Grewia sambesiaca*, Mill. Arg. A strengthening medicine is obtained from the roots of these trees, which is mixed with mutton soup.

[1] *Acacia Elatior*, Oliver, is also called Ol-kilentiti.

arm. A beaded belt confines it round the waist, leaving only one limb partly exposed. Frequently it is slipped off the shoulder, and depends entirely from the waist, leaving the bosom exposed. Their ornaments are of a very remarkable nature. Round the legs from the ankles to the knees telegraph wire is coiled closely in spiral fashion. So awkward is this ornament that the wearer cannot walk properly, she cannot sit down or rise up like any other human being, and she cannot run. Round the arms she has wire similarly coiled both above and below the elbow. Round the neck more iron wire is coiled—in this case, however, horizontally—till the head seems to sit on an inverted iron salver. When the leg-ornaments are once on they must remain till finally taken off, as it requires many days of painful work to fit them into their places. They chafe the ankles excessively, and evidently give much pain. As they are put on when very young, the calf is not allowed to develop, and the consequence is, that when grown up the legs remain at a uniform thickness from ankle to knee—mere animated stilts, in fact. The weight of this armour varies according to the wealth of the parties, up to thirty pounds. Besides the iron wire, great quantities of beads and iron chains are disposed in various ways round the neck.

Such, then, were the people that now greeted Moran, who, being a novice, had to suffer a good deal of chaff from both sexes. He was, however, soon initiated into the mysteries of a warrior kraal, and had seen a bit of life. The strictest diet imaginable was the rule. He had to be content with absolutely nothing but meat and milk. Tobacco or snuff, beer or spirits, vegetable food of all kinds, even the flesh of all animals except cattle, sheep, and goats, were alike eschewed. To eat any of those articles was to be degraded—to lose caste; to be offered them was to be insulted in the deepest manner. As if these rules were not strict enough, he must needs not be seen eating meat in the kraal, neither must he take it along with milk. So many days were devoted entirely to the drinking of new milk, and then, when carnivorous longings came over him, he had to retire with a bullock to a lonely place in the forest, accompanied by some of his comrades, and a Ditto to act as cook. Having scrupulously made certain that there was no trace of milk left on their stomachs by partaking of an extremely powerful purgative, they killed the bullock either with a blow from a rungu or by stabbing it in the back of the neck. They then

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

593 931 601 *Gifts to Certain Relations.*—A somewhat similar custom is that which ordains that a grown-up son must give certain presents to all children born to his father, as follows:—

(1) To a young girl-child, either a heifer or else a young ewe or young she-goat which has not yet had young. If the former present is given the child in future calls its brother (or half-brother) *lomshi*, and if either of the two latter animals is given the appropriate name is below.

(2) To a boy-child, either a heifer or a young ram or else a young ewe or she-goat which has not yet had young. The following are the appropriate names by which the boy henceforward calls the man: *Ikubin* if the gift was a young ewe, *ingini* if the gift was a young she-goat, *ndeun* if the gift was a heifer, *ikithome* if the gift was a young ram.

A grown-up son must also give a present to any new wife married by his father, the animal given and the name thenceforward used by the woman to the man being exactly as in the case of girl-children above.

604 *Mother's Brother.*—Among the Masai I can find no trace of any special functions of the mother's brother, and he has no special position in relation to his sister or her children.

589 *Widowhood.*—There is no idea of uncleanness attaching to widowhood, and therefore there is no ceremonial purification ceremony before sexual life can be indulged in by a widow. When a woman is left a widow she builds herself a hut [609] with one of her husband's own brothers (*i.e.* brothers by the same mother), and he becomes responsible for her welfare and acts *in loco parentis* to her children as far as making arrangements for initiation and marriage, etc., are concerned. In no circumstances, however, may this brother or any other of her husband's own [835] brothers have sexual intercourse with the woman. If she is still of child-bearing [951] age she is expected to go on having children (who will rank as her late husband's), and to this end she may have sexual relations with:—

589 834 (1) Any men of her late husband's age-group, who are not excluded by other restrictions (see above).

(2) Any of her late husband's half-brothers (*i.e.* brothers by a different mother).

(3) Any other men not otherwise excluded.

797 *Sickness.*—My informant was unwilling or unable to give me any detailed information about the treatment of sick people, save that medicines were made from the barks and seeds of various trees and from the stomach juices of slaughtered animals.

PART VII.—DEATH AND BURIAL.

76 *Death.*—Death is looked upon with fear and, therefore—except in the case of very old men and women past child-bearing—every precaution is taken to avoid a

12: Fox G-5 (1925-1930) 1930 FL.12 Masai FL.12
Kenya

995 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

968 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

989 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o sepingi* (the man of the iron wire).

965 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

959 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Damoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nong's gatok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kilaweti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Endorit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

973 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mouri*, literally "the egg." To this are added the dried fruits of the Sausage

000 Internal ailments. Infectious diseases: dysentery, malaria, chickenpox, smallpox, elephantiasis, parasitic cutaneous eruption. -- Ailments of the respiratory organs: head colds, bronchial catarrh. -- Ailments of the digestive organs: nausea, diarrhea, constipation, tonicum roborans /strengthening tonic/, liver pains, spleen pains, liver and spleen abscess, bilious fever, intestinal worms, ancylostomiasis. -- Venereal diseases: lues, gonorrhea, cystic catarrh, aphrodisiacum. -- Nerve ailments: headache, earache, toothache, rheumatic muscle pains, nerve stimulants, the em boschona sickness. -- External ailments: surgeons, tooth operations, bloodletting and cupping, swellings, abcesses. The goat-ulcer sickness. The glandular disease. Sand fleas. Snake-bite and scorpion sting. Poison-arrow wounds. Conjunctivitis. Sprains. Dislocations. Bone fractures. Removal of foreign bodies from wounds. Abdominal wounds. Amputation. -- Midwifery and women's ailments. Midwives. Intensifying the labor-pain activity. Pelvic narrowness. Position of the woman in childbirth. Afterbirth. Removal of the umbilical cord. Treatment of the newborn child and the woman in childbed. Nourishment. Care. Nursing. Weaning of the infant. Uterus pains. Abortion. Fertility. Child mortality.

Internal Ailments

953 The Masai, in contrast to the Negro peoples, never trace the origin of internal ailments to the work of evil spirits and only rarely to magic prepared against the sick person by one of his personal enemies. In most cases they see the causes of illness in external or
• 957 internal influences harmful to the organism. Knowledge of the treatment of internal ailments is the common property of all the people: a mother treats her small children; older children or adults treat themselves according to traditional methods observed by them or related to them.

/179 cont./

Infectious Diseases

757 164 For dysentery (eńg ga en gohŏge os sarge) the sick one is given much liquid sheep-fat or melted butter to drink.

Malaria (eńg odjoŋgáni). At the start of the chill, the patient is given an emetic, for example, a cold, strong extract of the bark of ol mokotan (Albizzia anthelmintica). Even before the fever breaks out, a decoction of os sogonoi bark is administered, through which, in many cases, the outbreak of the fever is supposed to be prevented or alleviated.

753 825 It is interesting that the Masai -- so they say -- have always regarded the bite of the mosquito as a prerequisite for an attack of malaria. They say that the latter, with its bite, inoculates the person with a poison that causes malaria. For this reason they never [361] lay out their kraals in the vicinity of a swamp or other standing water, and also avoid these places in whose surroundings during the rainy season longer standing puddles form. /180/ In order to drive away the mosquitoes they burn (in the camp or in the hut) the peppermint-scented ol eńoroń (Plectranthus Merkeri, Gürke). If a kraal is badly afflicted with mosquitoes, its inhabitants leave it immediately out of fear of fever (1).

1. So they told me as early as 1895. When, at the beginning of 1896, Zendeo with a number of his people came to Moschi, I received in reply to my question as to whether they had to suffer much with fever the answer: "No, there are no mosquitoes near our kraals."

757 Other emetics are: root powder of ol sisai (Cyathula Lindowina Vlks.), which is taken stirred in water; a decoction of roots and stalks of ol gurchaschi (Barleria mucronata Lindau); a root decoction of ol moran (Solanum nigrum); the boiling down of a handful of bark or root of ol dubgui (Harrisonia abyssinica Oliv.); a cold extract of five finger-size pieces of the bark of ori (Acacia mellifera Bth.)

/180 cont./

757 and the chewing of the root of ol asajet (Withania somnifera Z.) are regarded as acting especially vigorously. Children are given an infusion of the leaves of ol magingi (Moschosma multiflora [Hoch.] Bth.), because it has a considerably milder effect.

753 757 They call another greatly feared fever ol oirobi l'en duhiir and see its original cause in the bite of a kind of tick living underground, which they designate as en duhiiri lamon. The patient is given liquid sheep fat mixed with the powdered grains of ol odos (Maesa lanceolata Forsk.). Presumably this fever is identical with relapsing fever, for [136] which Professor Robert Koch identified as the carrier of the spirilla [164] a species of tick living underground (Ornithodorus Larigni) (2).

2. During the day Ornithodorus hides in cracks of buildings or in the ground and emerges as soon as a victim approaches. Merker's conjecture could therefore correspond to the truth, and the more so since to me too the Masai designated and displayed an unquestionable Ornithodorus as the carrier of a fever. The ed. Dr. S.

757 Against chickenpox (e riri or en diaboboi) no medicine is known. [164] The sick person remains in the hut, is given as a drink a little milk mixed with fresh blood and sheep-tail fat, two things that are regarded as strengthening; furthermore, as food, a piece of mutton roasted in the skin at the open fire.

For protection against smallpox (ol maschigu or ol minjaloi) [751] healthy persons are inoculated in two incisions on the forehead with the smallpox pus en gimek of a sick person. Smallpox patients are [164] given a decoction of the roots of en dulele (Solanum campylacanthum) mixed with cattle blood as a diaphoretic and at the same time a nourishing remedy. In order to increase the sweat secretion, the [758] patient is laid beside the hearth fire. Diet: no drink except the above-mentioned medicine; as food, the head of a sheep roasted in the skin or another piece of mutton similarly prepared.

/180 cont./

757 753 [164] Elephantiasis scroti (en dorenge) is regarded as a punishment of God for incest committed. A therapeutic treatment is unknown. Other forms of elephantiasis are said not to occur among the Masai; the one mentioned seems to be infrequent to the point of having disappeared.

757 /181/ To cure the parasitic cutaneous eruption (1)

> 1. The eruption heals within three days if the affected places on the skin are well covered with a nonirritating salve (for example, zinc ointment), after they have been previously cleaned with soap.

(el bebedo) called upele by the coastal people, the body is rubbed with oil obtained from the ol dimuai tree (Commiphora sp.), whereupon healing follows in two to three days -- as I was able to find out for myself a few times.

164 I have never seen among the Masai the frambesialike schiwaki sickness (2)

> 2. Schiwaki is often mistakenly taken for lues. With the administration of potassium iodide the schiwaki sores heal in the course of two to three weeks.

very common on the Kilimandscharo. To a corresponding question I always received the answer that this very infectious disease is unknown to them.

Ailments of the Respiratory Organs

757 [164] Against head colds (ol siobi I ol gumechi = cold of the nostrils) one snuffs tobacco mixed with the powdered bark of the en dopniki tree. In severe cases, as a diaphoretic, one administers the juice of the tuber of ol amboeki (Momordica cardiospermoides Kl.) or a decoction of ene alitetoijai kere (Anetlema johnstonii K. Schum.).

/181 cont./

• 757
164

Bronchial catarrh (es sedja eñ geroget = cough). The patient is given a handful of the powdered bark of oi marbait (Croton spec.) stirred into fresh cattle blood, or a paste that consists of a third of a liter of liquid honey and two handfuls of the powdered bark of ol sogonoi. A decoction of the bark of oi okiteni is supposed to have a loosening effect; for the same purpose one also chews the bark bast of oi debbe (Acacia Merkeri) and of oi bararuai or oi bariyi (Lonchocarpus Bussei spec.), and eats the unripe fruits of oi amriake (?). The mother gives small children the juice obtained by chewing a species of Pagara (oi oiuggi) or ekum (Spilanthes Acmella L.) or the leaves of eñ gawarna (Clutyia Kilimandscharica Engl.).

Ailments of the Digestive Organs

For nausea one drinks a decoction of the bark bast of oi bararuai (Lonchocarpus Bussei sp.) stirred with liquid sheep-fat, or one takes an emetic, such as stronger than the ordinary doses of oi molotos, oi odoe (Maesa lanceolata), eñi (Acacia mellifera).

Diarrhea and abdominal pain (eiwet eñ gobogo or eñ gourik, the latter word designates the watery excrement). To check it, one drinks extracts or decoctions of the bark of oi bugei (Terminalia Brownii Fres. var. Merkeri Engl. and Terminalia Hildebrandtii Engl.) or of oi nai (Acacia spirocarpa Hochst.). In addition, bark extracts of oi dabbeli (Ficus Sycomorus), a decoction of the bark of ee sagarasha (Rauhinia reticulata D. C.), of the root /182/ bark of oi ereai, goat-meat broth in which a few pieces of the root of oi ama (Ximenia americana L.) have been boiled, or a root extract of oi amemei mixed with milk. The powdered bark of oi ugumoni (Heeria pulcherrima) stirred into fresh milk is regarded as a quick and sure remedy. For abdominal pains a decoction of oi ghopia (Cassia obovata coll.) is administered, or a leaf extract of oi magaugut, also called oi magingi lete (Clerodendron discolor [Kl.] Vahl.). Because of its mild action, the extract or decoction of a Commiphora species (o'mpande) mixed with beef bouillon or an infusion of the leaves of ee oteri (Grewia bicolor Juss.) is popular. Pregnant women prefer this medicine on the many occasions [illegible]

751 /182 cont./ In order to avoid the onet of a case of diarrhea as a consequence of the very popular copius enjoyment of liquid fat, a root decoction of the above-mentioned ol ama tree (Ximenia americana L.) is administered.

• 753 044 Constipation (ol gólomi). The most popular remedies in severe cases are a decoction or extraction of the bark of ol jani 'njugi (Embelia kilimandscharica Gilg) mixed with fat, or, in milder cases, the pepperlik grains of ol odoa (Maesa lanceolata Forsk.), which are chewed.

[827] Regarded as aiding digestion is the bark of ol mata (Thespesia Garckeana F.Hoffm. and Dombeya reticulata Mast. vel aff.), of en dangacho also called ol eghrugi (Turraea Volkensii Gürke), which is drunk mixed with meat broth, and of a still unknown Acacia species (ol alil), which is why the warriors, during their meat feasts, add these powdered barks to their drinking water, as well as an extract of thepounded root of ol gbulót (Bridelia cathartica Bert).

"To clea out the stomach" the warriors take, once every three or four month, a medicine called en janigitti, consisting of the bark decoction of i odoa (Maesa lanceolata), ol mokotan (Albizzia anthelmintica, ol marbait (Croton spec.), ol jani 'njugi (Embelia kilimandscharica Gilg), ol getalamua (Myrica kilimandscharica Engl.), en ngurtati ani dinjai (Cissus quadrangularis).

As Tonicum roborans /strengthening tonic/ and beautifying agent, pulverized bark of ol dimligómmi (Pappea capensis Eckl. et Zeyh.) is add to the drinking water. It is supposed to make the skin softer andmore elastic, as well as to give rise to an increase in the padding ofat through which sharp contours are rounded. The remedy is especially popular among warriors.

[824]

757 124 For liver ains (aia e munjwa) one drinks a decoction of the bark of en ang (Euclea fructuosa).

For spleenpains and spleen swelling (aia ol dastin), the powdered bark of the ume tree, stirred to a paste with honey, is eaten or, mixed with hney beer, is drunk, as is a root decoction of en senetai (Cassia didymoctrya Fres.), which as a rule is mixed with milk.

/183/

752
164

Liver and spleen abscesses are supposed to be cut open to drain off the pus. I saw scars in the areas in question several times, but was never able to observe the operation itself.

• 757
164

For so-called bilious fever (ol odoa = the gall), an emetic is taken first, either a strong dose of grains of the ol odoa (Maesa lanceolata) or a bark extract of olti (Acacia mellifera); then one drinks a root decoction of ol deregeli (?) or of ol manual (?).

To get rid of intestinal worms (taeniae [ol gurto, el gurt] and ascarids [ol budi, el budok]) one uses decoctions of the bark of ol mokotan (Albizzia anthelmintica), of the root of ol deregeli (?), of the fruits of ol odoa (Maesa lanceolata), or also of the powdered bark of ol jani 'njugi (Embelia kilimandscharica Gilg), the latter of which is always taken with fat since otherwise it is too acrid and easily causes violent abdominal pains with diarrhea.

To cure ancylostomiasis (eng ga el gilbe) one administers a decoction of the bark bast of ol mokotan (Albizzia anthelmintica); the bark bast is cooked with meat; the patient drinks the meat broth.

Venereal Diseases

757
[164]
[548]

Gonorrhea and especially lues are quite rare among the Masai. This is due in part to the absence of professional prostitution, and in part to the fact that the Masai are familiar with the dangerousness of these diseases and their easy transmissibility. Those stricken with lues are segregated and may not enter any kraal until the external symptoms of the illness have disappeared; during this time they live outside the kraal in a superficially built hut surrounded by thorn branches for protection against predatory animals. Accordingly lues is called eng ga aulô, formed out of eng ga = the sickness, aulô = outside the kraal. Lues patients drink a great deal of liquid fat and liquid butter for a cure. One drips on the lues ulcers, as well as on
[539] those of the chancres, juice of the leaves of ol aingirai (?), sprinkles on them a powder made out of the leaves of ol agaramani (?), or burns them with Cuprum sulfuricum, which the Masai obtain in trade with caravans.

/183 cont./

757 For gonorrhea they use a whole number of medicaments, to some of which they attribute only or chiefly a diuretic effect, to others a healing effect as well. The principal remedies are the following: decoction of the bark of ol jani 'njugi (Embelia kilimandscharica), often mixed with calf urine; furthermore of os sagararam (Bauhinia reticulata), ol debessi (Acacia cfr. verrugia Schwfth.), ol mokotan (Albizzia anthelmintica) and ol gelai (?); a root decoction of the latter is also used, as well as of ol oesodo (Cissus sesquipedalis Gilg), ol amamiai (Oxyris tenuifolia Engl.), ol dorotua, and, finally, decoctions of the dried root bark of o'remit (Salvadora persica) and of the wood of a Rhus species (ol mesigie kete), which is regarded especially as a diuretic.

[164] /184/ For cystic catarrh one drinks a weak decoction of the root of o'remit (Salvadora persica).

832 A bark decoction of ol dimigomui (Pappea capensis) is regarded as an aphrodisiac for men, one made out of ol mokotan (Albizzia anthelmintica) for women. The bark of the trees ol gilorit (Acacia

[263] abyssinica) and ol oktegi, used as seasoning for meat broth, is supposed to have the opposite effect among the warriors.

These last two remedies, however, are by no means regarded as sedatives, but, on the contrary, as stimulants. The people

[147] explain the effect ascribed to them here with the words: the warrior does not like the odor of the girl, by which probably a specific fumor urinae /stink of urine/ more or less clinging to the clothing of all women is to be understood.

Nerve Ailments

757 With headache (edg ga ol ogunja) a blister is produced on each

[164] of the temples and on the nape with the fire twirler (ol biuu) rubbed hot; more rarely one ties a cord rather tightly around the forehead

[177] and the occiput. The latter remedy is not peculiar to the Masai, but has been adopted in places from other peoples.

[164] For earache (edg ga ol gia) one pours warm butter into the ear.

/184 cont./

• 757 With toothache (ég ga ol alai) one bites on a very hot residuum
[164] of fat with the aching tooth. Pieces of twigs of o'remit (Salvadora
[519] persica L.) and ol abalasa (Dodonaea viscosa L.) chewed to resemble
a brush at one end serve as toothbrushes.

[162] For rheumatic pains in the muscles one makes use of massage,
which is practiced by the women, or one makes poultices with the
pulp of the pulverized root of o'remit (Salvadora persica), which
[593] also finds use otherwise as a "mustard plaster." Married men have
[385] themselves massaged by their wives to get rid of pains in the leg
muscles after long marches, whereas the warriors scorn this help as
unmanly. Furthermore one administers a root decoction, preferably
mixed with a broth from steer meat, of o'rarak (Cissus rotundifolia
[Forsk.] Vahl.) or of ol logíóno (Pentas zanzibarica [Kl.] Vikm.),
or also a decoction of the wood of ol gonjí (Rhamnus prinoides
l'Herit.). For rheumatic pains in the back one drinks a root decoction,
sweetened with honey, of ol asasia l ua subertai (Cayris tenuifolia
Engl.). To cure articular rheumatism a root decoction of ol ogíno
(Boerhavia diffusa L.) is administered. Besides these remedies, those
that are regarded as diaphoretic, especially the above-mentioned ol
ambwchi (Momordica cardiospermoides Kl.) and eng alanoijai lete
(Aneilema johnstonii K. Sch.), are also given.

296 Other than for curative purposes the warriors regularly, and, to
be sure, for the entire duration of their membership in the warrior
[126] standing, take various nerve /185/ stimulants. These are taken
especially on war expeditions and, even more, during the meat
feasts forming the preparation for these. One of the most popular
stimulants is the bark of the frequently mentioned ol mokoran
(Albizzia anthelmintica). One pounds a piece of bark best the size
of two hand-palms with a club and then lets it steep for a few minutes
in still hot meat broth. The other stimulants are ol dinjai or ol
ngurtai (Cissus quadrangularis); an arm-long piece is cut up and
boiled in water. The extract is taken mixed with goat-meat broth.
Equally strong in effect is the root of ol ólgorai (?). One takes a
piece of root three centimeters thick and approximately ten centi-
meters long, chops it twice, and cooks it with beef broth. The
decoction smells disgusting.

/180 cont./

752 have been grasped with the fingernails and pulled forward.

To the surgeon's department belongs first of all the extraction of teeth. This is done by three different methods. To remove the lower middle incisors, which among children is done for the first time at an early age and is then repeated after the change of teeth, one sticks the thin iron blade of an ax between the teeth and levers them out while tapping moderately hard laterally several times with a stick against the blade. The other front teeth are taken out only when they are already quite loose. One ties a string of cattle tendon around the crown of the tooth and a fist-sized stone at the other end of it. When this is done, the operator, for a very loose tooth, simply lets the stone fall, or, with one resting more firmly, throws it down. To remove a molar, one places a little stick almost finger-thick and approximately 30 centimeters long, with its lower end, notched swallowtail-like, against the tooth, and, to be sure, from inside, at right angles to the dental arch and then directs several vigorous blows against the free end of the stick. An assistant holds the patient's head. Tooth operations, with the exception of the ritual ones of course, are very rare. Among 100 men between the ages of 30 and 50 the author found two who each had a tooth gap. One had had a molar knocked out in the manner just described, the other had lost a front tooth through being butted by a head of cattle.

• 757 Bloodletting and cupping, on the other hand, are very common, especially for rheumatic pains and headache. To let blood from a vein on the head or at the extremities, /180/ the blood in a skin vein, in a forehead vein on the head, is first blocked by a leather strap placed around the neck or around the limb above the cupping place. Then the surgeon places himself in front of the patient, the bloodletting arrow (cf. Fig. 70) against the bow, aims, holding the arrow point only five to ten centimeters away from the cupping place, and shoots into the swollen vein. To stop the bleeding, the aforementioned strap is merely loosened. For cupping on the back, chest, and belly, not the arrow but the razor is used. With it incisions a centimeter long are made in the skin, which has been drawn up roll-like with two fingers. These are arranged in horizontal rows, each of which numbers 15 to 20 cuts. It is by no

[Gal] [Gal]

/149 cont./

757 means rare that two or three rows are cut for o[illegible] ...e operation. Most adult Masai have such scars in greater numbers [illegible] however, one also often find people whose native name is literall[illegible] covered with cupping scars. It seems as though the people [illegible] ...he to avoid being cut twice in the same spot.

Upon swellings one puts the pulp, alleged[illegible] ...y acting as a resolvent, of the chewed plant of ol agurumbel (Crossa[illegible] ...a nilotica Oliv.).

752 Abscesses, when they are ripe, are puncture[illegible] ...d with a small, 757 pointed, double-edged knife and cut open only after the draining of 164 the pus by pressure. Then the wound is washed out with tepid water and cleaned out, using the nail of the index fi[illegible] ...ger, as well as possibly also the aforementioned knife, as a sp[illegible] ...ry spoon. Finally, one sprinkles on it a caustic powder made from the root of ol guerandoe l en deje (Plumbago ceylanica). T[illegible] ...e surgeon does not apply a bandage.

Abscesses of the mammary gland are treat[illegible] ...y punctured and emptied.

With panaritium the nail is removed and [illegible] ...e wound washed out.

Suppurating lymph glands (ol gumuri ol [illegible] ...gimek) are treated like abscesses, but the lymph gland is cut out b[illegible] ...fore the application of the caustic powder.

An ailment called ol dubdubi l en dare = [illegible] ...ner ulcers (1)

by the Masai themselves itself is that the person [illegible] ...afflicted has one, less frequently two. Last lumps the size of a hazelnut [illegible] ...t under the skin, tapering into a tailline point at the bottom. [illegible] ...ew these ulcers (en bunu) and their scars -- somewhat larger [illegible] ...an a mark place -- on the temples, on the chest, on arms, legs, a[illegible] ...d on buttocks. As [765] the original cause the people cite the eating of [illegible] ...meat of goats or sheep that died of olg ga [illegible] ...e (?).

2. Pulmonary anthrax.

758 [752]

/189 cont./

The hard lumps are cut out. During the illness the patient is given a diet of meat roasted on charcoal and, as medicine, a decoction of the roots of oi demellua /196/ (Solanum sessiflorum) or ol ohi with the addition of honey; a root decoction of ol gigi (Lycium cf. arabicum Schweinfurth) mixed with milk or meat broth or such of oi amelili (Maerua johanris Vlk. et Gilg), which, as a rule, is mixed with a little honey or fresh livestock-blood, is also regarded as curative. The patient drinks this liquid when he is thirsty. The illness is supposed to lead to death if this diet is not adhered to and the patient takes in particular cold water or milk, as well as cooked meat. On the other hand, if the prescribed way of life is observed for two or three months, the lump, gradually pushing outwards, is said to fall off. Since, however, the continuous meat diet is too expensive and the herb medicines cannot be obtained without difficulty, the operation is preferred to by far the most cases.

752 [764]

A persistent fever connected with swelling of the three pharyngeal tonsils, accompanied by violent coughing and considerable loss of strength, especially common in youthful age, the Masai call ol ol mali = gland sickness. Very probably it is a matter of adenoidal proud flesh in the nasopharyngeal cavity. The patient turns to the surgeon to be cured. The latter, putting his hand into the patient's mouth, scrapes the pharyngeal tonsils with the nail of his index finger, or with a small knife, so strongly that they bleed profusely. A rather large number of people whom I questioned about the success of the cure asserted that they always could count on certain recovery. Two of my boys, Masai youths about 11 to 12 years old, fell ill with the above symptoms. In spite of careful symptomatic treatment, their recovery of strength was so unsatisfactory that, upon their request, I gave them permission to go to a nearby livestock-kraal in the steppe for relief. After eight to fourteen days they returned, healthy and refreshed, and told me, which corresponds to the truth, that the surgeon had treated them in the manner described.

[illegible] described above for the sheep, but during this one tries to avoid unnecessary irritation, for fear of greater bleeding. On this account, many surgeons do not proceed with treating the wound until several

752 /198 cont./
that of an egg or even suppurate the member (hand, finger, toe). If
[758] this seems to him absolutely necessary. After the operation the
patient is given raw sheep kidney to eat and a considerable amount
of liquid sheep fat to drink, whereupon severe diarrhea soon sets in.
Often one has him go through a sweat cure in that he is set over
glowing charcoal on which leaves of Rafeeta mucronata and sheep
hair are thrown.

On a sunyiun ming (a-tsuje ed gulfee) one has a woman who
has given birth to twins or, lacking such, a pregnant woman spit
and rub the saliva over the painful spot. As long as the pain continues,
[762] the patient eats only raw goat liver, to which is ascribed some kind
[761] of marvelous effect -- as is also shown by the fact that it is the only
solid food of the at ellemi.

Into the wound caused by a poisoned arrow another person urinates
• [757] as quickly as possible. At the same time the wounded one is given
as an emetic a mixture of the juice of the fruit of an ddaia (Solanum
campylacanthum) and the amniotic fluid (ed gulee) of a gravid sheep,
which is slaughtered for this purpose.

757 For conjunctivitis (ddy ga ed gulee) a tobacco extract (ed gaee ed
gundee) or the juice of leaves of at ugiddie (Croton kilimandscharicus)
or dangui (Harimania abyssinica Gilo.) and at amajan, or an extract
of the leaves of at gunnee, is dripped into the eyes.

752 The surgeon removes the remains of a violently destroyed eye, by
drawing it out of the eye socket, with an awl best hook-shaped, far
enough so that he can cut it off with the razor. The eye socket is
then washed out with warm water and not bandaged afterwards.

[771] A place that has suffered a sprain or bruise the El dadhee rub
with the juice of at gdiddie (Acanthus spec.). Sometimes they also
apply the same drug by the method of rubbing the powder of the
charred twigs into small incisions that are made on that place.

/133/ Dislocated limbs are set again and placed in a splint
bandage that is not stiff. For a lower-arm dislocation the surgeon
[illegible]
above the wrist, and sets it again by a gradually stronger pulling
exerted in the required direction. He then puts around the affected
[237] part, from the middle of the lower arm to that of the upper arm,
which are drawn together at an angle of 150°, a padded bandage
consisting of a strip of sheep leather that is covered with as much
thick and soft hair as possible. The padded bandage is tied with a

/137 cont./

that I give a gentle tug with a healthy insertion of the index finger into the anuplit of the child."

/138/ In order to hasten the exit of the afterbirth, one of the entering women tries to persuade labor-pain activity by tickling with a feather the palate of the woman giving birth. This manipulation is also used in rare cases during the periods of the preliminary and of the actual labor pains. During the afterbirth period the child's umbilical cord is removed, in that the umbilical cord (or navel) is first tied close to the body with a cord of bark bast and then cut at a place an inch away from the body with the instrument otherwise serving as a razor, the ut mawaja. A navel bandage is unknown. The afterbirth, which is not the object of superstitious customs, is

[139] named into the livestock kraal by the midwife in some districts, buried there at night in others.

The newborn child is cleaned by a rubbing with liquid fat. According to statements of the people, this treatment, however, is supposed to represent not so much a cleaning as a strengthening and comfort. Then the child is laid beside its mother on a soft leather skin freshly greased. As soon as the latter has recovered from the

[140] birth act, she chews four grains of ut ulaw (Mimusa laxeolata) and

[141] gives the child an extract of these as a purgative. On the following day the newborn child is given its first bath, consisting of a rapid extract of the twigs of ak gaiwaai (Pycnia minima L.) and the

[142] walls of nig atmatjel (Commiphora spec.), to which is ascribed the action of a protective magic against sickness. Cold baths, say, for the purpose of hardening, are unknown. The child remains naked.

[143] The woman in childbed leaves her hut as a rule as soon as her condition permits, which is usually already the case on the following day. Her medicinal treatment consists first of all in the administration of laxatives, for which in this case a mixture made out of liquid fat, honey, soapy salt, and a few pounded ut ulaw corns, as well as a leaf infusion of ou ataxi (Grewia bicolor Juss.), is especially prized. Furthermore, she is given a leaf soap squeezed with ut ulaxis bark (Celastrus senatus Bongn.), as well as a decoction of ut gaiwaai [illegible] a genuine (Sphaerococa microphylla), a leafy sweep plant, or a leaf infusion of ut ulaxi (Grewia gariepina) or also a decoction of

/109 cont./

P16 roots and leaves of a wild (Melanum indicum Warm.). To both is
P17 ascribed the effect of promoting the recovery of the birth organs. This
is further assisted by putting on a leather body belt (ad gidin. (
ghatin) 30 centimeters wide. As a means for strengthening and for
increasing the milk secretion, one gives the coming woman a root
decoction of of amalai (Cycis neurikin Regl.) mixed with fat.

P53 During the first weeks of life the newborn child, which, incidentally, is often put at the breast soon after birth, is given, besides the mother's milk, a great deal of liquid horse, which during the first eight days even wholly replaces the former in case the child refuses the breast. Later such a child is given /110/ cow's milk as a substitute
[P-5] for mother's milk, and, to be sure, from a nursing bottle (ma bagal
ad gaval [Fig. 30]), which consists of a hollowed-out bottle gourd, over whose upper, open end, as a sucking dropper, is turned a score of leather pierced at the tip. During the sucking the mother is usually seated, while the child lies horizontally on her lap or square beside her on the ground. More rarely the woman stands and holds the baby on her arm in a sitting position; even more rarely mother and child further lie side by side on the ground. The suckling period, during which the mother is called ma dumpanej, lasts about two years. Its end as a rule is conditioned by the coming of a new pregnancy, in that the woman carries a male baby up to the third month of pregnancy, a female one up to the fourth or
P2 fifth month. Weaning, for which superstitious considerations are of no importance, comes to pass either in that one removes the baby from the mother, takes it to another but nearby, or
[P-5] the mother makes the breast distasteful to it by rubbing her nipples with the bitter juice of the
→ ca nagoni aloe. A permanent drying up of the
P5 mother's milk is explained by the woman's physical constitution. The woman seeks to

Fig. No. /30

/190 cont./

853 bring back the milk secretion by a copious drinking of liquid sheep fat. Meanwhile the child is nourished with cow's milk.

• 797 For pains in the uterus (el gumit) and in the uterine ligaments (ne nabil), as ~~chief~~ the woman drinks a root decoction of el makgulat (Cordia villosa).

To induce an abortion, the one concerned drinks a decoction of dried goat manure or a strong decoction of en segi (Cordia quarensis) or el dergi root. During the subsequent two or three days of convalescence she takes a weak decoction of el mokotan bark or one of the bark of el ollale (Colubrina asiatica).

163 Concerning fertility, the relationship of the sexes, and child mortality I was able to discover the following. The largest number of one woman's confinements that became known to me was 17. The 97 old women questioned had given birth to 548 children all together, which gives an average of 6.3 confinements for one woman. Of these, 231, therefore 42.2 per cent, were boys, 371, therefore 57.8 per cent, girls. Before their circumcision 38.7 per cent of the children died, including the stillbirths.

It should also be mentioned that the realization of a twin pregnancy is regarded as having arisen through one conception.

123 824 Our use of the capture gun to capture and mark wild animals was of particular interest to the Masai. They would often come up to watch us. Masai are famed for their refusal to carry out manual labor of any sort hence are regarded in East Africa as poor helpers on safari. However, labor, where it involves animals, is another matter. Sometimes Masai would come up and voluntarily help us handle captured animals, and this they did very well. We even experienced Masai coming to our camps to talk about our capture work that they had observed from a distance.

123 461 824

123 262 609 When we had extra meat from animals that we collected, we took it to the nearest Masai village. Most writers have reported that Masai will not eat the meat of most wild animals. We found, however, that they gladly accepted it in most cases. They always wanted to know what animals were involved. In several cases, when we first approached a village those who came out to meet us would refuse the meat. Then someone who knew us or knew of us would appear and accept the meat, explaining that the others did not know us.

123 757 Virtually all visitors to Masailand are regarded as a sort of travelling dispensary by the Masai. This is true throughout the world for most people who do not have

123 medical supplies. We had frequent visitors wanting "dawa,"
* 757 medicine, or a "sindano," an injection. The latter we could
[119] not provide (although we had a camp helper who stole a hypodermic syringe and for a time had a good business selling injections of water or anything else handy). We did serve as emergency hospital for various injuries, large and small. One morning came to camp with his hand nearly cut in two. He refused to go to the hospital at Narok, so my wife somewhat reluctantly and dubiously repaired the damage. Several months later when we returned to that campsite, the same Masai came striding across the plain and proudly showed his healed hand. He was profuse in his thanks and wanted to bring us some goats and sheep as a token of his gratitude."

123 FL9 . The Masai greatly enjoy riding in a vehicle. They are willing to walk several miles just to have a ride. Whenever it did not conflict with our scientific work we made it a point to give them rides. These were often rambunctious but always interesting experiences. We learned much about the Masai from them and we became well known to the many villages involved.

123 FL1 The Masai's apparent acceptance of us as essentially a part of the landscape is illustrated well by an incident in the southern Serengeti Plain. We had camped

particular relation. The naming ceremony is as follows:—When the child can run 553
about a small run is chosen and killed by the women of the village and eaten by
them (and not by any men). The child is then given a name which is chosen by the
assembled women. It is usually named after some friend of the family either living
or deceased, and great care is taken that the person after whom the child is named
is (or was) good-looking and of good character, as otherwise the child would grow up
ugly and of an evil nature. This is the name used by the family and by friends, but 551
after initiation a boy is always called "Son of 'so-and-so,'" and not by his own
name (except by his family). After a man is married and has named some of his
own, he is called "Father of 'so-and-so.'"

Tooth Extraction.—As soon as a child of either sex has cut all its milk teeth the 304
two central lower incisors are knocked out, and this operation is repeated when the
permanent teeth grow. There is no ceremony attached to this removal of the teeth, [959]
which is performed with a small, sharp two-edged knife. The reason given for this [312]
practice is, that in the case of any illness, if the patient keeps his mouth tightly closed, [958]
water and gruel can be poured in through the hole so formed.

Ear Piercing.—At the age of about 6 or 7, children of both sexes have holes pierced
in the cartilage round the upper part of the ear, and as soon as the boys start herding
cattle and the girls start drawing water they have the holes of the ears pierced. Ears
are pierced in order to prepare them for carrying ornaments, and the holes are
stretched to the size which the individual requires by means of a gradual increase
in the size of the inserted stretching plug of rough wood.

Games.—All sorts of childish games are played by the children during their 524
early days, but I could not obtain any details from my informants.

Clothing.—From a very early age children are given small bits of skin as clothing, 291
and the boys have small aprons made for them.

Food.—The food of children is the same as that of grown-ups and is restricted 242
to milk, fat, and meat, as no crops are grown.

PART II.—SEXUAL.

Herding.—As soon as they are considered old enough (and this depends upon the 859
number of other boys in the family available for this work), boys are sent to help
herd the sheep and cattle, and they continue to do so until they are old enough to
start preparing for initiation.

Sex Life.—Initiation is often delayed until some little time after puberty, and it [314]
is not considered in any way wrong for these boys to begin indulging sexually as soon [313]
as they like, provided that they observe certain restrictions. They may do as they [314]
like with the younger girls in the neighbouring villages, provided, of course, that they
observe the law forbidding sexual relations with any member of their own sub-clan, [314]

/22 cont./

When the Dramuck have been driven out of the kraal to pasture, the women and children want to clean it. Then the fire is lighted in the huts and on it are placed the pots filled with water in which the vegetables are to be cooked. These pots (a mesh, 'mesha') are not made by the Manai themselves, but are bought from neighboring tribes or also from the Wandorobo, who presumably learned the potter's art from them. They are a foot high and globular. In contrast to the warriors, all the occupants of the family kraal, especially since the cattle epidemics, eat vegetable food which they buy from the neighboring peoples, since they themselves do not engage in any agriculture at all. Their favorite foods, however, are, of course, milk, meat, and blood. Milk is always drunk by healthy people uncooked, as fresh (ol gaki) or sour (ol gaki nanyuki) boiled milk is feed for the sick and so milk is usually mixed with pulverized grains of ol ladoo (Manai lowcolera). Sheep milk is especially popular because of its very high fat content. Blood of cattle, sheep, and goats is drunk fresh or eaten in the clotted state. Milk mixed with fresh or /22/ cooked blood (ol ghiki) is greatly appreciated; this drink is highly esteemed as invalid soup for the wounded. Cheese making is unknown. Butter is made by agitating the cream in a large gourd-bottle (ol dingirgirgi). Fat, rendered in a pot, is used as an ingredient in other foods, especially meat broth, but is also drunk without any admixture. Meat is prepared without adding salt; it is cooked either with various spices or roasted on a stick at the open fire. One does not eat in one day cooked meat and milk /22. It appears here/ together

1. This was also forbidden for the Hebrews, according to the 2nd Book of Moses 23, 19-24, 26, passages which are part of the so-called Yahwist documents, that is, the oldest sources of the Pentateuch.

because the latter together with the ol ombaraa spice (lack of

[88] /85 cont./
[526] trample underfoot. The one now wanted had also wanted /86/ to
[52] regale guests with it on that day, but no one came to him whose son
showed himself to be a shifta. While the old people, as long as
[536] there is something to eat and drink, are only interested in that, the
[533] warriors, already early in the afternoon, start to dance and sing
with the young girls and amuse themselves in this way into the night.
Not until about ten o'clock do they go back to their kraal, to which
the girls presently follow them, after they have begged for a little
more milk, which they take along to their lovers. /III. 18 appears
here./

[558] The circumcised boys, soon after the completed operation, went
into the huts of their mothers and stayed there for seven days, until a
superficial healing of the wound has taken place. In order to hasten
this, they are particularly well cared for and are given only milk,
[411] blood, and meat. During the following period, until complete
[223] healing, they roam in small bands with bow and arrow -- they do not
use the ordinary bows, but ones only about half as long, made only
for this occasion; the arrows used with them have a wax ball at the
tip -- through *mzppe* /85/ and lower, in order to shoot small birds,
the skins of which they string by the beaks on a cord, which they
place garland-like around forehead and occiput. Between the bird
[301] skins the *en ilbelio* (sing. *en ilbell*) -- as the newly circumcised men
[302] are called during their recuperation -- stick an ostrich feather on
each side of their heads and paint their faces with white clay (*en
dumuni*). On the first day they go out, they slaughter a white goat-
[562] buck on the *mzppe*. After they have roasted and eaten its meat,
they throw the gnawed bones into the fire. This meal is called *el
ilbe* [*el lenek* (*el ilbe* = the goat buck, *el lenek* means the tree
with whose branches they make the fire). Every evening after their
recreations they return to the kraal and to the huts of their mothers.

[E1]
[M1] As soon as the young girl, who until then has lived in the warrior
kraal in the most unrestrained freedom, concludes from certain

[TEXT CONTINUED ON PAGE 56]

/150 cont./

757 and the chewing of the root of ol ungáli (Withania somnifera Z.) are regarded as acting especially vigorously. Children are given an infusion of the leaves of ol magingi (Mentheera multiflora [Hech.] Bth.), because it has a considerably milder effect.

753 757 They call another greatly feared fever ol oiódi l'en dúdú and see its original cause in the bite of a kind of tick living underground, which they designate as en dúdú l'ilmun. The patient is given liquid sheep fat mixed with the powdered grains of ol ubra (Mesua lancaeifolia Forsk.). Presumably this fever is identical with relapsing fever, for which Professor Robert Koch identified as the carrier of the spirilla a species of tick living underground (Ornithodorus Lahgei) (1).

[136] [147]

1. During the day Ornithodorus hides in cracks of buildings or in the ground and emerges at night as a victim approaches. Merker's conjecture could therefore correspond to the truth, and the more so since to me too the Masai designated and displayed as unquestionable Ornithodorus as the carrier of a fever. The ed. Dr. K.

757 [147] Against chickenpox (e ríri or en ilaiboni) no medicine is known. The sick person remains in the hut. He is given as a drink a little milk mixed with fresh blood and sheep-tail fat, two things that are regarded as strengthening; furthermore, as food, a piece of mutton roasted in the skin or the open fire.

[151] [147] [158] For protection against smallpox (ol maríbo or ol mirjéki) healthy persons are inoculated in two incisions on the forehead with the smallpox pus en gimeki of a sick person. Smallpox patients are given a decoction of the roots of en dúbóle (Solanum campylacanthum) mixed with cattle blood as a diaphoretic and at the same time a nourishing remedy. In order to increase the sweat secretion, the patient is laid beside the hearth fire. Then no drink except the above-mentioned medicines as food, the head of a sheep roasted in the skin or another piece of mutton similarly prepared.

758 /139 cont./
[752] The hard lumps are cut out. During the illness the patient is given a diet of meat roasted on charcoal and, as medicine, a decoction of the roots of ol demellua /136/ (Solanum macracanthum) or of olai with the addition of honey; a root decoction of ol gigi (Lycium cf. arabicum Schweinfurth) mixed with milk or meat broth or such of ol emellai (Maerua johnsonii Vlkn. et Gilg), which, as a rule, is mixed with a little honey or fresh livestock-blood, is also regarded as curative. The patient drinks this liquid when he is thirsty. The illness is supposed to lead to death if this diet is not adhered to and the patient takes in particular cold water or milk, as well as cooked meat. On the other hand, if the prescribed way of life is observed for two or three months, the lump, gradually pushing outwards, is said to fall off. Since, however, the continuous meat diet is too expensive and the herb medicines cannot be obtained without difficulty, the operation is preferred to by far the most cases.

752 [W4] A persistent fever connected with swelling of the three pharyngeal tonsils, accompanied by violent coughing and considerable loss of strength, especially common in youthful age, the blood call ol ngiti = gland sickness. Very probably it is a manner of adenoidal proud flesh in the nasopharyngeal cavity. The patient turns to the surgeon to be cured. The latter, putting his hand into the patient's mouth, scrapes the pharyngeal tonsils with the nail of his index finger, or with a small knife, so strongly that they bleed profusely. A rather large number of people whom I questioned about the success of the cure asserted that they always could count on certain recovery. Two of my boys, Masai youths about 11 to 12 years old, fell ill with the above symptoms. In spite of careful symptomatic treatment, their recovery of strength was so unsatisfactory that, upon their request, I gave them permission to go to a nearby livestock-local [illegible] for relief. After eight to fourteen days they returned, healthy and refreshed, and told me, which corresponds to the truth, that the surgeon had treated them in the manner described.

Fresh, simple wounds (ee dalem, o dungai) are cleaned as was described above for the circum, but during this one tries to avoid unnecessary irritation, for fear of greater bleeding. On this occasion, many surgeons do not proceed with treating the wound until several

752 /1N cont./
that of an egg or even amputates the member (hand, finger, toe). If
• [758] this seems to him absolutely necessary. After the operation the
patient is given raw sheep kidney to eat and a considerable amount
of liquid sheep fat to drink, whereupon severe diarrhea soon sets in.
Often one has him go through a sweat cure in that he is set over
glowing charcoal on which leaves of Bahsia rosemmata and sheep
hair are thrown.

On a migration wing (a-tsuge ni gaibu) one has a woman who
has given birth to twins or, lacking such, a pregnant woman spit
and rub the saliva over the painful spot. As long as the pain continues,
[762] the patient eats only raw goat liver, to which is ascribed some kind
[761] of marvelous effect -- as is also shown by the fact that it is the only
solid food of the ni ishwai.

[757] Into the wound caused by a poisoned arrow another person urinates
as quickly as possible. At the same time the wounded one is given
to an emetic a mixture of the juice of the fruit of an ishiki (Solanum
campylacanthum) and the amniotic fluid (ni gaba) of a gravid sheep,
which is slaughtered for this purpose.

757 For conjunctivitis (ely ga ni gaba) a tobacco extract (ni gaba ni
gunbai) or the juice of leaves of ni ushiki (Coleus blumeabelhariensis
ni dungi (Dactylanthus Oliv.) and ni ewajo, or an extract
of the leaves of ni gunoni, is dripped into the eye.

752 The surgeon removes the remains of a violently destroyed eye, by
drawing it out of the eye socket, with an awl here hook-shaped, far
enough so that he can cut it off with the razor. The eye socket is
then washed out with warm water and not bandaged afterwards.

[761] A place that has suffered a sprain or bruise the Ei doctor rub
with the juice of ni ashiki (Jacquinia spec.). Sometimes they also
apply the same drug by the method of rubbing the powder of the
charred twigs into small incisions that are made on that place.

/1N/ Dislocated limbs are set again and placed in a splint
bandage that is not stiff. For a lower-arm dislocation the surgeon
sits on the ground in front of the patient, grasps his lower arm just
above the wrist, and sets it again by a gradually stronger pulling
exerted in the required direction. He then puts around the affected
[757] part, from the middle of the lower arm to that of the upper arm,
which are drawn together at an angle of 110°, a padded bandage
consisting of a strip of sheep leather that is covered with as much
thick and soft hair as possible. The padded bandage is tied with a

After the war the German titles were consolidated. In 1921 Sir Charles Rose purchased the title to, on a lease on 18,000 acres of the Center to preserve the game and provide himself with a winter home. He never was able to be in residence, however, and there was a long litigation between him and the Tanganyika Government which ended by their repossessing the land when the said lease expired in 1946. Apparently a Captain G.R.R. Maxwell also had a farm in the center "for several years" after the war (Maxwell, 1928).

There were a few European ranches along the north edge of Western Rhodesia in Kenya prior to 1915. At least one of these was owned by a Major Cavendish in the Lemek Valley north-east of Kitong (Kenya Land Dept., 1915). All European lands in Western Rhodesia in Kenya were given to the Masai as a result of the treaty of 1911.

At Narok, Ololdaika, and Ngorongoro Crater there are District administration offices and stockade. Being a District headquarters Narok also has a Masai school and hospital. Periodically Europeans, especially South Africans, have put small stores here and there in the area. We were told that one was at Ewaso Nyiro,

General Allowance

759 [252] Surgery is the domain of special surgeons (el sikiri), or sikiri who extend their practice both to human beings and to cattle, goats, sheep, and donkeys. The calling as a rule is handed down from father to son. One cannot speak of a special caste here, however, since the surgeons occupy no special social position -- either in a good or a bad sense. Only the son of an el sikiri who knows how to practice the art is el sikiri, and, to be sure, only as long as he practices it. If, by way of exception, someone whose father is not a surgeon learns the art, he thereby becomes a surgeon. The surgeon thus practices a open calling.

As payment for help rendered, the el sikiri receives, according to the difficulty of the case or the amount of work done by him, a head of livestock, from a head of cattle down to a young goat or a lamb. One should also mention the remarkable arrangement that he can make a claim regarding the payment only if his treatment has had the desired result, and the patient [188] need not pay before the resulting complete cure. An established custom determines what falls to the department of the surgeon. The el sikiri stays within these prescribed limits under all circumstances. If this is not conducive to progress, it has the result, on the other hand, that every Mami, when necessary, entrusts himself immediately to the surgeon without hesitation. We learn that the latter will not undertake an operation on him which he cannot safely perform, but rather that whatever he does, he has often seen and has done with an older colleague or alone. No narcotic agents are available to the surgeon, but his patients have continued even very "strong nerves," even an enviable mental steadiness.

[192] 760 [192] The juice of el gilotti (Acacia glomerosa), chewed out and spat into the wound, and the charcoal powder of el dulgui bark (Nectandra glomerata Gilm.) are used as astringent remedies.

Adhesive have ligatures applied, if necessary, and, to be sure, by means of a leather strap placed around the limb, which is tightened by a short stick. The cut ends of the artery are then sewed together as neatly as possible with awl and rawhide cord, after they

/[illegible] cont./

737 artificial leg is optimal to the leg by bared leather straps.

Midwifery and Women's Allowance

• 759 Midwifery is in the hands of older women, who, as a generic term, all gynecologists, professionally practice the calling of midwives and have at their command a surprisingly accurate anatomical knowledge of the body parts in question. It seems that only in
843 exceptional cases are they not called upon at a birth. At the beginning of the last month of pregnancy the midwife examines the pregnant woman several times, in order to determine by palpation of the abdomen the position of the child. The head position is regarded as the most favorable for the birth then. If the woman during the examining finds another one, the attempts to change it to the desired one by means of a massage.

844 As soon as the first labor pains begin, the midwife, who lives either in the same house or in one nearby, is called in. She finds the woman in labor, who, incidentally, is not regarded as unclean, on the bed in her hut in a squatting, sitting, or lying position. With a normal birth the assisting woman remains in attendance without performing any kind of supervision or interior manipulations. On the other hand, if it proves necessary to bring about an immediate of the labor-pain activity, the midwife, with the help of a few women, has inside the woman in labor moved for a few days and, if the desired result is not obtained in this way, further help is given by means of a light massage. Only if these remedies prove insufficiently effective does one attempt the last one. The woman giving birth is /[illegible]/ slowly lifted by her feet by several women until her body hangs vertically and the crown of her head touches the ground, whereupon the midwife massages her abdomen in the direction of the navel.

The use of internal medicine to promote labor-pain activity is rare; a mixture consisting of liquid sheep fat and a decoction of [illegible] root (Cordia monosta Chiet) is regarded as effective.

The midwives mentioned regard the undertaking of massage through insertion of the hand, in analogy to the birth assistance given livestock,

/11 cont./
the El anlo also have their own tribes, which will be briefly discussed at a later place.

Corresponding to the uniformity in language, the number words are the same among the Mawu and Wokuti, whereas the Ané and El anlo have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision ceremony among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tenga, closely related to the Mawu people. In birth and death, too, all three have the same customs, while in the use of their camera one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their dances.

The people as a whole are divided into three large tribes, the Ané, the El ewolényo, and the El ewégaxa, each of which is made up of a number of lineages, and every Ané, as well as every El lanli and El ewomei, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Mawu in particular, which is at the same time that of the Wokuti, we are thereby including the ethnographic traits of the entire people the meeting of individual differences that have developed among the Wandamba in the course of time and under the influence of changed conditions will be reserved for the third part.

/12/ Second Part

I.

Tribes, lineages, sublineages. — The Ki gbéti lineage. — The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, feuds. — The sorcerer. — The El kéwéfe lineage. — The reincarnation.

Every tribe (ní gbéhoxo) is divided, as has already been mentioned, into a number of lineages (ní gbéxo, ní gbéti). Among them, in turn, one distinguishes principal lineages (ní gbéxo kéwéfe)

/[illegible]/

764 With one pair of it they tie water themselves, the other pair they pass over the corpse, after it has been taken out of the hut and laid out of a mat's skin. Outside the lamentations of the women remaining in the hamlet, the men carry out the dead man did lay him down after a few hundred steps. The corpse is laid on its left side with the head toward the north, so that the face is turned toward the east. The legs are drawn up and lie one upon the other. The left arm is drawn up in such a way that the hand lies close in front of the head, whereas the right arm is bent at the elbow in a right angle; the upper arm rests on the abdomen of the dead man, the hand touches the ground in front of it. If one laid the dead man down in any other way, according to popular belief, /[illegible]/ another death would quickly occur among the offspring or other relatives of the deceased. The same is feared if a married man dies far from his hamlet, which is why a family father, if he becomes seriously ill abroad, has himself taken home as quickly as possible. In contrast to this, warriors only wish to die abroad; death in the hut is not a proper soldier's death. Those who have fallen in battle are left lying on the spot on which they fell. In a few lineages it is customary to place the corpses of old people not simply on the ground, but in a shallow, roughhewn pit or more half a meter deep, which, however, is not filled up.

764 After the corpse has been put down outside, the men, with the widow taking precedence, or -- if he is still a child -- the brother of the deceased, cover it with green branches, whereby each says the prayer: "Ng ai yaiboi, ene kele ene jendi, ayage ai ngenje mbali, ayage ai gielem, ayage i gem," i.e.: "My God, father is dead, I pray, give health, give property, give children."

In case of a woman's death, after a black rum has been quickly disciplined, her body is anointed with fat by women who are not relatives and then carried out of the hamlet; the body of a person who leaves no children is carried out of the hamlet, without being anointed or other formalities, and is laid down -- as always -- a few hundred meters away. If someone dies outside the hamlet, he is left lying on the spot where death overtook him, and the men present throw a few branches of grass or leaves on the corpse. Later, upon peering

1: Hollis G-9 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas*, in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are entirely dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kimono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

[195] attacked by cattle robbers, and is only united to the despised tribes of the mountains: while to land on coast and with given strength and courage. When cattle fail them they make raids on the tribes which they know to be in possession of herds. They say that Engai (Heaven) gave them all that exists in the way of cattle, and that no other nation ought to possess any. Wherever there is a herd of cattle, thither it is the call of the Wakuafi and Hami to proceed and seize it. Agreeably with this maxim, they undertake expeditions for hundreds of leagues to attain their object, and make forays into the territories of the Wakamba, the Galla, the Wapoggo, and even the Wanika on the sea-coast. They are dreaded as warriors, laying all waste with fire and sword, so that the weaker tribes do not venture to resist them in the open field, but leave them in possession of their herds, and seek only to save themselves by the quickest possible flight.

[211] "The weapons of the Hami and Wakuafi consist of a spear, a large, oblong shield, and a club round and thick at the top, hurling which with the greatest precision, at a distance of from fifty to seventy paces they can dash out the brains of an enemy: and it is this weapon, above all, which strikes terror into the East-Africans, the Swahili with their muskets not excepted. The Wakuafi shelter themselves behind their long shields until they become close enough to the enemy [214] to make good use of their clubs. They conquer or die, death having no terrors for them. . . . . .

"The two kindred tribes, the Wakuafi and the Hami, hate each other mortally, which is a fortunate circumstance for the weaker African tribes: since, were they united and ruled by one supreme head, there would soon be an end to the existence of the other East-African tribes, who could not possibly resist them, the savage Galla themselves not excepted: for the latter fly before the Wakuafi and Hami, and, at the most, only prove dangerous enemies to them by strategem and cunning, but never cope with them in a fair and open field.

"As regards the physical conformation of the Hami and Wakuafi, their forms are tall and slender, with handsome and rather light-complexioned features. . . . . From their beauty of form the Hami and Wakuafi slaves, especially the young females, are much sought after by the Arabs and Swahilis of the coast: and they become much attached to their Mohammedan masters, provided always, that the latter do not require from them any kind of labour which is repugnant to their habits, such as tilling the soil and similar occupations.

"The Wakuafi and Hami as pastoral tribes, consider themselves the exclusive possessors of the plains and wildernesses, with their springs and rivers, and they do not attack the inhabitants of the mountains, so long as they confine themselves to their mountains, and refrain from descending into the level country to turn it to agricultural or pastoral purposes. It is said, however, that very recently, they have resolved to take possession of the mountain Kafiaro[1] to facilitate their freebooting expeditions against the Galla, Wanika, and Swahili, and to exclude these tribes of the coast from access to the interior. . . . . ."

Discovery of the source of the Nile.

The Hami first came into prominence in connection with the development of Africa and with geographical discovery by the discovery of the source of the Nile in 1858 and by the interest then aroused in Europe, both in Uganda and in the possibilities of opening up a more direct route from the sea than that one then in use from opposite Zanzibar to the southern end of the Victoria Nyanza. To the opening of this route the most serious difficulty to be overcome was the occupation of the country occupied by the then formidable and dreaded Hami, of whom previously all that was known was the rumour of their bravery and prowess in arms. East coast traders had repeatedly crossed Masailand, but no European had attempted the task.

Dr. Fischer's visit to Kikuyu.

In 1882, a German naturalist, named Dr. G. A. Fischer, was sent out by the Geographical Society of Hamburg to explore the possibilities of this route. He started from Pangani, opposite Zanzibar, with a caravan of 120 natives and porters,

[1] See Letter Source on Kingan.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

abandoned, and, though meat and milk were still the main items of his eating, he could now vary it with vegetable food, obtained by his wife from neighbouring agricultural tribes. Luxuries, also, he might now indulge in. He sported a fancy snuff-box and tobacco-box of ivory or rhinoceros' horn, and delighted to rap up its contents as he handed it to a friend. He chewed tobacco (mixed always with natron), though he never smoked. Then, as often as convenient, he liked to foregather with his friends, and have a jolly carouse over beer or mead.

It is pleasant to know that with this change in his mode of life there was a corresponding alteration (very much for the better) in his views of things. He delighted to talk with the traders whom before he had gloried in killing or annoying, and would in token of good-will cordially exchange the courtesies of life by spitting upon them and being spat upon. In his conversation he showed an intelligence far superior to any specimen of the Bantu tribes. He had no suspicions, and was communicative about his affairs and beliefs. He would even at times exercise a friendly guardianship of passing traders, and was able to ward off many a disaster by judicious warning. He was not stinted in his presents, and generally gave far more than he got. He has been known even to protect strayed porters, and tend sick men left behind

The softening down of his ferocity reacted upon his face. The habitual scowl gradually died away, and was replaced by a more pleasing and genial expression. His thoughts turned more to the strange mystery of life. He, alas! had little that was cheering to look forward to. He believed in the existence of a Supreme Being, and yet had not the faintest conception of an after-life. Unlike the men of the Bantu races, he did not believe in ghosts or spirits. He had no theory of dreams, and did not imagine like the negro that when he dreamed he was really experiencing all that was passing through his brain, and that his soul or spirit was actually knocking around somewhere, having a good time of it, unclogged by his body. Morun believed nothing of that; indeed, whether he had any idea on the subject, I have not been able to determine. When the man died, he was finished utterly, except so far as he might go piecemeal to build up the body of a hyena, a vulture, or a marabout stork. The Masai believe in annihilation. To bury a corpse would, they think, be to poison the soil: it must be thrown to the wild beasts without ceremony.

593 931 601 *Gifts to Certain Relations.*—A somewhat similar custom is that which ordains that a grown-up man must give certain presents to all children born to his father, as follows:—

(1) To a young girl-child, either a heifer or else a young cow or young she-goat which has not yet had young. If the former present is given the child in future calls its brother (or half-brother) *lemdi*, and if either of the two latter animals is given the appropriate name is *ledoo*.

(2) To a boy-child, either a heifer or a young man or else a young cow or she-goat which has not yet had young. The following are the appropriate names by which the boy henceforward calls the man: *libulio* if the gift was a young cow, *ingiai* if the gift was a young she-goat, *ndoro* if the gift was a heifer, *ebikhomo* if the gift was a young man.

A grown-up man must also give a present to any new wife married by his father, the animal given and the name thenceforward used by the woman to the man being exactly as in the case of girl-children above.

604 *Mother's Brother.*—Among the Masai I can find no trace of any special functions of the mother's brother, and he has no special position in relation to his sister or her children.

589 *Widowhood.*—There is no idea of uncleanness attaching to widowhood, and therefore there is no ceremonial purification ceremony before sexual life can be indulged in by a widow. When a woman is left a widow she builds herself a hut [607] with one of her husband's own brothers (*i.e.* brothers by the same mother), and he becomes responsible for her welfare and acts in loco parentis to her children so far as making arrangements for initiation and marriage, etc., are concerned. In no circumstances, however, may this brother or any other of her husband's own [835] brothers have sexual intercourse with the woman. If she is still of child-bearing [954] age she is expected to go on having children (who will rank as her late husband's), and to this end she may have sexual relations with:—

589 834 (1) Any men of her late husband's age-group, who are not excluded by other restrictions (see above).

(2) Any of her late husband's half-brothers (*i.e.* brothers by a different mother).

(3) Any other men not otherwise excluded.

757 *Sickness.*—My informant was unwilling or unable to give me any detailed information about the treatment of sick people, save that medicines were made from the barks and seeds of various trees and from the stomach juices of slaughtered animals.

Part VII.—Death and Burial.

•761 *Death.*—Death is looked upon with fear and, therefore—except in the case of very old men and women past child-bearing—every precaution is taken to avoid a

death taking place within the village. This means that as soon as a young or middle-aged person shows any signs of approaching death, he (or she) is hastily carried out into the bush outside the village and left to die there. ¶3

Should the death of a young or middle-aged person occur within the village the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be carried by a stranger (usually a member of the Wandombe tribe, who is always willing to perform this work), and the fee for doing so is a heifer. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony. ¶4

Burial of Old People.—Only an old man, or a woman past child-bearing, is allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a ram or bullock is slaughtered and the hut used to contain the body and clothes (even skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows: A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from scavenging animals. ¶5

About a month after the burial has taken place the village must be moved, with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before. ¶6

Ceremony at the Burial-place.—On the day that the village is finally abandoned every member of the village must file past the burial-place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat. ¶7

Inheritance.—A man's possessions all pass to his male children, but if they are too young to take charge of them themselves the deceased's own brother, who acts as *loo parents* (see Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock. ¶8

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

764 With one part of it they first sweep themselves, the other part they pour over the corpse, after it has been taken out of the hut and laid out on a mat's skin. Outside the inconveniences of the women remaining in the kraal, the men carry out the dead man and lay him down after a few hundred steps. The corpse is laid on its left side with the head toward the north, so that the face is turned toward the east. The legs are drawn up and lie one upon the other. The left arm is drawn up in such a way that the hand lies close in front of the head, whereas the right arm is bent at the elbow in a right angle; the upper arm rests on the abdomen of the dead man, the hand touches the ground in front of it. If one laid the dead man down in any other way, according to popular belief, [illegible] another death would quickly occur among the offspring or other relatives of the deceased. The same is feared if a married man dies far from his kraal, which is why a family father, if he becomes seriously ill abroad, has himself taken home as quickly as possible. In contrast to this, warriors only wish to die abroad; death in the hut is not a proper soldier's death. Those who have fallen in battle are left lying on the spot on which they fell. In a few lineages it is customary to place the corpses of old people not simply on the ground, but in a shallow, roughhewn pit at most half a meter deep, which, however, is not filled up.

764 After the corpse has been put down outside, the men, with the eldest taking precedence, or -- if he is still a child -- the brother of the deceased, cover it with green branches, whereby each says the prayer: "Ng ai pwilusi, ene hebe ene jenebi, ngage ai ngaeje nebeli, ngage ai gielem, ngage i gene," i.e.: "My God, father is dead, I pray, give health, give property, give children."

In case of a woman's death, after a black ram has been quickly slaughtered, her body is anointed with fat by women who are not relatives and then carried out of the kraal; the body of a person who leaves no children is carried out of the kraal, without being anointed or other formalities, and is laid down -- as always -- a few hundred meters away. If someone dies outside the kraal, he is left lying on the spot where death overtook him, and the men present throw a few bunches of grass or leaves on the corpse. Later, upon pewing

Nee, ten ilk en-giyai-kowi, enitee 'Ngatenye ake 'a-dikiria.

If a baby dies, its mother only lays aside her ornaments[1].

Il-tanja en 'l-enenkiya[2] ion-'l-enkiguenak, en 'l-enerin.

Ten ene en-ainé el-enkiguenó, enj ene en-enkiduge el-ten lenye. Nee, ten ilk el-enkiguenó, ene ɣ' ainoni, ainé ali el-ten lenye. Ilji aidiyi enene 'a-gidoo: enaitiki el-ten eyin.

People's souls and spirits, and snakes[3].

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over so with the entire, and that the soul does not come to life again[4].

Kake ten ilk el-eilenó enaki el-kerein, nenekari, ene ye ekgwiye e-enene lenye, enj enewale el-ten lenye, ene el-enerei; nele el-enerei enj-ekg en-'a-gere enyeno, enilgerene.

But when a meddlesome man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them.

Il-enaki ene enja, ye enkar il-Kenne 'l-enerin lenye. Nee, ten ainé i-Kgwiyok el-enerei il-ej, nenenki kulle, nenej el-enerei, nele.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away.

Ilji 'l-enerin nenek, nee la'a-gidoini en-'l-kiner; nee, ten ter ilkee enji 'l-enyeny, enja: 'Kiner, enee 'l-kulenkig.'

There is a black snake, which is sacred to the *Kiner* clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them.

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Anthropos*, pp. 130, 132; and *Bonn Parke in Central Africa*, p. 338, &c.).

[2] *Enee*, the heart, mind, soul; *el-enenkiguenó*, the corpse, spirit, ghost.

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Gessi, *Ten Years*, p. 31; *Bonn Parke*, *loc. cit.*, p. 339, &c.). The Latuka hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly regard and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 232).

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 129, 188).

[514] [515] [516] Too ekpuuki 'e-gwa kutiti 'l-ntiyanak tuuti ealdig, ameutaki 'ag-ameiak il-tuuti, ategiki: 'Kikitajeje ang-ki.'

Ene, too ekpuuki 'l-ameve il-ntiyanak kitaak, ameutaki kulilae-kitaak ing-ameiak ing-aik.

[517] [518] [519] Ene, too ekki el-Masaai en-ditki ueive ee-eldig ekki, ameu el-ekive ildiye, ameutae 'ag-ameiak, ategi: 'Tuuke! Ildiye 'l-ntiyani!' ategi ali: 'Tulukwaki!'

[520] [521] [522] Ore ali too ediitae, ategat il-ameidiga ameki ang-ameu e-'l-ntiyani ilae, ameutae 'ag-ameiak. Ore ali too enilig il-ameu tauuk ildiye ameu el-ntiyani ilo, ameutae 'ag-ameiak, ategi: 'Tuuke, ang-ki, mikiteta 'e-gipee.'

[523] [524] [525] Ore ye ekiar ang-ewee 'l-kimengee kuuse-kwapi, ye ekki il-Masaai, ameutae 'ag-ameiak, ameu ategi: 'Eiee kiddi il-ntiyanak ameu kulio.' Ategi ali: 'L-ellanak kitaak kulio-ntiyanak.' Ore ye epik el-kimengei el-ntiyani el-ekeni, ategiki el-ntiyani: 'Tuuutakaki 'ag-ameiak ye eldiin.' Ategi ang-ewee 'l-Ojeje ameu ewee 'l-pepit kumak.

If small children salute very old men[1], the latter spit on them, and say: 'May God give you long life and gray hairs like mine'[2].

Then, when warriors greet old men[3], the latter frequently spit in their hands before allowing the young men to grasp them.

If a Masai sees something phenomenal, such as a shooting star, he spits several times and says: 'Be lost! go in the direction of the enemy!' after which he says: 'Stay away from me.'

Again, should he forget, and call somebody who is dead, or mention the name of a deceased person, he spits. Should he hear any bad news, such as the death of some person, he spits, and says: 'Be lost, O God, we have no more.'

When the Europeans came to these countries and the Masai saw them for the first time, they used to spit, for they said: 'We have never seen people like these.' They also called them medicine-men, and if a European gave a Masai medicine, the latter asked him to spit on him to heal him. Europeans were formerly called 'L-Ojeje owing to their being hairy.

[1] Vide p. 283.

[2] It is customary amongst the Bari people for old men (fathers or grandfathers) to take children's heads between their knees and spit slightly on them to bless them (Mitterrutzner, *Die Sprache der Bari*, p. xvi).

[3] Vide p. 284.

Ol-le-Paiowuki.

Ten ajyin ol-mdgnai ewuki ewgwai ee'l-Masaai ewiten ol-ainake ewuki ewg-ewuke, ewiake ol-tuwuki. Ken, ten ajyin 'e-gwen, ajje Paiowuki.

The ceremony of the red head.

When a Masai wishes to make a person his brother or sister, he gives that person a red head, called ol-tuwuki. After performing this ceremony, they call one another Paiowuki, i.e. The giver and receiver of a head, instead of by their proper names.

Il-ilisi.

Ilaji ee-ilisi ajje 'l-Masaai, 'l-ilisi.

Ten ele ol-mdgnai ailgwuwa e-ilgwiyisi ewuwai, ol ituk ol-ilisi-ewuiki ajj Ol-ilisi, ewuwajje, "Ili-ili-ili," ke'ewiwa e-kalyaaya, ewiyiliba 'ajjwa ewuwai ewiidg. Ken, ten ituk ol-le-ewiiten, ewiyiliba 'ajjwa ewuwai ewiidg.

Ore, ten ele ol-mdgnai ailgwuwa ol-lwa ewuwai, ewituk ol-ilisi kalyaaya, ewiyiliba 'ajjwa ewuwai ewiidg. Ore, ten ituk ol-le-ewiiten, ewiyiliba 'ajjwa ee ele ailgwuwa.

Ore, ten ele ol-mdgnai ol-ewiiwai ewuki ee-jaaa, ewuiidg ol-ilisi ituiiu ke'ewiwa e-ewiiten, ewiyiliba ajje ewuir lekwa ewie ewiwa. Ken, ten ituk ol-le-kalyaaya, ewiiaya, ewa ajyiba 'ajjwa ewuwai ewuir.

Ore ten ele ol-mdgnai 'ag-ekgiin, ituk ol-ilisi

Omens.

The Masai believe in what they term Il-ilisi, or omens.

If a man goes to visit a woman who is ill, and the bird which is called Ol-ilisi*, on account of its note, cries on his left hand, he knows that the woman is very ill indeed. Should the bird utter its cry on his right hand, he knows that the woman is on a fair way to recovery.

If a person visits a man who is unwell, and hears the same bird crying on his left hand, he knows that the man is only indisposed; but on the other hand, if a bird cries out on the right side of the road, he knows that the man will die.

Again, if a man goes to fight or to raid and hears the Tile bird crying on his right hand, he knows that he will be successful. Should the sound come from the left hand, he will return home again, as he knows he will be beaten.

If a man is going to pay a visit and hears a Tile bird behind him, it

* Hieraetus spodocephalus, Rp.

death taking place within the village. This means that as soon as a young or middle-aged person shows any signs of approaching death, he (or she) is hastily carried out into the bush outside the village and left to die there. [¶4.1] [¶4.2]

Should the death of a young or middle-aged person occur within the village, the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be moved by a stranger (usually a member of the Wanderobo tribe, who is always willing to perform this work), and the fee for doing so is a bullock. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony. [¶4.3]

Burial of Old People.—Only an old man, or a woman past child-bearing, is allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a male or bullock is slaughtered and the fat used to anoint the body and clothes (pure skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows:—A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from marauding animals. [¶4.4]

About a month after the burial has taken place the village must be moved, with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before. [¶4.5]

Ceremony at the Burial place.—On the day that the village is finally abandoned every member of the village must file past the burial place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat. [¶4.6]

Inheritance.—A man's possessions all pass to his male children, but if they are too young to take charge of them themselves the deceased's own brother, who acts as her parents (see Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock. [¶4.7]

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

[illegible]

(000) Death. -- Succession. -- Hereditary succession. -- Last wishes of the dying. -- Sacrifice to ward off impending death. -- Treatment and treatment of the corpse. -- Funeral lament. -- Mourning. -- Burial. -- Burial of Chief Ishepian. -- Distribution of the inheritance.

• 763 When a family father feels death approaching, he calls his people, his wives and children, to him, in order to tell them his last wishes. These apply principally to the division of the inheritance and saying further -- probably always without exception -- that the eldest son of the principal wife is to be the successor in the personal level. Following this, the old man, with the words ulu, nwiyulu, or ilu nwiyulu, i.e., roughly: "come, I want to know you," turns to the chief here and gives him advice about keeping the members of the family together and supporting them in case of possible impoverishment.about care for the brothers who are still minors, as well as for the surviving wives and daughters. He admonishes him further to be friendly and gentle toward the members of the family, of the lineage, of the tribe, and toward all Igbani in general. He tell him that he is to celebrate the application feasts and to pay, and should also hold the relatives to this. He advises him to be thrifty, but warns against miserliness, and finally he presents him with one of his ornaments, as a rule, an armband, in memory of this hour.

The husband equals at the deathbed of a wife in order to hear her last wishes, which consist in her entrusting her children -- likewise power -- to his care.

(762) In the hope of warding off death, the dying one has a black bull slaughtered as an offering to God. His eldest son leads the sacrificial animal out of the hood, slaughters it by hitting it with a club in the neck, then removes the skin, cuts up the animal as usual, and lowers the heaped-up meat lying as a sacrifice. No prayer is spoken.

764 Prior of all the ornaments are taken off the deceased individual; sandals and leather apron remain on him. If the deceased is a family father, his sons quickly slaughter a black ox and hoil out the far.

II Hollis G-5 (ca. 1896-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas*, in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Baganda tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating grain or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, so far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

* It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully enquired.

What does it matter whether a person is one's own child or somebody else's so long as he does his duty?

[The Swahili have a somewhat similar proverb: "Kheri Kafi ukichapa kulko Islam usiyekuhu." (It is better to have a Kafir who pleases you than a Mahommedan who displeases you).]

No. 47. Kiere 'n-ail o ang'ap
They-separate-not the-buttocks and the-ground.

The buttocks and the ground do not remain long apart.

[One explanation of this proverb is that a man must sit down, and though he may walk about or lie down, he will sit on the ground again later. Another theory is that it has in some way reference to the disposal of the dead. With the exception, however, of the medicine-men and rich people, who are buried in shallow trenches, burial is unknown amongst the Masai. But it is perhaps a remarkable coincidence that the Tawiana[1], who are closely allied to the Masai, and the Ikoi, Dinka, and Madi[2], who live nearly 1,000 miles away, and not very far from the country whence the ancestors of the Masai are believed to have hailed, bury their dead in a sitting posture.]

The refuge[1].

If the Masai see best their wives, some go and seek refuge elsewhere, whilst others suffer and stay at home.

Should a husband beat his wife, but not badly, she will seek refuge in the house of a member of her husband's age.

When the man with whom she has taken refuge returns her to her owner, the latter does not beat her again, for he fears that he will be opposed by the members of his age.

If a woman commits a serious crime, and knows that she will be beaten in consequence, she goes to her father's kraal, and is given an ox, which she takes to her husband and begs forgiveness.

Death.

On the death of a child, or a warrior, or a woman amongst the Masai, the body is thrown away[2], and the person's name is buried, i.e. it is never again mentioned by the family.

Should there be anything which is called by that name, it is given another name which is not like that of the deceased.

For instance, if an unimportant person called Il-onana (he who is soft, or weak, or gentle) were to die,

[597] * Divorce appears to be unknown amongst the Masai.

[598] * The body is always taken to the west of the kraal, towards the setting sun. It is laid on the left side with the head towards the north, so that the face looks towards the east. The legs are drawn up to the chest, the left hand supports the head, and the right arm is folded across the breast.

Whenever anybody passes this spot he throws a stone on to the heap, and this is done for all time.

If a Kumi woman gives birth to a boy after the death of one of her sons, a small piece is cut off the ear of the newly-born babe and he is called Ilenanyu, i.e. from whom it has been snatched.

When the child grows up his name is changed to Ol-ereman, which has the same meaning.

Sometimes children's ears are not cut, in which case they wear a special kind of bracelet, called Ele-dunat, and a ring on one of their toes[1].

Mourning.

When a father of a family dies, the whole family mourns for him.

His widows lay aside their earrings, necklaces, and beads; his daughters leave off their chains, beads, armlets, and anklets; and his warrior sons and boys shave their heads.

His wives wait for a whole year before they put on their ornaments again.

If any other person dies, the women of the family leave off their small neck ornaments but not the iron rings or the ear-rings, and the men shave their heads. The mourning lasts for one month.

[illegible] from the trodden, he, of course, did not keep [illegible] 1[illegible]
himself, but divided among his companions of the kraal.

And so with war and women, life passed in happy fashion. 187
His demeanour was serious, and his expression furrowed, though he acquired an occasionally familiar lively sticking. He showed curiosity in a dignified manner. He rarely indulged in vulgar laughter, and smiling was hardly possible on a face which could only be called formidable.

He passed some twenty years in this manner. At last his 1[illegible]
father was found to be on the point of death, and he was 185
sent for. Shortly after his arrival, the old man succumbed.

[illegible] WARRIOR WOMAN.

It was not thought necessary to recognise this summons-given ceremonies in any way whatever, and therefore Moni lost no time in picking up the corpse and throwing it outside the kraal. Next morning, he smiled grimly as he going out, he kicked aside some freshly-picked brass, and glanced at some disgusting hyenas slinking away, in company with numerous storks, while vultures flapped greedily overhead.

He was now sole heir of his father's herds, for his younger 4[illegible]
brothers did not receive a single head of cattle, though they 185
had captured in their raids considerable numbers of them. Any they might secure now, however, would be their own property. Moni decidedly preferred the free and easy life of 185
the warrior's kraal, but, alas! he discovered, not that he was

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

abandoned, and, though meat and milk were still the main items of his eating, he could now vary it with vegetable food, obtained by his wife from neighbouring agricultural tribes. Luxuries, also, he might now indulge in. He sported a fancy snuff-box and tobacco-box of ivory or rhinoceros horn, and delighted to rap up its contents as he handed it to a friend. He chewed tobacco (mixed always with cadaver), though he never smoked. Then, as often as convenient, he liked to foregather with his friends, and have a jolly carouse over beer or mead.

It is pleasant to know that with this change in his mode of life there was a corresponding elevation (very much for the better) in his views of things. He delighted to talk with the traders whom before he had gloried in killing or enslaving, and would in token of good-will cordially exchange the courtesies of life by spitting upon them and being spat upon. In his conversation he showed an intelligence far superior to any specimen of the Bantu tribes. He had no superstitions, and was communicative about his affairs and beliefs. He would even at times exercise a friendly guardianship of passing traders, and was able to ward off many a disaster by judicious warning. He was not stinted in his presents, and generally gave far more than he got. He has been known even to protect stranded persons, and tend sick men left behind.

The softening down of his ferocity reacted upon his face. The habitual scowl gradually died away, and was replaced by a more pleasing and genial expression. His thoughts turned more to the strange mystery of life. He, alas! had little that was cheering to look forward to. He believed in the existence of a Supreme Being, and yet had not the faintest conception of an after-life. Unlike the men of the Bantu race, he did not believe in ghosts or spirits. He had no theory of dreams, and did not imagine like the negro that when he dreamed he was really experiencing all that was passing through his brain, and that his soul or spirit was actually knocking around somewhere, having a good time of it, unclogged by his body. Mosan believed nothing of that; indeed, whether he had any idea on the subject, I have not been able to determine. When the man died, he was finished utterly, except so far as he might go piecemeal to build up the body of a hyena, a vulture, or a marabout stork. The Masai believe in annihilation. To bury a corpse would, they think, be to poison the soil: it must be thrown to the wild beasts without ceremony.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngăi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngăi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 834 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the 764 day closed for both of them, and one after the other, they formed the subject of horrible hyenas' laughter. These fierce

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

creatures, with the vultures and the storks, tore their flesh under the light of the moon. Nothing remained but a couple of grim skulls and some bloody bones when the sun rose over the grassy plain in the morning; and the young urchins of the kraal kicked them about and laughed as they threw them at one another. 764 [524]

291

MASAI MARRIED WOMEN, NJIRI.

Such is the history of the commonplace life of Moran as retailed to me by men who had lived with him as boy, warrior, and husband, and for whose accuracy and truthfulness I can vouch. The next traveller will listen to the same story, and will doubtless be able to verify the main features of the narrative. 114

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

death taking place within the village. This means that as soon as a young or middle-aged person shows any signs of approaching death, he (or she) is hastily carried out into the bush outside the village and left to die there. 761 [763]

Should the death of a young or middle-aged person occur within the village the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be moved by a stranger (usually a member of the Wandorobo tribe, who is always willing to perform this work), and the fee for doing so is a heifer. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony. 764 [563]

Burial of Old People.—Only an old man, or a woman past child-bearing, is allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a ram or bullock is slaughtered and the fat used to anoint the body and clothes (sewn skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows: A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from scavenging animals. 766

About a month after the burial has taken place the village must be moved, with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before. 768

Ceremony at the Burial-place.—On the day that the village is finally abandoned every member of the village must file past the burial-place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat. 769

Inheritance.—A man's possessions all pass to his male children, but if they are too young to take charge of them themselves the deceased's own brother, who acts *in loco parentis* (*see* Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock. 428

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

Marriage.—The warriors may not marry till after the *E-Unoto*, and do not usually do so till after their first *Ol-Ng'esher*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 582 884 [585] [833]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be reclaimed if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the restrictions (*see* p. 202) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 583 561 837 [684]

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. [978]

If a woman who has borne children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (mother's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [593]

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law
} Must not be addressed by name.

Family.—The name for a family is *Ol Marei*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Masaini oinoti*, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyænas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 766

[1] *See* p. 200 of this volume.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika;* other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 [412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *naiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [782]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

764 provision of new sandals, a stick, and some grass in the hand is a further indication of a belief in an after-life. The bodies of laibons and rich men are buried in shallow graves under stone cairns; anybody passing a cairn is supposed to throw a stone on it. Cairns attributed to the Masai exist in Nandi, where they are said to be the graves of men killed in battle. The name of a dead person is never spoken again by the family.

000 Death. -- Interment. -- Hereditary succession. -- Last wishes of the dying. -- Sacrifice to ward off impending death. -- Treatment and interment of the corpse. -- Funeral banquet. -- Mourning. -- Burial. -- Burial of Chief Mbatyan. -- Distribution of the inheritance.

763 When a family father feels death approaching, he calls his people, his wives and children, to him, in order to tell them his last wishes. [428] These apply principally to the division of the inheritance and saying further -- probably always without exception -- that the eldest son of the principal wife is to be the successor in the paternal kraal. Following this, the old man, with the words wõu, maitujuño, or õu, maitanaba, i.e., roughly: "come, I want to bless you," turns to the chief heir and gives him advice about keeping the members of the family together and supporting them in case of possible impoverishment about care for the brothers who are still minors, as well as for the surviving wives and daughters. He admonishes him further to be friendly and gentle toward the members of the family, of the lineage, of the tribe, and toward all Masai in general. He tell him that he is to celebrate the supplication feasts and to pray, and should also hold the relatives to this. He advises him to be thrifty, but warns against miserliness, and finally he presents him with one of his ornaments, as a rule, an armband, in memory of this hour.

The husband squats at the deathbed of a wife in order to hear her last wishes, which consist in her entrusting her children -- likewise present -- to his care.

[782] In the hope of warding off death, the dying one has a black bull slaughtered as an offering to God. His eldest son leads the sacrificial animal out of the kraal, slaughters it by killing it with a stab in the neck, then removes the skin, cuts up the animal as usual, and leaves the heaped-up meat lying as a sacrifice. No prayer is spoken.

• 764 First of all the ornaments are taken off the deceased individual; sandals and leather apron remain on him. If the deceased is a family father, his sons quickly slaughter a black ox and boil out the fat.

/200 cont./

764 With one part of it they first anoint themselves, the other part they pour over the corpse, after it has been taken out of the hut and laid out on a neat's skin. Amidst the lamentations of the women remaining in the kraal, the sons carry out the dead man and lay him down after a few hundred steps. The corpse is laid on its left side with the head toward the north, so that the face is turned toward the east. The legs are drawn up and lie one upon the other. The left arm is drawn up in such a way that the hand lies close in front of the head, whereas the right arm is bent at the elbow in a right angle; the upper arm rests on the abdomen of the dead man, the hand touches the ground in front of it. If one laid the dead man down in [761] any other way, according to popular belief, /201/ another death would quickly occur among the offspring or other relatives of the 76 deceased. The same is feared if a married man dies far from his kraal, which is why a family father, if he becomes seriously ill abroad, has himself taken home as quickly as possible. In contrast to this, warriors only wish to die abroad; death in the hut is not a proper soldier's death. Those who have fallen in battle are left lying on the spot on which they fell. In a few lineages it is customary to place the corpses of old people not simply on the ground, but in a shallow, troughlike pit at most half a meter deep, which, however, is not filled up.

764 After the corpse has been put down outside, the sons, with the eldest taking precedence, or -- if he is still a child -- the brother [782] of the deceased, cover it with green branches, whereby each says the prayer: "Ng ai pasinai, etoa baba erta jamŏn, njage ol ogunja nahall, najage en gischon, njage n gera," i.e.: "My God, father is dead, I pray, give health, give property, give children."

In case of a woman's death, after a black ram has been quickly slaughtered, her body is anointed with fat by women who are not relatives and then carried out of the kraal; the body of a person who leaves no children is carried out of the kraal, without being anointed or other formalities, and is laid down -- as always -- a few hundred meters away. If someone dies outside the kraal, he is left lying on the spot where death overtook him, and the ones present throw a few bunches of grass or leaves on the corpse. Later, upon passing

764 /201 cont./ Later, upon passing
[765] the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being.
[782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

766 In contrast to the simple exposure of the corpse, that of a chief
[791] (ol oiboni), of a married man of the El kiboron lineage, and often
[613] also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit
[764] a meter deep is covered with a neat's hide moistened with fat, and
[237] upon this the corpse is laid in the position described above. A second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/214 cont./

426 the full debts, not only up to the amount of the inherited property.
686 If a warrantor is liable for the debt, he must satisfy the creditor if
[672] the debtor is unable to pay and, through that, becomes a creditor of the debtor himself. The liability of the warrantor does not end with his death, but passes on to his heir.

431 The nonacceptance of a gift is a rude insult to the giver and therefore never occurs. Giving is followed by counter-giving, except when the thing given was solicited by the ol momai = divine judgment. The Masai is put into the awkward position of having to ask in this way only if, for example, on an expedition of war, he has come a long way from his home district and finds no members of his lineage in the kraal to which he has come. The petitioner hangs from the roof of the hut of the one from whom he wishes to have a head of cattle a stool with the legs upward, or he wraps the legs of the stool or a bow with grass. This type is more urgent than the former, since the request must be granted before the grass dries.
[784] The ol momai is a divine judgment. A person who does not grant the request expressed in the ol momai sign will soon be punished by 'Ng ai through death or illness. A person who did not grant the
[783] request until after the grass had dried has himself absolved, for his own peace of mind, by a gathering of old men whom he entertains with a head of cattle and honey beer. It is believed that by the observance of this formality and by the statement of absolution of the old men God, too, has forgiven the sin. Upon handing over a gift, the giver always spits on it.

675 Loans or contracts are unknown. The creditor does not have
426 a right to the corpse of the debtor; neither debts nor misdeeds or
764 crimes committed by the deceased have an influence on the nature of his burial.

628 No distinction is made between murder and manslaughter, but
682 there is one between these and negligent homicide. If murder was committed on a boy or warrior, it is expiated by blood revenge carried out by boys and warriors or only by warriors. Any brother
[593] of the one murdered is first of all entitled to carry out the blood
[672] revenge and, further, any man belonging to the family. Blood

764 en-gurare. Ore ten eim pôkituñgani inne, nepik o-soit, neikôni nēja too-'l-árin pôkin.

Whenever anybody passes this spot he throws a stone on to the heap, and this is done for all time.

551 Ten ēä eng-ayōni oo-'l-Maasae, ore p' eīu ñgotonye ae-kerai, newaya en-giok e-[304] 'nna-kerai, nēji Nawaya.

If a Masai woman gives birth to a boy after the death of one of her sons, a small piece is cut off the ear of the newly-born babe and he is called Nawaya, i.e. from whom it has been snatched.

Ore pe ebulu, nēji Ol-ōwara.

When the child grows up his name is changed to Ol-owara, which has the same meaning.

304 301 858 Teni mewayi en-gerai en-giok, neishop en-daret o ol-giso to-'l-kimōjīne le-'n-geju.

Sometimes children's ears are not cut, in which case they wear a special kind of bracelet, called En-daret, and a ring on one of their toes[1].

Em-buroto.

Mourning.

● 765 Ten ēä ol-móruo loo-'l-Maasae ōata 'n-gera oo 'ñgorōyok, nepuroo ol-marei pôkin.

When a father of a family dies, the whole family mourns for him.

Neitau 'ñgorōyok i-surutya, oo 'seghenge oo-'murto, oo 'musetani; neitau sii 'n-doiye 'musetani, oo 'l-pisya, oo [302] 'seghenge oo-'n-gejek oo 'n-oo-'ng-aik; nebarn il-muran oo 'l-ayok il-papit.

His widows lay aside their earrings, necklaces, and beads; his daughters leave off their chains, beads, armlets, and anklets; and his warrior sons and boys shave their heads.

Netoni 'ñgorōyok ol-ari ōbo, neitōki áishop in-dōkitin enye.

His wives wait for a whole year before they put on their ornaments again.

Naa, ten ēä kulikae-tuñganak, neitau 'ñgorōyok o-'l-marei 'n-dōkitin naaata too-'murto, kake mme pôkin, epali-seghenge oo 'surutya; netoni ol-apa ōbo. [302] Nebarn sii 'l-lewa 'l-lughuny.

If any other person dies, the women of the family leave off their small neck ornaments but not the iron rings or the ear-rings, and the men shave their heads. The mourning lasts for one month.

[1] The second toe of the right foot.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Naa, ten ëä en-ginyi-kerai, neitau 'ñgotonye ake 'n-dōkitin.

If a baby dies, its mother only lays aside her ornaments[1]. 765

Il-tauja oo 'l-meneñga[2] loo-'l-tuñganak, oo 'l-asuria.

People's souls and spirits, and snakes[3]. 775

Ten etaa en-nëä ol-tuñgani, nēji etaa en-neduñgo ol-tau lenye. Naa, ten ëä ol-tuñgani, ore p' eirosi, nëä sii ol-tau lenye. Nēji eidipi anaa 'n-gishu: meitōki ol-tau apiu.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ëä ol-oiboni araki ol-karsis, nenukari, ore pe eñgwēyu o-sesen lenye, nēji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-añg oo-'n-gera enyena, neiñguraa.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 775 825

Ti-araki naa nēja, pe mëar il-Maasae 'l-asuria lenye. Naa, ten edol i-ñgorōyok ol-asurai ti-aji, nesuaki kulle, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 778 825

Etii 'l-asuria oorook, naa le-'n-gishōmi oo-'l-Aiser; naa, ten ëar likae etii 'l-oopeny, nējo: 'Miar, amu 'l-kulalañg.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [614]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 192; and *Emin Pasha in Central Africa*, p. 338, &c.). [191]

[2] Ol-tau, the heart, mind, soul; ol-meneñgani, the corpse, spirit, ghost. [192]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Casati, *Ten Years*, p. 31; *Emin Pasha*, *loc. cit.*, p. 339, &c.). The Zulus hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 233). [191]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

775 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

768 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

789 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o seyingei* (the man of the iron wire).

765 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

757 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Darsoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang'a gotok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kiluretti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Enderit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

273 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mosori*, literally "the egg." To this are added the dried fruits of the Sausage

[301]

[1] Because girls wear leg ornaments of iron wire.

764 /201 cont./ Later, upon passing
[765] the place, one again throws a stone or a handful of grass on that spot where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ig ai, at whose command the animals act here, that the deceased was a good human being.
[782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1

1. Cf. the passage Micha /Mikah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ɛ̃ɛ̃ ol-oiboni araki ol-karsis, nenukari, ore pe ɛñgwɛ̃yu o-sesen lenye, nɛ̃ji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-aña oo-'n-gera enyena, neiñgurua.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 775 825

Ti-araki naa nɛ̃ja, pe mɔ̃ar il-Maasae 'l-asuria lenye. Naa, ten edol i-ñgorɔ̃yok ol-asurai ti-aji, nesuaki kulle, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 778 825

Etii 'l-asuria oorook, naa le-'n-gishɔ̃mi oo-'l-Aiser; naa, ten ɛ̃ar likae etii 'l-oopeny, nɛ̃jo: 'Miar, amu 'l-kulalañg.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [614]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 192; and *Emin Pasha in Central Africa*, p. 338, &c.). [91]

[2] Ol-tau, the heart, mind, soul; ol-menesiganí, the corpse, spirit, ghost. [92]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 55; Casati, *Ten Years*, p. 31; *Emin Pasha*, *loc. cit.*, p. 339, &c.). The Zulus hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 233). [91]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

778 825 Eata sii en-gishōmi naji 'l-Tarōsero 'l-asuria lenye sambu. Naa, ten ŭarare ol-tuñgani loo-'l-Tarōsero ol-likae, pe meitŭu, nsipot 'l-asuria lenyena, nŭjo: 'E-sile e-'ng-aji e-yŭyo, talakunye!' Naa, ten eitu ekwet lidoŭarare, nepwŭnu, 'l-asuria sacny.

The Tarosero family have their own particular snakes, which are of many hues; and when a member of this family fights with some one and gets the worst of the combat, he calls upon his snakes, and says: 'The avengers of my mother's house, come out!' If the man with whom he is fighting does not run away, the snakes will come and bite him.

[614] Eata sii kulye-shomito 'l-asuria lenye. Etii 'l-asuria coibor, netii 'l-oonyokyo, netii sii 'l-oonyori. Etii 'l-kulikae ooata en-dŭki natii e-murt anaa ol-kila lo-'l-móruo, neibor kulikae 'l-lughuny anaa ol-móruo kitok.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ĕji sii eata 'l-oibonok 'l-kulenyena ootii ol-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 775 791 Nŭji ten ŭŭ kulikae-tuñganak kitunk anaa 'M-Batyany, ore pe enukari, nepwo 'l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuñgani, nemebuaki likae-tuñgani ainyŭye. Einyŭye akiti, amu ŭji: 'Ebaiki meidim ol-tau lenye atorinyunye, nŭŭ.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

795 825 Ĕjo 'l-Maasae metii 'l-menesiga, amu medol; kake ŭji edol in-gishu, naa ten eiñgurua 'n-gishu pŭkin e-wŭji nŭbo, nŭji edol il-menesiga araki ol-ŭwaru.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

[1] *Vide* p. 306.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

death taking place within the village. This means that as soon as a young or middle- 761
aged person shows any signs of approaching death, he (or she) is hastily carried out [763]
into the bush outside the village and left to die there.

Should the death of a young or middle-aged person occur within the village 764
the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be moved by a stranger (usually a member of the Wandorobo tribe, who is [563]
always willing to perform this work), and the fee for doing so is a heifer. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony.

Burial of Old People.—Only an old man, or a woman past child-bearing, is 766
allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a ram or bullock is slaughtered and the fat used to anoint the body and clothes (sewn skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows: A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from scavenging animals.

About a month after the burial has taken place the village must be moved, 768
with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before.

Ceremony at the Burial-place.—On the day that the village is finally abandoned 769
every member of the village must file past the burial-place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat.

Inheritance.—A man's possessions all pass to his male children, but if they are 428
too young to take charge of them themselves the deceased's own brother, who acts *in loco parentis* (*see* Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock.

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

Marriage.—The warriors may not marry till after the *R-Unoto*, and do not usually do so till after their first *Ol-Ng'esher*. The case stated by Mr. Leakey,[1] in which a warrior cannot have sexual intercourse with his initiated wife, is therefore hypothetical, and does not occur in practice. 561 582 884 [585] [833]

The cattle required for the bride-price are payable on the birth of the first child, and cannot be reclaimed if the wife dies or runs away, because the husband has got the child. Wives live with their husbands, but they are common to their husband's generation, not his own exclusively. Thus if a stranger comes to a village where lives a man of his generation he may choose in which hut belonging to his generation he will sleep. When it is time to sleep it is the custom for the owner of the hut to vacate it and leave the stranger with his wife. It is quite lawful and proper for the stranger to have sexual intercourse with the woman provided that she consents and that the restrictions (*see* p. 202) are observed. It is said that if a woman is persistently unwilling to allow the members of her husband's generation to have intercourse with her she may be severely admonished, and her husband may be fined a number of cattle. 583 561 837 [684]

On the other hand, the members of one generation are extremely jealous of generations older or younger than themselves. A fight between generations is very likely to occur if the men of one generation find that a man of another has had intercourse with one of their women. [978]

If a woman who has borne children leaves her husband and lives apart from him, he waits till his eldest son is old enough, and then sends him to fetch her back. 586

A man may not have sexual intercourse with the wife of his full brother (mother's son), but may have it with the wife of a half-brother (same father, different mother) who is of his generation. He may not have intercourse with his wife's sister or half-sister. 835

A husband and wife may not call each other by their names. 551 [593]

Father-in-law
Mother-in-law
Son-in-law
Daughter-in-law
} Must not be addressed by name.

Family.—The name for a family is *Ol Marei*. Relationship is not recognized beyond first cousin. The Masai take little interest in their genealogies and can seldom trace their ancestry beyond the fourth generation. Nevertheless, if a man is of pure Masai descent, *Ol Masaini oinoti*, he is proud of the fact. 602

Death and Burial.—Dead bodies are disposed of by the hyænas, except for those of *Laibons* or very influential old men. These are buried under cairns of stones. 764 766

[1] *See* p. 200 of this volume.

/201 cont./ Later, upon passing
764 the place, one again throws a stone or a handful of grass on that spot
[765] where the dead lay. The more respected he was, the longer this custom expressing veneration is continued.

[787] If the laid-out corpse is immediately devoured the first night by hyenas, this is regarded as a sign from 'Ng ai, at whose command the animals act here, that the deceased was a good human being.
[782] On the other hand, if one finds the corpse still untouched the next morning, the survivors bring a black ram as a sacrifice to appease the wrathful god. No prayer is spoken in this connection.

765 After the obsequies, a funeral banquet takes place, at which the animal whose fat served to anoint the deceased person is consumed. Everyone is welcome to take part. Formal mourning is observed only after the death of adult male persons. The period of mourning does not begin until one or more months after the death, and, to be sure, with the survivors shaving their heads (1)

1. Cf. the passage Micha /Micah/ 1, 16 (from the time around 724 B.C.) and Jer. 7, 23 /sic; see 7, 29/ (from the time around 605 B.C.).

--and the principal widow also cuts her nails -- and ends as soon as the hair has grown back about an inch long. /202/ The mourners remove all ornaments, for which the women also unwind the wire spirals from their necks and the wire cuffs from arms and legs; they do not take part in any feast or dance and may not marry during the period of mourning. For the death of a warrior his fellow comrades and fellow section-members, as well as his brothers and half brothers, mourn by shaving their heads and removing their ornaments.

• 766 In contrast to the simple exposure of the corpse, that of a chief
[791] (ol oiboni), of a married man of the El kiboron lineage, and often
[613] also that of a sorcerer (ol goiatiki) is buried. The bottom of a pit
[764] a meter deep is covered with a neat's hide moistened with fat, and
upon this the corpse is laid in the position described above. A
[237] second neat's skin, likewise rubbed in fat, is then spread over the corpse. Now the pit is filled with stones and earth and the latter

/202 cont./

766 [791] [613] [769] [778] stamped down firmly so that hyenas will not be able to dig up the grave. The chief's grave, as well as often the graves of the El kiboron old men, are crowned with a larger or smaller stone mound. Later, as a sign of veneration for the dead, Masai passing by will throw a few bunches of grass on the latter, whereas on the former, which is regarded as sacred, they from time to time pour a little milk as an offering.

766 791 Concerning the burial of Mbatyan, his son Zendeo told me the following: When the ol oiboni died, his large bodyguard was gathered around him, and immediately warriors set off in all directions, in order to bring the sad news to the kraals lying far from one another. From everywhere Masai came streaming in, the relatives of the deceased all appeared, down to the smallest infant. Every mourner brought a few fat-tailed sheep along, which, after a large herd was assembled, were slaughtered. Meanwhile the corpse had been laid out on a neat's skin. Beside this the closest relatives laid their leather aprons and others added theirs in a line ea. 100 paces long, the aprons being placed so that they formed a channel. Now the boiled-out fat was poured on the corpse and flowed along the channel. Then the body was buried, whereupon all the people brought grass and heaped a pile several meters high over the grave, which was then covered on the sides as well as on top with layered stones. In contrast to this description, there is a rumor circulating repeatedly among the people, according to which Mbatyan, several days before his death, in a state of mental derangement, is supposed to have secretly left the kraal at night and wandered about in the steppe, without the men of his guard, who had followed him, being able to find him. Then, when he was found on the fifth day, he was dead and his body already decomposed.

768 If in one kraal several young people or even children have died of some illness within a short time, it is abandoned, first because it is regarded as unlucky, but then also /203/ to enable the survivors to forget the sad event more easily. In such cases of death one can always observe deep sorrow among the relatives, whereas the death of old people, even own parents, is accepted more calmly. "The old ones are now resting, they sleep, their time has come."

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

775 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

768 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

789 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o segingei* (the man of the iron wire).

765 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

757 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Darsoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang'a gotok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kiluretti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Enderit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

773 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mosori*, literally "the egg." To this are added the dried fruits of the Sausage

[301]

553 and three old men. If it has not previously received a name, it may have been
852 called by the name of its father's father; but at the naming ceremony it receives a name which may be that of its father or a name not connected with any relative. People are also given nicknames referring to their physical or other peculiarities.
551 There is much uncertainty about Masai names; but every man has a patronymic, consisting of *O-le*, " son of," preceding his father's name; this he appears to assume after circumcision. Girls after circumcision may be referred to as *E-na*, " daughter of," preceding their fathers' name. At marriage, the husband gives his wife a new name. The practice of tecnonymy is a regular feature. Before the circumcision of his eldest son, a man becomes known as " the father of " So-and-so, i.e., if his son is called Sendeu, he becomes Menye Sendeu; his wife similarly becomes Ŋoto Sendeu, the mother of Sendeu.

551 The name of a dead child, woman, or warrior is not spoken again, and if the
768 name is an ordinary word, that word is no longer used by the family. Thus, if a man called Ol-onana, " the gentle one," died, on his death the word *nana* would be replaced in his family by some such word as *polpol*, " smooth."

Circumcision (E-murata)

881 Boys' circumcision ceremonies take place at intervals of about three years, and
304 the circumcision period is " open " for about four years. Though the operation may be performed on boys singly or in small groups, the whole number of those circum-
[711] cised at the same time throughout Masailand forms an associating group corresponding in some degree to the Nandi *mat* (see pp. 31 and 49). Judging by the published accounts, circumcision was a much less prolonged and ceremonious affair than among the Nandi. Before a boy can be circumcised, the father must submit to what is called *em-polosata e-sita*, " the passing of the fence." After making honey-wine, he stays alone in a small hut outside his kraal, dressed as a warrior. After four days, some elders bring him back to his kraal, where he is told to remove the warrior's clothes and become an old man. His son may then be circumcised.

Circumcision begins with the shaving and bathing of the initiate; in the afternoon after this has been done an ox or sheep is killed and eaten by the warriors and elders of the neighbourhood. On the second day, the boy cuts a tree called at
[824] this time *e-latim*,[21] which the girls of the kraal carry to the door of the hut [in which the boy sleeps?], where it is planted. On the third morning the boy gets up early and sits outside to get cold; after sunrise he is circumcised, the operator being often a Dorobo. From the fourth to the seventh day he remains at home, and then goes out, shooting with blocked arrows at the girls, and with other arrows at small birds
[884 which he wears hung from his head. This is his occupation till he has recovered:
292] during this time he is known as *o-sipolioi* and wears the dress of a married woman, including the *i-surutia* ear-rings, and an ostrich-feather on his head. After recovery he is shaved, given weapons and warrior's clothes, and becomes *ol-barnoti*, " the shaved one," i.e., a junior warrior. Till his local company forms its *manyata*, he lives at home.

Girls undergo the operation of clitoridectomy in preparation for marriage. There are no special times for this. An ox or sheep is killed before the operation. During the period of recovery they are known as *e-sipolioi*, and wear on their heads a wreath of the Hyphæne palm, *ol-merisian*, or of grass, instead of an ostrich feather.

Age-sets

561 Unlike the cyclic age-sets of the Nandi division, those of the Masai are of linear type, that is, they do not work in recurring cycles and do not come into existence till they are required. Nevertheless, it is clear from the lists of Krapf (1854), Hollis (1905), and Fosbrooke (1948), as well as from the Taveta age-sets (Hollis, 1901), that some at least of the names are fixed and recur. In 1939 the names Il-Kisalie

[21] *Zizyphus mucronata*; normally called *ol oilaki*.

/48 cont./

585 her own. Where a jus primae noctis is customary -- frequent, but not general -- it belongs to one or two old comrades-in-arms of the young husband. One who does not grant the jus primae noctis when it is claimed is insultingly called ol alomŏni or ol ŏmischo (formed from a-lōm, that is, refuse). He refuses others what they have a right to and must expect them to steal a few head of cattle from him in the next few days without his being entitled to raise a complaint about it. One who does not want to go along with this old custom, which is said to happen, has the wedding take place without any festivity, in order to avoid it. The bridegroom simply hands over the bride price, whereupon the bride, without any ceremony, follows [591] him into his already completed hut. This dwelling lies either in the kraal of his father or in the warrior kraal occupied by the young husband up to then and remains there until all his age mates are married; only then do the married couple build their own kraal.

/49/ After the married couple have moved into their home, the wife may not leave it for the next two days. It is customary for the husband to present her with three cows and a bull during these days, and on the third day she accompanies this livestock to the pasture, but does not stay there. During the next three days the wife does no work; not until the fourth day does she start it, and to be sure, with the milk- [822] ing of a plain black cow. According to the Masai explanation, the plain black is the symbol for quiet seriousness, whereas bright colors signify gaiety and lightheartedness. The woman is supposed to perform her duties with seriousness and not neglect them, lightheartedly rambling about, and make her husband angry by idle gossip.

768 587 If the marriage is dissolved by the husband's death, the widow may, if she is willing, become the property of his eldest brother or half brother; she may live with the former, whereas the latter may marry her legally after the expiration of three or four months. Upon 586 the death of the wife, the husband pays no compensation. A divorce may be brought about if the man drives out the woman or if the woman runs away from the man and refuses to return. In the first instance, the divorce is preceded by a family consultation in which the head of the family pronounces the divorce. The woman must

/202 cont./

766 stamped down firmly so that hyenas will not be able to dig up the
[791] grave. The chief's grave, as well as often the graves of the El
[613] kiboron old men, are crowned with a larger or smaller stone mound.
[769] Later, as a sign of veneration for the dead, Masai passing by will
[778] throw a few bunches of grass on the latter, whereas on the former, which is regarded as sacred, they from time to time pour a little milk as an offering.

766 Concerning the burial of Mbatyan, his son Zendeo told me the
791 following: When the ol oiboni died, his large bodyguard was gathered around him, and immediately warriors set off in all directions, in order to bring the sad news to the kraals lying far from one another. From everywhere Masai came streaming in, the relatives of the deceased all appeared, down to the smallest infant. • 768
[595]

Upon the death of the father, his sons inherit the herd left behind, and, to be sure, each inherits from it the livestock that his mother had had the care and use of up to then. Since the man provides best for his principal wife and gives more livestock to her than to the other wives, her sons naturally inherit more than those of the other wives. The relatively largest part of the livestock is inherited by her eldest son, the principal heir. The livestock that a sonless woman has in her care is divided among the sons whose mothers live on the same side of the kraal, the center line of which is formed by the two entrances, as she does. The custom that the father distributes a not inconsiderable part of his livestock among his sons in boyhood is peculiar. It remains in the herd, however; it is only when the son moves into the warrior kraal that the father gives him a number of cows from it in order for him to be able to cover his needs in milk, and furthermore from time to time a head of cattle to slaughter. Thus the father actually reserves the right of disposal over the livestock, even though the sons designate it as belonging to them, and it is part of the legacy in the inheritance. The wives of the deceased actually pass into the possession of his elder brother, but as a rule continue to live with their sons. The other wives, who have no sons, nowadays not infrequently go back to their paternal home. The eldest son of the deceased takes the father's place for the surviving daughters, which in practice is expressed only in that he confers the consent for their marriage and the bride price will be paid to him. Upon the death of the mother, the daughters inherit her ornaments, and the household equipment used by the former up to now also passes to them. From the estate of a warrior, his brothers, preferably the older ones, receive his weapons and half of his livestock, while the other half goes to his father.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

death taking place within the village. This means that as soon as a young or middle-aged person shows any signs of approaching death, he (or she) is hastily carried out into the bush outside the village and left to die there. 761 [763]

Should the death of a young or middle-aged person occur within the village the body must be carried out and thrown into the bush. The proper person to perform this last service is a son of the deceased, but if no son is available the body must be moved by a stranger (usually a member of the Wandorobo tribe, who is always willing to perform this work), and the fee for doing so is a heifer. The village must be moved as soon as possible after such an occurrence, but otherwise there is no purification ceremony. 764 [563]

Burial of Old People.—Only an old man, or a woman past child-bearing, is allowed to die peacefully in a hut in the village, and the body is then buried in the following way:—As soon as death occurs a ram or bullock is slaughtered and the fat used to anoint the body and clothes (sewn skins) of the individual. All ornaments are removed, and the burying-place is then prepared as follows: A spot in the bush not far from the village is selected and cleared and a hollow square of rough logs is then built up. This structure is usually about four feet square and three feet high. On the ground inside the structure the deceased's sleeping-skin is placed, and on it the body is laid (with the knees sufficiently bent to fit the space). Men are placed lying on their right sides, women on their left. The body is then covered by the various skin dresses owned by the deceased and left, no attempt being made to cover over the top of the structure with wood or earth in order to protect the body from scavenging animals. 766

About a month after the burial has taken place the village must be moved, with the exception of the hut in which the death took place. The hut is left to fall into ruin. Meanwhile, until the move takes place, any other occupants of the hut continue to live in it as before. 768

Ceremony at the Burial-place.—On the day that the village is finally abandoned every member of the village must file past the burial-place and the older people stop and drink beer and slaughter an ox there. My informants, however, insist that this is not a sacrifice to the departed spirit as among some other tribes, and as proof pointed out that they did not pour out any beer at the grave or leave any offering of meat. 769

Inheritance.—A man's possessions all pass to his male children, but if they are too young to take charge of them themselves the deceased's own brother, who acts *in loco parentis* (*see* Widowhood) looks after the property for them. In return for this he is allowed to retain a very small percentage of the stock. 428

A man's personal ornaments are put on his various children about two months after his death, with a certain amount of ceremonial and much beer-drinking. His weapons are kept for his sons until such time as they shall require them.

/202 cont./

766 stamped down firmly so that hyenas will not be able to dig up the
[791] grave. The chief's grave, as well as often the graves of the El
[613] kiboron old men, are crowned with a larger or smaller stone mound.
• [769] Later, as a sign of veneration for the dead, Masai passing by will
[778] throw a few bunches of grass on the latter, whereas on the former,
which is regarded as sacred, they from time to time pour a little milk as an offering.

766 Concerning the burial of Mbatyan, his son Zendeo told me the
791 following: When the ol oiboni died, his large bodyguard was gathered around him, and immediately warriors set off in all directions, in order to bring the sad news to the kraals lying far from one another. From everywhere Masai came streaming in, the relatives of the deceased all appeared, down to the smallest infant. Every mourner brought a few fat-tailed sheep along, which, after a large herd was assembled, were slaughtered. Meanwhile the corpse had been laid out on a neat's skin. Beside this the closest relatives laid their leather aprons and others added theirs in a line ea. 100 paces long, the aprons being placed so that they formed a channel. Now the boiled-out fat was poured on the corpse and flowed along the channel. Then the body was buried, whereupon all the people brought grass and heaped a pile several meters high over the grave, which was then covered on the sides as well as on top with layered stones. In contrast to this description, there is a rumor circulating repeatedly among the people, according to which Mbatyan, several days before his death, in a state of mental derangement, is supposed to have secretly left the kraal at night and wandered about in the steppe, without the men of his guard, who had followed him, being able to find him. Then, when he was found on the fifth day, he was dead and his body already decomposed.

768 If in one kraal several young people or even children have died of some illness within a short time, it is abandoned, first because it is regarded as unlucky, but then also /203/ to enable the survivors to forget the sad event more easily. In such cases of death one can always observe deep sorrow among the relatives, whereas the death of old people, even own parents, is accepted more calmly. "The old ones are now resting, they sleep, their time has come."

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

(especially rain, the sky, and volcanoes), or else definitely and personally of superhuman beings. In this latter sense it is said that there are two Gods (Ing-aïtin are), the Black God and the Red God, of whom the former is kindly, but the latter malevolent. It is the special function and pleasure of the Black God to provide rain, but the Red God objects to turning on the celestial water-tap. Loud thunder is the result of the Red God trying to get to earth through the Black God's dominions in order to kill men, but the distant rumbling is the Black God saying to him, 'Do let them alone; don't kill them.' This happy fancy that the good god is near but the bad god far, which is probably no accident but due to the fundamental characteristics of the Masai mind, has doubtless saved untold suffering, for it does away at once with the necessity for human sacrifices and all similar methods of propitiating cruel powers. Besides the Black and Red Gods there is a quasi-divine personage called Naiteru-Kop, who appears to have been, if not the creator, at least the arranger of the present order of things. A man called Le-eyo appears to have been the principal patriarch, though there were also Dorobo (hunting tribes) in his time, so that he was not strictly the first man. Death entered the world owing to his selfishness and disobedience (p. 269), and, by an incident common in stories of this kind, his younger son became the father of the Masai, while his elder son lost his birthright, and was the ancestor of the inferior tribes.

The worship of the Masai, like their beliefs, seems to be somewhat vague and wanting in ceremonial, but Mr. Hollis's collection shows that they have definite prayers, and that they petition the deity more frequently and fervently than the surrounding tribes are known to do. This is confirmed by Thomson, who speaks of them howling out prayers to Eng-aï for hours together. By a custom not without parallel in other nations, it would appear that the women pray twice a day, but the men only occasionally and in grave circumstances. The prayers which are for children, rain, and victory, are addressed to Eng-aï as a distinct personality 'who is prayed to and hears.' Remarkable also is the phrase 'the highlands and lowlands of our vast country which belongs to our God.' On the other hand, the sun and moon, the morning and evening star, and the mountain clouds are also invoked, and one song says in two consecutive verses, 'He whom I pray to is God,' and 'He whom I pray to is Lenana, our medicine man.' It is difficult to say whether

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

abandoned, and, though meat and milk were still the main 885.
items of his eating, he could now vary it with vegetable food, [262]
obtained by his wife from neighbouring agricultural tribes.
Luxuries, also, he might now indulge in. He sported a [276]
fancy snuff-box and tobacco-box of ivory or rhinoceros' horn,
and delighted to rap up its contents as he handed it to a
friend. He chewed tobacco (mixed always with natron),
though he never smoked. Then, as often as convenient, he [273]
liked to foregather with his friends, and have a jolly carouse
over beer or mead.

It is pleasant to know that with this change in his mode 157
of life there was a corresponding alteration (very much for 574
the better) in his views of things. He delighted to talk with 439
the traders whom before he had gloried in killing or annoy- 885
ing, and would in token of good-will cordially exchange the
courtesies of life by spitting upon them and being spat upon.
In his conversation he showed an intelligence far superior to
any specimen of the Bantu tribes. He had no suspicions,
and was communicative about his affairs and beliefs. He
would even at times exercise a friendly guardianship of
passing traders, and was able to ward off many a disaster by
judicious warning. He was not stinted in his presents, and
generally gave far more than he got. He has been known
even to protect strayed porters, and tend sick men left behind

The softening down of his ferocity reacted upon his face. 885
The habitual scowl gradually died away, and was replaced by 771
a more pleasing and genial expression. His thoughts turned 787
more to the strange mystery of life. He, alas! had little
that was cheering to look forward to. He believed in the
existence of a Supreme Being, and yet had not the faintest
conception of an after-life. Unlike the men of the Bantu
races, he did not believe in ghosts or spirits. He had no
theory of dreams, and did not imagine like the negro that
when he dreamed he was really experiencing all that was
passing through his brain, and that his soul or spirit was
actually knocking around somewhere, having a good time of
it, unclogged by his body. Moran believed nothing of that;
indeed, whether he had any idea on the subject, I have not 885
been able to determine. When the man died, he was 761
finished utterly, except so far as he might go piecemeal to
build up the body of a hyena, a vulture, or a marabout stork.
The Masai believe in annihilation. To bury a corpse would, [764]
they think, be to poison the soil: it must be thrown to the
wild beasts without ceremony.

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

781 frequently fighting, contact must have been limited. But that is not the
177 case to-day. When Mbeiya's boma was infected with measles in 1935
494 he hired a lorry and himself travelled to Nairobi and beyond, bringing back a Kikuyu medicine man to cleanse his boma for him. Kutata (24) is reputed to have obtained a charm to kill Mbeiya from a Sukuma witch doctor in Pare, and Letinga (25) and Balosi (26) hired a car to go and interview this doctor, in order to verify the rumour and/or to obtain charms stronger than those given to Kutata.

781 The cult of the laibon must therefore have much in common with the beliefs and practices of neighbouring tribes, and I put it forward as a possibility that, with further contacts, the institution may eventually end up merely as an instrument of common witchcraft.

781 In the absence of rational scientific explanations for the many natural
781 phenomena which surround them, — drought and disease, fecundity and sterility, birth and death, — it is natural that the Masai, in common with all other primitive peoples, should regard the unseen with deep fear and
[781] awe, and grasp at any opportunity offered which purports to control these mysterious factors in their lives. They believe the laibon to be capable of controlling these unseen forces; he is the intermediary between themselves and the supernatural. His blessing will assure prosperity, his charms and rituals can alleviate an existing calamity, and his power of foretelling the future enables steps to be taken to ward off an impending catastrophe.

It is extremely difficult to ascertain the strength of these beliefs amongst individual Masai, but it is considered that the majority of the Kissongo hold them implicitly. Some areas, e.g. Kibaya, have a reputation for consulting the laibon more frequently than others, but none the less the beliefs are general. The practice of the ritual may fall into temporary abeyance in certain areas, but the belief remains, and manifests itself in outward form on the advent of a drought or of a personal reminder from the laibon. Modern contacts have as yet done little to shake these beliefs. A few Christian Masai are completely sceptical; others may have their doubts, but when the occasion arises feel that they had better do
561 what they are told, 'to be on the safe side'. One of the chief factors
771 which guarantees the maintenance of these beliefs is the age grade system.
791 From early adolescence the future leaders of the tribe, the *laiguenak* and *ingobir*, are frequently taken to the laibon by their guardians, the *il piron* elders. The lengthy discussions beforehand, the actual journey, the reverential attitude of the elders to the laibon, the ritual, the mysterious voice in the darkened hut foretelling the future, all these must make a deep impression on the youths. This in turn is spread to the rest of their age-mates when they return home and perform the ordained ceremony.

There seems little doubt therefore that so long as the age-grade system is maintained in its present form these beliefs, and the consequent power they give the laibon, will be perpetuated. True, as education progresses, this power will decrease, but disbelief will dissociate a youth from his age-mates, and consequently his influence on others will be small; on the

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

other hand those brought up in awe of the laibon are in a position to influence large numbers of their fellows. For this reason it is probable that these beliefs will be held for many years to come, although their intensity and their outward manifestations may decrease, as in fact they appear to be doing in Kenya to-day.

The time has now come to summarise this section and to draw our conclusions. In doing so it will be necessary to differentiate between the Masai attitude to the laibon, and the laibon's attitude to the Masai. The Masai do not regard, nor have they ever in the past regarded the laibon as a chief or lawgiver. They regard him as an intermediary between themselves and the unseen, and in consequence hold him in great respect and awe. Any order that he cared to give, suitably disguised as a prophecy, would therefore be obeyed; the laibon is thus a great potential political leader. But here the attitude of the laibon to the Masai comes in. It may be that in the past a laibon has felt responsibility for the welfare of the tribe, but there are very few instances of this taking practical form. At the present time one can only judge the attitude of the laibon to the Masai on facts, and these reveal that he thinks only of himself and not of the tribe. With the possible exception of Lenana, no laibon has made any effort to assist the tribe to adapt themselves to modern conditions. Rather the reverse; for their own personal profit they have made themselves the focus of the tribe's intense conservatism. When cut off from one source of income (a share of raided stock), they have used their powers to develop an alternative (extended sale of charms).

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

Functions of Laibons.—A *Laibon* is far more than a mere medicine man or purveyor of charms. His function would seem to approach more closely that of a chief priest of the Israelites, and the N-Kidongi sub-clan might be compared to the Levite tribe. 991

He is, or should be, the religious head of the tribe. No ceremony nor important enterprise should be undertaken without his blessing, in return for which he should be given a large present of cattle. He prays to God on behalf of the people. On one occasion Sendeyo arrived in my camp before sunrise, just as I was about to start on an excursion into the deep forest, and made a prayer for our safety. We stood round him and responded "*Na-Ai*" (= "O God") at the pauses; I was too much taken by surprise to remember the details of the prayer except that it was very impressive, and that he ended by giving his genealogy (see Hollis, p. 326) in order to show that the prayer was one which should receive attention.

The *Laibons* use charms (*indolimpo*) for various purposes, and their employment is invariably accompanied by prayer to God. I have a few of the charms in my possession and have been instructed in their use, under promise not to reveal my knowledge. Sendeyo once said to me that a good heart was better than charms. [989]

Witchcraft.—Although the *Laibons* use charms, witchcraft, *i.e.* harmful magic, is not indispensable to their office. Some of them, however, are alleged to have made use of it. Witchcraft is not indigenous to the Masai. Such persons as I have found practising black magic in Masai country have learnt it from the Kikuyu of Nyeri District or from the Meru. 754 [199]

Religion.—The Masai believe in one God whom they call En-Gai, which is the same word as they use for rain. They say that God is one, but permeates everything. He may be prayed to as inhabiting a wood, a stream, the earth, etc., but He is all the same God. The Masai only use short prayers such as "Na-Ai" (O God) and "*Na-Ai mikiar*" (O God do not strike me) except for the prayers at *Il Pul* and those of *Laibons* already mentioned. Some, if not all, of the ceremonies have a religious significance, but I cannot give details without further experience. 996 996

Superstitions.—There are certain old trees with holes in them, in which a Masai puts a handful of grass or leaves when he passes. They have told me that this is equivalent to a prayer, "May I live to be old like this tree." 989

A traveller sometimes puts a stone in the fork of the branch of a tree near the track in order that he may arrive at his destination before nightfall.

There are a few places where the passer-by should tie a knot in the grass. I am uncertain of the reason for this.

When the new moon is first seen people pluck grass and throw it towards the moon, saying, "*Injuki o amen ol ondo amiako ol dorop*"—"Give me the body which is long and I give you the short." I do not know the significance of this.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika*; other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrap* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great "shovel-blade" with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 441 412 171 171

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The "minor deity called Neiterkob" which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, "the mediator between God and men." But the Masai word *naiterukop* means no more than "that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [182]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

/15 cont./

the El asiti also have their own idiom, which will be briefly discussed at a later place.

Corresponding to the uniformity in language, the number words are the same among the Masai and Wakuafi, whereas the Asá and El asiti have their own words for only a few numbers, but in general always make use of the ones used by the other two branches. One finds a complete correspondence for all three branches in their religious view, and the manner of circumcision customary among both sexes. The peculiar circumcision of the boys is practiced by no other people at all, with the exception of one lineage of the Tatoga, closely related to the Masai people. In birth and death, too, all three have the same customs, while in the rest of their customs one finds only unessential differences which are based solely on the difference in their external way of life. The most striking proof for the three branches' belonging together, however, lies in their descent.

The people as a whole are divided into three large tribes, the L aiser, the El mulelyan, and the El mengana, each of which is made up of a number of lineages, and every Asá, as well as every Ol kuafi and Ol massani, is a representative of one of these lineages.

If we now concern ourselves further with the ethnography of the Masai in particular, which is at the same time that of the Wakuafi, we are thereby including the ethnographic traits of the entire people; the stressing of individual differences that have developed among the Wandorobo in the course of time and under the influence of changed conditions will be reserved for the third part.

/16/ Second Part

I.

Tribes, lineages, sublineages. -- The En gidon lineage. -- The chief: his rule and policy, magic medicines, genealogical tree, village, ceremonies, foods. -- The sorcerers. -- The El kiborōn lineage. -- The rainmakers.

Every tribe (en gischomi) is divided, as has already been mentioned, into a number of lineages (ol gelata, el gelat). Among these, in turn, one distinguishes principal lineages (ol gelata kitok)

/203 cont./

XXI.

000 Religion. -- Monotheism. -- Religious doctrine. -- Explanation of natural phenomena. -- Prayers. -- Supplication feasts. -- Sacrifices. -- The snakes. -- Evil spirits. -- Sorcery. -- Amulets. -- Evil eye.

177 771 In a comparison of the ethnography of the Masai with that of the peoples neighboring them, living around them, no chasm as deep as in the field of religious outlook appears anywhere. Whereas in almost all the areas of ethnography we otherwise find a more or less strong influencing of the latter by the former -- from more external things, /204/ such as ornaments and weapons, to more deeply incisive social changes, such as, for example, the shaping of warriordom after the Masai model -- the religion of the two shows a sharp separation, which nowhere permits any interplay of the one in the other. In sharp contrast to the anthropolatry, the worship of departed human spirits, and the polydemonism of the Negroes, occurring in all forms and gradations, stands the simple, straightforward monotheism of the Masai.

776 779 Their god is called 'Ng ai and is an incorporeal being, a spirit. The people do not think about his appearance. The making of pictorial or sculptural representations of God would be a sin, according to his commandment given to the Masai. God is the creator of the world, the earth, and all that it harbors. He governs everything through his will. He is the guardian of the natural and moral order of the world. The laws and commandments that are valid in the life of the people and of the individual are expressions of his will. God is almighty, omnipresent, omniscient, benign, infinite, eternal. [771] 'Ng ai najollo = God knows it, 'Ng ai naischa el dunganak, 'n dogirin sidan = God gives human beings the good things, ol bai 'l Eng ai = it is the will of God, are words that one can hear every day, and they are not often used thoughtlessly, for a deep religiosity is peculiar to the Masai generally. God's benevolence forgives human beings a great deal and for a long time. Yet human beings are too weak and sinful, so that God has to punish from time to time for

/300 cont./

II.

000 A comparative consideration of the traditions of the Masai and Israelites, with regard to the reports of the primeval-age myths found in Babylonia: creation of the world, the creation of the first human beings, paradise and the fall, the deluge, the Kenites of the Bible, the blacksmiths of the Masai, the deception about the right of the first-born, Moses-Marumi-Musana, etc., circumcision, the naming of God, the fiery serpent, the ten commandments. -- Some further points of contact.

*12 *[173] *[171] •[171] The strictly monotheistic religion of the Masai and the similarity, often going as far as correspondence, of their primeval-age myths with those of the people of Israel, known to us from the Bible, demand a more detailed and comparative study. The fact that here a comparison can extend only to a few main points and even these can be dealt with only briefly and sketchily is to be explained by the fact that these lines are originating in African solitude.

Recent research, especially the excavations in the ancient Near Eastern center of civilization, on the soil of the Babylonian Empire, has traced back to Babylonian origin a whole series of Old Testament ideas from the primeval age. The reasons for this were by and large the following:

It was found that ideas similar to those, for example, contained in the Biblical /301/ myths about the creation of the world, paradise, the deluge, etc., were already established in writing or pictorially in the civilized state of Babel /Babylonia/ at a time when the ancient Israelites still inhabited the Arabian-Syrian steppes as culture-poor nomads. There was further found in those ideas in part a specifically Babylonian character such that it seemed as though they could have arisen in their Biblical form only in a land such as Babylonia, but not in the arid steppes, or even only in the atmosphere of Babylonian mental life and not in the conceptual sphere of the herdsmen of ancient Israel. Finally, one also had to reckon with the fact that Kanaan /Canaan/, the land in which the Israelites became sedentary after their long nomadism, was saturated with Babylonianism during

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

(especially rain, the sky, and volcanoes), or else definitely and personally of superhuman beings. In this latter sense it is said that there are two Gods (Ing-aïtin are), the Black God and the Red God, of whom the former is kindly, but the latter malevolent. It is the special function and pleasure of the Black God to provide rain, but the Red God objects to turning on the celestial water-tap. Loud thunder is the result of the Red God trying to get to earth through the Black God's dominions in order to kill men, but the distant rumbling is the Black God saying to him, 'Do let them alone; don't kill them.' This happy fancy that the good god is near but the bad god far, which is probably no accident but due to the fundamental characteristics of the Masai mind, has doubtless saved untold suffering, for it does away at once with the necessity for human sacrifices and all similar methods of propitiating cruel powers. Besides the Black and Red Gods there is a quasi-divine personage called Naiteru-Kop, who appears to have been, if not the creator, at least the arranger of the present order of things. A man called Le-eyo appears to have been the principal patriarch, though there were also Dorobo (hunting tribes) in his time, so that he was not strictly the first man. Death entered the world owing to his selfishness and disobedience (p. 269), and, by an incident common in stories of this kind, his younger son became the father of the Masai, while his elder son lost his birthright, and was the ancestor of the inferior tribes.

The worship of the Masai, like their beliefs, seems to be somewhat vague and wanting in ceremonial, but Mr. Hollis's collection shows that they have definite prayers, and that they petition the deity more frequently and fervently than the surrounding tribes are known to do. This is confirmed by Thomson, who speaks of them howling out prayers to Eng-aï for hours together. By a custom not without parallel in other nations, it would appear that the women pray twice a day, but the men only occasionally and in grave circumstances. The prayers which are for children, rain, and victory, are addressed to Eng-aï as a distinct personality 'who is prayed to and hears.' Remarkable also is the phrase 'the highlands and lowlands of our vast country which belongs to our God.' On the other hand, the sun and moon, the morning and evening star, and the mountain clouds are also invoked, and one song says in two consecutive verses, 'He whom I pray to is God,' and 'He whom I pray to is Lenana, our medicine man.' It is difficult to say whether

791 Ore too-'l-oibonok pôkin Ol-Ōnana ol-kitok lenye. Ninye egel il-Maasae pôkin, nějo ol-aitoriani lenye.

Of all the medicine-men Lenana is the greatest. All Masai acknowledge him as their lord and pay tribute to him.

791 173 Něji Ol-Ōnana en-gerai e-'M-Batyany, o 'M-Batyany en-gerai e-Supeet, o Supeet en-gerai e-Sitonik, o Sitonik en-gerai e-Kipepete, o-Kipepete en-gerai e-Parinyombe, o Parinyombe en-gerai e-Kidoñgoi, o Kidoñgoi en-gerai e-'Sigiriaishi.

It is said that Lenana is the son of Mbatian, who was the son of Supeet, who was the son of Sitonik, who was the son of Kipepete, who was the son of Parinyombe, who was the son of Kidongoi, who was the son of E-Sigiriaishi, the son of Ol-le-Mweiya.

791 ●173 614 Ore en-giterunoto oo-'l-oibonok něji enotōki Ol-le-Mweiya eton te-'n-geper o-'l-doinyo loo-'l-Aiser ōtadōuo te-'ng-aï. Netum il-Aiser, nějo en-gerai amu oti naleñg, nerik añg, nenyoriki ol-oiboni, neiyamisho, neïu 'n-gera.

The story of the origin of the medicine-men is said to be as follows: Ol-le-Mweiya came down from heaven and was found by the Aiser clan sitting on the top of their mountain[1]. He was such a small person that he was first of all believed to be a child. He was taken by the Aiser clan to their kraal, where it was discovered that he was a medicine-man. He married and had issue.

Ore etaa en-něä, nějōki 'n-gera enyena: 'Emindur te-'nne.' Ti-araki naa něja pe melam il-Aiser illo-doinyo.

When he was dying he said to his children: 'Do not move from this spot.' On account of this the Aiser clan do not go far from their mountain.'

791 787 Ore too-'l-oibonok pôkin li-opa 'M-Batyany ol-kitok.

Now, of all the medicine-men who lived in olden days Mbatian was the greatest.

Něji opa eton eitu epwōnu 'l-Aisungun kunna-kwapi, etiaka 'l-tuñganak: 'Epwōnu akenya 'l-tuñganak ooibor kullo-oshon.'

It is said that formerly, before Europeans ever came to these countries, he prophesied that white people would arrive.

Ore sii inna-kata eton eitu

Again, before he died he told

[1] Commonly known to Europeans as Ngong or Donyo Lamuyu. The Masai have three names for this mountain—Eng-oñgu e-'m-bagasi (the eye or source of the Athi River), Ol-doinyo loo-'l-Aiser, and Ol-doinyo lo-'l-le-Mweiya.

[103]

6:Thomson K-3 (1883-1884)1887
FL12 Masai FL12

ing to his father to learn something about his origin, and 869
this I believe is—among other stories—what he was told.
The primal ancestor of the Masai was one Kidenoi, who 869
lived at Donyo Egèrè (Mount Kenia), was hairy, and had a
tail. Filled with the spirit of exploration, he left his home 773
and wandered south. The people of the country, seeing him
shaking something in a calabash, were so struck with admiration at the wonderful performance that they brought him women as a present. By these he had children, who, strangely enough, were not hairy, and had no tails, and these were the progenitors of the Masai. As Moran had not heard anything of the theories which were convulsing scientific Europe and America, he remained ignorant of the fact that he had struck upon an interesting legend which the *savants* of civilized society would have given their beards to verify.

Meanwhile Moran practised with the spear, and killed 858
innumerable imaginary enemies. He listened intently with beating heart to the stories of daring cattle-raids and sanguinary fights, but as yet he could only dye his spear in the blood of an antelope, or, it might be, of a buffalo. His food
still continued to be that of a non-fighter, namely, curdled [262]
milk, maize, or millet, and meat. But vegetable paste was the meat of women and children, and he loathed it, though he ate it.

As he approached the age of fourteen he began to develop a truculent and ferocious expression, instead of making himself sick in the attempt to smoke a cigar, or examining his upper lip in the glass, as a lad of proper spirit in England would have done at the same age. It is quite laughable to think of Moran trying to look dangerous, pursing his brow, and generally cultivating the fiendish. And really, I am told he was the admiration and the envy of all the Lèon (boys) of the district, and quite won the hearts of the girls.

At last it was agreed that Moran had become a man, and 881
was fit to be a warrior. A certain rite, better known in Africa than in Europe, was performed; and Moran was no longer a boy, he was an El-moran—a warrior. His father, who was wealthy, resolved to rig him out in the height of
military fashion. For this purpose they journeyed to a [563]
neighbouring settlement of Andorobbo—a clan who are despised heartily by their distant relatives, the aristocratic Masai, on account of their ignoble mode of gaining a livelihood
by the chase. After making the Andorobbo quake in their [714]

9:Fosbrooke G-5 (1936-1948) 1948 FL12 Masai FL12
Kisonko

years ago, the latter were located in the area lying to the north and 174
west of Lake Rudolph.

The Masai themselves carry their history back to a time when they 173
lived in a lowland called Kieru; this cannot be other than the desert region lying between Lake Rudolph and the Kenya Highlands. The following is the story of their exodus from that area.

An elder, Maasinda, constructed a ladder or staircase up the scarp, which, till then, had prevented the Masai from moving south; on the plateau beyond he found good grazing and water. He consequently arranged to migrate, and he and his six sons, followed by the Laikipiak and the Kwavi, successfully negotiated the climb with all their cattle and possessions. The remaining Masai, who had previously been instructed to follow in an agreed order, then rushed the ladder, which broke under them. They were thus unable to follow.

The scarp is named Endigirr oo Namuga (the scarp of the sandals) and the country at the top Olkeju lol dugha (the river of palms). At this latter place Maasinda met with the Laitayok, the Uasingishu and Siria Masai, and the Kipsikis (Lumbwa).

Maasinda has become the culture hero of the Masai, to whom numerous 173
legends have been attached. In one it is alleged that a woman, Naiterokop, 173
came down from Heaven and bore two sons, Maasinda and ol Meek, this being the origin of the Masai and the Bantu. Maasinda is believed to have ordered the Masai to live at peace with their neighbours and, in the event of war, never to kill women or children. The invention of branding cattle as a means of identification is also attributed to him.

His six sons are also alleged to have been the founders of the existing [614]
Masai clans, Morungiro being the founder of the Laiser, Lolkesen of the Mokasen, Lesita of the Mamasita, Lelyan of the Molelyan, and Lesero of the Tarosero. The name of the founder of the Lughumae is not recorded.

The next event in tribal history is the acquisition by the Masai of the Medicine Man or Laibonok. The legend of the members of the Laiser clan finding a heaven-born child on Ngong Mountain is recorded by Hollis, 174
who also gives a genealogy in which Lenana's name is the ninth. If thirty 173
years is allowed for each generation (possibly an underestimate, since primogeniture is not the rule of succession), the first laibon must have been found about the year 1640. This agrees with all my informants, who state that this event took place prior to the earliest remembered age grade, i.e. before the beginning of the eighteenth century.

From the fact that the finding of the laibon took place at Ngong, it may be presumed that the period from the exodus to this event was one of slow penetration southward through the Kenya Highlands.

Contrary to the evidence previously recorded, it appears that the 173
advance guard of the Masai had penetrated as far south as Usagara (Mpwapwa District) and made contact with the Hehe by the beginning of the nineteenth century. The story is that when the Merishari were reaching the age of circumcision, two big bomas penetrated into Gogo country to a place called Muli (Masai) or Lodi (Gogo) in search of grass. The leaders of the movement were two uncircumcised youths. One of

/v cont./
124 investigators and therefore reflect, unclouded, the feelings of the savage.

128 Concerning the origin of the first two chapters of the fourth part, the tradition from primitive times and a comparative study of the /vi/ traditions of the Masai and the Israelites, etc., it should also be said that I first completed the former, in the form in which it appears, as a result of my research, and only afterwards did I approach a comparison with the traditions of the Bible. As alluring as it seemed to compare immediately what was told me by the Masai with Biblical accounts, I nevertheless had to resist this temptation, in order to avoid letting myself be unconsciously influenced in the manner of putting the questions in the
114 checking. It may be mentioned further that it was not until the
123 fifth year after the beginning of the work on the present study
• 773 that I came across the traditions from ancient times. That is, these are by no means common on people's lips, but are handed down in certain families, so that even in the larger Masai settlements one finds only very few old men who can relate them in detail. But even these few tell the investigator about them only when they know him intimately and know that he also knows them and their psyche intimately. Only when I had gone so far that
[124] the people seriously discussed the question as to whether I might not have been one of them, perhaps from the time of their residence in their original homeland, did I learn about those traditions. Yet it still took one and a half years before I had searched out what is presented in the first chapter of the fourth part. I mention this here so that other investigators who turn their attention to the Masai in other regions may not allow themselves to become discouraged if their efforts remain for a long time without the hoped-for success.

128 In the second chapter of the same part I present, among other things, a series of conjectures -- not unfounded, I believe -- which make absolutely no claim of incontestable correctness. Although this already clearly follows from the wording, it may
[121] be expressly pointed out here, especially for those who have something to find fault with in everything. I probably hardly need

Foreword

by Professor Dr. Fritz Hommel, Munich.

114
• 773
171

The reports of the deceased Hauptmann /Captain/ Merker, causing a sensation in his time, about the legends of the Masai so remarkably connected with the Hebrew early history are even today still capable of arousing the most widespread interest. The question as to whether traditions preserved for millenniums from the Arabian original homeland of the Masai people actually exist here or whether a Christian or even Jewish influence is not still to be assumed has not yet been silenced. As is known, Merker himself was unshakably convinced of the absolute impossibility of the latter assumption, and even if such an influence had nevertheless taken place, which is highly improbable in view of the reasons cited by me below, it could only have happened in the early period when the Masai were still living in the north, in the neighborhood of Abyssinia, which, however, also serves again as the basis for strong scruples.

114
177
797
773

First of all, mystification on the part of Merker, whose reliability is beyond all doubt, is completely excluded. Actually, it was only after a long acquaintance with the Masai of his region that he gained the confidence of those old Masai men who finally imparted to him the traditions otherwise anxiously kept from strangers; the distinguished Masai expert, our Bavarian compatriot Deeg, and furthermore African experts such as Schillings and Dr. Sander, are equally firmly convinced that Christian influence through the missionaries working there for only a comparatively short time, toward whose efforts the warlike and proud Masai have been very intractable up to now, is quite inconceivable. If the English Masai-missionary Albert R. Steggall, who was active there 1889-1905, says in the Expository Times, XVII, June, 1906, p. 429, that
[115] Mr. A. C. Hollis, this eminent authority on the Masai living in British East Africa, related to him from a Masai boy in his service, "that the Masai from whom Captain Merker got much of his information was for some years, during the Masai famine, connected with a Roman Catholic Mission in the neighbourhood, as indeed were many others, besides those who came under instruction

/xiii cont./

114 in the Church Missionary Society's station in Taveta" /cited in
177 English/, this, as Merker himself told me, can only refer to a
• 773 Masai man from whom he received other information: since for
797 the many investigations on /xiv/ which his ethnological work is
[115] based (habits, customs, names, etc. etc.), he had quite different
114 informants, of course. And Hollis' objection (1)
773

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1908, in Oxford (at the Kongress für Religionsgeschichte /Congress on the History of Religion/), just as I was also able to become personally acquainted with the deceased Merker in 1907, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Masai problem.

that he (Hollis), who was also acquainted with the Masai of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more southerly Masai (in German East Africa), with whom Merker worked, were more faithful guardians of those ancient treasures, which is not impossible, or Merker also had more luck in gaining their confidence on this point than Hollis, who, just there, did not come across the right people. Merker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across those traditions from ancient times, which by no means commonly cross people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Merker had completely learned what is set down in
114 his fourth chapter. Moreover, even according to Hollis (cf. also
776 C. Eliot's introduction to A. C. Hollis, The Masai, their
782 language and folklore, p. xix), the monotheism of the Masai
113

/xvii cont./

171 To come now to the early histories, it is to be emphasized at
• 773 the outset that, for any Semitic people, every time we come to the early period, through linguistic comparison, research into names, and literary remains, we are already able to uncover a well-established stock of myths that come very close to the Biblical early history (dragon fight in connection with the creation of the world, tree of paradise and serpent, first parents, flood) and furthermore, as religion, a moon cult (worship of the stars) to be described
[233] almost as henotheism. But we come across exactly the same thing, in its most original form, among our cattle nomads, the Masai, whereby it should further be noted that also among the oldest Semites, whom we have to think of more as nomads than as agriculturalists, cattle, as their mythology clearly teaches, must have played a great role, not perhaps the small livestock or the camel and the donkey, to say nothing of the horse, which only became known from Elam to the Semites here around 2000 B.C.

174 There is also the fact that among the Masai we find a series
171 of positively ancient traits that bring us close to the East Arabian
773 original homeland of all West Semites, and which otherwise come
192 to us most clearly only in the religion of the ancient Chaldeans (and then transformed into the more polytheistically stamped one of the Babylonians). To these belong first of all the struggle of the deity with the dragon Nenaunir on the morning of creation; when Merker compares the word for dragon, en-diamassi (fem.), with the Babylonian tiâmat (later popular pronunciation somewhat like tiamas), it is certainly not merely an accidental homophony, since the word for paradise, kerio, also goes back to the Babylonian kirû, "garden," which in the Hammurabi period must still have sounded like the uncontracted kiriu (cf. similarly Nabû Nebo, at that time still Nabiu, and many other examples) (1).

1. When in Masai en-diamassi also means fetus, embryo, Arabic again offers a striking analogy here; cf. Arabic el-gânn (from el-gânin), "demon," but el-ganîn, "embryo."

/xvii cont./

174 171 773 Now in ancient Chaldean astrology this original dragon is the female lion-headed dragon with a long neck localized on the later picture of the crab and which, on the cylindrical seals, looks like a lion's or dragon's head sitting on a pole (her husband is the so-called vulture-dragon, the Kingu of the Babylonian Epic of Creation); according to Hollis (p. 265), however, nenaunir means "the one /fem./ on the pole" and she was originally a lion (or half lion, half human being with which one /xviii/ should compare the Chaldean counterpart of the twins, the Janus-headed centaur that has a lion's and a human head). Furthermore, the name of the morning star, kilegen, which is precisely the Babylonian girgilu, "hen," belongs here; cf. the name of Venus, Nin-dar-anna, mistress of the hen of heaven (also masculine, corresponding to the nature of the morning star as contrasted to that of the evening star, Nin-dar-a of Gudea), which, as Gaŝan-Gir-gi-lu, already occurs in old Sumerian hymns (C. T. XV, 23, cf. Reisner, Hymnen /Hymns/, p. 138, lines 126 ff.). The sacred number of Istar (South Arabian masculine Astar), fifteen, also plays a role in connection with Masai births; among the previously neighboring el-Gargures people (cf. the Abyssinian Guragues?) for the birth of a boy the mother had to remain in the hut 30 days, for that of a girl, about 15 (30 is moon-number, cf. Babyl. Sin 30, his daughter Istar 15), Merker, p. 392, where the 15 gourd bottles with which the young man asks the father of the girl for her are also to be noted. If the three-headed serpent of paradise was called ol-arassumet because it lived in the reeds (= ol-rossua), it is also tempting to think here of a specific Babylonian word, namely, ruŝumtu, mud, swamp (at the latter, indeed, the reeds grow).

With regard to the individuality of the Masai legends, it is entirely original and, in spite of all the connections with the Biblical early history, a wholly independent impulse from the same source. This is expressed above all in the fact that for the most part quite different names occur; thus, Maitumbe corresponds to Adam (perhaps from a collateral form of Adam, ma'dûmu or maidûmu?), Tumbainot to Noah, Oschomó, Bartímaro, and

/xviii cont./

174 Barmáo to his three sons, Sem, Ham, and Japhet, Narabá, or his
171 double Metene, to Moses (cf. Metene and Rise = Moses and Aaron),
• 773 Isaac to Mutari, etc. What has not yet been noted, however, is the quite similar predilection for popular etymological explanations, which are given for every Masai name of this early history. If one compares the respective Hebraic explanations for the names Eva /Eve/ (Gen. 3, 20), Kain /Cain/ (4, 1), Seth (4, 25), Noah (5, 29), Abraham (17, 5), Isaak /Isaac/ (21, 6), Jakob /Jacob/ (25, 26), Ruben /Reuben/ (29, 32), etc., etc., up to Mose /Moses/ (Ex. 2, 50) and Samuel (I. Sam. 1, 20) with the name interpretations of the Masai myths, likewise often far-fetched, for example, Naiterogob (= Eva) called her second son Nabe because he had moved (ebe) violently in the womb, or Nairascho gave birth to a son and called him Serea because the ox slaughtered by the father after the birth was spotted (sera), then with this fondness pervading the one side and the other to explain in some fashion all the ancient traditional names, one must exclaim in astonishment with Adam: This is now bone of my bone and flesh of my flesh (that is, parallel organic further development of a common tendency of early times, namely, the same natural disposition). The objection of skeptics that missionaries (whether of more ancient times, say, of the first Christian centuries, or more recent ones is immaterial) told the Masai those stories in the Biblical style (and together with those Biblical etymologies) and the latter then changed them in accordance with their understanding and mental life, that is, /xix/ assimilated them completely into their own national experiences, and, to be sure, also freely copied the interpretation of the names, completely misses fire here; it would be almost a greater miracle than the simple assumption offered by Merker that the Masai brought all these traditions from their Arabian original homeland, and that they (these ancient traditions) run parallel with the Hebraic ones and both are based on a Chaldean or East Arabian original

/xix cont./

174
171
773

that has been lost to us (1).

1. With regard to the references to those Biblical popular etymologies cited above only with numbers, at least an example should be given for those who do not happen to have an Old Testament readily at hand. Genesis 25, 25 says: "the first of the twins that came out of the womb was red (admôni, play on the word Edom) and was (rough) like a hairy garment (se'ar) and they named him (therefore) Esau ('esau, where the accord between se' in se'ar and 'es in 'esau is sufficient evidence); after that came out his brother, whose hand took hold of Esau's heel ('akeb), and they therefore named him Ja'kob." Actually, however, Jakob /Jacob/ goes back to a more complete form Jakob-el (in which God is the subject, therefore roughly: there follows on the heel God, that is, he rewards or punishes).

Indeed, in any case the matter is and remains amazing enough even so, but the imageless monotheism of the still so savage Masai, disputed by no one, is also a marvel and, up to now, unparalleled among the peoples of Africa.

114
773
171

I come now to the early history itself, which Merker, in Section II of his sensation producing Fourth Part, has already compared, bit by bit, with the corresponding features of the Biblical tradition. It should be noted in this connection that the deceased, who, as he told me himself, had no longer concerned himself with the early history of Genesis since his childhood, did not recognize all the correspondences at once, but rather had overlooked a few very important ones. Sellin, who himself wrote a brochure in 1905 on "die biblische Urgeschichte /the Biblical early history/ (in the Biblische Zeit- und Streitfragen /Biblical questions of the time and controversial ones/, by Boehmer and Kropatschek, Lichterfelde,

/xix cont./

773
171
[114]

published by Edw. Runge, first series, No. II), had already called attention in his review of Merker's book in Die Reformation, Year 4, 1905, pp. 418-421, to the parallel between the lame-hipped Schagarda and Jakob /Jacob/, Genesis 32, 26. Far more important, however, is the fact that the Masai, from the creation of the world to the flood, exactly like the Hebrews in Gen. 4, count seven ancestors, the seventh of whom had three sons, whose correspondence to the Biblical ones is illustrated in the following table /in the original source the table appears in part at the bottom of p. xix and in part at the top of p. xx; in the translation below, the footnotes for each of the two parts will appear at the end of the part/:

Maitumbe	Adam
Sindillo	Habel /Abel/ (2)
Serea (3)	Henoch /Enoch/

2. Instead of Kain /Cain/. Since among the Masai the first murder is put shortly before the flood (for the motivation of same as judgment), there also fails to take place here the story of Kain and Habel, which, to be sure, by way of allusion, recurs again in Genesis (at the end of the 4th chapter) (cf. Jabal = Habel /Abel/, Jubal = Kain /Cain/ and Tubal = Naemah /Naamah/, as the original text probably read); but it is to be noted that Sindillo had a brother Sisia, from whom the blacksmiths are descended (Kain /Cain/, of course, means "blacksmith").

3. He builds the first kraal, just as, Gen. 4, Kain /Cain/ builds the first city for Henoch /Enoch/, which he names Henoch, after Henoch's name.

18: Merker--xxi G-5 (1895-ca. 1908) 1910 FL12 Masai FL12

/xx/

• 773
171

Schagarda (1)	'Irad
Lemajan	Mahujafl /Mehujael/
Learin	Metusalah /Methusael/
Lengeni (2)	Lamek /Lamech/

1. Also Ol-Ogarde, where one should compare the consonance with 'Irad (LXX Γαιδάδ for Γαιραδ).

2. Thus perhaps presuming Lamkan instead of Lamek (cf. Gen. 5 Kainan /Cainan/ instead of Gen. 4 Kain /Cain/). Here I have tacitly inserted Lengeni instead of his brother Tumbainot (= Noah, cf. dombo, ark, Hebr. tebah), which is fully justified, since Tumbainot had three sons by Naipander Ocheomó, Bartímaro, and Barmao (= Sem, Ham, and Japhet), but also by the widow of his adopted brother Lengeni, Nahaba-Legúnja (cf. with this double name the two wives of Lamech, Ada /Adah/ and Zilla /Zillah/), three more sons (who, according to the views of the so-called levirate must properly be regarded as sons of Lengeni), Lesha, L'olgesan and L'oe-sero (= Jabal, Jubal, and Tubal). Thus, even among the early ancestors of the Masai there were already circulating similar duplicate reports (or variants of myths), like the parallel lists of ancestors, Gen. 4 and 5, among those of the Hebrews. -- Apparently in order to reach the sacred number seven, Gen. 4 omitted Noah, whereas the Masai storyteller, on the other hand, the Lengeni = Lamek (inserted above by me instead of Tumbainot): the number ten in Gen. 5 (cf. Berosus) was reached on the basis of God (read Edom instead of Adam) and the God-incarnate mediator (Seth = λόγος = Adapad).

/xx cont./

• 973
171

A further correspondence not noted up to now is the four plagues after the flood (Merker, pp. 383 f.): 1. sickness (after the first theft), 2. dung beetles (after the negligent killing of a suckling donkey), 3. grasshoppers (after the deliberate killing of a cow) with famine following that, and, 4. pestilence (or the ongeg epidemic); one should compare this with the expanded list of the ten plagues, Exodus 7 ff., in which the above-mentioned four plagues of the Masai are all represented, and (as my former student, Dr. Otto Weber, pointed out to me) in the number four, the four plagues of the Babylonian account of the flood (lines 187 ff.), lion, jackal, famine, and pestilence.

With regard to the imparting of the ten commandments from the mountain of God, what is characteristic of the situation for the Masai tradition is that it is not a figure corresponding to Moses that proclaims the sacred laws, but an angel, namely, the mal'ak Jahve of the Old Testament, and, to be sure, in the form of a human being (cf. Daniel 7, 13, and the Adapad, i.e., the Marduk of Eridu in the Babylonian myth) with two wings and but a single leg (3).

3. The description of the angel as a one-legged creature is probably only the naïve expression for lame-hipped or limping, whereby one is immediately tempted to think of the lame fire god of the Greeks (the Chaldean Nebo, as Nusku-Gibil, is also a fire god) and of Ex. 37, 28 /sic: see Gen. 32, 25/ (where, according to the correct interpretation, despite 37, 32 /Gen. 32, 25/, not Jacob's hip, but rather that of the angel wrestling with him was out of joint). Lame-hipped Schagarda a Irad (I-irad means "the fire came down," cf. Babylonian Arad-Gibil) also corresponds to Nebo-Nusku, cf. my brochure: Die altorientalischen Denkmäler und das alte Testament /The old Oriental monuments and the Old Testament/, 2nd ed., Berlin, 1903, p. 30. The Egyptian illustration of Ptah and Osiris goes back to a similar idea.

/xx cont./

• 773 171 on account of which he could only move forward by jumps, with the help of a stick; he was called ol-Dirima /xxi/ (from diriman, crutch), a name that has been preserved in the Arabic darrâm (walking along with a limping step). Among the neighboring people of the el-Marimar (cf. the Nubian Wa'wa' people of the Aeg. inscriptions, which phonetically has arisen from Warwar and has been preserved in the present-day name of Berber, north of Khartoum), God is called Sita (cf. the Biblical Seth, Gen. 5, and what was said about him above, p. xxi, note 2, end), who is supposed to have been worshiped in the form of a male figure with but a single leg and thus probably corresponds to this ol-Dirima.

I do not believe that this Masai story of the lawgiving must necessarily presuppose a knowledge of the proclamation of the Ten Commandments by Moses, to which, indeed, for completion, the so-called Book of the Covenant also belongs (1),

> 1. With the end of the Book of the Covenant (Ex. 23, 19 = 34, 26, "thou shalt not seethe a kid in his mother's milk"), cf. the same abhorrence toward taking meat and milk together among the Masai, Merker, pp. 42 and 306.

but rather that, long before Moses, it was a traditional feature of the original tradition that when commandments were given by God this was always done in tens, the sacred number of the divine "herald" and scribe of God, Nebo; moreover, probably most of the Mosaic commandments already existed before Moses, and the mission of this man of God, who surely belongs to history, was only that of announcing them to his countrymen in a new arrangement and augmented by the Book of the Covenant.

114 773 171 This brings me to the last point, namely, the placing together of the Masai patriarch ol-Eberet with the Hebrews and, what seemed disastrous to me from the outset, the old Masai Amesai tribe with the Biblical (originally probably Eranite-Hittite) Amorities attempted by Merker in Section III of his Fourth Part.

/xxi cont./

114 If one considers how common Arabian tribal and personal names,
• 773 such as el-'Âmir, 'Amîra, 'Imrîn (from 'Amirîn), are, there is
171 not the slightest reason, in connection with the Ameroi, to think of the Amorites, who have played a role only in Palestine and came from the north. More likely ol-Eberet, if not to be compared with, say, the Arabian al-Abrahat (Abyssinian Abraha, which, in any case, is generally equated with the Hebraic Abraham) or another similar-sounding Arabian name, might be identical with 'Eber, the mythical ancestor of the Hebrews, especially since ol-Eberet's son Gerêus sounds remarkably similar to Eber's grandson Re'û (LXX Ραγου, hypocorism of Re'û-el, Reguel) Gen. 11, 18, which again, however, only points directly back to East Arabia, the original seat of all the western Semites, since the district 'Eber-Peleg (2)

2. Cf. in this connection my Grundriss /Outline/ (Munich, 1904), p. 184, note 1.

roughly coincides with the Arabian district of Jemâma.

773 While the Masai early histories, as they finally became
171 available to Merker after prolonged effort, are still being care-
174 fully guarded by a few of the older people, there are also among the myths generally widespread among the Masai, such as also became known to Hollis in British East Africa, some that are to be regarded as clear echoes of the sacred myths. Among these I count /xxii/ what Hollis relates (p. 270) about the god Naiterulop (the word, however, has the feminine article, thus the originatress of the earth, the foremost of the land), where therefore the Eve of the Masai has become a deity, whereas the reverse would be much less understandable: or the lowering of the cattle from heaven (Hollis, p. 270: cf. Merker, p. 359), or the story of Le-eyo's disobedience (Hollis, p. 271), in which I see a faint reminiscence of Merker's account of the fall, so strikingly coinciding with the Bible. If one considers how widespread the placing together of the tree of paradise and serpent was in the ancient Orient (up to the Greeks), then the preservation of this particular

/xxii cont./

• 773 171 174 feature among the Masai, with all the rest, is not so astonishing (1).

1. Incidentally, I should like to point out that the name of the old medicine man Lesigiriaschi, Merker, 25, 386, is certainly to be compared with the name i-Sigiriaischi, which the Somali bear among the Masai (Hollis, p. 30).

114 773 I conclude these considerations with the certain expectation that now, when my deceased friend's book comes out for the second time, the early histories of the Masai will no longer encounter the skepticism to which they were exposed when they first became known, but that they will now be duly appreciated for their as yet incalculable importance to the history of religion, as they deserve to be. And I repeat once more [174] [177] that a Christian or Jewish influence, perhaps even in early times (at all events through the Christian Nuba of the third century A.D., or through the Jewish Falascha /Falasha/ on the borders of Abyssinia), from the older northern dwelling-sites of the Masai, is quite out of the question, since one would then, as Merker already emphasized, necessarily have to expect not only connections with the Biblical early and patriarchal histories up to the lawgiving, but also with the later parts of Biblical history (and above all some allusion to the Gospels, if Christian missionaries are to be considered). The previously discussed connections with the Chaldean early histories, and, to be sure, at points not touched on by

/xxii cont./
114 the Bible (2).
• 773
[171]

2. Perhaps one of these is also the noteworthy accord between the name of the primeval dragon (diamassi = tihámat) Nenaunir, and Ki-Nunir, "place of battle," an originally mythical locality of the ancient Babylonian East Tigris region (Kvirinta of the Zendavesta, where the three-headed dragon Dahâka-Zohak was defeated; cf. in addition the three-headed serpent of paradise of the Masai) near Sirgulla; cf. also the stake of the tree e'naunir, Merker, p. 373, and the above-mentioned (p. xvii) Masai etymology of Nenaunir, with which may then perhaps be put the Babylonian giš-ku-nir (from giš-ku nu-nir), a weapon of the god Nebo, probably to be thought of as having a dragon shape (cf. my Grundriss /Outline/, p. 379, footnote 6).

completely exclude any doubt.

/340 cont./

*121 173 Ol eberet became the founder of the lineage of the El eberet, named after him, which already at that time was separated from the Ameroi by its external mode of life and had to become separated even further by its continued development. Through this it is most probable that after the migration of the Masai the meaning of the name as one of many lineages of a people receded and was transformed into the conception of a folk name.

[171] Furthermore the tradition of the Masai reports that their separation from the Ameroi and El eberet remaining behind took place at the time the son of Ol eberet, Gerëua, lived, and the Biblical account in 1st Moses /Genesis/ 10, 25 says that at the time of Peleg, son of Eber, the earth was divided, which, translated from the Biblical language and considering the circumstance that the Israelites regarded themselves as the chosen people, beside whom other peoples were inferior, contemptible heathen, could mean nothing other than: at that time a local shift not without significance for the Hebrew people occurred, within the field of vision of the Hebrews, among the peoples close to them.

/341/ Accordingly, I think it may be assumed that to the Amai of the primeval age, as whose direct descendants the present-day Masai regard themselves, belonged the oldest traceable component of the Israelites, who, as a Hebrew people, was originally identical with the lineage of the El eberet.

*121 173 171 •173 With regard to the further fate of the El eberet-Hebrews the Masai tradition reports that they found special support by the agricultural people of the El dinet (1)

1. As a parallel to the peaceful, neighborly association in which, according to the tradition of the Masai, the El eberet stood with regard to the El dinet, might be interpreted, in the sense of the meaning El dinet = Hetthiter /Hittite/, the report in Genesis 23, in which it is told how Abraham acquired a burial place for Sarah in the land of the Hetthiter /Hittites/ with whom he was on a friendly basis, and further the passage

/341 cont./

*121
173
171
•773

/footnote 1 continued/ in Genesis 26, 34, which reports that Esau, Abraham's grandson, married two Hetthiter /Hittite/ women, Judith and Basmath /Bashemath/. -- That even at that time it was not always easy for Hebrews to find suitable girls of pure Hebrew extraction for marriage we see from Genesis 27 and 28, where it is reported that Jakob /Jacob/ was induced by his mother, who could not get along with Esau's Hetthitish /Hittite/ wives, to set out for distant Mesopotamia in order to fetch himself a Hebrew wife from there. -- One should also note, in connection with the name El dinet, the name of Jakob's daughter by Rahel /Rachel/, Dinah (Genesis 30, 21). This evidence seems to me of particular significance because it refers to that most ancient time in which the Hebrews were still culture-poor nomads. One may think as he wants to about the historical value of these passages, but among all the details there is one that may be clung to: namely, that these reports are based on the memory of a close contact -- and, to be sure, not a brief one, but of longer duration -- of the Hebrews with the Hetthitern /Hittites/, which took place during a time that lies at the very beginning of Hebrew history, in those epochs in which the first historical moments rose up like islands out of the sea of myths. -- The Masai tradition reports further that the El dinet lived in tembes. This, however, is a hut form very similar to the one that is still customary today in Asia Minor and Syria, that is to say, in the lands once inhabited by Hetthitern

/341 cont./

*121 173 [171] [173]

/footnote 1 continued/ /Hittites/, which even today still shelter the most and purest Hetthiter /Hittite/ descendants.

and lived in their vicinity. From that it is to be concluded with great probability that they adopted some customs from them, and this assumption also seems to confirm the one in the direction of the identity of the El eberet and Hebrews.

Just as the El dinet did not consume blood and let the slaughter animal bleed from the opened neck artery before cutting it up, so also was it forbidden for the Israelites to consume blood, according to 1st Moses /Genesis/ 9, 4; 3rd Moses /Leviticus/ 3, 17; 7, 26-27; 17, 10-14; 19, 26, and 5th Moses /Deuteronomy/ 12, 16, 23, 24; 15, 23, a law which later, as is well known, became elaborated into the slaughter ritual. The passages in 3rd Moses /Leviticus/ 17, 13, and in 5th Moses /Deuteronomy/ 12, 16, 24, and 15, 23, also expressly order that one is to let the blood run out and flow on the ground like water. It is to be mentioned in this connection that the last of these passages comes from the law book that allegedly was found around the year 623 when the temple was being repaired, but in reality had only been written then, for the forming of the first priesthood that had grown on Kanaanitic /Canaanitic/ soil into a priestly rule. The other passages, however, stem from the so-called Priestly Codex, /342/ made by priests who, just like the people for whom it was intended, grew up in exile. If I further add that the quoted passages are the only ones in the entire Pentateuch that deal with the prohibition of the consumption of blood, it is doubtless indeed clear that we are dealing here, not with something originally Hebrew, but with a foreign view and institution. That the prohibition against the consumption of blood could have come to the Hebrews only through the influence of a people practicing agriculture is taught by the fact that, for the herd nomads, the blood of their livestock is a valuable food, which is preferably consumed either alone or as an addition to other foods. Just as among the Semite peoples of interior Africa who have become sedentary -- amid mixture with Negroes -- so also among the Hebrews does the custom of consuming blood as food seem to have been preserved long after they became sedentary.

/343 cont./

*121 174 Unfortunately, Oriental research still knows practically nothing about the Amorites, or at least not much more. We do not know what somatically different peoples participated in the formation of the historic Amorite people, and we are not familiar with either their ethnography or the manners and customs characteristic of them before they were absorbed. Not until research has thrown light upon this shall we have more detailed knowledge, for the time being we can only surmise. Now my surmise on this subject is that the Ameroi as they became sedentary became an essential part of the Amorites, to whom they also gave their name. The other constituent part of the Amorites was -- as is surmised -- blond-haired and of Aryan origin, and probably also significantly surpassed the Semitic Ameroi in numbers. The fact that the Amorites, however, were named after the latter and not the former /344/ will not surprise us if we consider that the people of the same race as the Ameroi, the El eberet-Hebrews, and the Semitic Babylonians were given that name, and that the Hebrews too, despite their 95 per cent non-Semitic blood, were always called Hebrews (and Israelites) and never Hetthiter /Hittites/.

*121 • 993 174 Now, if it is correct that the Masai, the Hebrews, and the Amorites, descended from the original Amai people in the aforesaid way, the following is shown with regard to the origin and migration of the Biblical myths coming under consideration: The myths stem from the original Amai people, who passed them on directly to their descendants, the present-day Masai. Through the El eberet-Hebrews, the oldest consitiuent part of the Israelites, they came to the latter. The Ameroi-Amorites, who first became sedentary in Kanaan /Canaan/, subsequently brought them, through their immigration, to Babylon, where the part of them that could be inserted into the astral cult prevailing there was preserved. This assumption may satisfactorily explain the form of the reports of those myths found in Babel: of the original accounts the images, the external forms, are preserved, whereas the spirit of the 'Ng ai-Jahve religion originally animating them was driven out by the one of the Babylonian state religion, which is represented as an astral cult planted on the shamanism of the Sumerians.

174 160-200 miles airline north of Western Masailand, and
174 it is a desert at present. A tribal elder called
• 173 Maasinda found a way to climb the escarpment at the south
of Kieru and some of the tribe then moved into the Kenya
(614) Highlands. The legendary Maasinda had six sons who
became the founders of the present six Masai clans.

The tribe gradually moved south. At Ngong, near Nairobi, according to their traditions they found a Heaven-born child who became their first Laibon
174 or Medicine Man (Hollis, 1905). Fosbrooke (1948) dated the arrival at Ngong at 1640 on the basis of the geneology of the Laibons founded by that legendary first child. During the next 150 years the Masai moved over 300 miles airline southward.

131 175 1800-1890: By 1800 a few Masai had made what proved to be the tribe's maximum penetration into Tanganyika but it was not until about 1880 that they had completed their occupation of what is now the Masai Steppe in Tanganyika (Fig. 1). There had been constant warfare and raiding involved in this settlement, and the margins of Masailand fluctuated somewhat. For a time the Masai occupied the area immediately south of the Ngorongoro Highlands, as well as lands near Mt. Kilimanjaro and Mt. Meru that are now in other hands.

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ĕji sii eata 'l-oibonok 'l-kulenyena ootii ol-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 775 791 Nāji ten ĕä kulikae-tuñganak kituak anaa 'M-Batyany, ore pe enukari, nepwo 'l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuñgani, nemebuaki likae-tuñgani ainyĕye. Einyĕye akiti, amu ĕji: 'Ebaiki meidim ol-tau lenye atorinyunye, nĕä.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

795 825 Ĕjo 'l-Maasae metii 'l-meneñga, amu medol; kake ĕji edol in-gīshu, naa ten eiñguraa 'n-gīshu pôkin e-wĕji nĕbo, nĕji edol il-meneñga araki ol-ōwaru.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

[1] *Vide* p. 306.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika;* other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rrep* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great " shovel-blade " with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 [412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The " minor deity called Neiterkob " which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, " the mediator between God and men." But the Masai word *naiterukop* means no more than " that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [782]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

we have here primitive and undeveloped religious sentiment where the personality of the deity is hardly separated from striking natural phenomena, or remnants of some old cultus of the heavenly bodies, mountains, and tribal deities preserved in a hazy way by a military race which had not paid much attention to religion.

The Masai believe that ordinary persons die like cattle, and they throw away their corpses to be eaten by hyenas[1], in the revoltingly unceremonious way common to many East African tribes. Medicine men, however, and influential people are buried, and their souls are said to pass into snakes, which are respected in consequence. Many tribes on the Nile also reverence snakes. It is noticeable that death and misfortune are not attributed to witchcraft. The Laibon is not the same as the Witch Doctor of the Bantu tribes, and it is no part of his duties to detect witches.

As the Masai men will practically do nothing but fight or tend cattle, they are naturally dependent on others for all articles, including their arms, which cannot be manufactured by women. There is among them a special tribe of smiths, called Il-Kunono, who make iron weapons, but are treated as inferiors and not allowed to marry Masai women. A somewhat similar tribe are the Dorobo or hunters.

It would appear that the military organization, the aversion to hunting, to eating game or vegetable food, and to engaging in agriculture or any productive art are peculiarities specially developed by the Masai, though some of them have been imitated by other tribes. Another peculiarity is the shape of their houses—long low buildings constructed of poles, grass, and mud, and divided into rooms by partitions. Their other customs, however, seem to tally with those of the Latuka, Bari, and Dinka, as far as differences of residence and occupation permit. Remarkable points of agreement are the nudity of the men, the shaven heads of the women, extraction of the middle teeth of the lower jaw, resting in a standing position on one leg, drinking the blood from living animals, and spitting as a sign of affection or benediction.

Linguistic evidence points the same way, though ampler and clearer information about the languages of the Nile is desirable for purposes of comparison. It is no want of respect to the labours of Sir H. Johnston and others to say that the researches of Mr. Hollis have for the first time

[1] It has been suggested that this practice may be due to a desire not to contaminate the earth by burial, but Mr. Hollis could find no trace of this idea, although he carefully inquired.

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

Naa, ten ëä en-ginyi-kerai, neitau 'ñgotonye ake 'n-dökitin.

If a baby dies, its mother only lays aside her ornaments[1]. 765

Il-tauja oo 'l-meneñga[2] loo-'l-tuñganak, oo 'l-asuria.

People's souls and spirits, and snakes[3]. 775

Ten etaa en-nëä ol-tuñgani, nëji etaa en-neduñgo ol-tau lenye. Naa, ten ëä ol-tuñgani, ore p' einosi, nëä ëii ol-tau lenye. Nëji eidipi anaa 'n-gishu: meitöki ol-tau ąpiu.

When a man is on the point of death, people say he is about to cut his heart; and when he dies and is eaten (by hyenas), his soul dies with him. It is believed that all is over as with the cattle, and that the soul does not come to life again[4]. [763]

Kake ten ëä ol-oiboni araki ol-karsis, nenukari, ore ąe eñgwëyu o-sesen lenye, nëji etawale ol-tau lenye, etaa ol-asurai; nelo ol-asurai eng-añg oo-'n-gera enyena, neiñguraa.

But when a medicine-man or a rich person dies and is buried, his soul turns into a snake as soon as his body rots; and the snake goes to his children's kraal to look after them. 766 775 825

Ti-araki naa nëja, ąe mëar il-Maasae 'l-asuria lenye. Naa, ten edol i-ñgoröyok ol-asurai ti-aji, nesuaki kulle, nemej ol-asurai, nelo.

The Masai in consequence do not kill their sacred snakes, and if a woman sees one in her hut, she pours some milk on the ground for it to lick, after which it will go away. 778 825

Etii 'l-asuria oorook, naa le-'n-gishömi oo-'l-Aiser; naa, ten ëar likae etii 'l-oopeny, nëjo: 'Miar, amu 'l-kulalañg.'

There is a black snake, which is sacred to the Aiser clan; and if a person of another clan were to strike the snake whilst the owners were present, they would tell him to desist as it belongs to them. [614]

[1] The Dinka, Bari, and other Nilotic tribes follow similar customs (Kaufmann, *Schilderungen*, pp. 130, 192; and *Emin Pasha in Central Africa*, p. 338, &c.). [171]

[2] Ol-tau, the heart, mind, soul; ol-meneñgani, the corpse, spirit, ghost. [192]

[3] The Dinka, Bari, Latuka, and other Nilotic tribes, also pay reverence to snakes (Kaufmann, *loc. cit.*, pp. 127, 188; Schweinfurth, *The Heart of Africa*, vol. i, p. 35; Casati, *Ten Years*, p. 31; *Emin Pasha*, *loc. cit.*, p. 339, &c.). The Zulus hold that divine ancestral shades are embodied in certain tame and harmless snakes, whom their human kinsfolk receive with kindly respect and propitiate with food (Tylor, *Primitive Culture*, vol. ii, pp. 8, 233). [171]

[4] The Dinka and Bari likewise disbelieve in a life after death (Kaufmann, *loc. cit.*, pp. 124, 188).

The other clans and families have their sacred snakes as well. Some are white in colour, others red, and others green. Some have a hood like an old-man's cloak, others again have white heads like very old people.

[791] Ēji sii eata 'l-oibonok 'l-kulenyena ootii ol-bene.

The medicine-men are also said to have snakes, which they keep in their bags.

766 ●775 791 Nēji ten ēä kulikae-tuñganak kituak anaa 'M-Batyany, ore pe enukari, nepwo 'l-tauja lenye eng-ai.

It is believed that the souls of some big people like Mbatian[1] go to heaven after death and burial.

794 828 Ten eirura ol-tuñgani, nemebuaki likae-tuñgani ainyēye. Einyēye akiti, amu ēji: 'Ebaiki meidim ol-tau lenye atorinyunye, nēä.'

A sleeping man must not be awakened suddenly. He must be roused gently, for it is thought that his soul may perhaps not return and he will die.

775 825 Ejo 'l-Maasae metii 'l-meneñga, amu medol; kake ēji edol in-gīshu, naa ten eiñgurua 'n-gīshu pókin e-wēji nēbo, nēji edol il-meneñga araki ol-ōwaru.

The Masai say there are no such things as ghosts because they do not see them. But it is supposed that cattle see them, and when a herd of cattle all gaze at one spot, they are said to be looking at either a ghost or a beast of prey.

[1] *Vide* p. 326.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

422 428 Women possess no property save their ornaments. Of these the beads and the necklaces become the property of the daughters, but the wire ornaments are thrown away.

775 776 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse [775] uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laiseer	(1) Laiseer (2) Legetoi (3) Letoya (4) Lukumai (5) Lamothere (6) Libartimaru (7) Loiger.
No. 2. Ndarosiru	(1) Ndarosiru (2) Lanaboguaru.
No. 3. Molelian	(1) Molelian (2) Mbarakineti
No. 4. Magesen	(1) Magesen (2) Lesegu.

PART IX.—CATTLE AND SHEEP.

233 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well-known to be worth discussion. A few interesting notes were, however, obtained.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

775 The Masai know nothing of a life after death, but it is thought that *Laibons* may live on in the form of black snakes.

768 If a death occurs in a hut it is not evacuated until the village moves in the ordinary way (the Masai being nomadic, seldom stay for long in one village). If, however, the village only moves to a new site close to the old one, the family in which the death has occurred must move further away and remain away for two or three months.

789 If a woman has lost her eldest male child she binds a few turns of iron wire below the knees of her next surviving son, in order to make him look like a girl[1] that death may pass him by. A man still wears these coils of wire even when he is old. Such a man is nicknamed *Ol o segingei* (the man of the iron wire).

765 If the head of the family dies a white or a black bullock is slaughtered, and the people smear the fat from the front of the ribs on their bodies and on the garments of the deceased.

757 *Sickness and Medicines.*—The Masai have their treatment for numerous diseases. Members of the Il Darsoero clan appear to be the most skilled in medicine. They have often shown me herbs which they use, but I have for the most part forgotten the Masai names for them, and lack of botanical knowledge prevents me from giving their scientific names. Such Masai as understand the use of herbs have never shown any reluctance to tell me about it.

Sheep's fat plays an important part in nearly all their medicines. For instance: (*a*) If a Masai is bitten by a mad dog (disease called by Masai *Nang'a gotok*, presumably rabies) a sheep must be immediately slaughtered and the fat boiled with bark of *Il Kiluretti* trees. The sufferer drinks this mixture and his skin is smeared all over with the contents of the sheep's stomach. This is said to be a certain preventive if done at once. I described the treatment in greater detail in an appendix to the Narok District Intelligence Report for April, 1929, and it is probably still on file in the Government office.

(*b*) *Anthrax* (Masai *Enderit*).—When this disease appears as an external sore a sheep is slaughtered and the sheepskin is bound round the affected part. The patient drinks the fat of the sheep. He must on no account be allowed to drink water or milk, and if he does so he is almost certain to die. This disease is fairly common among the Masai, but they usually recover from it. In the opinion of some Europeans the Masai treatment is more efficacious than ours.

773 *Honey Wine* (Masai *En-Aisho*).—This is much used at religious ceremonies and other occasions of importance. It is a very pleasant beverage. To make it, honey and water are mixed in about equal quantities in a special gourd called *E-Mosori*, literally "the egg." To this are added the dried fruits of the Sausage

[1] Because girls wear leg ornaments of iron wire.

/204 cont./

776 779 improvement. He then does this through sickness, drought, or cattle epidemics.

779 721 [186] The Masai feel that they are the chosen people of 'Ng ai; all other peoples should be subject to them. God created the world with all that is in it only for them, and thus everything on earth belongs to them. If they obtain booty in war against another tribe, they are only taking what has been given to them by God for their own, what lawfully belongs to them, and what that tribe is unlawfully withholding from them. "If the el mgg would voluntarily give us our property, for that is what the livestock in their possession is, we should not have to make war on them. But since they do not do this, we are forced into war." And they are constantly waging this war against the despised, savage heathen, who know nothing about 'Ng ai and do not pray to him, but to spirits, which is why he does not assist them and always makes the Masai victors for a worthy cause.

776 779 On their journey through life God protects the Masai through guardian angels, who are pictured as winged, invisible beings of human form. The guardian angels are the same sex as their protégés; a male individual has an ol dumgani l Eng ai, a female one an eñ gorojoni Eng ai, watching over them. The angel accompanies the person always and everywhere and protects him from dangers, so that he will not succumb in the struggle for existence before the lifetime previously set for him by God has run out; only then does the person die. The angel carries his soul /245/ to the other world and then [775] undertakes the protection of a child born on the same day. Every day a Masai dies and every day one is born, the people say.

775 779 Into the other world (eñ gatambó = cloud land, i.e., the land where the clouds come from) go the souls of all the deceased, both those of the Masai and of non-Masai, both those of the good and those of the bad people. As soon as a soul reaches the portal of the other world, which lies far to the north (Kopekob), God decides its future fate. The souls of good people gain entry into paradise, which is equipped with all the beauties and splendors of nature. Lush pastures with fat cattle alternate with lakes, rivers, and cool glades whose trees bear the most delicious fruits. In the midst of this splendor the good souls live in human fashion, but without care, trouble, or

/205 cont./

• 775 779 work. Every day they receive the best food in abundance. Here, however, in accordance with God's command, each one may marry only one wife. The other world, like the earth, is divided into individual lands, each of which is intended for the souls of one people, so that the person who arrives there will find his deceased relatives. Bad human beings are denied this paradise; they are driven into a barren, waterless desert. Those not so bad also gain entry into paradise through God's grace, though not to live in carefree happiness, but to do hard work.

779 This is the Masai religious doctrine as it is handed down and taught by the old men. The supernatural explanation of natural phenomena has nothing to do with the religious doctrine. In them

[781] one sees only the works or expressions of God and therefore observes at least the more powerful ones with something like reverential awe. [illegible] not, say, demonolatry, the deification of personified natural forces.

776 821 The sun (*eng olol*) is regarded largely as a reflection of God, like the gloriously colored morning and evening redness. The clouds mask God before the eyes of mankind, they surround him, from them he looks down on the bustle of the earth. This seems to explain why the Masai call the redness of the morning and evening sky *'Ng ai naniugi*, the clouds *'Ng ai naboi*, and the blue, cloudless sky *'Ng ai nanyk*. These literally mean "the red God," "the white God," and the "black God," but should properly be translated as "the divine red," "the divine white," and "the divine black," for actually the people see in these phenomena no gods and nothing godlike or to be worshipped like him. It should also be mentioned here that God, who in ordinary speech is always called *'Ng ai*, is often called *'Ng ai nanyk* or *Nai nanyk*, that is, the black God, in the prayer songs to be discussed later. The Masai themselves do not know any explanation for these strange word-formations, and I have not been able to learn anything from them from which an interpretation could be derived.

/206/ More infrequent than the above explanation for the sun is the one that it and the moon are servants of God, whose duty is to illuminate the earth. In this the sun is regarded as feminine, the

/209 cont./

796 782 [834] [539] In the songs the following prayer is commonly repeated: 'Ng ai ayanaia, 'I' emkiage aemon, kiamon ag' ije kiamon ed gera, ed gainbi en aiacho, i.e., God, I implore you always: I pray, we pray to you alone, we pray for children, for birth for the barren woman.

Whereas the supplication feasts are usually held on the en sabiath days (from the 18th to the 20th of the month), a joint supplication-prayer, ol dapim, often takes place on the day of the new moon. The people of the kraal gather in the evening and, from a buffalo or cattle horn, drink a mixture consisting of milk, a cold extract of ed gaitenujai twigs (Commelina Merkeri K. Sch.), and a white powder obtained from the ol oibori, while they say the /210/ prayer: 'Ng ai jo ijok ed giachon, jo ijok ñ giacho, jo ijok ed gera! That is, may God give us well-being, livestock, and children. If a larger supplication feast is to be held in a month, the inter supplication feast always precedes it on the first day of the month.

[272] [237] [415] [329] [539]

782 783 [784] If a small child of one not long detached from the warrior standing dies, he not infrequently sees in it a punishment from God for his having killed a pregnant woman on an earlier expedition, provided that he once killed a woman who might have been in this condition. In order to obtain forgiveness, he offers God a black gravid sheep, and, to be sure, close to the spot where at that time he committed the deed. Before he kills the animal, he prays to God, mentions the purpose of the sacrifice, and asks for pardon. As penance for his misdeed, he throws the blood and amniotic fluid (ol gapa) of the sacrificial animal, as well as the fetus and uterus, both cut into pieces, upon the spot where it occurred. He takes along neither meat nor skin of the slaughtered animal, but leaves everything lying there when, after the concluded sacrifice, he returns to his kraal.

825 826 775 613 The lineage of the El kiboson believes that the bones of the buried corpses of their married men turn into snakes. They therefore do not kill these animals, like the other Masai, but are happy about their presence in the kraal and by the huts and, as soon as a snake appears, set on the ground a shallow dish with milk and honey as food for it. Snakes in and near El kiboson kraals are not rare.

•775 /210 cont./
825 Allegedly they never bite the El kiboron people: on the other hand
826 the latter often use them as frightening devices against both Masai
613 and Negroes.

776 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngnaunir, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngnaunir is merely a bogeyman [861] for naughty children. "Do not go too far away," the mother says to the children, "otherwise 'Ngnaunir will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (es ~~ekim~~), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and 789 the execution of special gestures. The aforementioned amulet ring [751] (ol geretti) protects one against the effect of magic made by another [754] Masai. Women who go into the neighboring areas of foreign tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /211/ roots, barks), after which they are named, and a secret medicine of the ol goiatiki, who alone is able to prepare the whole in such a way that it is effective. The [842] legumojig amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women barren up to then in connection with the boys' en gebita feast. The en gogurol is tied around the ankle and protects one from ailments of the legs. The ol dargel [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The en jorig protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

The influence of the

791 medicine man is due to his supposed power of prophecy and
787 divination. No explanation is offered of this power, nor does it appear that the Laibons are believed to enjoy the acquaintance and assistance of definite spiritual beings; but they can foretell the future by such methods as throwing stones out of a horn, inspecting the entrails of slaughtered animals, interpreting dreams, and delivering oracles when intoxicated with honey wine. Great, however, as is their influence, it does not appear that either among the Masai or
[171] the Nandi, where similar institutions prevail, they have ever attempted to assume a position like that of the various small sultans of the coast or the kings to the west of Lake Victoria.

791 The most celebrated of these medicine men was Mbatian, the father of the present holder of the office, Lenana, who died about 1890. He is celebrated for having prophesied outbreaks of cattle plague and small-pox, which duly came to pass; and also for having foretold the arrival of white people. It is generally said that he bade the Masai be friendly to them, but Mr. Hollis could not find any corroboration of this statement. His death was followed by
173 a disputed succession. There is considerable discrepancy as to
791 the details of the story, but, according to the versions taken down by Mr. Hollis (p. 327), Mbatian told his eldest son
662 Sendeyo that on the morrow he would invest him with the insignia of a Laibon, of which the principal is an iron club. Lenana, the younger son, overheard, and presented himself before his father very early the next morning. Mbatian, who was very aged and had only one eye, behaved much like Isaac in similar circumstances, and gave his younger son the insignia, saying 'Thou shalt be great among thy brothers and among all the people.' In any case, Lenana succeeded,
791 and was accepted as Laibon by all the Masai except the Loita.
578 This created a division in the tribe, and as it roughly
619 corresponded with the division between British and German territory, Sendeyo was long regarded as the chief of the German Masai and Lenana of the British. But in 1902 Sendeyo quarrelled with the German administration, made his peace with his brother, and came over to the British Protectorate.

•776 The religious ideas of the Masai, as collected by Mr. Hollis, are vague and unformulated. The commonest word for God is Eng-aï, which it will be observed is a substantive with a *feminine* article. Eng-aï appears to be used either quite indefinitely and impersonally of remarkable natural phenomena

1: Hollis G-5 (ca. 1894-1904) 1905
FL12 Masai FL12

(especially rain, the sky, and volcanoes), or else definitely and personally of superhuman beings. In this latter sense it is said that there are two Gods (Ing-aïtin are), the Black God and the Red God, of whom the former is kindly, but the latter malevolent. It is the special function and pleasure of the Black God to provide rain, but the Red God objects to turning on the celestial water-tap. Loud thunder is the result of the Red God trying to get to earth through the Black God's dominions in order to kill men, but the distant rumbling is the Black God saying to him, 'Do let them alone; don't kill them.' This happy fancy that the good god is near but the bad god far, which is probably no accident but due to the fundamental characteristics of the Masai mind, has doubtless saved untold suffering, for it does away at once with the necessity for human sacrifices and all similar methods of propitiating cruel powers. Besides the Black and Red Gods there is a quasi-divine personage called Naiteru-Kop, who appears to have been, if not the creator, at least the arranger of the present order of things. A man called Le-eyo appears to have been the principal patriarch, though there were also Dorobo (hunting tribes) in his time, so that he was not strictly the first man. Death entered the world owing to his selfishness and disobedience (p. 269), and, by an incident common in stories of this kind, his younger son became the father of the Masai, while his elder son lost his birthright, and was the ancestor of the inferior tribes.

The worship of the Masai, like their beliefs, seems to be somewhat vague and wanting in ceremonial, but Mr. Hollis's collection shows that they have definite prayers, and that they petition the deity more frequently and fervently than the surrounding tribes are known to do. This is confirmed by Thomson, who speaks of them howling out prayers to Eng-aï for hours together. By a custom not without parallel in other nations, it would appear that the women pray twice a day, but the men only occasionally and in grave circumstances. The prayers which are for children, rain, and victory, are addressed to Eng-aï as a distinct personality 'who is prayed to and hears.' Remarkable also is the phrase 'the highlands and lowlands of our vast country which belongs to our God.' On the other hand, the sun and moon, the morning and evening star, and the mountain clouds are also invoked, and one song says in two consecutive verses, 'He whom I pray to is God,' and 'He whom I pray to is Lenana, our medicine man.' It is difficult to say whether

The story of the gods.

There are two gods, a black one and a red one. The black god is good, and the red god malicious.

One day the black god said to the red one: 'Let us give the people some water for they are dying of hunger.'

The red god agreed, and told the other one to turn on the water. This he did, and it rained heavily.

After a time the red god told the black one to stop the water as sufficient rain had fallen.

The black god was, however, of opinion that the people had not had enough, so he refused.

Both remained silent after this, and the rain continued till the next morning, when the red god again said that enough had fallen. The black god then turned off the water.

A few days later the black god proposed that they should give the people some more water as the grass was very dry.

The red god, however, was recalcitrant and refused to allow the water to be turned on again.

They disputed for some time, and at length the red god threatened to kill the people, whom he said the black god was spoiling.

A devil.

There is a thing which is called a devil. It was formerly a lion, but it changed itself, and one half became a man while the other half became a stone. [176]

This devil can alter its appearance, and is sometimes to be seen one half a lion and the other half a man.

It lives in a forest and is particularly fond of the tree called e-silalei [2] owing to the denseness of its growth.

It only eats human flesh and will not touch wild animals.

When people pass the spot where the devil is, it calls to them, and says: 'Come, my brother, help me lift this load of firewood.'

If anybody complies with its request, he is struck with the devil's stake, and the devil cries out to him: 'I belong to the Aiser clan, escape from me if you can.'

[1] Lit. the-of-the-stake. Krapf (*Vocabulary of the Enguduk Eloikop*, p. 9) also mentions this belief in a devil, and says that the word refers to a pointed stick.

The beginner of the earth.

The thing which is called Naiteru-kop is a god, but not as great as the black god[3].

This is the story which was told us by the elders:

The Masai were formerly Dorobo, and had no cattle: it was the Dorobo who possessed the cattle.

Naiteru-kop came one day and said to a Dorobo: 'Come early tomorrow morning, I have something to tell you.'

The Dorobo replied: 'Very well,' and went to sleep.

A Masai named Le-eyo, having heard what had been said to the Dorobo, arose during the night, and waited near the spot where Naiteru-kop was.

When it dawned he went to Naiteru-kop, who said to him: 'Who are you?'

On Le-eyo telling him his name, Naiteru-kop asked where the Dorobo was. Le-eyo replied that he did not know.

Naiteru-kop then dropped one end of a piece of hide from the heavens, and let cattle down one by one until the Masai told him to stop.

[1] Related by Napisyoki, an elder of the Aiser clan (Sighirari sub-district).

[113] [2] Krapf in his *Travels and Missionary Labours in East Africa* writes (p. 360), 'These truculent savages (the Masai and Wakwavi) have a tradition that Engai—heaven or rain—placed a man named Neiterkop on Mount Kenya. He was a kind of demi-god, for he was exalted above men and yet not equal to Engai.'

[3] For tayooku.

6: Thomson K-3 (1883-1884)1887
FL12 Masai FL12

776 In connection with the decided belief of the Masai in a God, it may be noted that they have also some minor deity called Neiterkob—apparently, as far as I could learn, an [754] earth spirit. They have faith in witchcraft, though the efficacy of the lybon, or medicine-man, lies not in any innate ability of his own, but in his power of intercession with Ngăi, who works through him, and imparts magical virtues to various objects. Their conception of the Deity seems to be marvellously vague. I was Ngăi. My lamp was Ngăi. Ngăi was in the steaming holes. His house was in the eternal snows of Kilimanjaro. In fact, whatever struck them as strange or incomprehensible, that they at once assumed had [782] some connection with Ngăi. Their prayers to him were incessant. Nothing could be done without hours of howling, whether it was to seek direction where to slaughter their 824 enemies, or to ward off a disease. The most sacred thing among 778 them is the grass. Held in the hand, or tied in a sprig to the dress, it is a sign of welcome and peace. Thrown at any one, or into some mysterious place, it is an invocation for a blessing on the person, or a propitiatory offering. Next to the 272 grass comes the milk. No liberties may be taken with it. 778 The milk must be drawn into calabashes specially reserved for its reception, into which water is not allowed to enter—*cleanliness* being ensured by woodashes. To boil it is a heinous offence, and would be accounted a sufficient reason for massacring a caravan. It is believed that the cattle would [231] cease to give milk. The cows, it may be remarked, are never milked except in the dark.

885 Moran found married life sadly dull after his warrior experiences, and to kill time he accompanied one or two war-parties. But that was exceptional. His time henceforward was chiefly occupied in eternal and interminable discussions on the most trivial questions, or wandering long distances on visits to his friends, while his wife stayed at home to milk the cattle, or occasionally made journeys to neighbouring hostile tribes to buy grain. She, however, was in her element when a caravan came round, and then she enjoyed the double pleasure of an intrigue and a lovely present of iron wire and beads.

595 In time Moran's first wife became old and ugly, and he took to himself a second—the former being stripped of all her iron wire for the purpose of decking the new comer. At last the day closed for both of them, and one after the other, they 764 formed the subject of horrible hyenas' laughter. These fierce

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

427 428 Women possess no property save their ornaments. Of these the beads and the necklaces become the property of the daughters, but the wire ornaments are thrown away.

775 776 *Spirit Life.*—My informants declared that the Masai had no belief in a spirit life after death, or in spirits of any kind, but I am not satisfied on this point. For some reason (probably a restriction with a heavy penalty attached) they were unwilling to discuss this subject.

754 *Curses.*—The death-bed curse is considered very terrible, as there is no possible way of escaping its evil effects, for a curse can only be removed by the person who uttered it. A man who has been cursed will use every possible means to have the curse withdrawn immediately lest the utterer of the curse should die. (A curse [775] uttered during life is supposed often to remain inactive until the death of the utterer, and this in itself seems to indicate a belief in some sort of spirit activity.)

PART VIII.—CLANS.

614 The following is a list of the clans and sub-clans among the Masai (it is as nearly complete as possible):—

Main Clan Name.	*Sub-clans.*
No. 1. Laiseer	(1) Laiseer (2) Legetoi (3) Letoya (4) Lukumai (5) Lamothere (6) Libartimaru (7) Loiger.
No. 2. Ndarosiru	(1) Ndarosiru (2) Lanaboguaru.
No. 3. Molelian	(1) Molelian (2) Mbarakineti
No. 4. Magesen	(1) Magesen (2) Lesegu.

PART IX.—CATTLE AND SHEEP.

233 As a pastoral people the Masai have many very interesting customs connected with their flocks, but information on this subject is very hard to obtain, as details of the greatest interest to anthropologists are often not given because they are considered too trifling or too well-known to be worth discussion. A few interesting notes were, however, obtained.

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

Functions of Laibons.—A *Laibon* is far more than a mere medicine man or purveyor of charms. His function would seem to approach more closely that of a chief priest of the Israelites, and the N-Kidongi sub-clan might be compared to the Levite tribe. 791

He is, or should be, the religious head of the tribe. No ceremony nor important enterprise should be undertaken without his blessing, in return for which he should be given a large present of cattle. He prays to God on behalf of the people. On one occasion Sendeyo arrived in my camp before sunrise, just as I was about to start on an excursion into the deep forest, and made a prayer for our safety. We stood round him and responded "*Na-Ai*" (= "O God") at the pauses; I was too much taken by surprise to remember the details of the prayer except that it was very impressive, and that he ended by giving his genealogy (*see* Hollis, p. 326) in order to show that the prayer was one which should receive attention.

The *Laibons* use charms (*indalingoi*) for various purposes, and their employment is invariably accompanied by prayer to God. I have a few of the charms in my possession and have been instructed in their use, under promise not to reveal my knowledge. Sendeyo once said to me that a good heart was better than charms. [789]

Witchcraft.—Although the *Laibons* use charms, witchcraft, *i.e.* harmful magic, is not indispensable to their office. Some of them, however, are alleged to have made use of it. Witchcraft is not indigenous to the Masai. Such persons as I have found practising black magic in Masai country have learnt it from the Kikuyu of Nyeri District or from the Meru. 754 [177]

Religion.—The Masai believe in one God whom they call En-Gai, which is the same word as they use for rain. They say that God is one, but permeates everything. He may be prayed to as inhabiting a wood, a stream, the earth, etc., but He is all the same God. The Masai only use short prayers such as "Na-Ai" (O God) and "Na-Ai mikiar" (O God do not strike me) except for the prayers at *Il Pul* and those of *Laibons* already mentioned. Some, if not all, of the ceremonies have a religious significance, but I cannot give details without further experience. 771 776

Superstitions.—There are certain old trees with holes in them, in which a Masai puts a handful of grass or leaves when he passes. They have told me that this is equivalent to a prayer, "May I live to be old like this tree." 789

A traveller sometimes puts a stone in the fork of the branch of a tree near the track in order that he may arrive at his destination before nightfall.

There are a few places where the passer-by should tie a knot in the grass. I am uncertain of the reason for this.

When the new moon is first seen people pluck grass and throw it towards the moon, saying, "*Injoki o sesen ol oado naaisho ol dorop*"="Give me the body which is long and I give you the short." I do not know the significance of this.

13:Huntingford E-4 (no date) 1953 FL12 Masai FL12

Warriors do their hair in pigtails, *ol-taika;* other people of both sexes shave their heads periodically. In both sexes the ear-lobes are pierced and elongated, and the two lower middle incisor teeth are removed. Cicatrized patterns are often made on the upper part of the body in both sexes. 302 304

Iron-work

Iron is used for weapons (spear and sword of warriors, and arrows of elders), axes, knife-blades, razors, and many of the ornaments of both sexes. The spears and swords are distinctive of Masai culture and, together with the shield and *e-rep* arm-clamp, separate the Masai and Nandi culturally from other Nilo-Hamites. Spears are of three shapes: a small leaf-shaped blade with long neck, long shaft, and medium butt; the great " shovel-blade " with short neck, long shaft, and medium butt; and the long-bladed winged spear with short shaft and long butt. The colour of the short shaft of the winged war-spear is important: senior warriors have black shafts, others reddish ones, and the demand of junior warriors for the privilege of black shafts is a significant factor in the tension that arises between senior and junior warriors. The sword has a long narrow blade and is kept in a red leather sheath attached to the belt. The winged spear-blade and sword have been borrowed by the Nandi, Kipsikis, Keyo, Kony and others of the Nandi division, together with the arm-clamp; the Kikuyu have imitated them. 411 [412 171] [171]

Other Objects

Clubs are made of wood or rhinoceros horn. Shields are roughly oval, about 3 ft. long, and made of buffalo or giraffe hide on a light wooden framework; according to Merker, the old form of shield was circular and (if the scale of his Fig. 34*b* is correct) about 1 ft. in diameter. Stools are cut out of a solid block of wood and have three legs. Horns are used for summoning people, but there are no musical instruments or drums. 411 714 352 322 534

Ritual and Beliefs

Religion

Little has been recorded of Masai religious beliefs, except such obvious facts as the invocation of *Enk-ai* (the Masai word for God, rain, and sky). As to ancestor-worship, it is generally said that the Masai do not believe in an after-life (said also of the Suk); but the alleged belief that the soul of a laibon or rich man turns into a snake implies some belief in the survival of the soul. This matter needs careful investigation; and Merker's statement that each Masai is taken to paradise by his guardian angel and let in by *Enk-ai* if he has been good is alien to Nilo-Hamitic thought. *Enk-ai* is recognized as a creator, and is prayed to by both men and women. Some of the prayers recorded include an invocation to both *Enk-ai* and Mbatiany, the laibon who died *c.* 1890; thus Thomson heard the Il-Aikipiak praying to *Enk-ai* and Mbatiany, and the Nandi war dance after a victory, recorded by Hollis after Mbatiany's death, contained also an invocation to *Enk-ai* and Mbatiany. The " minor deity called Neiterkob " which Thomson thought was an earth-spirit, appears in Krapf's book as the Neiterukob, " the mediator between God and men." But the Masai word *naiterukop* means no more than " that which began the earth," and thus would seem really to apply to *Enk-ai* in his role as creator. *Enk-ai*, god, is grammatically feminine, and his wife *Ol-apa*, the moon, is grammatically masculine. 771 774 [114] 776 [782]

Death and Burial

The bodies of most people are put out for the hyenas, to the west of the kraal, and laid on the left side so that the face looks eastward, with the legs drawn up, the head supported by the left hand, and the right hand across the breast. The 764

/xiii cont./

114 in the Church Missionary Society's station in Taveta" /cited in
177 English/, this, as Merker himself told me, can only refer to a
773 Masai man from whom he received other information; since for
797 the many investigations on /xiv/ which his ethnological work is
[115] based (habits, customs, names, etc. etc.), he had quite different
114 informants, of course. And Hollis' objection (1)
773

> 1. Personal communication from the researcher, highly esteemed by me, whom I had the good fortune to become acquainted with in September, 1908, in Oxford (at the Kongress für Religionsgeschichte /Congress on the History of Religion/), just as I was also able to become personally acquainted with the deceased Merker in 1907, after I had previously corresponded with him, which was extremely valuable to me in view of the so highly controversial Masai problem.

that he (Hollis), who was also acquainted with the Masai of his region for many years, would then also have had to come across the traces of such early history is only an argumentum e silentio. Either the more southerly Masai (in German East Africa), with whom Merker worked, were more faithful guardians of those ancient treasures, which is not impossible, or Merker also had more luck in gaining their confidence on this point than Hollis, who, just there, did not come across the right people. Merker, however, indeed also expressly states in the foreword to the first edition that it was not until the fifth year after the beginning of his work that he came across those traditions from ancient times, which by no means commonly cross people's lips, but are handed down only in particular families and there are only ever to be found among a few old men. And then it took another year and a half before Merker had completely learned what is set down in
114 his fourth chapter. Moreover, even according to Hollis (cf. also
• 776 C. Eliot's introduction to A. C. Hollis, The Masai, their
782 language and folklore, p. xix), the monotheism of the Masai
113

/xiv cont./

114 and their imageless worship of God ("they have definite prayers
• 776 and they petition the deity more frequently and fervently than
782 the surrounding tribes are known to do" /cited in English/), stand
113 unquestionably, just as generally a comparison of the book by Hollis, appearing shortly after Merker's book, with Merker's Masai is the best apologia for the reliability of Merker's ethnological as well as linguistic observations.

114 Another outstanding African scholar, the praiseworthy, well-
174 known linguist Carl Meinhof of Berlin (now Hamburg), has above all, and, to be sure, for linguistic reasons, turned against Merker's designation of the Masai as a "Semite people," and with that then also at the same time against their onetime ancestral home in Arabia (2).

[113] 2. Cf. his review in Zeitschr. f. Ethnol., 36, 1904, pp. 735-744.

But what the Arabist Schwally (in Giessen) said about the Masai traditions (Archiv für Rel.-Gesch., IX, 1906, p. 505), that here "features of Semitic origin are well grafted on African ones" (but "when and under what circumstances is hard to say"), also applies to the language, as I was able to convince myself by a thorough study of Hollis' book. Definite remains show that the Masai must once have been Semites, and, to be sure, Arabian Semites. This will be briefly discussed in what follows next.

174 Not only does their own tradition teach that they came from
197 the north, but this is also confirmed by a comparison of some of
[173] their number words with those /xv/ of the Cushitic languages
[113] (especially Somali and Galla) and of Nuba. One should compare
[80] the following lists, to which I have also further added the number words of Nandi, closely related to the Masai, from the new book by Hollis (The Nandi, their language and folklore, with Introduction by C. Eliot, Oxford, 1909):

/21 cont./

791 576 609 rises, goes toward him, and, with the customary greeting, extends his hand to him, whereby, not this, but the wrist is grasped. After the concluded discussion, for which there are no particular formalities, he takes his leave with the ordinary farewell.

791 789 [262] In the way of food, the ol oiboni takes only goat liver roasted on the fire, milk, and honey, for, through any other food, "he would suffer the loss of the capacity for prophecy and the preparation of efficacious magic charms." Of these arts [illegible] little is [173] supposed to have been handed down to his son [illegible] and still less to Zendeo, through which it is all the more [illegible]ble that the /22/ Masai today tell of hundreds of di[illegible]inds of miracles that Mbatyan allegedly performed. According to them, he could fell large trees by sheer will power, or he had the hut in which he was to be found set afire by his attendant, and, after it had burned down, he appeared, uninjured, out of the ashes.

756 [613] From the En gidon lineage there are further supplied, as has already been mentioned, the sorcerers or medicine men (ol goiatiki, el goiatek), several of whom live in each district. Their office, too, is handed down from father to son, who, however, is usually initiated into the whole secret art only after his marriage. The [789] most important magic charm in the life of the Masai, the war medicine, the ol goiatiki does not know how to make. Rather, one turns to him only in cases of illness of human beings and livestock for which the well-known remedies fail, or which one traces back to the sorcery of evil neighbors, as well as to determine unknown wrongdoers (thieves, murderers, etc.).

613 [776] The lineage of the El kiboron of the El mulieljan tribe, who, according to the view of all the people, are especially favored by 'Ng ai, the god of the Masai, which has made them primarily the bearers of the religious traditions, require a special discussion.

613 157 Corresponding to their position with 'Ng ai, they are distinguished by a relative peaceableness. The young warriors, to be sure, also set out on raiding expeditions with the other lineages, but they thereby seem to avoid any unnecessary roughness or brutality, in which the others often compete. The passion for disputes, quarrels, and vituperation, a prominent trait in the character of the young

000 Religion. -- Monotheism. -- Religious doctrine. -- Explanation of natural phenomena. -- Prayers. -- Supplication feasts. -- Sacrifices. -- The snakes. -- Evil spirits. -- Sorcery. -- Amulets. -- Evil eye.

177 771 In a comparison of the ethnography of the Masai with that of the peoples neighboring them, living around them, no chasm as deep as in the field of religious outlook appears anywhere. Whereas in almost all the areas of ethnography we otherwise find a more or less strong influencing of the latter by the former -- from more external things, /204/ such as ornaments and weapons, to more deeply incisive social changes, such as, for example, the shaping of warriordom after the Masai model -- the religion of the two shows a sharp separation, which nowhere permits any interplay of the one in the other. In sharp contrast to the anthropolatry, the worship of departed human spirits, and the polydemonism of the Negroes, occurring in all forms and gradations, stands the simple, straightforward monotheism of the Masai.

• 776 779 Their god is called 'Ng ai and is an incorporeal being, a spirit. The people do not think about his appearance. The making of pictorial or sculptural representations of God would be a sin, according to his commandment given to the Masai. God is the creator of the world, the earth, and all that it harbors. He governs everything through his will. He is the guardian of the natural and moral order of the world. The laws and commandments that are valid in the life of the people and of the individual are expressions of his will. God is almighty, omnipresent, omniscient, benign, infinite, eternal.

[771] 'Ng ai najollo = God knows it, 'Ng ai naischa el duhganak, 'n dogirin sidan = God gives human beings the good things, ol bai 'l Eng ai = it is the will of God, are words that one can hear every day, and they are not often used thoughtlessly, for a deep religiosity is peculiar to the Masai generally. God's benevolence forgives human beings a great deal and for a long time. Yet human beings are too weak and sinful, so that God has to punish from time to time for

/204 cont./

776 779 improvement. He then does this through sickness, drought, or cattle epidemics.

779 721 [186] The Masai feel that they are the chosen people of 'Ng ai; all other peoples should be subject to them. God created the world with all that is in it only for them, and thus everything on earth belongs to them. If they obtain booty in war against another tribe, they are only taking what has been given to them by God for their own, what lawfully belongs to them, and what that tribe is unlawfully withholding from them. "If the el mgg would voluntarily give us our property, for that is what the livestock in their possession is, we should not have to make war on them. But since they do not do this, we are forced into war." And they are constantly waging this war against the despised, savage heathen, who know nothing about 'Ng ai and do not pray to him, but to spirits, which is why he does not assist them and always makes the Masai victors for a worthy cause.

776 779 In their journey through life God protects the Masai through guardian angels, who are pictured as winged, invisible beings of human form. The guardian angels are the same sex as their protégés; a male individual has an ol duńgani l Eńg ai, a female one an eń gorojoni Eńg ai, watching over them. The angel accompanies the person always and everywhere and protects him from dangers, so that he will not succumb in the struggle for existence before the lifetime previously set for him by God has run out; only then does the person [775] die. The angel carries his soul /205/ to the other world and then undertakes the protection of a child born on the same day. Every day a Masai dies and every day one is born, the people say.

775 779 Into the other world (eń gatambó = cloud land, i.e., the land where the clouds come from) go the souls of all the deceased, both those of the Masai and of non-Masai, both those of the good and those of the bad people. As soon as a soul reaches the portal of the other world, which lies far to the north (Kopekob), God decides its future fate. The souls of good people gain entry into paradise, which is equipped with all the beauties and splendors of nature. Lush pastures with fat cattle alternate with lakes, rivers, and cool glades whose trees bear the most delicious fruits. In the midst of this splendor the good souls live in human fashion, but without care, trouble, or

/205 cont./

775 work. Every day they receive the best food in abundance. Here,
779 however, in accordance with God's command, each one may marry only one wife. The other world, like the earth, is divided into individual lands, each of which is intended for the souls of one people, so that the person who arrives there will find his deceased relatives. Bad human beings are denied this paradise; they are driven into a barren, waterless desert. Those not so bad also gain entry into paradise through God's grace, though not to live in carefree happiness, but to do hard work.

779 This is the Masai religious doctrine as it is handed down and taught by the old men. The supernatural explanation of natural phenomena has nothing to do with the religious doctrine. In them
[781] one sees only the works or expressions of God and therefore observes at least the more powerful ones with something like reverential awe. It should be expressly emphasized that it is only a matter of this and not, say, demonolatry, the deification of personified natural forces.

776 The sun (eng̃ oloń) is regarded largely as a reflection of God,
821 like the gloriously colored morning and evening rosiness. The clouds mask God before the eyes of mankind, they surround him, from them he looks down on the bustle of the earth. This seems to explain why the Masai call the redness of the morning and evening sky 'Ng ai nanjugi, the clouds 'Ng ai nabor, and the blue, cloudless sky 'Ng ai narok. These literally mean "the red God," "the white God," and the "black God," but should properly be translated as "the divine red," "the divine white," and "the divine black," for actually the people see in these phenomena no gods and nothing godlike or to be worshipped like him. It should also be mentioned here that God, who in ordinary speech is always called 'Ng ai, is often called 'Ng ai narok or Hai narok, that is, the black God, in the prayer songs to be discussed later. The Masai themselves do not know any explanation for these strange word-formations, and I have not been able to learn anything from them from which an interpretation could be derived.

/206/ More infrequent than the above explanation for the sun is the one that it and the moon are servants of God, whose duty is to illuminate the earth. In this the sun is regarded as feminine, the

/206 cont./

776 821 [177] moon as masculine, corresponding to their word formation, eng olod and ol aba. That this view is not peculiar to the Masai, but was somewhat uncritically adopted by them is evident from the fact that to a question about the reason for it one is given a very childlike reply, if any at all. "The sun has to work all day, the moon only a few hours at night, consequently the overworked sun is probably a woman, corresponding to the earthly performance of work!" Others again have the sun and moon married; sometimes the former is the man, sometimes the woman in this marriage; it is only certain that both travel, one behind the other, toward the west, where the common hut stands in the clouds. Where the tendency toward personification [197] of natural phenomena is peculiar to a people, one must expect that firm views exist at least about the most important and most frequent ones, and therefore the uncertainty in these explanations also shows that it is a matter of something that the Masai adopted, without having any understanding of them.

The first-born child of 'Ng ai, the girl Barsal, brings to human beings the greatest benefit, the rain, and thereby shows that God is satisfied with the doings on earth. His eldest son, Ol gurugur, announces through thunder and lightning that God is angry with human beings because of their bad behavior and at the same time admonishes them to improve. A rainbow is the sign that God is satisfied with the doings of the Masai and is therefore well disposed toward them. Wind and storm are the raging of a wrathful God. Hail announces coming 821 rain. A fireball (bolide) shows that now plentiful rain will fall and 787 that the people will be spared misfortunes, such as livestock epidemics and pox. A comet, on the other hand, means misfortune; sickness and death will befall human beings and livestock. Upon the appearance of a very bright comet in the eighties there soon followed the great livestock epidemic, rinderpest and tuberculosis.

821 776 The Milky Way is the path along which the children of 'Ng ai wander as bright stars. From here they observe the doings of mankind and report on them to God. Other stars are his eyes; now and then one of them shoots forward from there toward the earth, in order to see more accurately -- a shooting star. Venus, which the Masai call en kilegen, announces rain through particularly bright

/206 cont./

821 light. The nubes minor and major /the two Magellanic Clouds/ are
[206] two lakes from which the cattle of 'Ng ai drink. The Pleiades
(ñ gulwa), through their rising in the west, announce the onset of
the great rainy season named after them. In Orion λ and the two
small stars beside it form a constellation called 'ñ gulia = the
widows. The stars δ, ε, ζ, θ and the two small stars on a line with
it form another constellation. In it δ, ε and ζ are three el moruo
who are about to marry three widows. /207/ This constellation is
called 'ñ gapiak = the remarried widows, in contrast to the three
[206] 'ñ gulia, who stand alone. The two large stars in Centaurus (el
orugo) and the four principal stars in the Southern Cross are boys who
tend the cattle of 'Ng ai, which are represented by the small stars of
[187] the Milky Way. A ring around the sun or moon heralds rain. For
the warriors on an expedition this phenomenon is regarded as promising rich spoils. Just as sun and moon have made a kraal for themselves, so will the warriors on their way have to lay out such a one for the captured livestock (1).

[823] 1. For the cardinal points (e' ishoi Ng ai = the sides of God) the Masai have the following names: North = Kipwikik or Kipwikik, which also designates the land of the original home. South = e' ngiyat, i.e., the battle; it is the direction in which the Masai traveling south always had to endure new battles against the long-settled el mug. East = engilebunoto ebg ginê = the sun rises. West = endorjanoto ebg olon = the sun sets.

782 In case of distress, danger, sickness, or other calamities, all the people pray to God. Otherwise the men say a prayer mostly only on special occasions, whereas the women pray daily, mornings and
[184] evenings. Children do not pray at all in some districts, in others only the girls pray, and in still others all children learn it at the age of
[823] six to eight, usually through their mother. In praying, one turns the face to the north, or in the morning toward the rising sun and in the

775
825
826
643

/810 cont./
Allegedly they never bite the El Kiboroo peoples; on the other hand the latter often use them as frightening devices against both Masai and Negroes.

796 The Masai are not familiar with devils, but indeed with the -- male -- demon 'Ngumatic, whose body is hard as stone and therefore invulnerable, who bears the head of a predatory animal and whose feet are armed with claws. He lies in wait on paths and calls passers-by by name, in order then to tear apart and devour those who approach. For most adults 'Ngumatic is merely a bugeyman [K.1] for naughty children. "Do not go too far away," the mother says to the children, "otherwise 'Ngumatic will get you."

754 If a person brings misfortune, illness, or death to another through sorcery (ol ~~dhi~~), this is merely the effect of a power inherent in the magic medicine, which is based on the composition of the medicine and is effective through the recitation of certain formulas and the execution of special gestures. The aforementioned amulet ring 789 [751] (ol gawuti) protects one against the effect of magic made by another [754] Masai. Women who go into the neighboring areas of Kenya tribes to buy vegetables especially protect themselves from their sorcery. They smear their foreheads and cheeks with cattle dung or wear around their necks a cord on which are strung small, split sticks. Other amulets that I found contained, sewed in leather, a mixture of plant powder (from wood, /751/ roots, barks), after which they are named, and a secret medicine of the ol gulaiki, who alone is able to prepare the whole in such a way that it is effective. The [842] lagumajiy amulet is worn by women around their necks and is regarded as prompting conception. We have become acquainted with another remedy prized by the women heretofore up to then in connection with the boys' ol gubika ikam. The ol gugumi is tied around the ankle and protects one from ailments of the legs. The ol dargof [751] is worn by warriors around the neck or wrist for protection against sorcery. In hand-to-hand combat the powder contained in it is also scattered toward the enemy, whereupon the latter is supposed to be forced to give up his resistance. The ol ~~kiri~~ protects the husband from the anger of his wife when he has committed some folly, for example, has gone beyond the customary limits on

/313 cont./

Among the Maual and the ancient Israelites the entire law, the natural and moral order, consists of precepts and interdicts of God. He commands the human beings to do good, he forbids them to do evil. He is the teacher of human beings in the distinction between good and evil, so that this ability to differentiate is one of his foremost characteristics even in the religious view of a primitive people.

The idea of the tree of life presupposes the desire for another characteristic inherent in God, for eternal life not limited by death. Now, however, is such a desire present in the feeling and yearning of a savage, culture-poor man? The extraordinary contempt for human life, the absence of mourning going beyond the customary interment ceremony, the idea that death brings sleep to the aged, rest from earthly life, answer the question negatively. The desire for long life is the result of a higher culture, and, indeed it is the civilized man who wishes for an eternal life on earth, but not the member of a primitive people.

I suspect, therefore, that the Israelitish original conception of paradise knew of only one tree, without any more detailed designation. "the tree concerning which I commanded thee not to eat any of it," as Jahve /Yahweh/ designates it in Genesis 3, 11.

The adoption of the tree of life, which may have come from Babylonian myth, then gave the originally one tree the addition "of the knowledge of good and evil."

In the Biblical presentation and in that of the Maual we find the picture of the tempting of the woman by the snake, which though that is represented as the symbol of evil, of sin. For the Maual this interpretation is still to be found in some of their customs. We saw that the members of the lineage of the El kiberon, peaceful, and therefore particularly beloved of God, do not fear snakes, and, further, they believe that the bones of their interred dead turn into snakes. Proceeding on the assumption that the story of the fall is the primary one, the first-mentioned belief in the naïve form of the primitive peoples shows that those living according to God's commands and illumined by his grace /313/ need not fear the power that evil has over man, whereas the second view demonstrates that what is sinful in man remains on earth and goes on living after his death.

After the bride's wedding-garments have been oiled, she puts them on, and is given a gourd which has been ornamented with cowries. This is put on her back, and she is taken by her husband, who is accompanied by two of his friends and two of the old women from his bride's kraal, to her future home. 585

She does not hurry but walks very slowly until she reaches her husband's kraal, where a child is given her to feed.

When a man marries, it is considered unlucky if he calls his wife by her name. He must give her another name. A favourite method is to call her by the age to which she belongs, thus, The (woman) of the Seure age. 551 593 777 [561]

If a Masai owns large herds of cattle he is able to marry many wives. Some have two wives, others three, and others four; whilst if rich men wish, they may have as many as ten or twenty. 595

When a Masai marries for the second or third time, his first wife gives the new wife a calf, after which they call one another Paashe, i.e. the giver and receiver of a calf. 595 431

No Masai may marry a woman belonging to the same sub-division as himself if both families live in the same district, but he may marry a woman of his own clan or one belonging to another clan. 582

2: Bernardi E, M-4 (no date) 1955 FL12 Masai FL12

561 624 when the *aiguenani loongishu pokin* was recognised as a general leader.[119]

Judicial activity is not a real part of the *aiguenani's* office. It [692] all depends on his personality and on how much he is favoured by his age-mates, who may ask him to arbitrate and settle their disputes.[120]

The election and the status of the *aunoni-otuno* as the ceremonial leader of the age-unit has already been described. A peculiar duty of the *aunoni's* office is the responsibility "for the smart turn-out of the *moran* (initiates)".[121] MERKER,[122] and HOLLIS,[123] state that the *aunoni* was responsible to the prophet (*laibon*) for the organisation of raids. The anonymous author of *MS.* 48, p. 4, describes [977] him as the mascot of the unit when this was at war: "as long as he is alive they (the unit-members) cannot be beaten by the enemy... For this reason they take him on their raids".

The relationship between the *aiguenani* and the *aunoni* is not clear. It seems certain that the latter has a more ceremonial and ritual character than the former.

The term of office for all these officers is limited to the existence of the age-unit as such; but they will always be distinguished and sought for their opinion.

561 621 701 The analysis of the unit's leaders does not offer a complete picture of the internal structure of the age-unit. This structure rests on two other institutions, namely the *manyatta*, which is the proper

[119] The *aiguenani* was not expected to take part in the actual fighting: he had to be in the rear to govern the action or, as FOSBROOKE, p. 38, puts it, "probably because the *laiguenan* wore the charm which had been obtained from the laibon, and its loss could not be risked". At present, adds FOSBROOKE, p. 38, "the relations between senior *laiguenak* and their juniors are very lax. It is probable that this is due to the prohibition of raiding and consequent reduction of the occasions on which large-scale common efforts are required. In the old days when large groups of *moran* (initiates) came together for raids the senior *laiguenak* (sic.) must of necessity have asserted his position, and the others must have obeyed him, to ensure the success of the venture".

[120] "It appears", writes FOSBROOKE, p. 38, "to be the privilege of the aggrieved party to select his judges... If a local *laiguenan* has a reputation for fairness and justice, he will be called even from a distance, but proceedings are not invalidated if no *laiguenan* is present".

[302] [121] FOSBROOKE, p. 40. So, no initiate was supposed to cut off his pig-tail coiffure without the permission of the *aunoni*.

[122] MERKER, *l. c.*, p. 122.

[123] HOLLIS, *l. c.*, p. 299 n. 1.

E-TAREMU EN-GIOO : ABORTION

Abortion is rare.[1] Should a woman cause herself to abort, the matter is left to the women of the kraal, who generally beat the culprit. 682a

If a woman is made to abort by her husband or by another man, the matter is again left to the women. They may beat the culprit, but the more usual procedure is for them to take an ox of the abortionist's to some quiet place and beat it to death with sticks. The women then eat this ox, but no men or no pregnant women may be present while they are doing so.[2]

IL-DEKETA : CURSES

If a warrior should curse an Elder, he must offer him a cow, a calf and a bottle of honey. If he does not do this, he will die.[3] 683

If one warrior is cursed by another, he may try to kill him. If he succeeds in doing so, he is liable to no penalty. On the other hand, he may bring the matter before the Council of Elders, who will fine the guilty party. [692]

IL-MOMA LOO-'L-MAASAE : MASAI ORDEALS

Eng-duo : The Bow[4]

A strung bow is laid on the ground and the deponent swears in front of the Elders that his words are true. He then steps over the bow. Should his words be true, no harm will come to him, but should he be telling a lie, he will have bad luck and may shortly die. 695 [777]

[1] During three and a half years spent with the Masai of Tanganyika Territory, I came across only one case of abortion. In this, the husband had caused his wife to abort, as he was jealous of the father of the child. This man was a warrior of the same age as that to which the husband belonged.

[2] The converse of the custom whereby no women may see meat for the warriors' consumption before it has been cooked.

[3] For examples of Masai curses, see Hollis, *The Masai*, p. 344.

[4] *Eng-duo* is no longer regarded very seriously by the younger generation of Masai, some of whom are taking into disuse in consequence. The other ordeals, particularly *Eng-duti*, are still regarded with awe, and I think it would be difficult to find a Masai living with the Tribe who would be prepared to testify falsely under ordeal.

5: Maguire G-5 (no date) 1928
FL12 Masai FL12
Kisongo

Eng-ilati : The Reim

695 A short reim is greased with butter at both ends. The accused grasps one end with his left hand and his accuser the other, also with his left hand. The accuser is then told to cut the reim in the middle with a knife or sword which he is given for the purpose. If he does so and is making a false accusation, he will die. The accused may also be called upon to cut the reim in support of his defence. A similar fate will befall him if he is lying. (This form of oath is considered very binding, and no Masai will enter upon it lightly. It may be compared with the Nandi ordeal described on page 77 of *The Nandi* by Sir Claud Hollis.)

Em-bere : The Spear

The iron-shod haft of a spear is driven into the ground for about a foot, and is then withdrawn. The deponent urinates, and then spits into the hole thus made. No one may look while he is doing this, and all turn their backs. He then swears that his words are true. The Elders then fill in the hole with earth and stamp it down. If the deponent is lying, he will die.

En-aishó : The Honey-wine

If a man is accused of theft and denies it, he must drink from a gourd of honey-wine in front of the Elders, having sworn that he is innocent. If he is telling the truth, he has nothing to fear, but if he is guilty he will have no more luck in life and will probably end by being killed by a lion.

[777] It is an axiom of the Masai that no punishments should be laid down in the event of a man being discovered to have, deliberately, made a false oath. The matter is left to God, and the offender is invariably suitably punished by Him.

R. A. J. MAGUIRE.

11: Leakey E-5 (no date) 1930 FL12 Masai FL12
Kenya

Milking.—Milking is usually done by women and girls, but uninitiated boys may also milk. Milk is either drunk fresh or is curdled by mixing with blood, or is curdled alone by leaving for two or three days. 234 462 252

Raiding.—Frequent raids on neighbouring tribes are carried out by the warrior classes, and the cattle and sheep so obtained are some of them distributed to a warrior's parents and friends and some kept for himself. When cattle are raided from another clan or sub-clan in order to repay a murder (*see* Murder), all maimed, blind, and otherwise damaged cattle are returned immediately afterwards, for to keep these would certainly bring bad luck on the raiders. 721 [682] [777]

PART X.—MISCELLANEOUS NOTES.

Fire.—Fire for special occasions is made by means of the hand-drill method, and women may not make fire by this means. Normally, fire is obtained from the ashes of the previous day's fire or from a few live coals borrowed from a neighbouring hut. The first fire in all new huts must be made with fire-sticks. 372

Murder.—Should a man kill a member of his own sub-clan there is no punishment. "What would be the use of taking a fine from one's own sub-clan?" If, however, a man of another sub-clan is killed, then the sub-clan of the murdered man raids the murderer's sub-clan and try to seize cattle in compensation. Usually a free fight takes place and if, in the course of this, a man of the murderer's sub-clan is killed, the matter is considered all square, and any raided cattle are returned. In the course of such a raid all sorts of cattle are driven off, but all the blind and maimed ones are returned next morning (*see* Raiding, above). 682

Smiths.—Among the Masai smiths are considered "bad." There are smiths in each clan, and the business is purely a family one handed down from father to son. Young boys of smiths' families are initiated alone, and once initiated go straight to the business of smithing and may take no part in the life of the ordinary novices or warriors. Smiths are considered to be considerably lower in the social scale than even the Wandorobo. A Dorobo can leave his hunting life and rank as a true Masai if he so chooses, but never a smith. 326 564 [563]

If a smith comes and sleeps at a village he is given a bed, but must sleep on the wrong side of the sleeping hide (*i.e.* the rough fleshy side). Smiths may only marry with smiths' families. No Masai would dream of marrying or having any kind of sexual intercourse with a smith's daughter (Wandorobo girls may be married by Masai, but not *vice versa*), nor can a smith marry an ordinary Masai girl. Smiths make spears and small knives, cattle bells and iron ornaments, but never swords, which are always bought from the Kikuyu. Should a Masai buy the cattle or sheep of a smith he must dip them in the [illegible] before adding them to his flock. [574] [582] [563] [911] [412] [438]

12: Fox G-5 (1925-1930) 1930 FL12 Masai FL12
Kenya

779 It is lucky to see a fish eagle (*ol korpellia*) sitting on a tree if it is facing the observer. It is unlucky to see a single wild pig, but lucky if a number of pigs cross the path from left to right in front of the traveller.

There are several other superstitions, but they seem to be held in little, if any, more importance than most of our own, *e.g.* seeing the new moon through glass, encountering magpies, spitting when a hare crosses one's path, etc.

514 576 *Spitting* is a greeting and brings good luck. One is asked to spit on a new-born baby. I have sometimes been spat on in a similar way by very old men and women—a somewhat trying ordeal which had to be patiently endured. Moreover, a Masai may spit on his palm before shaking hands in order to give an exceptionally warm greeting. It is then etiquette to follow his example.

173 *History.*—The Masai have little historical tradition. Some of it is given in Hollis, pp. 266–273. They are said to have come from a place in the North called by them *Endigir* a hundred generations (of 15 years each) ago. The generation names from the present time, working backwards as far as they are remembered, are:—*Il Tuati, Il Talala, 'L Aimer, Il Nyangusi, Il Tuati, Il Kidotu, I Merishare, Il Tiegi, Il Salaash*, and *Il Meshopo*. Those before this have been forgotten. When they left Endigir there were no *Laibons*, so the elders arranged about the ceremonies. The warrior and age-group system was already in being, having been instituted by Naiteru Kop (*see* Hollis, p. 266). The customs of group marriage and of free love between the warriors and the girls were also in existence.

There were four tribes in Endigir—the Masai, the Dorobo, the Kikuyu and the Il Kunono (smiths). God gave the cattle to the Masai and the wild beasts to the Dorobo. He told the Kikuyu to go to the mountains and the place of many rivers and to eat grass. He gave iron to the smiths and provided them with stones to beat it with. These four tribes were all friends together.

262 *Restrictions as to Food.*—Besides those mentioned above as applying to warriors and junior elders, the following apply to all Masai:—

They must not eat the flesh of wild animals.

They must not drink milk soon after eating meat.

Women must not be seen eating meat or drinking milk by men of their husband's generation.

805 *Months and Days.*—The Masai divide the year into the following months:—

Ol Adualo. Meaning unknown

Or'at = Grass in the hollows. (About February.)

O Ānyi Oing'ok = When the bulls are tied up.

Ol o Doyoerie ol o Ingokwa = When the Pleiades are in the West.

Ol o Olepunyi Ingokwa = When the Pleiades are in the East.

Ol Guju Orok = The short black bristles. So called because it is the month of ceremonies, and therefore heads are shaved.

/110 cont./

578 192 man. From young girls among themselves one hears: eñ orobó menje = accumbens patri /one who lies with her father/, eñ orobó 'l alahe = accumbens fratri /one who lies with her brother/.

Used by warriors toward young girls: hai em ballsch = you, vulva; hai, e mówo = you, clitoris.

Younger children insult one another:

ñotonji eñ gomos = vagina matris;

ol agambai Eñg ai = hated by 'Ng ai;

tababuá = stumble;

ol agaischiri Eñg ai = cry to God (when you get a beating);

e mai = stupid fellow;

hai ol madai (or e madai) = you stupid fellow (stupid girl);

id' ol airirua, you are a blockhead;

id ol bua, you are a rowdy;

id' ol dillo endoi, that is, you are indeed mad. The term ol [136] dillo, which here means madman, is formed from the like-named bird, the red-headed Anaplectes melanotis, one of the many species of the weaver birds native to East Africa. If one en route hears it call- • [777] ing on the steppe from the left side, it means good luck, but if it [825] calls to the right of the traveler the latter will soon encounter a misfortune.

Ol agatar' em baie, that is, die by an arrow, ol agawa ol gollug = die of fever; ol bebedo = of the upele sickness; ol minjaloi = of smallpox; eñ gohogge = of stomach or intestinal sickness; ol agataremo el gigaret = may the thorns prick you; ol agatarigi ol mairon = may your belly burst from eating; ol agairokischo = become black; ol agoibarra = rogue, brawler; e at' ol marenge = slanderer, gossiper; ol duñgani serseri = bad fellow; ol duñgani guret = coward.

201 To express contempt one spits before the person concerned or at him.

192 593 The large number of invectives stands in contrast to a striking poverty in terms of endearment.

/111/ The mother designates her child as 'l aischa 'Ng ai = child given me by God, as eñ gutok e jêjo = mouth of the mother, or as ol oib e jêjo = resting place of the mother. The father calls it ara ñgotonji = child of the wife. Older brothers and sisters talk fondly to younger ones with the term ara e jêjo = child of mother.

/111 cont./

192 When one so often sees how the warriors flirt with the girls and
832 how the latter act lovingly with the former, one would expect an abundance of expressions of tenderness. But here, too, this does not turn out to be true. The only pet name that the warrior gives the girl is joruert' ai = my darling, while the girl calls him ol djore lai = my friend, or also says injŏr nalen = I love you very much, to which the warrior replies: ídol íde eń gawariš = we shall see (literally videbo noctu /I shall see at night/).

XIII.

000 The blacksmiths. -- Their own kraals. -- Their social position. -- Attitude toward the blacksmiths. -- Workshop. -- Tools. -- Iron extraction. -- Technique. -- Blacksmiths' products; their prices. -- Wire drawing.

564 The kraals of the blacksmiths lie isolated, apart from the true
326 Masai kraals. It is not correct to designate these as a blacksmith
[361] tribe, since there are blacksmiths (ol kononi, el konono) in all three
[614] tribes and also in all lineages, except the El kiboron, and neither a
[613] single tribe nor a single lineage consists exclusively of blacksmiths. They form a caste of their own and are the pariahs of the Masai, the despised and detested, the unclean, whom one would prefer not to tolerate if one did not need them so urgently. From ancient times the trade has been handed down from father to son, who only practices the calling after his marriage, therefore as ol móruo. One cannot detach oneself from the caste by not practicing the trade; rather, one who comes from a blacksmith family always remains ol kononi, no matter whether he works as a blacksmith or not. If, on the other hand -- which happens only very exceptionally -- a Masai who does not belong to the blacksmith caste permanently or temporarily practices the blacksmith's trade, he will, to be sure, also be regarded with scorn, but neither he himself nor his descendants will be despised as blacksmiths or counted in the blacksmith caste. A blacksmith kraal
[777] (eńg an el konono) in the vicinity of other kraals brings the latter bad

/111 cont./

564 luck and would cause their inhabitants illness and death for man
326 and beast. Even in an emergency one never claims the hospitality
[779] of a blacksmith, any more than one ever grants him guest privileges.
[574] The warriors coming from blacksmith families do not live in the
[701] ordinary warrior kraals, but in the smaller blacksmith warrior-
kraal (ol manjata l el mŏran l el konono) and only with daughters of
blacksmiths. They do not set out for the battlefield with the other
warriors either, but alone, and naturally bring along, since they /112/
are few in number, only a little booty each time, which then often
enough is simply taken away from them by the other warriors. An-
[582] other Masai does not marry the daughter of an ol kononi, just as the
latter's son dare not desire in marriage the daughter of a man who
does not belong to the despised blacksmith caste. Even the extra-
[837] marital association with a woman or girl belonging to the black-
smiths is regarded as disastrous for any other Masai. It is believed
that he will sooner or later lose his mind, will never be able to
become the father of a healthy child, or on the next field expedition
he will be killed by the spear or arrow of an enemy. How despised
[784] the blacksmiths are is shown by the fact that a Masai does not dare
[192] to pronounce the word "ol kononi" after the onset of darkness (1).

564
326
114
784
192

1. More than once the people, when in camp, in the evening, I wanted to speak with them about the el konono, begged me to abstain from this, because otherwise some misfortune would befall us. Nevertheless it happened from time to time, and thus also on the evening of December 31, 1901, when I was camped near a Tatoga settlement on the steppe southwest of Mburu. A lion then penetrated into my camp in the night and took a man, whom we, despite prompt pursuit of the lion, could no longer rescue. The next morning the Masai made me responsible for this incident, "it would not have happened if you had not spoken about the el konono last evening; we have so often told you this."
